Faltering economy drives families into poverty

By David L. Perlman

A failing economy, not crumbling family values, is responsible for most of the growth in poverty during the 1980s, according to a staff study prepared for the Joint Economic Committee of Congress.

Unemployment and low wages are creating more poverty than teenage pregnancies, the study concluded.

A single-parent household headed by a woman is still much more likely to be poor than a two-parent family, the study noted. But even though such poverty-prone households have continued to increase, the new poor are more likely to be found in traditional two-parent households.

From 1979 to 1985, poverty rose by 2.2 million or 23 percent in female-headed households and by 3.2 million or 32 percent in married-couple households.

Rep. David R. Obey (D-Wis.), outgoing chairman of the JEC, and Sen. Paul S. Sarbanes (D-Md.), who will head the committee in the new Congress, said the study points up the economic stagnation that has prevented a full recovery from the severe 1981-82 recession.

Unemployment continues to hover around 7 percent, compared with the 1979 average of 5.8 percent, the study noted. It found that "the poverty rate seems to rise and fall in lock-step with the unemployment rate."

Another big factor cited in the study is the lower pay levels of the jobs being created in an import-battered, sluggish economy. Obey and Sarbanes pointed to a recently-issued JEC report showing that, since 1979, some 60 percent of the net growth in employment came from jobs paying less than $7,000 a year.

Related to this, the study noted, is the decline in the buying power of the federal minimum wage. In 1979, a worker employed full time at the minimum wage would be able to maintain a family of three slightly above the poverty level. But at today's depreciated minimum wage, a comparable worker would have an income 20 percent below the family-of-three poverty level.

Apart from the decline in cash incomes, working families have also been hurt by the stiffer eligibility standards imposed in the Reagan years for benefits to supple-

Failing Reagan policy tied to U.S. downturn

Key industrialized nations surge ahead

By Gene Zack

The Reagan Administration's flawed economic policies have left the United States lagging far behind Japan, West Germany and Sweden in all but five out of 30 areas dealing with economics and the quality of life, the Economic Policy Institute charged.

The Washington-based research organization pointed out that the United States spends a smaller share of its gross domestic product—the total output of the nation's goods and services after subtracting income from foreign investments—on essential domestic programs than any other advanced industrial country in the world.

The result is that the United States is the loser in key economic areas, EPI said in its first major study. These include GDP growth, productivity, joblessness, youth unemployment, the percentage of jobless receiving unemployment benefits, foreign trade, exports of goods and services, net savings, the misery index which measures the joint impact of unemployment and inflation, gross capital investment and manufacturing profits.

In the area of the quality of life, the study showed, America has the worst performance in such categories as the equality of income distribution, infant mortality, prenatal mortality, male life expectancy and the number of hospital beds per capita.

Few positives

The only areas where the United States scored positively were in the increase in gross capital investment, expenditure on medical care per capita, living space per person, home ownership and employment growth. Even so, the job gains were primarily made in the low-paying service sector.

Looking toward the post-Reagan era—that will begin when a new Administration takes office on Jan. 20, 1989—the research group called for development of alternatives to restore jobs, revitalize the nation's economic competitiveness and reduce the crippling deficit in the balance of payments.

It specifically rejected the Administration's "laissez-faire" ideology, emphasizing

America's failure to keep pace with other industrialized nations is detailed at an Economic Policy Institute forum in Washington. From left, USWA President Lynn Williams, Ernest Wilson of World Bank, Prof. Lester Thurow of Massachusetts Institute of Technology, UAW President Owen Bieber, AFSCME President Gerald McEntee and EPI President Jeff Faux.

Sakharov return spurs call to release other dissidents

The AFL-CIO welcomed the decision by the Soviet government to restore at least partial freedom to human rights activist Andrei Sakharov, who was allowed to return to Moscow after six years of internal exile in Gorky.

"We welcome any step that gives this great human rights leader an extra margin of freedom," said Federation President Lane Kirkland, "although, like Sakharov, we remain concerned about the many more prisoners of conscience inside the Soviet Union and the millions who still languish in the gulags."

Kirkland took the occasion of Sakharov's release to restate labor's sorrow over the recent death of Soviet trade union and human rights activist Anatoly Marchenko after a four-month hunger strike to protest torture at the hands of USSR prison camp guards.

The AFL-CIO president emphasized that if the Soviet government had "responded

Clean water bill gets congressional priority

A clear water bill that President Reagan pocket-vetoed last November after Congress adjourned is expected to be the first substantive legislation enacted by the 100th Congress, which goes to work Jan. 6.

It passed the House and the Senate unanimously last October, but Reagan vetoed it after Congress adjourned, thus preventing a certain override. It was too costly, he complained.

At issue is the future of a labor-supported program launched in 1972, when pollution of lakes and rivers threatened the nation's water supplies. Congress required cities and industries to clean up wastes to acceptable levels before discharging them into waterways and provided financial help to construct sewage facilities.

The budget President Reagan sent to Congress last year would have phased out construction grants, with a final authorization of $6 billion to carry the program through fiscal 1989. Budget cuts imposed in the first year of the Reagan Administration had already sliced the program's funding levels in half.

But Congress balked at the Administration's phaseout schedule. Instead, it voted a $20-billion program, to run through 1994. Direct construction grants would continue to 1990, being gradually replaced by a state-administered revolving loan fund to which the federal government would contribute.

The vetoed bill also authorized a new program to help control runoff pollution from farm lands, construction sites and city streets.

Despite the Administration's objections, the House passed the bill on a 408-0 roll-call last Oct. 15, and the Senate approved it, 96-0, the next day. A veto override was

Layoff warnings dampen holiday joy

Cutbacks and plant closings imperil thousands of workers

By Arlee C. Green

Tens of thousands of union workers learned during the holiday season that their jobs are in jeopardy. American Telephone & Telegraph Co. announced a layoff of 27,400, General Motors Corp. targeted the jobs of 29,000 workers at 11 or more plants for elimination, and steel industry analysts predicted up to 30,000 more steel jobs will disappear in 1987.

The Communications Workers called AT&T's announcement of a major cut in its payroll in 1987 "an error, a gross overstatement and unduly alarming."

CWA President Morton Bahr said the cuts in the workforce would be spread over the rest of the decade with only a quarter of the layoffs occurring in 1987. The cutbacks will hit 16,500 hourly workers and 10,900 managers, AT&T said.

Rotten timing

The timing of the announcement was "unfortunate," Bahr said, as workers would be checking the mail "not for holiday greetings, but for a pink slip from their employer." AT&T President James Olson said that all reductions would come in 1987.

Also in the communications industry, U.S. West Information Systems announced it will cut 1,000 employees from its 2,275-member workforce. A nonunion subsidiary of U.S. West Inc., a regional telephone system, the company markets communications equipment manufactured by other firms.

The steel industry will eliminate up to 30,000 more jobs in 1987, predicted John Jacobson of Chase Econometrics. Employment in steel declined from 509,000 in 1973 to 180,000 in 1986 and will likely fall below 160,000 in 1987, Jacobson said. The Steelworkers, stressing that layoffs of this magnitude have been predicted for

Glimmers of hope amid gloom of 1986

Massive deficits in jobs, international trade and the federal budget dominated the news in 1986, creating a whole range of problems for workers and their families.

While the year began and ended on these dreary economic notes, there were small glimmers of hope for the trade union movement. It weathered another 12 months of an anti-labor Administration, its members and their families helped end Republican domination of the Senate for the twilight years of Ronald Reagan's presidency and there were victories to boast of on both the legislative and bargaining fronts.

Leafing back through the 51 issues of the AFL-CIO News published last year put this perspective on what happened.

In May, President Kirkland informs Yelena Bonner, wife of Soviet dissident Andrei Sakharov, that her husband is the recipient of the George Meany Human Rights Award for 1986. At year's end, Sakharov was allowed to return to Moscow, ending seven years in internal exile.

January

The year began with the domestic market awash in imports, sending 1985 into the record books with a massive $148.5-billion trade deficit as unemployment festered at the 7-percent level. The 99th Congress returned to wrestle with budget cuts mandated by the Gramm-Rudman-Hollings Act, with labor warning against further slashes in domestic programs. The AFL-CIO launched a nationwide boycott of Shell Oil Co. to protest its "repressive treatment of black workers" in South Africa and management's support of that nation's racist policies. Labor joined with its civil rights allies in the first observance of the Martin Luther King Jr. national holiday. The State, County & Municipal Employees won a $107-million out-of-court pay equity settlement for 35,000 Washington state workers. Some 22,000 Food & Commercial Workers won job security guarantees to end an eight-week strike against Southern California supermarkets. The Oil, Chemical & Atomic Workers won pay increases, bonuses and plant-closing safeguards with Amoco Oil Co. to set the pattern for industry negotiations. A report showed that the Reagan-dominated National Labor Relations Board continued its bias toward management and against workers. Missouri unionists staged a massive rally to head off a proposed "right-to-work" measure in the state legislature.

People—Sandra Feldman was elected president of New York City's 85,000-member United Federation of Teachers. Death claimed Alexander J. Rohan, 74, former AFL-CIO vice president and the retired president of the Printing Pressmen; Francis M. Schaufenbil, 70, president of the United Textile Workers and John Evans, 66, chief executive of the AFL-CIO Housing Investment Trust.

February

In his State of the Union message, President Reagan painted a rosy picture of a prosperous America "on the move," and simultaneously submitted a budget that proposed starving the domestic sector to fund another huge rise in military expenditures. A three-judge federal panel ruled that the Gramm-Rudman-Hollings Act was unconstitutional, setting the stage for a Supreme Court showdown as the Executive Council called for the measure's repeal. President Lane Kirkland hailed the key role played by unions in assuring democratic elections that ousted Ferdinand Marcos and brought Corazon Aquino to power in the Philippines. The Executive Council called for a broad range of government policies to restore full employment, adopted a new procedure to avoid "wasteful" competition between unions in organizing campaigns and created new structures to deal with the changing face of the workplace and unions. Labor stepped up its drive for legislation to stem the import tide, restore benefits for trade-devastated workers and overhaul the tax law to put the wealthy and giant corporations back on the tax rolls. A Bureau of Labor Statistics report showed that union members average $104 a week more than nonunion workers. The Teachers and the Service Employees called for safe removal of asbestos from schools.

People—The Challenger space shuttle tragedy claimed the life of Christa McAuliffe, an AFT member scheduled to be the first teacher in space, and six fellow crew members. Harry J. Van Arsdale Jr., 80, president of the New York City AFL-CIO since 1957, died. Gerald Menapace became UFCW secretary-treasurer to succeed Anthony J. Lutty who retired. Three AFL-CIO department directors retired, with Richard Womack succeeding Civil Rights Director William E. Pollard, Robert M. McGlotten succeeding Legislative Director Ray Denison and Charles McDonald succeeding Organizing Director Alan Kistler.

March

The Supreme Court ruled that the NLRB erred in insisting that nonunion workers could vote in an independent union's election on affiliation with the UFCW and affirmed the agency shop principle for public employees. Congress voted a six-year renewal of the trade adjustment program and strengthened pension insurance for 30 million workers covered by single-employer plans. The House voted a curb on "lie detectors" to prevent employers' from imposing polygraph tests on workers or job applicants. Labor scored impressive on-the-job safety victories in 1985 as eight state legislatures enacted "right-to-know" laws on hazardous substances. Some 30,000 Steelworkers set an industry bargaining pattern by swapping givebacks for a profit-sharing plan at the ailing LTV Steel Corp. and fought off management takeback demands in new contracts to end a 16-day strike at four major can producers. The Occupational Safety & Health Administration came under fire for caving in on record-keeping requirements. The locked-out Oil, Chemical & Atomic Workers warned of serious health and safety hazards at the Geismar, La., plant of the BASF conglomerate.

People—The Theatrical Stage Employees elected Alfred W. DiTolla president after Walter F. Diehl retired. Broadcast Employees & Technicians President Edward Lynch resigned and was succeeded by Vice President James P. Nolan. Former Sec.-Treas. Albert E. Albertoni of the Fire Fighters died at 77. Thomas P. Van Arsdale was elected president of the million-member New York City AFL-CIO.

April

The House voted 229-173 for a labor-backed bill to curb double-breasted contractors. A key 54-44 Senate vote scuttled an anti-union amendment to the Hobbs Act. The Vatican issued a call for job creation to end the "tragic problem of unemployment" and urged the payment of a "family wage" to support workers and their dependents. The Communications Workers and the Electrical Workers set job security and wage increases as their bargaining goals as contract talks opened for 205,000 workers at the American Telephone & Telegraph Co. The NLRB threw out a complaint by the nonunion Associated Builders & Contractors challenging a Building & Construction Trades agreement to build the new General Motors plant in Spring Hill, Tenn. OSHA levied a record $1.4-billion fine on Union Carbide Corp. for 221 safety violations at its Institute, W.Va., facility. An AFL-CIO teleconference focused on strategies to combat management demands for givebacks in health care coverage. With the political spotlight shifting to the states, Kirkland and Sec.-Treas. Thomas R. Donahue stressed the need for full affiliation with state and local central bodies. The United Transportation Union disaffiliated from the federation after an Executive Council subcommittee found it in noncompliance under the Article XX internal disputes procedures. The Ladies' Garment Workers marked the 75th anniversary of the Triangle Shirtwaist Co. fire.

People—The Actors & Artistes elected John C. Hall Jr. as executive secretary. Leo Perlis, 74, former director of the Dept. of Community Services, died. Pioneer organizer Pauline Newman of the Ladies' Garment Workers died at 96.

May

By a lopsided 295-114 vote, with 59 Republicans deserting the Administration, the House passed a get-tough trade bill backed by labor cracking down on countries that deny workers' rights and subsidize exports while closing their markets to U.S.-made goods. Unions representing federal and postal employees hailed final congressional approval of a new three-tier government retirement system. The Environmental Protection Agency's new rule on asbestos removal was denounced by the Public Employees Dept. for being inadequate, out-of-date and weaker than EPA's 1985 standards. The Reagan Administration proposed Davis-Bacon Act changes that building trades unions said would virtually demolish prevailing wage protections on federally funded construction. The Railway & Airline Clerks ratified a new contract with the nation's major railroads. CWA members authorized a strike at AT&T as negotiations deadlocked. The federation warned that corporations were reaping billions of dollars by terminating pension plans and pocketing "excess" assets. Ground was broken for the George Meany Archives at the Maryland labor studies center named in his honor.

People—The Executive Council selected Andrei Sakharov as the recipient of the 1986 George Meany Human Rights Award and called on the Administration to pressure Moscow to release the Soviet civil rights activist from exile. The nomination of Jeffrey Zuckerman as general counsel of the Equal Employment Opportunity Commission was overwhelmingly rejected by the Senate Labor Committee. John A. Pendergrass was confirmed as head of OSHA although labor expressed reservations because of his role with 3M Corp. in fighting cotton dust regulations.

June

Cracking down on management's use of bankruptcy proceedings to void collective bargaining agreements, a federal judge ruled that Wheeling-Pittsburgh Steel Corp.'s scrapping of its contract with the Steelworkers in July 1985 was illegal. The NLRB dismissed charges by the National Right to Work Legal Defense Foundation and approved the agreement between the Auto Workers and General Motors Corp. for its new Saturn plant. More than 15,000 members of the Aluminum, Brick & Glass Workers struck 15 plants of the Aluminum Co. of America after rejecting demands for wage and benefit cuts. Foreign trade, taxes and the budget, organizing and labor's new benefit program held center stage as 2,500 members took part in a marathon "Union Meeting of the Air" beamed via satellite television to 20 local sites across the country. The CWA and the IBEW won strong job security provisions at AT&T to end a three-week strike.

People—Jay Mazur was elected president of the ILGWU to succeed Sol C. Chaikin who retired after 11 years in that post. Nelson H. Cruikshank, former director of the federation's Dept. of Social Security, died at 83. Howard Collins, 59, former president of the United Garment Workers, was killed in an automobile crash.

July

President Kirkland denounced South Africa's racist regime and its brutality against workers after returning from an ICFTU protest mission to that strife-torn country and sharply criticized the Administration's "hypocrisy" in opposing sanctions to end apartheid. In a move to extend economic protection to its members from the workplace to the marketplace, the AFL-CIO formally launched its Union Privilege Benefit Programs with a low-cost credit card and legal services. The AFL-CIO welcomed the Supreme Court's ruling that giving the comptroller general automatic authority to enforce Gramm-Rudman-Hollings budget cuts was unconstitutional, forcing the tough decision-making process back on Congress. Textile employment in eight southeastern states plunged to a 35-year low under the impact of imports. A 28-month strike and boycott of El Al Airlines ended, restoring Machinists to their jobs and ousting strikebreakers hired to replace them.

People—Robert E. Rader, a controversial anti-union lawyer opposed by organized labor, was rejected by the Senate Labor & Human Resources Committee for membership on the Occupational Safety & Health Review Commission. Despite vigorous labor opposition, the Senate confirm-

Continued on Page 3

Labor Day 1986 saw tens of thousands trade unionists on the march, the largest turnout being this mile-long parade in Detroit.

Governments pressed on job creation

Paris—Dealing with persistent mass unemployment in a period when economic growth is not matched with job opportunities, demands the "coordinated action" of employers, governments and unions, the Trade Union Advisory Committee to the Organization for Economic Cooperation & Development declared.

The labor group praised a communique issued by the OECD's labor ministers that placed emphasis on the responsibility governments must assume in order to make a "concerted attack on the problems of unemployment."

In a companion statement, AFL-CIO President Lane Kirkland, TUAC's newly elected president, told labor ministers—including U.S. Labor Sec. William E. Brock—that they must "get the message across to their colleagues in government that bringing unemployment down must be the central objective" of government policy.

That message, he declared, must be transmitted in particular to the conservative finance and economic policymakers in government.

"Unemployment is not only a shameful waste of economic resources and creative human capacity," Kirkland declared. "It is polarizing society in a great many ways, and is above all a problem which spreads fear and insecurity, dividing society, raising tension and hindering desirable change."

Wage increases vital

TUAC expressed agreement with the labor ministers' recognition of "the need to sustain social standards and employment security" and its emphasis on the need for a continuing pattern of wage increases as part of any economic resurgence in the industrialized nations.

But the labor advisory group expressed concern over the trend toward "jobless growth," disagreeing with the labor ministers' contention that the introduction of new technology is a positive way to increase employment. TUAC emphasized that this is not the case today, when advancing industrial and office technology are causing a shrinkage in the workforce.

TUAC represents some 40 major labor centers in the principal industrialized countries of North America, Western Europe and Asia. It evolved out of organized labor's participation in the Marshall Plan.

By dawn's early light

Shipyard workers assemble for their daily pre-dawn solidarity march in Portland, Ore., to protest wage cutbacks imposed by Dillingham Ship Repair of up to $6 an hour and the elimination of craft jurisdictions. The nine unions of the Portland Metal Trades Council at Dillingham are pursuing unfair labor practice charges. Only about 150 of the yard's 900 employees are still working. The rest have been laid off.

Court upholds hiring hall obligation

Enforces NLRB order for back pay to union workers

An iron and steel supplier in Yuma, Ariz., violated the Taft-Hartley Act when it terminated welfare and pension fund contributions and refused to continue hiring workers through a union hiring hall after its contract with Iron Workers Local 75 expired.

The U.S. Court of Appeals for the District of Columbia Circuit affirmed the judgment of the National Labor Relations Board, which ordered Southwestern Steel & Supply Inc. to compensate in full all workers "who were denied an opportunity for work because of its unlawful refusal to continue using the hiring hall."

Southwestern had agreed to hire workers from the local union's hiring hall and to contribute to the California Iron Workers pension and welfare plans "for the period provided in the agreement and from year to year . . . unless written notice revoking this agreement is given . . . at least 60 days prior to any anniversary date."

But when the contract expired, Southwestern began hiring nonunion workers and stopped making contributions to the funds. The Iron Workers filed unfair labor practice charges with the NLRB.

In its appeal for review of the NLRB decision, Southwestern acknowledged that certain conditions of employment are "mandatory subjects of bargaining."

But the company argued that the hiring hall provision is included in a short list of exceptions to that rule. However, the NLRB has limited the exception to union shop clauses, dues checkoff plans and some no-strike agreements, none of which remains in effect after a collective bargaining agreement expires.

The appeals court rejected Southwestern's contention and affirmed the Board's decision that hiring hall clauses remain in force after a contract expires while the parties continue bargaining. The court also affirmed the NLRB's remedy requiring compensation for union members "who have been harmed by the company's refusal to comply with the hiring hall provision."

Similarly, the appeals court rejected Southwestern's claim that the union had waived its right to bargain over the pension and welfare fund contributions. The "qualified right to terminate" the plan would take effect "only after the company has complied with its statutory duty to bargain," the court held.

Frank Garrison heads Michigan Fed

Lansing, Mich.—Frank Garrison, an Auto Worker whose career closely paralled that of the late Sam Fishman, has been elected to serve out Fishman's term as president of the Michigan AFL-CIO.

Garrison, the 52-year-old Michigan director of the UAW's Community Action Program, was the unanimous choice of the state federation's general board.

A native of Huntington, Ind., Garrison joined UAW Local 699 in 1952, when he started work at the General Motors steering gear plant in Saginaw, Mich. After military service, he returned to the GM plant and was elected to a number of local offices before being appointed a UAW international representative in 1972.

Garrison was subsequently assigned to the UAW's Michigan CAP staff, as legislative director and assistant to Fishman. After Fishman's election as executive vice president of the Michigan AFL-CIO in 1982, following the UAW's reaffiliation, Garrison succeeded him as Michigan CAP director.

Workers rode economic rollercoaster in 1986

Continued from Page 2

ed Daniel A. Manion as a federal appeals court judge by a 49-49 tie vote. The Maintenance of Way Employees elected Geoffrey N. Zeh to succeed Ole M. Berge as president.

August

By a slim eight-vote margin, the House failed to override President Reagan's veto of import limitations on textiles, clothing, shoes and copper. The "dismal economic performance" spawned by flawed Administration policies prompted the Executive Council to renew its call for strong full-employment measures. Some 22,000 Steelworkers were locked out by USX Corp. although the USWA offered to continue working under the terms of the previous agreement while fighting management's demand for wage reductions. Reagan Administration plans to lift the 44-year-old ban on industrial homework was assailed by the AFL-CIO and affiliated unions as opening the gate to the return of kitchen sweatshops and widespread child labor abuses. Public sector collective bargaining agreements in the first half of 1986 averaged 6 percent a year over the term of the contracts. The CWA and the IBEW settled with the "baby Bells"—the regional telephone companies created after the 1984 court-ordered breakup of AT&T. Some 7,500 members of the Woodworkers and Carpenters ended a six-week strike against Weyerhaeuser Corp.

People—John J. Barry was elected president of the Electrical Workers to succeed Charles H. Pillard who retired. Tom Kahn was named to head AFL-CIO Dept. of International Affairs as Irving J. Brown retired.

September

In parades and rallies across the country, unionists marked Labor Day, underscoring Kirkland's message that a reversal of Reagan's disastrous economic policies were needed to raise the flagging American standard of living. The national poverty rate remained stuck at 14 percent with 33 million losing the battle for economic survival. Congress put its final seal of approval on tax reform legislation that labor said went a long way toward restoring fairness and equity. The House voted to mandate labor protection provisions for airline employees trapped by mergers and acquisitions. The Senate approved a union-sought bill to compel EPA to set standards for safe removal of life-threatening asbestos from schools and public buildings. The National Air Traffic Controllers took off as the federation's newest union. Congress voted to impose a settlement in the lengthy dispute between the Maintenance of Way Employees and Maine Central Railroad. The Furniture Workers voted to merge with the Electronic Workers.

People—The Senate confirmed William H. Rehnquist as chief justice of the Supreme Court and Antonin Scalia as an associate justice. Alvin E. Heaps, 66, died and was succeeded as president of the Retail, Wholesale & Department Store Union by Lenore Miller. Death claimed Daniel Healy, 78, retired director of AFL-CIO Region I, and Frank Nelson, 75, former president of the Television & Radio Artists.

October

Congress voted overwhelmingly to override President Reagan's veto and impose tough sanctions on South Africa until its racist policies are eliminated. Defying another veto threat, Congress approved an expanded Superfund program to accelerate the cleanup of the nation's toxic dump sites. An immigration reform measure was enacted, including labor-sought provisions to crackdown on employers who hire illegal aliens and granting amnesty to those who crossed the border illegally but who have now put down roots in American communities. Revelations that the Reagan Administration was encouraging American firms to shift their assembly operations to Mexico spurred congressional action to bar the use of taxpayers' money for this purpose. The Clothing & Textile Workers sued corporate raider David Murdock for draining the pension funds of retirees at Cannon Mills in Kannapolis, N.C.

People—Railway & Airline Clerks President Richard I. Kilroy was elected to head the Railway Labor Executives Association. Jack F. Otero, a BRAC vice president, was elected to head the Labor Council for Latin America Advancement, succeeding Henry L. Lacayo who did not seek re-election.

November

In a massive repudiation of the Reagan record, the American voters ousted the Republicans from control of the Senate after six years, giving the Democrats a 55-45 majority and widening the Democratic margin in the House by five seats. The Republicans gained enough gubernatorial races to pull almost even with the Democrats, but the latter expanded their control of state legislatures. Two-thirds of the COPE-endorsed candidates won their congressional and gubernatorial races. In referendum issues, labor scored tax and safety gains but lost a tough "right-to-work" fight in Idaho. General Motors, in a move directly attributed to the rising import tide, announced it will layoff 29,000 UAW members over the next two years. America's Catholic bishops, in a document five years in the making, called for a full-employment economy "with adequate pay and decent working conditions," branding poverty a "social and moral scandal." The Telegraph Workers and Typographical Union merged with the CWA.

People—AFL-CIO President Kirkland became the first American union leader to be elected president of the Trade Union Advisory Council to the Organization for Economic Cooperation & Development. Death claimed John H. Lyons, 66, president-emeritus of the Iron Workers; S. Frank Raftery, 57, former president of the Painters, and Edward F. Brabec, 55, president of the Chicago AFL-CIO.

December

The trade deficit, heading toward an all-time record, drove the U.S. deeper into debtor-nation status, as reports showed that other nations continued to take advantage of this nation's "open-door" trade policy while putting major stumbling blocks in the way of American goods reaching their consumers. The International Trade Commission told Congress that programs supposed to promote improved economic conditions for the U.S. and Mexico were failing and that workers on both sides of the border bear the brunt while corporations prosper. A major corporate campaign prodded Kaiser Permanente Health Plan of California to settle a three-week strike of the Service Employees and Marine Engineers.

People—Sam Fishman, president of the Michigan AFL-CIO died at age 67.

Asbestos alert documents risk to workers' wives

Chicago—Wives of pipe insulators who use asbestos on the job risk lung damage from inhaling the fibers their husbands carry home on their clothes, according to a new study which concludes that spouses should be regularly screened for asbestos-related diseases.

In a three-month study of 93 wives of members of Asbestos Workers Local 17, Dr. Lee Sider and Dr. Elizabeth Holland of Northwestern University found that 20 of the women showed signs of lung disorders associated with asbestos exposure. Chest X-rays revealed a thickening of the pleural surface, a thin membrane enveloping the lungs.

All of the women included in the research reported at least a 20-year indirect exposure to asbestos, said Sider, who is also director of chest radiology at Northwestern Memorial Hospital.

The findings were reported to the annual meeting of the Radiological Society of America, and will be published in a medical journal early next year.

The screening of the women involved a chest X-ray, a pulmonary function test and answering questions related to asbestos exposure. The screening was voluntary and in conjunction with that provided by the local for about 750 active and retired members, Local 17 Business Manager Louis Pauly reported.

Since that screening, Pauly said, four members have died of asbestos-related diseases. "Every single person over age 50 had a problem," Pauly said. The average age of the members in the study was around 55, he noted.

Slider's study reinforces earlier findings tying asbestos-related diseases in spouses to the fibers carried home on their husbands clothes. He said that people who develop serious lung disease from incidental asbestos exposure deserve the same rights of compensation as those who work directly with the material, including annual chest X-rays.

He added that if the women studied "progress to the point of functional impairment, they may have a somewhat occupationally imposed problem."

Millions of dollars in lawsuits have been filed against the asbestos industry and employers by workers suffering lung disorders caused by the carcinogen.

In a related development, a study of 2,500 former and current merchant seamen found 35 percent showed X-ray evidence of lung abnormalities generally associated with asbestos exposure.

The study, conducted by the noted researcher Dr. Irving Selikoff of the Mt. Sinai School of Medicine in New York City, found the highest rates of lung scarring, thickening of lung tissue and other symptoms among those workers who had spent the longest time at sea. The report found also that about one of every three former ship engine-room workers studied showed evidence suggesting asbestos exposure.

Santa Claus hears requests from children at UFCW Local 770 party.

Toys and candy are packed for children in war-ravaged Beirut, Lebanon, as part of a union-backed No Greater Love project.

Union Santas spread holiday cheer

Members share gifts with lockout victims and jobless

By Candice Johnson

During the holiday season, union members across the country made an extra effort to spread joy and good will throughout their communities, from southern California to frosty upstate New York.

Food banks, fuel programs and other projects that operate year-round took on a special look this holiday season, as contributions from trade unionists and communities added turkey with all the trimmings, Christmas cookies and other holiday goodies to the grocery baskets passed out to unemployed workers and their families and gave special attention to the homeless.

And because "Christmas is meant for children," trade unionists also made certain that Christmas stockings were filled and that Santa made a visit to holiday parties held for union members' families.

Following is just a sampling of the holiday cheer offered by union members to their friends and co-workers:

Greetings of "Feliz Navidad" rang out in Los Angeles as the children of unemployed packinghouse workers whispered their Christmas wishes to Santa Claus at a holiday party sponsored by Food & Commercial Workers Local 770.

More than 200 children, whose parents have been idled by strikes or layoffs at three area meat-packing plants, received an early Christmas treat of toys and candy donated by union members.

Christmas cheer

UFCW members on the East Coast also were busy spreading Christmas cheer. Joined by Teachers Local 4261, UFCW Local 400 assembled and distributed more than 750 food baskets to needy families in the Tidewater, Va., area.

Donations from area food markets included 4,000 pounds of potatoes, 20 crates of bananas, 817 pounds of carrots and staple goods. Local 400 added bread, canned goods and prepared dinners to round out the holiday packages that were given to local churches for distribution.

In Seattle, contributions from area unions made the holidays happier for more than 200 unemployed families who received a bag of groceries, holiday cookies and other trimmings and a gift certificate. Volunteer union members wrapped presents and bagged groceries for the food baskets and toys distributed by union members, retirees and volunteers from the King County United Labor Agency.

Many union members shared their Christmas spirit by "adopting" a needy family during the holiday season. In Little Rock, Ark., members of Rubber Workers Local 883—employed at Armstrong Rubber Co.—adopted one family for each work shift, while Electrical Workers Local 1136—representing workers at North American Philips Lighting Corp.—sponsored a happy holiday for 10 families, including 42 children. And for the second year, the staff of the New York AFL-CIO adopted a family in Albany, N.Y., making contributions toward presents, clothing, food and toys.

Holiday parties

Communications Workers Local 6508 sponsored a holiday party for patients of the North Little Rock, Ark., Handicapped Services while CWA Local 3903 in Decatur, Ala., donated money for gifts to brighten the holidays for a family in Minor Hill, Tenn.

More than 900 steelworkers in the Chicago area, locked out by the USX Corp., each received Christmas greetings and a certificate for a holiday turkey from the Chicago AFL-CIO. The central body also made a contribution to the USWA District 31 fund for locked-out members and to the Tribune Strikers' Holiday—to benefit members of the Typographical Union and Graphic Communications Union on strike against the Chicago Tribune.

In Mobile, Ala., community residents held a Christmas party for the children of idled workers at USX-owned Warrior & Gulf Navigation Co., complete with toys and candy. The safety engineering and equipment firm has refused to settle its dispute with members of USWA Local 4754 until USX ends its lockout of more than 22,000 workers.

The children of locked-out USX workers in Lorain, Ohio, shared some Christmas cheer at a holiday party sponsored by USWA Local 1104 while local building trades unions showed their Christmas spirit with donations to the USX workers fund.

Workers at the Wilkes-Barre, Pa., Citizens' Voice—a daily paper started by newspaper unions eight years ago following a strike against the Times Leader newspaper—joined in the Valley Santa project, a community program that distributed toys to 1,400 needy children this year.

The Fire Fighters, Iron Workers, Painters and Sheet Metal Workers joined in a special holiday project organized by the nonprofit group No Greater Love. The unions' donations purchased 1,000 toys and 5,000 lollipops that were distributed to Christian and Muslim children in Beirut, Lebanon.

Letter Carriers in Owensboro, Ky., exchanged their uniforms for those of Santa's helpers, building toys for children and repairing bicycles, washers, dryers and appliances for needy families. During the holiday season, the members of Letter Carriers Local 234 joined in a local radio station's "Christmas Wish" program, by "adopting" families for the holidays and meeting other needs, like a winter's supply of heating oil or transportation so a family could be together on Christmas.

In Utica, N.Y., members of Letter Carriers Local 375 staffed the Salvation Army's Christmas kettles, while Albert Nous, a retired letter carrier from Troy, N.Y., maintained his 23-year Christmas tradition of collecting funds for children at the St. Francis Orphanage in Pusan, South Korea. This year Nous collected donations totaling $10,500.

Jaruzelski regime blocks Kirkland on visit to Walesa

AFL-CIO President Lane Kirkland and a federation delegation were denied visas to visit Poland after refusing to be coerced by the Jaruzelski regime into meeting with leaders of the government-sponsored puppet unions.

The federation officials sought the visas in order to meet with Solidarnosc Chairman Lech Walesa. But the condition imposed by the Polish government for letting the American unionists into that country would have required them to meet with the "official trade unions" created by the government after the communist regime crushed Solidarnosc.

"As a matter of principle, we refused to do so," Kirkland declared. "We will not be coerced by any government into meeting with 'company unions.' We reject the assertion of the Polish government that Solidarnosc does not exist and that the new 'unions' speak for Poland's workers."

American labor, he emphasized, continues to regard Solidarnosc, Poland's free trade union federation, as "the authentic voice of Poland's workers."

Kirkland had hoped to meet with Walesa to discuss issues the Polish trade union activist raised in recent letters regarding American sanctions against Poland for its continued violations of trade union and human rights.

Seeking guidance

Such a discussion, Kirkland said, would have followed the same pattern of his meetings in South Africa last year with the leaders of the black trade union movement "to seek their guidance on appropriate American policy toward their country." Those South African meetings reinforced labor's support for a crackdown on the Pretoria regime that led Congress to enact tough South African sanctions over President Reagan's veto.

Despite the Jaruzelski regime's denial of the requests for visas, Kirkland stressed, the American trade union movement will "continue to provide Solidarnosc with all the material and moral support of which we are capable."

The AFL-CIO at its last convention affirmed Solidarnosc as the "only authentic voice" of the Polish workers, stressing that it represents "the democratic aspirations of the overwhelming majority of the Polish people."

Failing economy responsible for increase in family poverty

Continued from Page 1

ment the paychecks of the working poor, the report noted.

The JEC study made clear that family instability is a factor in poverty and a cause of concern. But it stressed that it would be "incomplete and misleading" to downplay the close relationship between economic policies and poverty.

It noted that economic forecasts of continued slow-to-moderate economic growth mean that "poverty rates will fall very slowly" and a new recession will increase poverty "very sharply."

The committee continued its exploration of poverty in America by hearing from an author of the "economic justice" statement of the National Conference of Catholic Bishops, and from a critic of that document.

Archbishop Rembert Weakland of Milwaukee told the panel that government must play a key role in creating "new jobs with adequate pay and decent working conditions," along with other measures to reduce poverty.

The critic was a former member of President Reagan's Council of Economic Advisers, William A. Niskanen Jr. He said the bishops were ignoring the Bible and trying to bring back the "failed" Great Society programs initiated by President Lyndon Johnson.

It was under the Johnson Administration that a "war on poverty" was launched that substantially reduced the nation's poverty rate.

Tool orders nosedive

Mixed signals blur outlook for economy

There were sharply contradictory signals about the nation's economic outlook as machine tool orders took a sickening 26.3-percent plunge in November while the leading indicators, bounding on the higher prices for key materials, rose 1.2 percent.

Machine tool orders are a gauge of industry's long-range production plans, and the drop from $180 million in October to $132.7 million in November indicated a shrinkage in capital spending plans by major manufacturers.

As for the leading indicators—which are supposed to be the main barometer of future economic performance—part of the improvement was linked to such financial components as stock prices and the money supply, which have meaning to bankers and investors but don't translate into gains for workers and their families.

Signs of inflation

Analysts were wary of the jump in the indicators for another reason. Rising prices for such raw materials as lumber, iron and steel scrap and other sensitive materials, they said, could be a forerunner of a new round of inflation that would be a drag on economic growth.

In other developments:

- Powered by a big military buildup and a last-minute rush to take advantage of expiring tax breaks, orders for big-ticket durable goods rose 5.9 percent in November. It was the biggest rise in two years. Without the defense orders, the increase would have been a much more modest six-tenths of 1 percent.
- Sales of new single-family houses dropped 2.2 percent in November, the seventh monthly decline in eight months. However, sales through the first 11 months are still stronger than during the same period last year, running at a seasonally adjusted annual rate of 661,000 units—a 9-percent rise over the 639,000 level in 1985.
- Consumer prices increased two-tenths of 1 percent in November, as rising food prices offset continued declines in energy costs. New car prices shot up a sharp nine-tenths of 1 percent reflecting both the introduction of new models and a cutback in special financing concessions. The rise in medical care costs slowed to four-tenths of 1 percent putting them 7.5 percent above the year-ago mark.
- Real average weekly earnings rose eight-tenths of 1 percent in November. It was the largest monthly gain since March and resulted from increases in both hours worked and pay levels that more than compensated for the slight advance in consumer prices. Despite the gain, real earnings were still far below the 1979 level.

Open house

Pennsylvania AFL-CIO President Julius Uehlein misses most of the splash as Sec.-Treas. Judith Heh dedicates the state federation's new headquarters in Harrisburg, Pa. The new office is located a few doors from the state capitol "to ensure that labor remains at the center of political and legislative activity on issues important to Pennsylvania workers," Uehlein said. The building also houses legislative offices of several AFL-CIO affiliates.

New Congress to put priority on vetoed clean water bill

Continued from Page 1

averted only because Congress adjourned on Oct. 18, enabling Reagan to kill the bill by withholding his signature.

Republicans, who then controlled the Senate, were fearful that a pre-election veto of a popular bill might hurt GOP candidates for Congress. But a "delay" in completing the Senate paperwork on the bill kept it from reaching the President's desk so that the veto announcement would not come until after the election.

Another candidate for early action by Congress is a union-urged renewal of funding for highway and mass transit programs. The program, funded largely from the federal gasoline tax and other road-user fees earmarked for the Highway Trust Fund, expired on Sept. 30. While states have been able to draw on some carryover funding, the delay has set back timetables for some highway projects.

Differences over easing the 55-mile-an-hour speed limit and some other issues deadlocked a House-Senate conference in the last Congress.

Because of a new timetable imposed by the Gramm-Rudman-Hollings deficit-reduction law, President Reagan is expected to send an abbreviated budget proposal to Congress on the eve of the Jan. 6 opening of Congress. His more detailed budget document will be sent along at the end of January, as has been the custom.

To stay within the Gramm-Rudman ceilings and provide the military buildup to which the Administration is committed, the President is expected to propose both domestic spending cuts deeper than Congress is likely to approve and the sale of government facilities for a one-time revenue boost.

Added flexibility

The nullification by the Supreme Court of the law's provision for mandatory cutbacks in federal spending, with half coming from the defense segment of the budget, has given Congress somewhat greater flexibility in achieving deficit reduction.

One of the budget battles will involve the Reagan Administration's repeated attempt to eliminate the last vestige of shipbuilding assistance—a union-supported loan guarantee program that enables ship owners who "build American" to obtain government insurance through the Maritime Administration for 75 percent of the construction loans they obtain from private lenders.

Unions level coercion charge at NBC's political action fund

Unions representing actors, newscasters, writers, musicians and other performing artists and technicians expressed their outrage at a proposal by the National Broadcasting Co. to set up a political action fund to which NBC employees would be expected to contribute.

In a memo to network employees, NBC President Robert C. Wright suggested the establishment of the political action fund, and implied that those workers not contributing to it might be considered disloyal.

The Arts, Entertainment & Media Industry Committee of the AFL-CIO Dept. for Professional Employees assailed the "insensitivity of NBC management," noting that radio and television networks are allowed under government regulation to profit from the use of the public airwaves.

The DPE rapped the network for "its failure to understand that those airwaves are not the property of any political party or corporate point of view."

In a statement, the unions said, "We are dismayed and outraged at the proposal by NBC to institute a political action committee to which network employees would be expected to contribute. Our organizations vigorously oppose this plan or any plan which would formally, or by management pressure, try to force our members to give money to a fund of this type."

Objectivity compromised

Stressing that such contributions "would compromise the integrity and objectivity" of workers involved in producing the news and other shows, the committee said, "We are shocked at the suggestion that failure to contribute to such a fund would mean that an employee is disloyal to the company."

"To look at a network as just another company selling products and services is an incredible failure to understand the traditions of broadcasting or journalism and the fact that a network is made up stations licensed by the government as a public trust," the committee said.

The unions participating at the meeting included the Television & Radio Artists, Screen Actors Guild, Musicians, Actors' Equity, Theatrical Stage Employees, Communications Workers, Guild of Musical Artists, and Writers Guild of America East.

Economic lag tied to Reagan's failures

Continued from Page 1

that public sector spending is not a burden on the economy and that there is a need for both public and private investment to lift the nation out of the economic doldrums and improve the quality of life. "The real issue," the 44-page study concluded, "is not whether government has a vital role to play, but what that role should be."

A Washington press conference introducing the report, titled "No Longer Leading," heard this litany of problems:

- Auto Workers President Owen Bieber said workers and their unions must assume a larger role in business decisions because corporate leaders are "notoriously unconcerned with long-term outcomes." At the same time, he said, labor must see that political leaders forge "a long-term plan for our economic future."
- Steelworkers President Lynn R. Williams expressed concern over the continued shift of the economy from well-paying industrial jobs to low-paying service sector employment. He called establishment of the institute a "significant turning point toward hope, opportunity and prosperity."
- State, County & Municipal Employees President Gerald W. McEntee said that in the past six years, "the middle class—the backbone of the world's most powerful nation—have been losing ground." Real wages have fallen, he said, and "our children face a future pinned between the world's largest trade and budget deficits."
- Mine Workers President Richard Trumka called for "a social contract in which all have a stake," and emphasized that "a strong national defense must rest on a strong national economy."
- EPI President Jeff Faux said that "after more than a decade of anti-government rhetoric and public policies . . . it is hardly surprising that the United States is no longer leading in major areas of economic and quality of life performance."
- Prof. Lester Thurow of the Massachusetts Institute of Technology pointed out that when Reagan took office in 1981, the nation held $150 billion in net capital assets and that when it leaves office two years from now the nation will be in hock to the tune of $650 billion as a result of a record budget deficit and a trade imbalance that he called "the black hole of the nation's economy."
- Prof. Ray Marshall of the University of Texas, who served as Secretary of Labor in the Carter Administration, called for developing a new consensus of "creative pragmatism" whereby labor, business and government can join in developing a national industrial policy. Policy-making can't be left to bankers and economists, he said, and "the worker's voice is needed" to help restore economic vitality.
- Prof. Ernest Wilson III of the University of Michigan and now a member of the World Bank blamed the Third World debt crisis for much of the drag on the American economy. To pay interest on the huge debts they owe U.S. bankers, he said, these countries have boosted exports to America and cut back on imports of U.S.-made goods. "The national interest and not the interest of the banking sector alone must guide national policy," he declared.

In addition to AFSCME, UAW, USWA and UMWA, unions supporting the new institute include the Communications Workers, Machinists, Service Employees and Food & Commercial Workers. Financial backing has also come from the Bydale Foundation, Field Foundation, Joyce Foundation and Villers Foundation.

Charles Clark dies at 60, ACTWU's Canada director

St. Catherines, Ont.—Charles "Bud" Clark, Canadian director of the Clothing & Textile Workers, died after a heart attack Dec. 6. He was 60.

Clark had served as a Textile Workers Union of America local president, and later business agent of the southwestern Ontario textile joint board. He was elected an ACTWU vice president in 1976 when TWUA and the Clothing Workers merged. He was named co-director for Canada in 1977 and became director in 1986. He had been a vice president of the Canadian Labor Congress since last February.

IBEW projects job growth in national pact

The Electrical Workers negotiated a national agreement with the National Electrical Contractors Association aimed at increasing job opportunities for IBEW members working on electrical transmission line construction and servicing.

IBEW President John J. Barry said the national agreement is intended to recapture transmission line work, associated substations and equipment work that had been lost to nonunion contractors in recent years.

Barry said the accord will help combat the threat of nonunion employers by offering union contractors greater flexibility in exchange for job security and increased opportunities for workers.

Job protections

The agreement gives employers "significant flexibility in the portability of manpower, scheduling of work, job manning requirements and other economic advantages" in exchange for job protection for union workers and restrictions on subcontracting. It also provides for grievances and work disputes to be resolved by the Council of Industrial Relations, a labor-management industry group.

The model contract is available on a job-by-job basis only to contractors "who are 100-percent union," the IBEW said. When requested by a contractor, the accord will replace any local agreements for line transmission work and will remain in effect from year to year unless terminated by either side.

Sakharov spurs renewed effort to free all dissidents

Continued from Page 1

favorably to our request to permit Marchenko to visit the United States, he might be alive today."

Sakharov was chosen by the Executive Council earlier this year to receive the 1986 George Meany Human Rights Award and the federation invited him to come to the United States to receive that honor.

Kirkland said that he never received a reply to the invitation, raising the question of whether the USSR ever transmitted the message to Sakharov during his internal exile.

The AFL-CIO intends to renew the invitation, Kirkland said, in the hope that the Kremlin will now allow the human rights activist to visit America and be honored by the federation.

When the award was voted by the council in May, Kirkland conveyed the news to Sakharov's wife, Yelena Bonner, who was visiting Washington after coming to this country for heart surgery. At that time, Kirkland recalled that the Soviets had prevented the human rights activist from attending the federation's 1977 convention and made it clear labor would continue to invite him here until the Kremlin relents.

Winning touch

Jacquelyn Johnson, a shop steward of Service Employees Local 250, is congratulated by AFL-CIO President Lane Kirkland during a trip to Washington—the first prize in a voter registration contest sponsored by the San Francisco AFL-CIO. Johnson signed up 50 new voters for the November elections, winning the trip plus a plaque. Left is the central body's assistant secretary, Jeffrey Greendorfer.

More workers threatened by layoffs, plant shutdowns

Continued from Page 1

sometime, said it will continue working to preserve its members' jobs. It held out hope for congressional action to limit imports of steel.

Meanwhile, in Monessen, Pa., the bankrupt Wheeling-Pittsburgh Steel Corp. announced on Christmas Eve that it would close its five-year-old steel rail mill by April, ending the jobs of the remaining 200 workers. It cited competition from imports and a falling domestic market.

A temporary layoff of a quarter of the 879 workers at bankrupt Phoenix Steel Corp. mill in Claymont, Del., was announced in early December. It will last 90 days while the company seeks a buyer.

Layoffs at General Motors involve the closing of nine plants and parts of two others over the next few years and GM President Roger Smith said the company would be assessing the need for even further cutbacks. In addition, automakers announced short-term layoffs of some 24,800 workers for periods of one to two weeks, and 2,100 workers at GM's Lakewood, Ga., plant will be off for 16 weeks.

Impact on town

In Silsbee, Tex., the Kirby Forest Industries' plant—the area's largest employer—closed its gates Jan. 1, laying off 840 workers in a town of 8,000. Kirby, which consists of a sawmill and plywood manufacturing plant, was recently purchased by Louisiana-Pacific Corp. from Santa Fe Southern Pacific.

The loss of jobs in this small town will drain $30 million annually from the local economy.

Meanwhile, in Owensboro, Ky., only 14 workers remain on the job at the North American Philips plant which produced light bulbs. That plant will shut down completely in early 1987, the victim of corporate decision-making and foreign imports, including imports from Philips' overseas operations.

The 146 workers already on layoff and those still in the plant are members of the Allied Industrial Workers Local 928. Local President Ora Capps said the firm announced the shutdown on Nov. 6 "without the union having an opportunity to bargain with the company over possible steps to save the plant."

Big dividends

"Thinning of the ranks" often pays big dividends for top managers. Firestone Tire & Rubber Co. threatened more layoffs from its worldwide workforce, while company Chairman John Nevin pocketed part of a $5-million bonus—the reward for his restructuring efforts that closed 10 plants and thousands of workers.

Whirlpool Corp. will close four plants in St. Joseph, Mich., by mid-1988, ending the jobs of 1,050 workers. In its place, the company will build a product engineering headquarters on part of the property and seek developers to turn the rest of it into a tourist and boating complex. Machinists Local 1918 President Keith Craig said the workers had hoped another manufacturing concern would have taken over the waterfront site. "As far as the normal worker, this doesn't offer much," Craig said.

Some 350 members of Retail, Wholesale & Dept. Store Union Local 256 at U.S. Playing Card Co. in Norwood, Ohio, have been locked out since Nov. 30 in a dispute over company demands for a $50-a-week pay cut, a reduction in medical, dental and vision coverage, cutbacks in vacation, holiday and funeral leave and elimination of life insurance for retirees. RWDSU members in Reno, Nev., picketed casinos there in support of the Norwood workers.

Gillette Co. announced a week before Christmas that it will lay off 2,400 workers and sell some of production units to help cover its costs in thwarting a takeover bid by Revlon Group Inc., which pocketed $34 million in profits from its unsuccessful bid.

ATU undercut as Greyhound sells bus line

Phoenix—The Greyhound Corp. sold its bus operations to an investor group shortly after reaching tentative agreement with the Transit Union on a three-month extension of its current contract.

The investor group, led by Fred G. Currey of Dallas, a former chief executive officer of Trailways Inc. and chairman of Buslease Inc., will pay more than $350 million for the bus line.

ATU President James La Sala said he would meet with the prospective owners in Dallas on Jan. 6. Currey has contended the buyers are under no obligation to negotiate with the union. "We're buying the assets of the company, not the contractual obligations," he said.

La Sala pointed out that the union's contract with Greyhound contains a successorship clause that would keep the agreement in force after the takeover.

The ATU had reached tentative agreement on the extension in the midst of a strike authorization vote by the 7,500 drivers, clerical and maintenance workers it represents at Greyhound. Earlier they voted down a two-year contract offer that would have cut pay scales 9 percent, eliminated cost-of-living increases and introduced new work rules.

In 1983, ATU members at Greyhound struck the firm for seven weeks before taking an 11.8 percent pay cut. Last year, the union reached tentative agreement one year early on a new four-year package to freeze pay levels. Some job protections were included in the proposal, but the company would have been permited to phase out a quarter of the jobs by selling or leasing the bus terminals. The contract was rejected by the members, so Greyhound instituted its leasing scheme.

Arbitration ruled only remedy for shopcraft dispute

Chicago—A federal district judge barred rail shopcraft unions from striking over the elimination of locomotive maintenance jobs, but ruled that management can't go ahead with its job-destroying plan unless it prevails in an arbitration case.

Judge Charles P. Kocoras granted a preliminary injunction sought by the National Railway Labor Conference, the management bargaining group of most of the nation's railroads. He said the dispute should be resolved under the grievance procedure of the Railway Labor Act, which requires arbitration of all "minor disputes."

Three shopcraft unions—the Electrical Workers, Machinists and Boilermakers—insisted they were free to strike because contracts for locomotive services entered into by the Burlington Northern and the Illinois Central Gulf railroads represented unilateral changes that bypassed the bargaining table.

Company scheme

The Burlington ploy involved contracting with a third party for the purchase of power equal to the output of 100 new-model diesel locomotives. The railroad thus would not have any responsibility for the maintenance of the locomotives providing the power. Although the agreement covered just a portion of Burlington's locomotive needs, the railroad acknowledged that it envisioned eventual abolition of its locomotive fleet.

Illinois Central entered into a simpler contract with another financial firm that would provide and maintain locomotives for use on the railroad.

Both the IBEW and the IAM suspended ratification votes on a national railroad agreement last November after learning of the contracting-out subterfuge, and the Boilermakers held up the final tally of ratification ballots.

Judge Kocoras said the railroads were obligated to maintain existing conditions until the dispute is resolved through arbitration.

There is "no doubt" that the shifting of locomotive maintenance to third parties would cause "irreparable injury" to shopcraft employees, he said.

Schedule of Labor Studies Center courses

The George Meany Center for Labor Studies will offer 12 workshops during January and February. The schedule:

Occupational Safety & Health, Jan. 4-9—An institute to help unions to handle problems relating to chemical and physical hazards in the workplace.

Organizing Techniques, Jan. 11-16—An introduction to basic organizing skills for new organizers and a refresher course for veterans.

Labor Law in the Construction Industry, Jan. 11-16—An institute focusing on new legal issues in construction labor law, practical applications through case studies.

Computers for Local Unions, Jan. 18-22—An institute to provide union staff with information about the uses of mini- and micro-computers.

The Craft of Negotiating, Jan. 18-23—A study of negotiating tactics that avoid impasses in bargaining, grievance and leadership situations.

Effective Leadership Styles, Feb. 1-6—An institute on leadership styles that teaches participants how to recognize their own styles and modify them when appropriate. Individual coaching and video replays are provided.

Pension Trustee Training for Public Sector Unions, Feb., 2-6—An institute for full-time union officers and staff who serve or expect to serve as pension fund trustees or pension fund board members.

Negotiating Profit Sharing & ESOPs, Feb. 8-13—A new program for full-time officers/staff on how to design and write profit-sharing and ESOP programs and analyze financial documents.

Arbitration Techniques, Feb. 8-13—A workshop on presenting mock cases before professional arbitrators. Sessions will be videotaped.

Basic Labor Law, Feb. 22-27—A workshop on labor law fundamentals, current trends and new decisions on bargaining, servicing and union administration.

Newswriting & Editing, Feb. 22-27—For union editors on the basics of publishing journals and other publications.

Teaching Techniques for Labor Education, Feb. 22-27—A program to provide union staff with skills to teach educational programs.

AFL-CIO affiliates using the campus in January for their own staff training programs are: Teachers, Jan. 4-9; Communications Workers, Jan. 4-23; COPE, Jan. 11-16; AFL-CIO Dept. of Community Services, Jan. 13-14; CWA, Jan. 15-16; American Institute for Free Labor Development, Jan. 18-Feb. 21, and AFL-CIO Industrial Union Dept., Jan. 20-21.

Members of AFL-CIO affiliates will be in residence Jan. 25-30 on the campus while working for credits on bachelor of arts degrees from Antioch University through the center's continuing college degree program.

More information about labor studies programs is available from Robert Pleasure, executive director, George Meany Center, 10000 New Hampshire Ave., Silver Spring, Md. 20903. Telephone 301/431-6400.

EDITORIALS

Hope for a New Year

AT THE START of a new year, we dare to hope. Reason may whisper that 1987, like its predecessors, will bring setbacks as well as progress. But for the moment, the page is unmarred and everything is possible.

Well, almost everything. There are deep-seated problems that won't disappear with the stroke of a pen. All the more reason for making a real start to their solution.

In much the same words, the AFL-CIO greeted 1986. Obviously, the bright hopes did not materialize although the year was not without its redeeming features.

Shamefully, unemployment hovered near the same 7-percent level throughout the year. Even more shamefully, neither the White House nor Congress appeared unduly alarmed.

Incredible as it seems, some even applaud the persistence of such a high level of joblessness. Consider this callous viewpoint as expressed in the economic newsletter of Prudential-Bache Securities: "We don't want to see employment head up. We want U.S. companies to stay lean. An increase in employment is, to us, a sign of a decrease in productivity."

TO THE TRADE UNION movement, unemployment anywhere close to 7 percent is obviously a sign of wasted human resources and of a still-sick economy. Before the Reagan era reintroduced the nation to double-digit unemployment, a jobless rate of 7 percent would have been recognized as the flashing danger signal of a recession.

If it were only for humanitarian considerations, Congress would be obligated to give the highest priority to restoring full employment as a national goal. But it is increasingly evident that a significant reduction in unemployment is needed to reduce the budget deficit without making unacceptable cuts in domestic programs and defense obligations.

Persons without jobs are a drain on government resources. Persons with jobs pay taxes to help meet the nation's needs.

The most effective step that could be taken to bring down unemployment would be enactment of a trade bill that would stem the continuing hemorrhage of American jobs.

The time is long, long overdue for Congress and the President to face up to the gravity of a trade imbalance that has continued to rise. For yet another year, unemployment has been the nation's costliest import.

THE ELECTION of a Congress in which a majority of both the House and Senate were elected on pledges to address these problems gives us reason to hope that 1987 will be more productive than 1986.

"We shall not sit by passively while our American industrial base erodes, American jobs disappear and American wages and opportunities decline," the Speaker-designate of the House of Representatives said last month. His Senate counterpart gave a similar pledge.

For its part, the trade union movement will work to build the public support and demand that is necessary to overcome Administration opposition.

This can and should be a year in which at least the first big step can be taken to make health care available to the millions who now fall between the cracks of a largely employment-linked private insurance program. We can and must do better.

We don't expect all the world's leopards to change their spots. But continued pressure for human rights and justice in every country can make this a better and safer world.

It's worth the effort.

Andrei Sakharov

IN CHOOSING Andrei Sakharov for the George Meany Human Rights Award, the AFL-CIO Executive Council last May referred to him as a "towering moral figure," who demonstrated that "even in the bleakest tyranny, democratic values can find a voice."

Sakharov's first words on returning to Moscow on Christmas eve after a seven-year exile were a call for the release of all political dissenters. He pledged to "do everything in my power" to bring it about.

The voice of this gentle humanitarian has not been stilled.

Washington Window

Health care gap widens with six years of neglect

By Press Associates

The recent debate on catastrophic health care insurance shows how far backward the nation moved during the past six years.

In the 1970s, especially during the Carter Administration, Congress did not debate whether America's citizens needed help in paying the huge costs involved in acute or long-term illness.

Arguments then centered on the form that a national health care plan for all Americans should take. Should it be a phased-in program providing comprehensive coverage to the aged, the disabled, the poor and working poor, including catastrophic and other special care needs, as the Carter Administration proposed?

Or should it provide comprehensive health care benefits to all citizens and legal aliens, with premiums geared to income, as Sen. Edward M. Kennedy (D-Mass.) and Rep. Henry Waxman (D-Calif.) proposed?

Another proposal by then Democratic Senators Russell Long (La.) and Abraham Ribicoff (Conn.) would have provided catastrophic health insurance for the general population and federal medical assistance for the poor and medically needy. Still another proposed a complex tax credit and voucher system for a "consumer choice health plan."

Action bypassed

When these proposals were debated in 1979, there was no doubt that Congress was serious about health care reform. But without a consensus, Congress let the issue ride.

Looking back after six years of the Reagan "revolution," Congress' failure to pass health care reform before the 1980 elections can only be called abysmal.

Now, a very modest proposal by Health & Human Services Sec. Otis T. Bowen to allow some 30 million Medicare beneficiaries to pay a $60-a-year premium to cover acute health care expenses over a $2,000 deductible is too much for Reagan's economic advisers. They fear it might evolve into a new entitlement program and drain profits from the $5-billion-a-year "Medigap" insurance business.

The sad situation surrounding Bowen's ideas is that they elicited some praise on Capitol Hill simply because he belongs to an Administration that has cut $25 billion from Medicare since 1982, and is now reportedly eyeing ways to ax another $90 billion from both Medicare and Medicaid for the poor.

The reality, however, is that Bowen's plan is just a drop in the bucket in terms of the nation's overall health care problems. As organized labor noted in its criticisms, the proposal is overwhelmed by the fact that an estimated 37 million Americans have no health care insurance.

Financial hardship

It also fails to address the health care problems of the elderly poor. Of the 16 million Americans who were over age 64 in 1984, 3.3 million lived below the federal poverty line of $4,979 for single, elderly persons for that year.

A $2,000 cap on out-of-pocket medical expenses for these people would be a hardship. The average nursing home cost for long-term illness is $22,000 a year is completely out of sight.

It doesn't require a time warp back to 1979 to understand that the health care crisis will not solve itself. Solving the staggering problems that have worsened under the Reagan Administration's economic policies will require a system-wide reform of the nation's public policies.

Just such an agenda has been set by the labor-supported Health Security Action Council and the Save Our Security coalition. The groups have a 14-point legislative program to improve health care services for all Americans.

In addition, a new coalition of more than 60 labor, senior, religious, minority and community action organizations recently kicked off a grass-roots drive to coordinate national and state efforts to win real health care policy changes.

The National Health Care Campaign's goal is "to make health care coverage affordable and to bring good health within the reach of all Americans."

MEMO FROM COPE

37.3 Percent Went to Polls Nov. 4

Why Low Vote? Who the &%®¢#* Knows?

Why do so many citizens fail to vote?

It's a question that pushes to the surface after every national election and is worried over by candidates, commentators, civics teachers and political activists.

It's a question for which there's always been a spate of theories, but never a definitive answer. It's a question that's been asked again, repeatedly, since last November 4.

Then, little more than one out of three eligible citizens voted in U.S. House elections—37.3 percent. The average was only slightly higher in U.S. Senate and gubernatorial elections. (COPE's get-out-the-vote campaigns helped bring AFL-CIO member turnout to over 50 percent. But the flip side of 50 percent voting is 50 percent *not* voting.)

Even in presidential years, voting percentages are low. In the past three runs for the presidency, citizens voted in the range of 53-54 percent. The 1960 Kennedy-Nixon confrontation was hailed for the large turnout it generated—but that was only 63 percent.

The fact is, there seems to be no sure-fire lure for pulling out voters who—for whatever reason—don't choose to vote.

Real hot contests, many argue, will get them out. But in Florida in 1986, there were two "real hot contests" statewide—for governor and for U.S. Senator. Yet the turnout was only 36.2 percent.

In California, the U.S. Senate race was the most costly, one of the closest and one of the most widely publicized, contests in the country, with two heavy-hitters slugging it out toe to toe. There was also a gubernatorial race between candidates with full name recognition and large followings. One was the Republican incumbent, the other the long-time Democratic mayor of Los Angeles, the state's largest city.

Did voters turn out? Not in breath-taking numbers. Only 35.2 percent of all eligible Californians cast ballots in the contests for statewide offices.

In Pennsylvania, where two excellent candidates squared off for the Senate—incumbent Arlen Specter (R) and challenger Rep. Bob Edgar (D)—and where there was a hard-fought gubernatorial battle as well, did that bring out the voters? No. Only 37 percent showed up.

Even in Wisconsin, with a hot Senate and gubernatorial race of its own, and with unregistered citizens able to go and register at the polls on election day, only 41.4 percent of eligibles made it to the voting booths.

As the accompanying chart shows, in only three states with U.S. Senate races did turnout exceed 50 percent. An equal number came in below 30 percent.

There is no consistent correlation between cliff-hanger contests and higher turnout. While 54.2 percent voted in Idaho in a hard Senate race between incumbent Steve Symms (R) and challenger Gov. John Evans (D) only half of that—a mere 27.7 percent—got to the polls in Georgia where an equally tense battle for the Senate occurred between Rep. Wyche Fowler (D) and incumbent Mack Mattingly (R).

So, why don't they vote? Following are some of the theories advanced by observers (there might be others—neither more nor less valid):

► **The Apathy Factor**—Political activists have always railed at what they see as "apathy" among the electorate, a just-don't-give-a-hoot attitude. That apathy abounds is inescapable. That it alone accounts for such low voting participation in American elections is highly questionable. You'd have to accept that about two-thirds of all citizens think elections unworthy of their time or attention. That's too grim a conclusion to buy in a democracy.

► **The "We're Okay Either Way" Factor**—It has been argued by some political thinkers that a lot of folks don't vote because they're convinced the nation or their state/community will get along okay no matter who's elected. This isn't too far-fetched an explanation for at least *some* voter absenteeism. The nation and most of its political subdivisions have muddled through a couple of centuries with only occasional real calamities to remind optimists that things *can* go wrong. However, the "we're okay" position assumes—wrongly—that there's no substantive differences between candidates that affect individuals' lives. And a lot of its disciples can get awful angry over issues and then fail to connect them to elected officials and go out and vote.

► **The "We're Doomed Either Way" Factor**—This is the mirror image of the "we're okay" mode. Some citizens think whoever is elected they (the citizens) are going to get the shaft, and as long as you're going to get the shaft, what difference does it make who's administering it? There is some—though not overwhelming—historical evidence for the position.

► **The "Where Are the Issues?" Factor**—It is said that the 1986 elections weren't united by any national issues, and there's some truth to that. In 1982, the deep Reagan Recession was an issue that coursed coast to coast. Yet, even then, only 39 percent of eligible citizens voted in congressional elections. And in 1986, there were important issues in most major races—Social Security, for example, came up in several close Senate races, as did trade, jobs and farm matters.

► **The "They're Both in the Mud" Factor**—This one's been coming on for several elections and peaked in 1986. A lot of citizens who spoke up in on-the-street TV and newspaper interviews complained both candidates for an office were too busy slinging mud, and they—voters—were turned off. And it's true—in too many contests, you'd have thought you were offered a choice between Attila and the Ayatollah instead of between two essentially decent individuals who happened to differ on issues and direction. With campaigns more and more managed by mercenaries, the "negative" attack has become a staple in politics.

► **The "It's Too Hard to Get There" Factor**—Though most states have modernized election laws to make it easier to register and vote, in many jurisdictions it's still more of a hassle than a lot of citizens are willing to confront. Inconvenient locations and restricted hours of registration—and little outreach by elections boards to voters—still hold down participation. But, again, not so much that it accounts for a 37 percent turnout—or, rather a 63 percent no-show.

So, there are a lot of possible reasons but none compelling enough by themselves—or in aggregate—to answer the question that's asked after every election:

Why don't they vote?

The only honest answer is:

Who in &%#@*¢ knows?

Senate Turnout—No Great Shakes

Congressional Quarterly

Correction & Update

This is the first chance that has arisen to correct a mistake (gasp) in COPE Memo of Nov. 29, 1986. In a one-vote-counts item, the Memo erroneously reported that COPE-supported Rosemary Pooler (D) defeated incumbent Rep. George Wortley in New York's 27th Congressional District by only 511 votes—82,865 to 82,354. It was the other way around.

* * * * *

The Nov. 29 Memo also reported a recount was pending in a North Dakota state senate race, going into which GOP's Mike Timm led Democrat Larry Schoenwald—a union member—by just one vote.

The recount gave Schoenwald the victory 3,098 to 3,093—just five votes out of 6,191 cast.

It's a double-barreled one-vote-counts story. Schoenwald's win gives Democrats a one-vote, 27-26, margin in the state senate. This is the first time Democrats ever controlled that legislative body.

Labor sets legislative goals

Jobs in safe working environment high priority

Relieving unemployment, safeguarding jobs, advancing workers' rights and insuring a safe and healthy workplace will be at the heart of organized labor's agenda as the first session of the 100th Congress gets down to business.

Along with legislation to curb the floodtide of foreign imports—the trade union movement's No. 1 priority—attention will focus on a wide range of labor-backed measures that passed the House in 1986 but were scuttled in a Senate under the grip of the Republican party.

Although both the House and Senate now are controlled by the Democrats, the outlook for passage remains clouded with the specter of a spate of Reagan vetoes hanging over most of the measures supported by workers and their unions.

On the import front, labor has renewed its call for legislation to crack down on countries that employ unfair trading practices and exploit their low-paid workforce and that will provide more relief for workers and industries damaged by a crushing trade deficit that could reach $175 billion.

Intimately related to the trade issue is the problem of helping workers dislocated by imports and technological change. Rep. Augustus

AFL-CIO news

VOL. 32, NO. 2
SATURDAY
JANUARY 10, 1987

Protesting a dirty deal

Supporters from 15 unions pound the pavement in Reno, Nev., to protest a dirty deal by U.S. Playing Card Co. Last November, the company locked out 260 members of the Retail, Wholesale & Dept. Store Union at its Norwood, Ohio, operation after they rejected the company's demand to slash wages by 15 percent and cut health insurance, vacations and other benefits. Following the lockout, U.S. Playing Card moved operations to Reno, where nonunion workers are paid less than half the wages of the locked-out RWDSU members.

Reagan budget plan axes vital programs

Kirkland assails 'unfair' domestic cuts

By Gene Zack

President Reagan's fiscal 1988 budget—the first in history to soar above the trillion-dollar mark—drew stinging criticism from the AFL-CIO because it proposes to finance a continued military build-up at the expense of workers, the poor, the elderly and the young.

Federation President Lane Kirkland labeled the $1.024-trillion package little more than a carbon copy of "the unfair and discredited formulas" embedded in the six previous fiscal plans that Reagan has sent to Capitol Hill since the start of his presidency.

Kirkland called on the 100th Congress—under Democratic control for the first time in the Reagan presidency—to undo the Administration's mischief by rewriting the budget in a way that restores "fairness" to the task of meeting the nation's "true needs."

The President's "refusal to pay for what he describes as national security needs means he would sharply curtail other essential government programs and continue to borrow from the future," Kirkland asserted.

The contrast in Reagan's ideological priorities could not have been more stark. He called for a $21-billion increase in military spending over current levels to be financed largely by slashing another $12 billion from domestic programs already battered by budget cuts throughout this decade.

'Onerous' cuts

Kirkland assailed as "particularly onerous" White House proposals to eliminate vocational education grants and direct student financial assistance, and to make further deep cuts in funding for Medicare, Medicaid, veterans' health care and low- and middle-income housing.

As if that were not enough, the AFL-CIO asserted, Reagan has called for "unreasonable" reductions in federal support for "needed improvements in such deteriorating public facilities as bridges, highways, public transportation, and water and sewage treatment systems."

The budget proposes a 13.5-percent slash in Labor Dept. funding—from $17 billion to $14.7 billion—but asks for $980 million to establish a new "dislocated worker program" to replace both the Trade Adjustment Assistance program and Title III of the Job Training Partnership Act.

Such a scheme, Kirkland said, falls dismally short of meeting the needs of the nearly 15 million unemployed, partially

Congress pledges swift action on trade

November deficit worst in history under deluge of imports

Senate and House leaders pledged that the 100th Congress would give top priority to legislation curbing the raging foreign trade deficit, as the Reagan Administration reported that November's shortfall hit $19.2 billion—an all-time one month high.

With one month still to go, the 1986 trade gap stood at a staggering $159.1 billion, far eclipsing the previous record of $148.5 billion peak for all of 1985. Estimates are that last year's trade imbalance could reach the $175-billion level.

The figures added up to bad news for the entire national economy with workers bearing the heaviest burden. Government studies show that for each $1 billion in sales U.S. producers lose to imports, more than 22,000 American jobs are destroyed.

Congressional leaders agreed with the assessment by the Commerce Dept.'s top economist, Robert Ortner, who termed the November deficit "horrendous."

Ready to roll

They vowed that a trade bill similar to one that passed the House last year only to die in the then-Republican-controlled Senate, would be one of the first orders of business in a Congress now firmly under Democratic leadership.

Sen. Robert C. Byrd (D-W.Va.), the new Senate majority leader, charged that the Administration "has pretended that we have no trade crisis and that our trade problems will take care of themselves." That philosophy has failed dismally, Byrd said, promising to work for "comprehensive trade and competitiveness legislation that will restore jobs and halt the erosion of our industrial base."

The new Speaker of the House, Rep. James C. Wright Jr. (D-Tex.) branded the trade shortfall the "most important economic problem" facing the nation and promptly reintroduced last year's House-passed measure—a bill Reagan had criti-

Jobless benefits rise as coverage falls

Only 28 percent of idled workers drawing compensation

By Candice Johnson

The new year brought mixed news to the nation's unemployed workers, as jobless benefit levels in 12 states were increased but the number of unemployed workers actually receiving benefits continued to decline.

In Illinois, the state legislature voted an increase of 4.5 percent in unemployment compensation benefits that raises individual rates from $161 to $168 a week and increases the maximum benefit from $209 to $219. That increase is the first in three years.

While 8.2 percent of the Illinois workforce—about 466,000 persons—was unemployed in 1986, jobless benefits were awarded to just 25 percent of the unemployed, or 100,000 workers, according to the state's Dept. of Employment Security.

72 percent get nothing

AFL-CIO compensation specialist James Ellenberger said that nationwide, only 28 percent of the jobless receives any kind of unemployment compensation with unemployed workers often stymied by arbitrary restrictions and filing requirements.

In 35 states, less than one-third of unemployed workers receive jobless benefits, Ellenberger noted, while in only three states—Rhode Island, Massachusetts and Alaska—do more than half of the jobless receive any unemployment compensation.

- In Connecticut, the maximum weekly benefit was increased to from $242 to $254. Two-thirds of the jobless in the state do not receive jobless pay.
- Hawaii upped its top benefit $12, to $212, with 36.1 percent getting benefits.
- Massachusetts raised its maximum family benefit from $310 to $330 a week, with 53 percent of unemployed workers receiving benefits.

Banking on union banks to build more union jobs

Workers' resources yield good return on investment

Operating Engineers' fund generates jobs.

By Henry Fleisher

Unions traditionally have worked to get a maximum money return in wages, salaries and benefits for their members.

Now, to an increasing degree, unions are becoming more actively concerned with the investment returns on workers' resources, whether it's individual savings, union treasury money, or the tremendous sums in jointly controlled labor-management pension and welfare funds.

In addition, there is a widespread belief that dollars controlled by unions and their members, or reposing in funds based on collective bargaining agreements, should not—so far as the law permits—be invested in non-union competitive enterprises.

Out of that concern several labor banks have been established. Two of them have been functioning for half of a century or more; four others have been created in the past 10 years, and at least two others are in the active planning stage.

Growing trend

As part of the same trend, the AFL-CIO, which had started a mortgage investment trust some 20 years ago, broadened the scope of the program in 1984 through the creation of its Housing Investment Trust, with a board of directors representing both labor and management and a "neutral" chairman.

With more than $154 million in assets —through participation by subscribing unions and pension and health funds—the AFL-CIO Housing Investment Trust has a "clear and specific trust," said its chief executive officer, Floyd Hyde, "to utilize union and pension fund investments to provide both housing and jobs for union members, while offering competitive returns based on prudent investment policies."

Union Labor Life Insurance Co., a private company established over a half-century ago and owned by various unions, was an early entry into the field of financing contractors who "build union."

Millions invested

ULLICO's "J for Jobs" program has attracted millions of dollars from pension funds for financing commercial, residential or retirement projects built by union workers and contractors.

The idea is spreading. In Albuquerque, N.M., the Union Mortgage Co., working in close harmony with a number of building trades unions and pension funds, has channeled "union label dollars" into the financing of "union label construction projects." The venture is "definitely a success," said Michael Keller, the company chairman.

Fleisher is a Washington-based public relations consultant who represents several AFL-CIO affiliates.

"For each million-dollar project, approximately 20,000 hours of work are created," the company said. "We have generated over 500,000 hours of union work in New Mexico."

In some metropolitan areas, commercial banks which have in the past managed to keep their enthusiasm for unions under careful control, have begun to realize that doing business with the unions can be good business. In the Washington-Maryland region, for instance, at least three banks are merchandising a "100-percent union" investment program, with dollars from unions and funds specifically earmarked for investment on construction projects using union members only.

President Robert A. Georgine of the AFL-CIO Building & Construction Trades Dept., reminded a pension conference that about 60 percent of the some 2,500 multi-employer pension plans negotiated by unions are in the building trades. Their assets run into the billions. Georgine feels that in the past too much of that money was turned over to managers who had neither realistic instructions from their principals nor a pro-labor sentiment about placing even a part of their investment funds in the union sector of the economy.

Walter W. Carlough, administrator of the Sheet Metal Workers' National Pension Fund, which has passed the billion-dollar mark, is an advocate of using pension funds constructively. He said that "our fund, while acting carefully within the guidelines of 'prudent' investing can help increase the employment and well-being of trade unionists." He noted that "throughout the country this concept is rapidly taking hold."

Indeed, it is. In Texas, President Harry Hubbard of the State AFL-CIO has worked closely with a number of unions on plans for a savings and loan association to be located in Houston. Application for a federal charter has been filed with the appropriate government agency for a Texas Union Federal Savings Bank, which will be at least 75-percent owned by union members.

Broad representation

The bank's board, when it comes into being, will have representatives of seven unions and members of the public, including former Labor Sec. Ray Marshall, now a professor at the University of Texas.

In California, Anthony Ramos, head of the State Council of Carpenters, has been working for several months on a project to establish a union-owned, state-chartered savings and loan association. An application has been filed, but it will probably be well into 1987 before the state authorities make their decision.

Union-owned savings and loans went into business in 1985 in Phoenix as the Union Savings & Loan and in Albuquerque as the Union Savings Bank.

The Phoenix bank is owned by about a dozen unions, according to President Elliot Revere, and its assets have climbed to $38 million. He said the bank is being used increasingly by union members, both as depos-

Original Kansas City home of the Boilermakers' bank.

BCTD pledges fight to save prevailing pay

The AFL-CIO Building & Construction Trades Dept. vowed to oppose renewed Reagan Adminstration legislative attempts that would increase the level under which federal contracts would be exempt from the prevailing wage requirements of the Davis-Bacon and Service Contract Acts.

BCTD President Robert Georgine called the Administration proposal to exempt Defense Dept. contracts under $1 million and all other federal contracts under $100,000 from the wage requirements "simply ridiculous on its face."

Georgine stressed, "We opposed every attempt to increase the threshold in the last Congress. We will continue to oppose such attempts in this Congress, unless accompanied by stricter enforcement procedures and prohibitions against the fragmentation of contracts." He said the "proposed thresholds would emasculate the Davis-Bacon statute" by exempting from coverage the vast majority of construction work.

President Reagan's fiscal 1988 budget proposal said that an increase in the threshold limit is "appropriate in recognition of economic changes in the past several decades and to encourage competition and efficiency in government procurement."

The Davis-Bacon Act covers wages and benefits paid to workers on federally backed construction projects, while the Service Contract Act covers pay and benefits of workers under federal service contracts.

Conferees reject bid

In the last session of Congress, the Administration was aided by conservative Republicans and Democrats in achieving a portion of its goal when the Senate set a $250,000 threshold for military construction. The House rejected that figure, proposing instead a $25,000 limit. The measure died in a House-Senate conference committee.

Labor Sec. William E. Brock had testified at House hearings in support of raising the military construction threshold to $1 million and to $100,000 for all other construction.

Georgine pointed out at the same hearings that the Davis-Bacon Act protections have already been weakened by regulatory changes imposed by the Labor Dept. He noted that substantially raising the current $2,000 limit would make it easier to break up large contracts into small segments below the threshold level.

Union representatives meet with Rep. Conyers, who outlined job-saving legislative proposals.

Drive launched in House to preserve jobs

Emphasizing that corporations don't have the right to "treat workers the same way they treat obsolete plants," Rep. John Conyers Jr. (D-Mich.) kicked off a legislative drive to preserve the jobs and rights of American workers.

At a Capitol Hill meeting with union leaders, Conyers pledged to hold hearings and craft a measure that will begin to address the nation's chronically high unemployment.

Attending the session were representatives of the Communications Workers, Steelworkers, Machinists, Auto Workers, Service Employees and Food & Commercial Workers, as well as the unaffiliated Mine Workers.

Conyers said the legislative drive was spurred by wide-ranging actions by numerous corporations that threaten the economic livelihood of workers including plant closings, layoffs and runaway shops.

He cited announcement of mass layoffs by General Motors Corp., USX Corp.'s six-month-old lockout of 22,000 USWA members and MCI Corp.'s firing of 1,000 workers in Michigan because they expressed an interest to form a union.

All this, Conyers said, adds up to "a corporate industrial strategy that spells a serious challenge to the collective bargaining institution."

The Michigan congressman said a legislative solution is needed to promote a stable workforce where "a worker who agrees to stay with a company can do so and not be dependent on a company decision that it'd rather make peanut butter than autos."

Jobless benefits rise but coverage skimpy

Continued from Page 1

- In Michigan, weekly family benefits were increased to $229 from $198. But just one-fifth, or 20.2 percent, of the state's jobless collect unemployment compensation.
- In Minnesota, the top benefit rate hit $242, up from $228, with 30.4 percent of the jobless collecting benefits.
- Missouri increased its maximum weekly payments from $125 to $130, with only 30 percent of unemployment workers receiving benefits.
- Montana raised the ceiling on its weekly benefit level to $179 from $171, paying benefits to a scant 28.5 percent of unemployed workers.
- In New Jersey, the maximum rate was increased from $214 to $228, with 38.4 percent of the jobless collecting benefits.
- New Mexico raised its top weekly benefit from $154 to $158, with 27.4 percent of unemployed workers receiving benefits.
- In North Carolina, the ceiling was raised $9 to $184. Only 26.8 percent of workers on the jobless rolls receive benefits.
- Pennsylvania increased its maximum weekly jobless payment to $249 from $240, with 35 percent of unemployed workers collecting benefits.
- Tennessee raised its maximum unemployment benefit by $10 to $130 a week, with less than 22 percent of the state's jobless receiving unemployment compensation.

The state increases ranged generally from 2.6 percent in New Mexico to 8.3 percent in Tennessee, with only Michigan adopting a double-digit increase—15.6 percent—in its top benefit level.

Union banks build union jobs

Continued from Page 2

itors and borrowers, and expects it will take three to five years before Union Savings & Loan comes to realize its full potential.

The Union Savings Bank in Albuquerque has assets of about $10.5 million and a growth rate that approaches 25 percent a year. Its ownership includes a number of building trades unions as well as locals from unions in other industries. Michael Keller, chairman of the bank as well as head of the Union Mortgage Co., said he foresees a strong future for the city and feels that the S&L will grow with the area.

In Denver, the Union National Bank, owned completely by unions, has been making steady progress, according to Joseph Donlon, chairman of the bank and secretary of the Colorado Building Trades Council.

He acknowledged that a local bank faces heavy competition from the big commercial banks, with their heavy advertising budgets, but feels that a union-conscious investment policy that will be helpful to unionized employers makes the effort worthwhile.

The Union Bank & Trust Co. in Minneapolis is somewhat older; it was established in 1976 and now reports assets of about $30 million. The bank's custodial accounts—money it holds for pension funds and endowments—amount to close to $250 million.

The Brotherhood Bank & Trust in Kansas City, Kans., is one of two labor banks surviving from the 1920s. Created by the Boilermakers, which owns 40 percent of its stock, the bank has a large facility in the union's headquarters building and operates other branches in the city.

The largest and most prominent of the labor banks is the Amalgamated Bank of New York, which was founded in 1923 on the initiative of Sidney Hillman, the founding president of the Clothing & Textile Workers. Its assets run to over $1.3 billion, and it has established a solid reputation as a well-managed, consumer-oriented financial institution.

Changing times

In this day of fierce competition by the banking industry to sell accounts to just about every man, woman and child in the country, it is difficult to imagine a period—only a few decades ago—when wage earners were looked upon as "outside the banking market."

In those days, working people were simply not welcome in most banks. Unless they were the beneficiary of a rich uncle's estate, they could not qualify for a checking account, or would be required to maintain absurdly high balances. Credit was available for workers only if they posted collateral about equal in value to that of the loan.

The Amalgamated Bank deserves major credit for initiating a variety of needed financial services to working families. It pioneered with no-cost checking accounts; personal loans without high collateral; lower-than-average-interest consumer loans; and participations in investments at higher rates of return than available from savings accounts.

Many of the consumer banking practices that reach out to Americans of average income were pioneered by the Amalgamated Bank—a small institution by comparison with huge New York commercial competititors.

Union-run banks are only part of the story of the role labor plays in the financial field. Across the country—in large cities and small towns—thousands of labor-operated credit unions provide a wide range of services to their members.

With combined assets running into the hundreds of millions of dollars, the credit unions offer savings and retirement programs, consumer loans, home-equity lines of credit and, in many cases, checking accounts—making them virtually equivalent to the full-service bank down the block.

Labor banking is still comparatively tiny, and not about to take over at any time soon a substantial segment of the nation's banking. The assets of the top 15 commercial banks in the U.S. amount to almost a trillion dollars.

But some experts have predicted that by 1996 the total assets of joint labor-management directed pension funds could be at the $4-trillion level.

An increasing number of union officers and fund trustees, both labor and management, feel that under all the rules of "prudence" required by law, a substantial amount of that money should be invested in companies that recognize unions, not those that fight labor and want a "union-free" environment.

Message to employers

Video documents lockout at USX

The Steelworkers' dispute with USX Corp. and the spirit and determination of union supporters are spotlighted in a new video produced by the Labor Institute of Public Affairs.

The videotape, titled "Why We're Here," documents the lockout of more than 22,000 USWA members by the giant steelmaker and labor's response through the federation's Steelworkers Support Committee. The lockout is six months old.

In the LIPA production, USWA members on picket lines from Gary, Ind., to Fairfield, Ala., tell of the struggle to save their jobs, earn a decent wage and to support their families. They are joined by rank-and-file supporters from more than 25 unions who expressed their solidarity with the locked-out workers at a rally in Clairton, Pa.

One by one, the trade unionists speak of the need to send a message to USX and other anti-union employers—a message that says workers are tired of takeaways and contracting out, that the goal of the labor movement is to provide a better life for all working people and that union members will achieve that goal at USX and other companies.

The video also features "Stand By Me," an original song which explains labor's need for unity in the chorus: "Though I don't make my livin' workin' with the steel, together with my friends we'll lend a hand, 'cause the next thing you know, they'll be coming after us."

The AFL-CIO Steelworkers Support Committee expects the video to be used by labor groups in fund-raising activities for the locked-out workers. The video will be distributed to affiliated unions and labor bodies.

Meanwhile, negotiations between the USWA and the steelmaker resumed in December following a month-long recess. After USX broke off negotiations Nov. 20, USWA President Lynn Williams sought a three-member panel to help resolve the dispute. Williams and USX Chairman David Roderick agreed to the appointment of Sylvester Garrett, a veteran arbitrator, to mediate the dispute. Garrett made his recommendations earlier this week.

Tape distribution is being handled by Frances Kenin at 202/637-5130.

Angelo Verdu dies, retired AIFLD deputy

Arlington, Va.—Angelo Verdu, retired deputy director of the American Institute for Free Labor Development, died of cancer Dec. 29 at the Hospice of Northern Virginia. He was 76.

In a message to Verdu's wife Clarice, AFL-CIO President Lane Kirkland and Sec.-Treas. Thomas R. Donahue said, "The American labor movement is that much richer because he was a part of it and the cause of free and democratic labor in the world was equally enriched by his care and active participation."

In the late 1930s, Verdu served on the executive boards of the Mine, Mill & Smelter Workers and the Shipbuilding Workers before he was named a representative of the Steelworkers in 1950. He was appointed AIFLD's program director for Colombia in 1963, named regional director two years later, and deputy director in 1967.

Verdu retired in 1975 but was recalled two years later to serve as director of the Free Trade Union Institute while it was being reorganized.

Budget office impairs study of VDT risks

The Service Employees assailed the "inappropriate meddling" of the White House Office of Management & Budget in a federally funded study on possible reproductive hazards resulting from the use of video display terminals. The union urged that questions on stress and fertility, deleted by OMB, be reinserted in the survey.

SEIU President John J. Sweeney expressed his concerns in a letter to Health & Human Services Sec. Otis Bowen. He charged that OMB won't let the National Institute of Occupational Safety & Health "do its job" properly in conducting the study.

Sweeney said that OMB's "meddling" caused the study to be "scientifically compromised" and that "needed answers about the potential reproductive health effects of VDTs will continue to be delayed while the technology is introduced into the workplace at an ever-increasing rate."

The Communications Workers and 9to5, National Association of Working Women, had both pressed Bowen to override the OMB changes. From the beginning, BellSouth, a regional telephone company whose VDT operators were to be studied, had objected to questions on stress and fertility and had met with OMB officials to relay its concerns.

The survey, delayed for nearly a year by OMB, was finally approved. NIOSH accepted the deletions, even though "the changes requested by OMB will eliminate information in the questionnaire which would help to confirm or explain any difference found between the VDT group and the comparison group," said Dr. James M. Melius, director of NIOSH's division of health evaluations and field studies.

Study scaled back

The survey of some 4,000 female telephone workers was considered a rare opportunity to study two similar large groups of workers, half of whom used VDTs. The delay by OMB caused a scale-back of the study as more workers in the control group were switched over to using VDTs.

OMB recommended deleting 61 questions relating to stress and 10 questions concerning fertility. Dr. Irving Selikoff, a noted researcher at Mt. Sinai School for Medicine, reviewed the survey. Concerning the questions on stress, Selikoff said the deletion would "greatly impair" NIOSH's ability to assess the role of stress in causing reproductive problems.

Concerning the subjects of fertility, employment history and medical and surgical conditions, Selikoff stressed that the results of the study would be "uninterpretable" if NIOSH is unable to ask these questions.

Jobs and safe workplaces top legislative agenda

Continued from Page 1

F. Hawkins (D-Calif.), chairman of the House Education & Labor Committee, has already introduced a bill providing funds to retrain these workers, upgrade their skills and help them find new jobs. And legislators from oil-producing states plan a fight to extend trade adjustment assistance benefits to the more than 164,000 oil and gas workers who lost their jobs last year as a result of plunging world oil prices.

Here is an overview of the other items that will be on labor's slate in the months ahead:

Double-breasting—Legislation to block employers in the construction industry from setting up nonunion operations in order to evade their union contract obligations passed the House last April, but ran into a filibuster threat that kept it from being tacked onto the continuing budget resolution enacted in the waning days of the 99th Congress. Rep. William Clay (D-Mo.), chairman of the House Labor-Management Relations Subcommittee, plans to introduce the bill again and will schedule early hearings.

Polygraphs—A bill restricting the use of so-called lie detectors in private industry passed the House in the 99th Congress but died in the Senate. Rep. Pat Williams (D-Mont.) plans to reintroduce the measure, stripping of it an amendment added on the House floor that exempted drug companies, nuclear and electric power plants, security and armored car guards, and day care and nursing homes from polygraph regulation.

Labor protection provisions—Last September, the House voted overwhelmingly to require worker safeguards in airline mergers. But the Senate, on a tie vote, rejected a scaled-down version of the bill. LPPs were routinely imposed in airline mergers prior to deregulation in 1978, but the Reagan Administration has consistently refused to follow that precedent. Unions will also ask Congress to put the brakes on corporate mergers and takeovers, citing the adverse effects on the jobs and pensions of workers.

Right-to-know—Sen. Howard Metzenbaum (D-Ohio), incoming chairman of the Senate Labor Subcommittee, has introduced a bill requiring employers to notify workers of health risks they face on the job, primarily from toxic chemicals, and to tell workers what they can do to protect themselves. An estimated 11 million workers are exposed to known carcinogens and, labor insists, have a right to know the risks from using hazardous substances in the workplace.

Plant closings—Metzenbaum and Rep. William D. Ford (D-Mich.) will spearhead the drive to require employers to give advance notice of shutdowns or major job cutbacks. A similar measure went down to narrow defeat in the House in 1985. A bipartisan task force has recommended a $900-million-a-year program of assistance for dislocated workers, but sidestepped the advance notice issue.

Minimum wage—Although the Reagan Administration remains opposed to hiking the current $3.35-an-hour minimum, labor points out that inflation has eroded its purchasing power by 26 percent since the last increase in January 1981, driving it to its lowest point in more than three decades. Reaching the current poverty threshold for a family of three would require fulltime, year-round work at a wage of $4.25 an hour.

Health insurance—The list here is long, topped by labor's ongoing fight to secure health care coverage for the 37 million Americans now without such protection. Then there's health insurance for retirees of bankrupt companies, an issue Congress dealt with on a temporary basis last year by requiring bankrupt firms to continue paying for such benefits until May 15, 1987. And the Administration is weighing a recommendation of Health & Human Services Sec. Otis T. Bowen to provide coverage against "catastrophic" illnesses through Medicare.

Civil rights—New efforts will be made to overturn a 1984 Supreme Court decision that restricted Title IX of the 1972 Education Act Amendments banning gender-based discrimination in educational programs. Rep. Don Edwards (D-Calif.), chairman of a House Judiciary subcommittee, said that "the votes are there" to insure that any cutoff in federal funds because of sex discrimination applies to the entire institution—not just the student aid office that receives the money, as the high court insisted.

Other issues facing the 100th Congress will include re-enactment of the clean water bill that Reagan vetoed last November, renewal of funding for highway and mass transit programs, parental leave and the rehiring of the 11,500 air traffic controllers fired by President Reagan in 1981 for going on strike.

Researchers explore new bargaining tactics

New Orleans—Changes in the workplace, brought about by industry deregulation and lopsided U.S. trade policies, have resulted in new bargaining strategies, structures and challenges for American unions.

That was the conclusion of nearly 250 economists and scholars from labor, industry, universities and government, who belong to the International Relations Research Association. Participants discussed topics ranging from affirmative action programs and economic inequality to bargaining for health care and other topics during IRRA's 39th annual meeting.

AFL-CIO economist John Zalusky reviewed profit sharing and gainsharing proposals in contract negotiations and observed that labor's experience has been "mixed." Workers have seen profit sharing used as a union-busting tool, as a "management-only bonus" during prosperous times and a wage alternative for workers in poor times, he charged.

"Workers have traded wages for long-term bonuses only to see the plans terminated" before benefits are ever paid, Zalusky noted, adding that workers have not won job security or gained from an "abstract" plan for combining the interests of labor and management.

But on the plus side, profit sharing has given workers a role in decision-making and plant operations, the opportunity to participate as stockholders and to gain standing as debtors in possible bankruptcy proceedings, Zalusky pointed out.

The 1980s have seen a change in profit sharing and gainsharing provisions, Zalusky noted. While gainsharing or incentive pay —described as an "exchange of worker short cuts, ideas and higher levels of production" for additional payments—was included in some agreements negotiated by the Steelworkers, Auto Workers, needle trades and other unions, many workers found that these plans "have led to job losses when productivity increases and market shares don't," he stressed.

Sound income level

Labor's goal in profit sharing plans is to achieve a sound income level for all members, and to share the wealth of profitable firms while securing employment opportunities at marginal firms, Zalusky said.

He cited a profit sharing agreement negotiated between the USWA and LTV Corp., in which wage cuts accepted by the workers are considered a loan to the firm, to be repaid from profits. If profits are not sufficient to repay the loan, LTV must issue convertible preferred stock paying 5 percent interest to meet the debt. Converted to voting stock, the LTV workers gain standing as stockholders.

In the deregulated airline industry, profit sharing became a trade, Zalusky said, "an investment of current wages for a promise of future returns" plus a voice in the decision-making process. But the results do not always benefit workers who have put aside short-term earnings for possible long-term dividends, Zalusky pointed out, adding that "the debts and cash flow of most workers allow little room for risk taking. Profit sharing can work only when basic security already exists."

Federation Organizing Director Charles McDonald reviewed labor's initiatives in organizing and membership benefits that grew out of the work of the AFL-CIO's Committee on the Evolution of Work.

New techniques and mechanisms in organizing include the growing use of volunteer union members in organizing drives, corporate campaigns against anti-union employers and coordinated efforts among affiliates, like labor's response to the USX Corp. lockout of 22,000 workers through the federation's steelworkers support committee, McDonald told participants.

Improving the "public perception of unions, their activities, their problems and the opportunities they provide unorganized employees" is another goal, McDonald said, as unions make a greater effort "to bring news other than strikes and corruption to the public's attention and to do a better job of dealing with the media in strike situations."

Bargaining changes

In another presentation, Professor Wallace Hendricks of the University of Illinois outlined changes in the bargaining structure of the Communications Workers as a result of the 1984 breakup of the American Telephone & Telegraph Corp.

Earlier negotiations had involved a single employer. After divestiture, CWA had to bargain separately with AT&T, seven regional "baby Bells" and eight other companies, Hendricks said, with the union forced to evaluate a large number of proposals all around the same period.

Other labor participants included Richard Prosten of the AFL-CIO Industrial Union Dept. and A. Michael Collins of the Operating Engineers.

Trillion-dollar Reagan budget proposes new domestic cuts

Continued from Page 1

employed and discouraged workers who have dropped out after futile searches for jobs that can't be found. It fails to "deal with the basic unemployment problem caused by foreign trade and, at best, would only provide services to a third of those workers dislocated by unfair foreign imports," he stressed.

Struggling to meet the Gramm-Rudman-Hollings Act mandate to reduce the budget deficit to $108 billion in the coming fiscal year—down from the current fiscal year shortfall that has already reached $173.2 billion and is still rising—Reagan asked Congress to auction off to the private sector some $15 billion worth of federal assets, including the Naval petroleum reserves, Amtrak and five public power authorities and to sell $5.4 billion in government loans to the banking industry.

Kirkland rejected this approach of achieving one-time revenues as "phony budget reduction" adding that the privatization of government services is just the latest move in Reagan's continuing crusade to make federal government employees "scapegoats" for his discredited policies.

Although the President stoutly denied he was proposing any tax increases, a careful perusal of the budget document showed some $21 billion in new revenues.

The balance of the White House plan to stem the flow of red ink in the budget rests on the shaky economic assumptions that in fiscal 1987 the raging trade deficit will drop by some $40 billion, unemployment will decline to 6.3 percent and that the economy will grow by 3.2 percent. Few analysts or members of Congress have any confidence these goals can be achieved.

Among the budget's major proposals:

- Cuts of $7.7 billion in major medical programs, with the largest single cut in Medicare which provides health insurance for the elderly who will have to pay substantially more for coverage.
- A continued squeeze on the states by capping Medicaid payments, cutting food stamp payments and slashing economic development funds.
- Deep cuts in programs for higher education, particularly student aid, that would reduce the Education Dept.'s outlays from $17 billion to $14.7 billion.
- Two programs to aid in school desegregation with a combined current budget of $24 million would be killed.
- Elimination or phase-out of dozens of federal programs involving urban development, mass transit and housing—most of which were marked for extinction by the Administration before, but saved by a Congress unwilling to see them torpedoed.
- A $5-billion reduction in Agriculture Dept. farm support and nutrition programs at a time when family farmers face a bleak and uncertain economic future.

White House Budget Director James C. Miller rejected the notion that the budget would be "dead on arrival" on Capitol Hill. However, members of the 100th Congress on both sides of the aisle generally agreed it was already a terminal case.

Unions coordinate strategies to deal with appliance giants

Hollywood, Fla.—Plans for a permanent structure within the AFL-CIO Industrial Union Dept. to deal with the myriad problems in the appliance industry moved forward as delegates to the second Appliance Committee meeting approved plans for regular biennial conferences.

The delegates from 18 international unions representing workers at more than 85 organized plants also endorsed a move whereby committees from each of the major North American appliance manufacturers would meet on alternate years to share information about the industry.

In his keynote address, Machinists President William W. Winpisinger warned that appliance industry workers face a bleak future because of unfair trade, new technology, plant closings and the growing industry trend to move its facilities abroad.

Winpisinger was sharply critical of the industry for standing idly by while foreign companies dump their products on the American market, and for then responding by running away to other countries where they can exploit cheap labor.

The IAM president called for quick action on trade legislation in the 100th Congress, tax reform to close loopholes that allow runaway manufacturers to profit from their offshore operations, and enactment of a bill requiring advance notice of plant closings and major job cutbacks.

The session heard reports on contract settlements, strikes, plant shutdowns and related topics.

Delegates also were given an update on the continuing effort of Magic Chef Inc. in Cleveland, Tenn., to crush the Molders and pledged financial support for the strikers. The National Labor Relations Board has ordered reinstatement and back pay for the workers, but the company is refusing to honor that directive.

Unions belonging to the IUD's appliance committee include the IAM, Molders, Allied Industrial Workers, Communications Workers, Electrical Workers, Firemen & Oilers, Electronic Workers, Operating Engineers, Office & Professional Employees, Sheet Metal Workers, Plumbers & Pipefitters, Auto Workers, Plant Guard Workers, Steelworkers, Stove & Furnace Workers and the unaffiliated Canadian Auto Workers, Teamsters and United Electrical Workers.

Happy hour crackdown

At a time when the American economy is swamped by textile, apparel, shoe, steel and auto imports, the Reagan Administration has chosen to launch a trade war against foreign-made liquor and snacks.

Upset over European Community limitations on American grain shipments to Spain, U.S. Trade Representative Clayton Yeutter announced the imposition of punitive tariffs on gin, brandy and white wine from EC countries, as well as some cheeses, canned ham and olives.

The tariffs on these items now run between 15 and 20 percent. Under the new directive, they will rise to 200 percent effective Jan. 30—nearly tripling the cost the consumer will have to pay for a cocktail party or after-dinner drinks.

Hardest hit will be Americans who quaff French brandy and British gin.

Trade bill put on front burner as deficit soars to new peak

Continued from Page 1

cized as both "protectionist" and "anti-trade."

Wright called on the White House to work with Congress in fashioning a suitable response to the glut of imports, declaring: "For two years the United States has temporized, alibied, tinkered with the currency, even tried to pretend the problem does not exist. Meanwhile, the problem has continued to grow."

Underscoring Congressional determination to press ahead with trade legislation, Wright said that "bold action" is needed. He issued an invitation to Administration, congressional, labor, industry and academic experts to attend a one-day conference on Jan. 21 to try to agree on a joint approach to the problem.

For the trade-battered textile and apparel industry, November was another gloomy month as the nation imported almost $2 billion more of these commodities than it exported—a trade imbalance 32.6 percent higher than the same month in 1985. For the first 11 months, foreign textile and apparel imports totaled just under $23 billion while domestic producers exported only $3.2 billion worth—a deficit increase of 18 percent over the same period a year ago.

The Fiber, Fabric & Apparel Coalition for Trade, a joint labor-industry group, said the figures "serve as pathetic testimony to the Administration's failure to help an industry under seige by imports." Last year, Reagan's veto of legislation to aid the troubled industry was narrowly upheld in the House.

"Clearly, the textile and apparel manufacturers and their 2 million workers are America's forgotten industry," the coalition declared. "Without a legislative solution, the problem of unfair, job-robbing imports will not go away and this Administration will continue to allow an entire American industry to suffer instead."

Among the dispiriting November figures was a 35-percent leap in the nation's trade deficit with Japan—to a record $6.74 billion—the biggest one-month excess of imports over exports ever recorded with any country. Meanwhile, the deficit with Western Europe nearly tripled and that with the developing world jumped nearly 40 percent.

November's $1.76-billion deficit with Taiwan was larger than that with any European country, and the trade shortfalls with South Korea and Hong Kong, both just under $825 million, were bigger than those with any European country except West Germany.

The deficit with Canada soared to $2.8 billion last month—75 percent higher than October's $1.6-billion shortfall.

Back pay rule binds 'bankrupt' firm

An employer can't hide behind a bankruptcy proceeding to avoid compliance with a National Labor Relations Board reinstatement and back pay order, the 6th Circuit U.S. Court of Appeals ruled.

The employer, a painting contractor in Lexington, Ky., unilaterally terminated its contract with Local 768 of the Painters. The union brought charges and the NLRB filed an unfair labor practice complaint.

While the NLRB proceedings were pending, the corporation owner and his son set up a partnership which continued the painting business. The corporation filed a petition for bankruptcy and was liquidated before the NLRB rendered its decision and backpay order.

The appellate court noted that proceedings by a governmental unit to enforce its regulatory power are not stopped by filing for bankruptcy protection. The NLRB order, it ruled, was enforceable both against the original corporation and the partnership which was its "alter ego."

Wayne King and Lynn Johnson at the AFM electronic bulletin board.

Musicians learn the score via electronic bulletin board

New York—The Musicians have gone "on line" with a electronic bulletin board that provides information on auditions, contracts and other news.

A project of the AFM Symphony Dept., the board is available to union members 24 hours a day every day, with access from any personal home computer by telephone modem hook-up. The service went on line six months ago and has been used by several hundred union members, the AFM reported.

After logging in with the proper password, members can call up the bulletin menu where general information, including symphony audition lists, is posted. The lists then can be copied onto the home system.

A message center, where AFM members can leave public news of general interest to musicians or private messages addressed to individuals is also available. A scan mechanism allows the home user to read all the public messages and his or her own personal ones.

Other features include information on 1985-86 wage scales and working conditions for major and regional orchestras, symphony contracts, orchestra bylaws and a "door" that provides average wage data and other financial information on specific organizations that can be used in developing or assessing contract proposals.

The software program allows users to call up budget, annual wage and average annual wage for various orchestras or groups of orchestras, and transfer that data to the home computer system.

Union members also can use the message center to ask questions of the AFM staff or to comment on the bulletin board operation.

Using the file transfer facility, some AFM members have received questionnaires on symphony wage scales and working conditions and have transferred the completed surveys back to the bulletin board. This "two-way talk" will help process contract information in a timely way, the union said.

OSHA finds new way to stall overdue formaldehyde rules

The Occupational Safety & Health Administration's decision to reopen its record on formaldehyde is a "questionable decision that will add nothing to the evidence in the record and could further delay a final standard," organized labor said.

Margaret Seminario, associate director of the AFL-CIO Dept. of Occupational Safety, Health & Social Security, said it was "not clear that the agency needed to reopen the record. The evidence already in the record is sufficient to prove the carcinogenic risk and the need to reduce the exposures" for workers.

She warned that the 30-day reopening period might delay OSHA's planned issuance of its final rule by September 1987.

Dr. Frank Mirer, safety director for the Auto Workers, said that the information on which OSHA sought additional comments is "minor information. The basic facts have been known since 1981. Five years have passed. Nothing's changed. People has just been exposed to unnecessary risks for an added five years."

Needed protection

Mirer stressed that there will be industry arguments forever against issuing a strict standard, "but we don't see anything on the horizon that will change our minds about what is needed in the way of protection for our members."

He noted the possibility of a delay, but said, "For the moment, we will take them at their word. We think this is a procedure that potentially delays the process and is unnecessary."

OSHA is considering two regulatory alternatives for formaldehyde, depending on whether it finds the existing scientific information on formaldehyde's ability to cause cancer in animals to be sufficient to require protections for humans.

If OSHA decides workers would be risk ing cancer in their exposures to formaldehyde, it will reduce the current 3 parts formaldehyde per million parts of air, to 1 ppm and set requirements for reducing exposures, monitoring workers' health and training.

Otherwise, the agency will merely reduce the exposure level to 1.5 ppm without setting any other requirements.

Meanwhile, OSHA made a preliminary determination that four glycol ethers pose "a significant risk to workers" and should be regulated, affirming the Environmental Protection Agency's finding that exposure to the chemicals can cause reproductive, developmental and hematologic problems.

Seminario expressed the federation's concern that OSHA will delay in taking the next step. "The evidence is not new; these risks have been known for quite some time," she said. "Our concern is whether the agency will move in a timely fashion to reduce worker exposures."

The glycol ethers are large volume industrial chemicals produced from ethylene oxide. They are used in the production of acetates, and in resins, inks, fuel additives, cleaners, adhesives, electronics, plastics, rubber and photographic chemicals.

The chemicals are 2-methoxyethanol, 2-ethoxyethanol and their acetates. An estimated 200,000 to 350,000 workers are exposed on the job to glycol ethers.

'87 conventions slated by AFL-CIO affiliates

Below is a list of conventions scheduled for 1987 by AFL-CIO national and international affiliates, state central bodies and fraternal organizations. Changes and additions will be reported.

DATE	ORGANIZATION	PLACE
Jan. 23-24	Woodworkers	Portland, Ore.
Mar. 23-25	Louisiana	Baton Rouge
Mar. 25-29	Professional Athletes	Los Angeles
Apr. 12-15	Auto Workers	Chicago
May 3-10	Plate Printers & Engravers	Philadelphia
May 11-13	Michigan	Detroit
May 11-14	Metal Polishers	Louisville, Ky.
May 27-29	Arizona	Tucson
May 31-June 3	Arkansas	Hot Springs
June 7-11	Grain Millers	Las Vegas, Nev.
June 11	Actors & Artistes	New York
June 15-19	Clothing & Textile Workers	Miami Beach, Fla.
June 15-19	Leather, Plastic & Novelty Workers	Atlantic City, N.J.
June 15-19	Musicians	Las Vegas, Nev.
June 15-26	Flint Glass Workers	Bal Harbour, Fla.
June 22-26	Newspaper Guild	San Diego
June 24-28	Utility Workers	Hollywood, Fla.
June 28-29	Mechanics Educational Society	Niagara Falls, N.Y.
July 17-19	Nevada	Stateline
July 19-24	Longshoremen	(undecided)
July 27	Railway & Airline Clerks	Hollywood, Fla.
July 27-29	Police Associations	Bossier City, La.
July 27-31	Communications Workers	Miami Beach, Fla.
Aug. 10-13	United Garment Workers	Nashville, Tenn.
Aug. 10-14	Aluminum, Brick & Glass Workers	Hollywood, Fla.
Aug. 12-15	Texas	Austin
Aug. 16-22	Sheet Metal Workers	Ottawa, Ont.
Aug. 19-21	Iowa	Waterloo
Aug. 20-22	Montana	Billings
Aug. 23	Asbestos Workers	Philadelphia
Aug. 24	Allied Industrial Workers	St. Louis
Sept. 4-6	Siderographers	Ottawa, Ont.
Sept. 15-18	North Carolina	Asheville
Sept. 16-18	Connecticut	New Haven
Sept. 17-19	North Dakota	Grand Forks
Sept. 18-19	Washington	Kelso
Sept. 20-23	Minnesota	Minneapolis
Sept. 21-23	Nebraska	North Platte
Sept. 21-24	Florida	Jacksonville
Sept. 21-25	Oregon	Seaside
Oct. 4	Rubber Workers	Las Vegas, Nev.
Oct. 4-6	Maryland	Washington, D.C.
Oct. 7-9	Kansas	Topeka
Oct. 16-17	Rhode Island	Providence
Oct. 19-20	Metal Trades Dept.	Miami Beach, Fla.
Oct. 19-21	Alabama	Birmingham
Oct. 21-22	Union Label & Service Trades Dept.	Miami Beach, Fla.
Oct. 21-23	West Virginia	Charleston
Oct. 22	Dept. for Professional Employees	Miami Beach, Fla.
Oct. 22-23	Maritime Trades Dept.	Miami Beach, Fla.
Oct. 23	Public Employee Dept.	Miami Beach, Fla.
Oct. 23-25	Labor Communications Association	Miami Beach, Fla.
Oct. 28-31	South Carolina	Myrtle Beach
Nov. 1-3	Tennessee	Nashville
Nov. 16-18	Industrial Union Dept.	Hollywood, Fla.

AFL-CIO MEETINGS & EVENTS

Feb. 16-20	Executive Council	Bal Harbour, Fla.
Mar. 20-22	Regional Conference—West	San Francisco
Mar. 23-27	National Education Conference	New Orleans
Mar. 30-31	Work & Family Conference	Washington, D.C.
Apr. 5-8	BCTD Legislative Conference	Washington, D.C.
Apr. 10-12	Regional Conference—Mid-Atlantic/ New England	New York
Apr. 25-30	Lawyers' Conference	San Francisco
May 5-7	Executive Council	Washington, D.C.
May 6-7	IUD Legislative Conference	Washington, D.C.

Arbiter can't be judge in own grievance case

New York—An impartial arbitrator has a right to a hearing over his termination by one of the parties to his employment agreement, but he can't serve as the judge in such proceedings, the 2nd U.S. Circuit Court of Appeals ruled.

The court overturned a decision by U.S. District Court Judge Robert Sweet, who upheld labor's dismissal of arbitrator Millard Cass as proper under the terms of a 1978 agreement between the 25,000-member New York Hotel & Motel Trades Council and the Hotel Association of New York, which provided that the arbitrator's employment could be terminated by either party on 60 days' notice.

Citing a provision of the collective bargaining agreement that made "all complaints, disputes or grievances" arising out of the contract arbitrable, the court ruled that the dismissal was subject to such a procedure.

But, it stressed, Cass's "clear personal interest in the outcome of this dispute disqualifies him from hearing it" in his role as the impartial arbitrator.

The dispute arose last June when the union coalition exercised its right to fire Cass because he had accepted a 100-percent pay increase put into effect by management over labor's protest. Cass continued to hold the arbitator's post and ruled that the firing by the unions was illegal.

The unions are weighing a possible appeal to the U.S. Supreme Court, insisting that the employment agreement is independent of the contract and therefore not subject to provisions governing the arbitration of grievances.

EDITORIALS

More of the Same

THE NEWEST Reagan Administration budget repeats the unfair and discredited formulas of its previous spending plans. Once again, the President's refusal to pay for what he describes as national security needs means he would sharply curtail other essential programs and continue to borrow from the future.

Proposals in the President's budget that are particularly onerous include those to eliminate vocational education grants, direct student financial assistance and further cuts in funding for Medicare, Medicaid, veterans' health care, and low- and middle-income housing. The budget would make new, unreasonable cuts in federal support for needed improvements in such deteriorating public facilities as bridges, highways, public transportation, and water and sewerage systems.

The President's proposal for new training funds does not deal with the basic employment problem caused by unfair foreign trade and, at best, would only provide services to a third of those workers dislocated by unfair foreign imports.

We believe it is inappropriate to engage in phony budget reduction through the sale of federal assets. We object also to the newest effort to make federal government employees scapegoats by reducing their benefit structure and turning over more of their jobs to private contractors.

Once again, it will be the responsibility of Congress to rewrite the President's budget proposals to recognize the true needs of the country and to restore a modicum of fairness in responding to those needs.

—AFL-CIO President Lane Kirkland, Jan. 6, 1987.

Constitutional Year

THIS NEW YEAR, 1987, will bring a wave of national soul-searching as the country celebrates the bicentennial of the U.S. Constitution.

We can hope that the anniversary will be marked with the seriousness that the subject deserves. Hopefully, the commercial hucksters that took over the celebration of the restoration of the Statue of Liberty will stay on Madison Avenue this year.

There are many serious issues to be explored this year, particularly since the record of the Reagan Administration for eroding many constitutional rights is so fresh in our minds.

Trade unionists should be alert for the usual huffing and puffing by the nation's publishers and broadcasters who are bound to preach about *their* First Amendment to the Constitution.

We will be ready to point out that the First Amendment that guarantees a free press also guarantees the rights of free religious expression, freedom of speech and freedom of assembly. Thus, the First Amendment protects the rights of workers to organize into unions; it is *our* First Amendment, too.

Solidarnosc Fights On

THE HIGH COURT of Poland handed down an expected decision last week. Playing its phony role to the hilt, the court tossed out the appeals made by groups of Polish workers that they be allowed to form new branches of Solidarnosc because they had no confidence in the unions sanctioned by the military government and ruling communist party.

Although the Polish generals tried to put Solidarnosc out of business in 1981 when they took power in the country, the only free trade union in the communist world continues to maintain a firm hold on the dreams of most Polish workers and other believers in democracy. The government cannot permit any public manifestation of support for Solidarnosc. At the same time, it cannot generate any popular support for the puppet unions it has established.

This is the background for the Warsaw government's insistence that if he visited Poland, AFL-CIO President Lane Kirkland would have to pay court to the pseudo unions and ignore Solidarnosc and its leader, Lech Walesa. Kirkland gave the regime the succinct answer: American free trade unionists do not do business with the communist "company unions."

Washington Window

Right-wing peddles myths about welfare recipients

By Press Associates

In the public and congressional debate over "welfare reform," it is important to sort out hard facts from popular fictions that some politicians and conservative ideologues have helped to promulgate over the years.

Myth: Poor people just live off government welfare.

Fact: The participation level of the poor in many of the government assistance programs is surprisingly low. In 1984, only about one-third of poor families received Aid to Families with Dependent Children cash benefits; only 43 percent got food stamps; 42 percent were covered by Medicaid, and just 26 percent received rent subsidies or lived in public housing.

In nearly every state, it is possible to have earnings that are several thousand dollars below the poverty line and still be ineligible for AFDC.

Myth: Welfare benefits are too high.

Fact: As of January 1985, the typical state offered AFDC benefits for $379 a month for a family of four—equal to 41 percent of the poverty line. Even adding food stamps doesn't raise a poor family's income to the poverty level, except in Alaska. In half the states, the combined benefits of AFDC and food stamps fails to reach three-fourths of the poverty line.

AFDC benefits have not been inflation-adjusted in most states, and thus have shrunk by about one-third in the typical state since 1970.

Myth: The AFDC rolls are full of able-bodies adults who prefer welfare to work.

Fact: Nearly 70 percent of AFDC recipients are children. Adults on public assistance are mainly female single parents. Fewer than 4 percent of AFDC recipients are men.

Nearly 40 percent of those who received AFDC in 1982 reported to the Census Bureau that they had worked during at least part of the year.

A 1985 General Accounting Office study showed that the vast majority of the working poor whose benefits were terminated under new restrictions adopted by the Reagan Administration in 1981 did not stop working or looking for work, even though in many cases they were worse off financially. They did so despite such barriers to their employment as lack of child care and high unemployment.

Myth: Once on welfare, always on welfare.

Fact: Among AFDC families, more than half leave the rolls within two years, while fewer than one-sixth are long-term cases remaining on the rolls for eight consecutive years or more.

Myth: Women receiving AFDC keep having more children just to get more money.

Fact: Families on welfare have shown the same steady drop in family size as the general population. In 1969, 50 percent of all AFDC families included three or more children. By 1982, 74 percent of AFDC families had fewer than three children, 43 percent had one child, and fewer than 1 in 60 had six or more children.

In most states, there is no financial incentive for AFDC recipients to have more children due to the small amount of benefit increases for additional children. A 1984 landmark study commissioned by the Dept. of Health & Human Services found that welfare benefit levels have no significant impact on out-of-wedlock birth rates.

Myth: Poor people migrate to states with 'high' AFDC benefits to get these benefits.

Fact: Poor people tent to migrate in the same direction as the population as a whole in search of job opportunities. In recent years, they moved out of midwestern and eastern states into the Sunbelt states, where AFDC benefits are lower.

Myth: Many welfare recipients try to cheat the system. Nothing is being done to prevent it.

Fact: All states have systems to control errors in the AFDC program. HHS data show that the fraud rate is under 3 percent.

Myth: Welfare and other programs for the poor are the main cause of the federal deficit.

Fact: AFDC payments amount to less than 1 percent of the federal budget, and all means-tested programs—including food stamps, Medicaid, SSI, nutrition, housing and energy assistance, and employment and training—amount to less than 9 percent of federal spending. This is less than the annual interest payments on the national debt.

Old Glory

An all-union effort raises the American flag at the George Meany Center for Labor Studies. Union Label & Service Trades Dept. Sec.-Treas. John Mara spearheaded the drive, with UL&STD donating the pole and the Iron Workers volunteering the muscle to erect it. The flag was a gift of the United Textile Workers. From left, Robert Pleasure, executive director of the Meany Center, Iron Workers Treas. James Cole, Sec. Jake West and President Juel Drake, and Mara.

Court orders reinstatement

Union sticker no cause for firing

Atlanta—A highway construction firm that fired two workers who demonstrated their support for a union organizing campaign violated labor law, a federal appeals court ruled.

The 2-to-1 decision by the 11th Circuit U.S. Court of Appeals upheld the National Labor Relations Board in ordering the company to reinstate the workers and to remove any record of the discharges from their files.

The court ruled that Malta Construction Co. of Conley, Ga., violated the Taft-Hartley Act when it fired John Lambert for wearing an Operating Engineers Local 926 sticker on his hardhat. The union had begun a campaign to organize mechanics and equipment operators on an interstate highway project in Georgia.

Lambert had placed union stickers on a crane and on his personal and company hardhats. He removed the insignia from the crane but continued wearing his personal hardhat with the union sticker. When told he must wear the company hardhat, Lambert agreed, but refused to remove the union sticker. He continued to wear the sticker on his company hat and was fired.

Another worker and union supporter, Paul Hoback, was fired during the organizing drive when Malta claimed he refused to follow instructions and caused "deliberate interference with production." Although he discussed the union campaign with other employees only during his work breaks, Hoback was fired after his supervisor charged that he was late in completing work assignments.

NLRB ruling

The IUOE local filed unfair labor practices with the NLRB which ordered Malta to reinstate the two men and to eliminate from their personnel records any reference to the discharges.

Malta appealed the board's decision, claiming that its policy of prohibiting union stickers was based on legitimate business and safety concerns which the NLRB had ignored. The orange company hardhats allow supervisors and equipment operators to quickly recognize employees, Malta stressed, reinforcing job safety and Malta's identity.

But the appeals court rejected Malta's argument, agreeing with the NLRB that Malta had not demonstrated any legitimate business or safety reason to prohibit the union stickers.

"The wearing of union insignia by employees, particularly during an organizational campaign, is fairly typical behavior" that is protected under federal labor law, the court stated, adding that the NLRB has acknowledged stickers can be prohibited under certain circumstances, "but Malta had not demonstrated such special concerns."

The court also agreed that Malta wrongly fired Hoback without warning him that his actions might result in disciplinary measures. "While management has a lot of freedom in hiring and firing its employees, it cannot fire when the real motive is to discriminate against pro-union employees," the court ruled. It observed that the reasons given by Malta for Hoback's discharge "were not the real ones" and found that the company failed to prove it would have fired Hoback "absent the union conversation."

Air traffic controllers file for election

Representation denied since Reagan's mass firing in 1981

Nearly half of the nation's air traffic controllers have asked the federal government to hold an election so they can choose the National Air Traffic Controllers Association as their bargaining agent.

The rebirth of a union for air traffic controllers follows by five years the death blow President Reagan dealt to the Professional Air Traffic Controllers Organization, whose members went on strike in August 1981.

More than 11,000 PATCO members were fired by Reagan, who steadfastly refused to allow them to be rehired by the government at any time. Since then, the workforce of 15,000 has been rebuilt to 13,000, but the overall experience level remains lower than it did in 1981.

NATCA, an affiliate of the Marine Engineers, filed a petition with the Federal Labor Relations Authority along with 5,800 authorization cards from employees of the Federal Aviation Administration.

John F. Thornton, national coordinator for NATCA and one of the striking air traffic controllers whom President Reagan fired in 1981, predicted that "an overwhelming majority of air traffic controllers will vote for a strong and responsible union like NATCA in an election in the next few months."

He stressed that "for too long, controllers have been cut out of the decision-making process at the FAA. A union will give the controllers a method for exerting influence on air traffic safety within the FAA." Equally important, he noted, will be the added means of communications from the controllers to Congress on aviation safety matters.

Election procedure

Under federal government procedures, FLRA will validate the signatures on the authorization cards, then hold meetings with NATCA and FAA officials to work out plans for a secret ballot election. Certification of NATCA as the bargaining agent will be based on its winning more than half the votes cast.

AFL-CIO President Lane Kirkland expressed the federation's "wholehearted support" for the NATCA organizing campaign. "An effective union will lighten the excessive burdens now being placed on the men and women employed by the FAA in the air traffic control system," Kirkland said. "Thus, a union for controllers will certainly promote air safety."

The federation urged the FLRA to "expedite action on this request for an election."

Bruce Rosenstein, FLRA acting regional director for the Washington area, said the agency will try to validate the support for the union "in the next three weeks or so." He indicated an election could be held by the beginning of April.

The organizing effort was also welcomed by the Air Line Pilots, whose members work daily with the controllers. ALPA President Henry Duffy said, "The Pilots will welcome the presence once again of a union of air traffic controllers. We have common interests and share common concerns about traffic problems and air safety in the nation's airways system."

Tough restraints on Solidarnosc upheld by court

Warsaw—Poland's highest court upheld restrictions on Solidarnosc, preventing it from forming trade unions that compete with government-sponsored worker organizations.

The first free trade union movement in the Soviet bloc, Solidarnosc was outlawed in 1982 following a sweeping crackdown on workers' rights and the imposition of martial law by the regime of Gen. Wojciech Jaruzelski.

Last month, AFL-CIO President Lane Kirkland and a federation delegation were denied visas to meet here with Solidarnosc leader Lech Walesa. The action followed refusal by the American union officials to bow to Jaruzelski's demand that they also meet with the "official trade unions" created by government decree. Kirkland insisted that Solidarnosc is "the authentic voice of Poland's workers."

The court rejected Solidarnosc's claim that the ban on union pluralism violates the Polish constitution and International Labor Organization agreements ratified by Poland guaranteeing workers the right to unite in unions of their choice. The court ruled that the restriction is valid and can be lifted only by the Council of State, an executive body firmly under Jaruzelski's control.

Susan Washington joins education staff

Susan Washington has joined the AFL-CIO Dept. of Education as a staff representative. Washington, 32, had served as program coordinator for education at the federation's American Institute for Free Labor Development for the past two years.

A graduate of Spelman College with a master's degree from George Washington University, Washington was AIFLD's assistant director in Barbados from 1981 to 1984. She later served as AIFLD director in the Dominican Republic.

Kistler fills Humphrey Institute labor seat

Minneapolis—Alan Kistler, retired director of the AFL-CIO Dept. of Organization & Field Services, is filling the labor policy chair at the Hubert H. Humphrey Institute of Public Affairs for the current academic year.

Kistler, who is also president of the federation's Human Resources Development Institute and a board member of the Manpower Demonstration Research Corp., is leading seminars for graduate students on labor's policies and strengthening the trade union movement's presence at the Institute, a part of the University of Minnesota.

The labor policy chair is funded through contributions from AFL-CIO affiliates.

Sign of the times

Labor's message is being seen all over Boston as part of a new year-long "visibility campaign" sponsored by the Massachusetts AFL-CIO and 23 area unions. The campaign will use billboards rented from Ackerley Communications, whose employees, members of Painters' Sign & Pictorial Local 391, are donating their time and skills to the project. The State AFL-CIO plans to include airport and subway ads in the campaign.

Trade and budget deficits cloud 1987 outlook

Continuing deficits in jobs, foreign trade and the federal budget cast a "dark shadow" over the performance of the American economy in 1987, the AFL-CIO warned.

In a New Year's assessment of the economic outlook, Federation Research Director Rudy Oswald dismissed as "too rosy" forecasts by the Administration and private analysts of a 3-percent growth in the gross national product this year.

Although it would represent a "slight improvement over the economy's sluggish performance over the past two and one-half years," during which GNP advanced at an annual rate of just 2.5 percent, even an upturn of such modest proportions doesn't seem to be in the cards, Oswald said.

"The trade deficit will remain high, the federal budget deficit will still be around $150 to $170 billion, thousands of workers are receiving layoff notices, and wage gains have been weak," he asserted. "This doesn't make for a bright picture for most workers."

The jobs outlook is particularly bleak, the analysis pointed out. Since mid-1984, when the nation was supposed to have "recovered" from the worst effects of the Reagan Recession, Oswald stressed, the unemployment rate has "remained confined within a narrow range around 7 percent—a rate equated to recession levels.

"With joblessness generally expected to average 6.9 percent in 1987, no improvement is foreseen in the unacceptably high and damaging proportion of people unable to find work," the assessment emphasized. And the recent wave of large-scale layoffs at such corporate giants as General Motors Corp. and American Telephone & Telegraph Co. further dims the prospects for easing the crisis on the employment front.

Administration economists are pinning their hopes for a quickening tempo on the assumption that the decline in the value of the dollar against foreign currencies which began in February 1985 will finally produce a much-delayed improvement in the nation's crushing trade deficit.

But, Oswald said, "the same assumption

Labor wants action to save jobs

Donahue testifies at Senate job and wage hearings with AFL-CIO Research Director Rudy Oswald and Associate Legislative Director Peggy Taylor.

Minimum pay hike needed, Senate told

By David L. Perlman

The AFL-CIO called on Congress to stave off economic collapse by expanding job opportunities, shoring up sagging living standards and restoring the lost buying power of the minimum wage.

Low-paying jobs won't get the nation's economy back on track, AFL-CIO Sec.-Treas. Thomas R. Donahue told the Senate Labor & Human Resources Committee.

The committee hearings dramatically pointed up the turnabout of last November's elections, which gave the Senate a Democratic majority for the first time in the Reagan Administration. Sen. Edward M. Kennedy (D-Mass.), the new committee chairman, made clear that he shares labor's concern. "The minimum wage is not a living wage," he agreed.

Donahue and other opening witnesses at the Senate hearings on National Goals in Employment reflected the changed focus of the new Congress. For the first six years of the Reagan Administration, the minimum wage battle was over the White House attempt to lower the pay floor through a subminimum youth wage.

No support

In refusing to endorse calls for a pay floor boost, Labor Sec. William E. Brock told the panel that the Administration has not yet adopted a position on the issue.

The Labor Dept.'s priorities, he said, are to improve job training, increase literacy and help disadvantaged youngsters break a cycle of welfare dependency. But he cautioned that government's role is limited by budget deficits and said the private sector will have to take on a bigger role.

Other witnesses insisted that government has a bigger responsibility, including Cath-

Panel backs notification in plant closings

By Gene Zack

A federal task force threw its support behind the principle of giving workers and their unions advance notice of plant closings and major layoffs, but fell short of agreement on making such action mandatory.

AFL-CIO President Lane Kirkland welcomed the recognition that advance notice must be "an essential component of any program to help workers and local communities adjust successfully" to the adverse economic and social fallout from the flood of imports, plant relocations overseas, technological change, mergers and takeovers.

Legislation needed

Kirkland emphasized that mandatory notice is vital and said labor intends to press for a congressional solution. Legislation is the only way to "fully meet the needs of American workers who lose their jobs" because of massive layoffs, he asserted.

President Howard D. Samuel of the federation's Industrial Union Dept., who headed the union delegation on the panel, echoed that view. He called for a bill that would "embrace and build upon the consensus recommendations" of the task force which, he said, recognized that dislocation of workers is "a problem demanding a response."

The Labor Dept. task force—comprising six members each from organized labor and management and nine members representing state and local governments and academia—called for a blend of private and public programs to provide a "rapid response mechanism" to deal with the mounting problem of dislocated workers.

Declaring that the nation has a "human-

Supreme Court upholds pregnancy leave rights

Unions welcomed a Supreme Court decision upholding a California law that requires employers to allow women workers up to four months of unpaid leave during pregnancy and childbirth, with the right to reclaim their jobs on return to work.

At issue was whether the state law conflicted with the Pregnancy Disability Act that Congress passed in 1978. The federal law merely required employers who provide disability benefits for their workers to include coverage for women temporarily incapacitated as a result of pregnancy.

By a 6-3 majority, the justices ruled that the federal law does not preclude or nullify the California law. That was the conclusion urged by the AFL-CIO in a brief supporting the validity of the state law.

The Coalition of Labor Union Women, which strongly supported the California law, saw the Supreme Court decision as a spur to the labor movement's campaign for a parental leave law, guaranteeing the right of workers in all states to take time off to care for a new child.

The majority opinion, by Justice Thurgood Marshall, found no indication that Congress intended to prohibit states from requiring employers to provide job retention rights for pregnant women when it passed the 1978 law.

The federal law was clearly intended to assure certain rights to pregnant workers, not restrict rights, the opinion noted. It observed that several states had laws similar to that of California at the time Congress acted and the legislative record is devoid of any indication that Congress intended to supersede them.

In the case that reached the Supreme Court, a Los Angeles savings and loan

Tax justice campaign shifts to states

Study finds loopholes for rich heap burden on workers

The super-rich have been taking a "loophole joyride" at the state level, paying disproportionately less in sales, income and property taxes than the middle class and the poor.

In ten states, the tax burden on the wealthy is half or less that borne by median-income workers and their families. And in those states, plus five others, the richest families pay less than half the taxes borne by the poor.

Nationwide, people living below the poverty line pay 37 percent more of their incomes in these taxes than the seven-tenths of 1 percent of the population with income 70 times greater than theirs.

Those are the highlights of a report by Citizens for Tax Justice, which launched a campaign to win state and local revenue reform to match the federal tax overhaul enacted by Congress last year.

"Unless states link up with the federal reforms, the rich will continue to enjoy a tax-break windfall" at the expense of middle- and low-income families, said Robert S. McIntyre, CTJ's director of tax policy.

In reviewing the study, President Gerald McEntee of the State, County & Municipal Employees said states have a golden opportunity in 1987 to enact "a broader, fairer tax base capable of producing additional revenues at current rates of taxation."

McEntee noted that the wealthy claim the 1986 federal tax reform measure is producing a tax "windfall" for the states. In reality, he emphasized, it is "a 'restoration'—a return to the states of the ability to undo the damage to fiscal stability and fairness" that grew out of the Reagan tax cuts of 1981.

CTJ—a Washington-based research and lobbying group supported by a coalition of

Labor remembers King

Across the country, union members will be celebrating the Martin Luther King national holiday in rallies, parades and conferences. Following is a small sample of events sponsored by organized labor:

In Atlanta, AFL-CIO affiliates are joining in the weeklong activities planned by the King Federal Holiday Commission and the Martin Luther King Center. Trade unionists from more than 30 unions will be attending the events, which include a conference at Georgia State University, a showing of the Public Broadcasting System's documentary "In Remembrance of Martin," rallies and exhibits. The celebration features a parade through the city on the Jan. 19 holiday. The King Center also will present special awards to Steelworkers President Lynn Williams, Farm Workers President Cesar Chavez and Georgia AFL-CIO President Herbert Mabry.

Despite the refusal of Republican Gov. Evan Mecham to honor the national holiday, members of the State, County & Municipal Employees in Phoenix will hold a candlelight vigil honoring King on Jan. 18. On the following day, AFSCME members will march en masse to the state capitol to present a petition protesting the governor's action.

Los Angeles-area union members will celebrate the King holiday at a labor breakfast while in Miami, the Miami AFL-CIO and 20 local unions will hold an evening rally and a parade through the city on the Jan. 19th holiday.

In Philadelphia, union members will meet at the Clothing & Textile Workers Hall for an evening of music, speakers and entertainment honoring the civil rights leader and marking labor's fight against apartheid in South Africa.

A look at the long partnership between the civil rights movement and organized labor was the subject of a conference held at AFL-CIO headquarters, sponsored by the National Capital Labor History Society and the Washington chapters of the A. Philip Randolph Institute and the Coalition of Black Trade Unionists.

King was a staunch trade union supporter as well as a civil rights leader, participating in dozens of organizing drives and strikes over nearly two decades. He was slain by an assassin's bullet on Apr. 4, 1968, in Memphis, Tenn., where he went to lead a peaceful march of striking sanitation workers—members of AFSCME Local 1171.

Trade panel hits dumping of TV tubes

Color television picture tubes imported from the Far East and Canada have been illegally "dumped" in the United States, threatening the domestic TV manufacturing industry and the jobs of thousands of workers, the International Trade Commission ruled.

Acting on a complaint filed by four AFL-CIO unions and the Industrial Union Dept., the six-member panel concluded in a unanimous decision that "there is reasonable indication that an industry in the United States is materially injured" by the large volume of imported tubes from Japan, Korea, Singapore and Canada sold at "less than fair value" here.

The Commerce Dept. now must continue the investigation and will issue its findings on the extent to which the U.S. color picture tube industry has been harmed by high levels of imported tubes.

President William H. Bywater of the Electronic Workers applauded the decision, urging a "speedy, thorough investigation and a fair decision."

"Speed on this case is vital because jobs once lost are almost impossible to recapture," Bywater stressed.

The dumping complaint, filed last November, charged manufacturers in Canada, Korea, Taiwan and Singapore with dumping picture tubes in the United States at prices ranging from 5 to 94 percent below the selling price in their home countries. The unions' petition held that foreign manufacturers were scheming to take over the U.S. market by selling their products at an artificially low price.

Jobs wiped out

A 1984 Commerce Dept. ruling found Korean and Taiwanese firms guilty of dumping color television sets in the United States. But foreign manufacturers began to ship television parts and picture tubes to the United States for assembly, further undercutting the domestic industry and wiping out jobs, the unions pointed out.

In 1983, imported color picture tubes held a 10-percent share of the market, growing to 26 percent last year, the unions noted. About 10,000 workers are still employed in the U.S. picture tube industry, but layoffs continue to shrink the workforce.

Also joining the petition were the Electrical Workers, Machinists and Steelworkers.

In a separate decision, the ITC held that stainless steel cookware imported from Korea and Taiwan benefited from subsidies and was being sold in the United States at prices lower than those charged in the two countries. The 3-3 vote affirmed the complaint of the Cookware Manufacturers Association, representing nine companies and 1,600 workers.

In 1985, 49 percent of all imported stainless steel cookware was made in Korea, with 1 percent produced in Taiwan.

Advance notice closing rule endorsed

Task force calls for $900-million worker retraining plan

Continued from Page 1

itarian responsibility" to help find suitable employment for those left jobless at a time when they're still able to work, the task force said it is in "the national interest" to keep people working and avoid any "unnecessary hardship and waste of human capital."

Chaired by Malcolm R. Lovell Jr., director of the labor-management institute at George Washington University, the panel called for a $900-million program to help train and re-employ workers who've lost their jobs to foreign competition or new technology. It would replace parts of the Job Training Partnership Act and the Trade Adjustment Assistance program.

A total of $980 million for this purpose was included in the trillion-dollar budget President Reagan sent to Congress a week ago. At that time, Kirkland called the commitment inadequate, pointing out that it would "only provide services to a third of those workers dislocated by unfair foreign imports."

Created by Labor Sec. William E. Brock in October 1985—just prior to a narrow 208-203 House defeat of a bill mandating 90-day advance notification and consultation prior to plant closings or major layoffs—the task force painted a grim picture of a continuing shift from an industrial to a service economy under the combined pressures of imports, business failures and mergers.

"This process of change," the task force said, "has created a population of displaced workers"—those who had been with their employer at least three years prior to the time their jobs were abolished permanently. A total of 5.1 million such people joined the ranks of displaced workers between 1981 and 1985, with 1.3 million added to the ranks of the displaced in 1985 alone. If all adult workers were counted, without regard to length of employment, the number whose jobs were permanently shot out from under them more than doubled—to 10.8 million.

Mixed reaction

In the face of this deepening problem, management's reaction to the devastation suffered by workers and communities has been decidedly mixed, the task force pointed out. Some employers provide assistance to displaced workers, "often the result of pre-existing contracts" with unions. But many other employers "appear to do little or nothing before, during or after a closing or permanent plant layoff."

Public policy approaches are mixed, too. Augmenting federal assistance now offered through JTPA, TAA, the unemployment insurance program and the U.S. Employment Service, only a few states—California, Delaware, Illinois, Indiana, Massachusetts, Michigan, New Jersey and New York—provide their own programs to assist displaced workers. And what aid these programs offer often is too little and too late because of the absence of an early-warning system.

"Clear notice in advance, the earlier the better," is the most effective tool in "accelerating worker adjustment," the task force said, particularly when "notice is coupled with no loss of severance benefits for early leaving and aggressive joint labor-management" efforts to help workers find new jobs.

Yet, the report asserted, a recent survey by the General Accounting Office showed that "in too many plant closings and permanent mass layoffs, insufficient advance notice of job loss is given to make possible an optimal private and public role in the re-employment process."

Task force split

Despite these findings, the task force couldn't reach agreement on the best method for providing such advance notice. The labor representatives and some public members favored a legislative approach but management officials clung to the notion of "voluntary notification as opposed to regulations."

Kirkland praised the panel's labor representatives for "reaching a constructive compromise with the business members" concerning the scope of the problem. He called on Congress to "enact legislation which more fully meets the needs of American workers who lose their jobs as a result of plant closings and major layoffs."

Besides Samuel, labor members of the task force included Steelworkers Vice President Leon Lynch, Auto Workers Vice President Don Ephlin, Clothing & Textile Workers Vice President Joyce Miller, Food & Commercial Workers Vice President Jay Foreman, and Tom Hickman, director of the manufacturing department of the Electrical Workers. All of these unions represent workers who have borne the brunt of import-related dislocations.

Loss of manufacturing jobs changes economy's profile

Predatory foreign trade, the relocation of American-owned plants abroad and corporate takeovers and mergers are changing the face of the U.S. economy, the bipartisan Labor Dept. Task Force on Economic Adjustment & Worker Dislocation pointed out.

Here are highlights of the changes reported by the panel:

- In 1970, manufacturing employment amounted to 33 percent of the nation's total nonfarm payroll; by 1985, the proportion had dropped to 26 percent. During the same period, the service industry's share of the workforce advanced from 67 percent to 74 percent.
- Although the economy created 29 million jobs over the last 15 years—9.6 million of them between 1980 and 1986—most of the employment growth was concentrated in the service sector.
- This changing employment mix "indicates a shift away from higher-paying toward lower-paying jobs," as demonstrated by the fact that from 1972 to 1985, average real hourly earnings were down a sharp 9 percent and average weekly earnings plunged 14 percent.

At the same time, the study provided this profile of the members of that army of displaced workers:

- Almost 50 percent lost jobs in manufacturing, most of them in such key areas as primary metals, transportation, equipment and machinery.
- They were disproportionately blue-collar workers, both skilled and unskilled.
- The job losses were heavily concentrated in the Midwest and other areas with heavy industry.
- As of last January, 18 percent were still unemployed and another 15 percent had left the workforce, a significant number of whom had quit looking for jobs because there were none to be found.
- More than half of those eventually re-employed were no longer in the same industry or performing the same work they had before they were displaced.
- When they did find new jobs, workers displaced from full-time employment suffered average losses of 10 to 15 percent in real earnings, with nearly 30 percent of the re-employed blue-collar workers and 24 percent of the white-collar and service workers taking pay cuts of 25 percent or more.
- Older workers and those with the longest tenure with their previous employer bore the brunt of the earnings losses, and such wage cuts were greater in areas of high unemployment and among blue-collar workers "displaced from well-paying unionized industries." Moreover, workers employed the longest at their previous jobs endure the longest spells of joblessness.
- Black workers on the average had longer periods of joblessness than whites and women had longer spells of unemployment than men.

William Dolson to serve as BCTD-Toyota arbiter

William F. Dolson, a labor law professor at the University of Louisville, will serve as the final arbitrator of disputes under a project agreement negotiated between the AFL-CIO Building & Construction Trades Dept. and Ohbayashi Corp., construction manager for the Toyota Corp. The BCTD and Ohbayashi agreement covers the construction of an $800 million assembly plant in Georgetown, Ky.

The project agreement includes a no strike and no lockout clause with provisions for the prompt arbitration of disputes.

House drafts bill on plant shutdowns

Three House members announced a bipartisan plan to introduce legislation embodying President Reagan's proposed $980-million job training plan to aid workers thrown out of their jobs by imports, plant closings and new technology.

But they added that their bill will also include language requiring employers to give advance notice of anticipated plant closings or mass layoffs.

The bill's sponsors—Reps. William D. Ford (D-Mich.), William Clay (D-Mo.) and Silvio Conte (R-Mass.)—emphasized that a Labor Dept. task force's findings on dislocated workers "lead to the inescapable conclusion that notice is necessary."

"The report leaves little doubt that public policy must address the reality that worker dislocations are certain to be an economic fact of life for the foreseeable future," they said in a joint statement.

The three congressmen were sponsors of similar advance notice legislation in 1985. It was narrowly defeated in the House under intense opposition from the Reagan Administration and business groups.

Layoff notices dim hope for 1987 improvement in employment outlook

By Candice Johnson

The employment situation for American workers remained bleak throughout 1986, with the jobless rate stuck at a stagnant 7 percent for the year.

While December's decline of two-tenths of 1 percent produced an unemployment rate of 6.7 percent, the Bureau of Labor Statistics reported, 7.9 million workers were still without jobs and 5.6 million were working part time but seeking full-time work. Another 1.1 million persons were considered "discouraged" workers—the longterm unemployed who have given up a fruitless search for work.

The official jobless rate is misleading because the BLS count does not include discouraged workers, and considers involuntary part-time workers as fully employed. Including these groups produced a "real" jobless rate of 12.3 percent for December, the National Committee for Full Employment pointed out.

While the government's survey of businesses indicated an increase of 2.4 million jobs last year, nearly 80 percent of the gains came in lower-wage retail and service trades. A December gain of 31,000 manufacturing jobs did little to boost employment in that sector, leaving manufacturing employment 100,000 below the level of a year ago. Employment in mining dropped by 160,000 during the past 12 months.

The establishment survey also showed a drop in average weekly hours worked in the retail trades from 29.2 in December 1985 to 28.8 a year later with a corresponding drop in average weekly wages —from $178.50 to 176.99. Weekly manufacturing wages improved slightly over the year, increasing to $411.16 from $406.16.

More layoffs ahead

Coming on the heels of the BLS report were announcements of further layoffs and plant closings by major manufacturers:

- General Electric Co. said it plans to eliminate more than 3,400 jobs over the next two years—furloughing workers at its turbine facilities in Lynn, Mass., and Schenectady, N.Y., and at a jet engine plant in Evendale, Ohio. Layoffs at the firm's Pittsfield, Mass., plant will affect another 750 workers, and 650 jobs will be eliminated in Syracuse, N.Y., as GE ends its production of color television picture tubes.
- Caterpillar Inc. will close plants in Davenport, Iowa, and Dallas, Ore., laying off more than 1,700 workers. Over the past five years, the construction equipment manufacturer closed six U.S. plants and eliminated more than 36,000 jobs.
- Wang Laboratories Inc., is cutting its workforce by 1,000 jobs and said it will reduce workers' salaries by 6 percent over the next six months. In 1985, Wang laid off more than 1,600 workers and eliminated another 1,600 jobs through voluntary retirements.
- VF Corp. will lay off 1,200 workers when its Wrangler jeans division closes eight shops in Arizona and North Carolina over the next three months. Another 300 workers were laid off late last year.
- Additional layoffs planned by General Motors Corp. include nearly 2,000 workers at an assembly plant near Kansas City, where GM plans to cut its workforce to one shift. Earlier, the auto manufacturer announced it would eliminate the jobs of 29,000 workers at 11 plants.

Bleak state picture

BLS reported that unemployment in November rose above October levels in 36 states, with four states experiencing increases of 1 percent or greater. Unemployment in the year ending November 1986 increased in 20 states, with eight states reporting an increase of 1 percent or more, BLS noted.

Four states reported unemployment rates in the double-digit range, up from two in the year-ago period. Louisiana led the nation with a jobless rate of 13.4 percent, with Alaska, Mississippi and West Virginia also reporting unemployment above 10 percent.

Unemployment declined in 28 states and the District of Columbia for the same 12-month period, but in 26 states and the District of Columbia, the average unemployment rate was 6 percent or higher, the bureau indicated.

States with the lowest level of joblessness were New Hampshire, 2.5 percent; Delaware, 3.2 percent; Connecticut, 3.4 percent, Massachusetts, 3.6 percent, and Rhode Island, 3.8 percent.

The BLS producer price index for finished goods was unchanged last month, resulting in an overall decline of 2.5 percent for the year, compared to an increase in finished goods prices of 1.8 percent for 1985. The 1986 drop was led by a sharp plunge in energy prices, which averaged between 30 and 40 percent below their December 1985 level.

Food prices fell four-tenths of 1 percent in December, but averaged a 2.9-percent increase over the year. In other goods, auto prices fell two-tenths of 1 percent during December, but were 6.6 percent higher than in 1985.

Immigration reform

Concerns of workers and their unions over implementation of the new Immigration Reform Act were expressed to Commissioner Allan C. Nelson of the Immigration & Naturalization Service by AFL-CIO President Lane Kirkland and Sec.-Treas. Thomas R. Donahue. The federation officials detailed the wide-ranging program being implemented by the labor movement to help undocumented workers achieve citizenship status and to assure that they will not be exploited by employers. Nelson pledged to work with unions to carry out the legalization mandate of the new law.

CWA arbitration win brings $6-million back pay award

The Communications Workers won back pay for about 900 workers at American Telephone & Telegraph Co. and reinstatement for 130 others in one of the largest negotiated grievance and arbitration settlements ever. The award will total $6 million.

The settlement resolved 109 pending arbitration cases and 80 grievances, all resulting from violations of the CWA contract with Bell of Pennsylvania that bans contracting out of work during job surplus situations.

That contract remained in force, the union held, after the breakup of the Bell System three years ago and those 1,000 workers were transferred from Bell of Pennsylvania to AT&T.

At issue was AT&T's contracting out of work that resulted in the layoff of 130 workers and the downgrading or denying of overtime to 900 other workers. CWA had already found new jobs for about 100 of the laid-off workers—all of whom will be offered their original jobs and wage levels along with back pay and full credited service.

The downgraded workers will be given an opportunity to regain their former jobs with back pay and "grandfathered" at the pay rate with all subsequent increases of the higher wage scale.

"This is an enormous victory for the union on two counts," declared CWA President Morton Bahr. "While the magnitude of the settlement is staggering, the substance, the prohibition on this employer's ability to subcontract this work, is equally if not more important. We will continue to fight the abuse of subcontracting wherever and whenever it exists."

CWA Vice President Vincent Maisano, who negotiated the settlement, said "this is another example of the union protecting workers against some of the sorrow and trauma caused by the divestiture of the Bell System." He credited the agreement to the "shop stewards, representatives, local and unit officers" of CWA Local 13000 in Philadelphia and the union's staff "tenaciously policed the contract."

Jewel food chain pact ratified by 17,000 in Chicago

Chicago—Wage increases ranging from 70 to 75 cents an hour highlight a new three-year contract ratified by 17,000 Food & Commercial Workers at the giant Jewel Food Stores chain.

UFCW Local 881 also succeeded in ending a two-tier wage system under which 700 employees at the chain's stores in northwest Indiana were being paid $1.25 an hour less than their counterparts in Chicago-area stores.

Establishing a single wage rate was one of the union's major bargaining goals and caused negotiations to continue for two months beyond the Oct. 4 expiration date of the old agreement.

The new contract was approved by nearly 80 percent of those who participated in the mail referendum. It gives food clerks an immediate 35-cent hourly pay increase, bringing their hourly rate to $11.25. It will rise to $11.40 on Oct. 4 and to $11.65 in October 1988. General merchandise clerks will receive $9.35 an hour immediately, a 35-cent hourly raise. The rate will go to $9.55 in October and $9.75 an hour next year.

The agreement also provides premium pay on Sundays and holidays, and entitles union stewards and executive board members to straight-time pay while attending Local 881's annual stewards' conference.

Tax justice campaign shifts to states

Study finds loopholes for rich heap burden on workers

Continued from Page 1

labor, consumer and grass-roots organizations—was a prime mover in the 1986 federal tax reform fight. In a study titled "The Sorry State of State Taxes," the group found that:

- State sales taxes take over twice the share of a median-income family's earnings and over four times as much of a poor family's income as it does from those at the top of the economic heap.
- Property taxes, while less regressive than sales taxes, still fall disproportionately on the non-wealthy because the wealthy are not taxed on such personal property as stocks, bonds and art collections.
- Although income taxes are the fairest of the three types of levies imposed by the states, they are flawed because the value of personal exemptions and the standard deduction has declined in most states, "leaving working and poor families at a huge disadvantage when compared to their rich neighbors."

The coalition identified what it said were the "terrible ten" states that tax the middle class at twice the rate of the rich. They are South Dakota, Wyoming, Washington, Nevada, Texas, Tennessee, Utah, New Hampshire, Missouri and Indiana.

These ten states—plus Connecticut, Florida, Illinois, Pennsylvania and Iowa—had the dubious honor of making it to CTJ's dishonor list of the "filthy fifteen" because they all tax the rich at less than half the rate levied on the poor.

"There is a crying need for thorough, top-to-bottom tax reform in almost every state in the union," McIntyre said. If the states simply conform their tax systems to the new federal code, the wealthy would still pay only 91 percent of what the poorest pay and 92 percent of what middle-income earners pay. "This is hardly a radical breakthrough," he emphasized, "just a step toward fairness."

Answering the charge that federal tax reform is producing a "windfall" for the states, McIntyre accused the wealthy of merely wanting to continue "the astounding tax windfall" they have been receiving by piling one tax shelter on top of another.

Putting tax avoiders back on the state rolls will produce more revenues, McIntyre said. This will make it possible for state governments to pick up some of the slack in the area of public services resulting from Reagan Administration budget cuts.

McEntee pointed out that between 1981 and 1986, federal aid to state and local governments was cut by 15 percent. This took away $76 billion in grants for education, employment and training, health services, nutrition, income maintenance and human services and investment in infrastructure. Many of these cuts fell on recipients of these services, depriving the poor and middle class of opportunities for the future and support for basic needs.

Supreme Court upholds state pregnancy leave law

Continued from Page 1

association had denied reinstatement to a woman employee who had taken the four months of unpaid leave the law allowed her. The employer said her job had been filled and there were no openings for any similar job.

A federal judge upheld the savings firm's claim that the state law did not apply because it was preempted by the federal law. But the 9th Circuit U.S. Court of Appeals held that the state and federal laws could co-exist. It maintained that Congress intended "to construct a floor beneath which pregnancy disability benefits may not drop—not a ceiling above which they may not rise."

The Supreme Court majority affirmed the appellate court ruling. Dissenting were Chief Justice William H. Rehnquist and Justices Byron R. White and Lewis F. Powell Jr.

The dissent, written by White, claimed the California statute violated the "equality of treatment" intent of federal law by giving preferential treatment to pregnant employees.

Elizabeth Youvon, a registered nurse and member of Hospital & Health Care Employees Local 1199M, tends to UAW Organizing Coordinator Willie Gilbert at a Detroit union blood donation drive.

Labor steps up blood donations to remedy Red Cross shortage

Responding to the call for help from the American Red Cross, AFL-CIO unions have mounted blood drives and educational campaigns to increase donations during a critical nationwide shortage of blood.

Federation Vice President John Sweeney is leading the national effort, spearheaded by the federation's Dept. of Community Services.

In launching the campaign, Sweeney stressed the critical need for blood following the holiday season and in the summer months. Labor's campaign is asking trade unionists to donate blood during January and August, when Red Cross blood supplies are at their lowest.

In Detroit, nearly 100 union members donated blood during a special two-day drive organized by the Detroit AFL-CIO Community Services program and the Red Cross's southeastern chapter. Four union halls—the Teachers, Auto Workers, Service Employees and Food & Commercial Workers—became temporary bloodmobiles, while labor volunteers helped in collection efforts at eight Red Cross centers.

The St. Louis AFL-CIO added a twist to its wintertime blood drive by offering drawings and special prizes to union members who donate during labor's campaign. Karen Krshul, the central body's COPE coordinator who is directing the project, said local merchants had contributed ski lift passes, hockey tickets, a pair of opening day baseball tickets and other prizes to be given away to union member participating in the Jan. 31 drive at the Carpenters' union hall.

Special blood drives also have been held by the Carpenters and Plumbers & Pipefitters in Columbus, Ohio, and the Communications Workers in Cleveland. In Toledo, Ohio, where a drive is set for later this month, the Red Cross is distributing brochures and posters, plus information dispelling the myths linking blood donation to dangerous diseases, included AIDS—acquired immune deficiency syndrome.

In Mobile, Ala., community services representative Chris Marston reported that donations for January increased 20 percent over last year's level. Seven special blood collections were coordinated by labor in Atlanta.

Union members in Albany, N.Y., will be signing up for hypertension screenings and blood donations at a Jan. 27 rally, said Colleen Crawford, community services director for the New York AFL-CIO. The state federation also plans a major blood drive in March.

'Back-door' deal

Steelworkers denounce LTV pension bailout

Pittsburgh—The Steelworkers blasted the takeover by the federal Pension Benefit Guaranty Corp. of pensions plans covering 75,000 members at LTV Corp. and prepared a court challenge to what it called a "back-door action." As a result takeover, the benefits of about 7,000 pensioners will be slashed.

Judge Richard Owen of the U.S. District Court for Southern New York signed the orders Jan. 12 allowing the PBGC, a government agency that insures corporate pensions of more than 30 million workers, to terminate three LTV pension plans covering hourly and salaried workers.

The PBGC said it took the action because of LTV's failure to comply with minimum funding standards for contributions to the funds. LTV had earlier notified the agency that it couldn't pay the $280-million annual premium, which was to be funded by concessions on wages made by USWA members.

The USWA—whose members are under two plans covering hourly workers—was not notified until after the court ruling, USWA President Lynn Williams said. "It's remarkable" that neither the PBGC nor LTV "had the decency or courtesy to give the Steelworkers advance notice." Union attorneys are weighing what court action to take.

Three-pronged effort

In a letter to LTV retirees in December, the USWA said that if the pension plans were terminated, the union would first bargain with LTV for a relief package for those workers who lost benefits. Secondly, it noted the PBGC is required to set up a trust fund to repay part of the lost benefits and finally, USWA would file a claim with the bankruptcy court.

The PBGC's action can only "serve to complicate an already difficult situation," Williams said, noting that LTV filed for bankruptcy protection under Chapter 11 last July for its steel, energy and aerospace concerns. The steel unit has facilities in 35 states.

The plans for hourly workers that PBGC took over were the Republic Steel Corp. plan covering 15,900 active and 25,700 retirees and vested former workers and Jones & Laughlin Steel Inc. plan covering 12,300 active and 31,600 retirees and vested former employees. PBGC also took over the Jones & Laughlin plan for 15,400 current and retired salaried workers. On Sept. 30, it terminated a similar plan covering 7,700 active and retired Republic Steel workers.

Williams said that over the past few weeks the union and LTV had attempted to negotiate "a new pension plan that would take effect if the existing plans were terminated. Now in the midst of those negotiations, LTV and PBGC report the termination of the plans as a fait accompli."

Blasting the cloak of secrecy surrounding the terminations, Williams said, "It is a strange day in this country when the (PBGC), a government agency charged with the responsibility of protecting the interests of retirees, works in secrecy with a bankrupt company—a company that failed to fund its pension obligations—to terminate pension plans."

Bad faith charged

LTV has long claimed that it needed to get out from under its pension plan obligations in order to successfully reorganized under Chapter 11. Williams stressed "this is not the way to bargain in good faith."

LTV is going to need the full support of its active and retired employees to emerge from Chapter 11 proceedings as a healthy company, Williams said. "If company officials think this is the way to earn that support, they've got their heads screwed on backwards."

He noted that while pension payments will remain the same for about 85 percent of the retirees, at least 7,000 pensioners now receiving supplemental early retirement benefits of about $400 a month would lose those payments, "without even having had their day in court." In addition, all retirees could eventually lose their health insurance coverage under the transfer. Those benefits are guaranteed until May 15 because of a law passed by Congress last year.

The three plans paid out about $360 million in 1986 to retirees. The $1.3 billion in assets will be transferred to the PBGC, which will be saddled with unfunded liabilities totaling $2.3 billion.

PBGC Executive Director Kathleen P. Utgoff, in announcing the plan terminations, urged that legislative steps be taken immediately to prevent the "financial collapse of the pension insurance system." Without the changes, she said, the agency's revolving fund will run out of money in 1989 and its trust fund, containing the assets of plans it takes over, would be out of money within a decade.

Donahue prods Congress on job, wage losses

Continued from Page 1

olic Bishop Joseph Sullivan, leading academicians and Karen Nussbaum, president of Service Employees District 925.

So did most committee members. Sen. Paul Simon (D-Ill.) said he will press a guaranteed employment bill in his new role as chairman of the Subcommittee on Employment. And Sen. Robert T. Stafford (R-Vt.), a moderate Republican whose vote helped block several anti-labor measures in recent years, sharply questioned how the Administration's budget proposal to eliminate federal funds for vocational education meshed with the goal of improving job education.

Donahue noted the steady rise in unemployment rates over each of the past four decades and expressed labor's concern at the nation's drift toward a "split-level economy."

At the top is a thin layer of high-paying, highly skilled professional and managerial jobs, he said. At the bottom are an increasing number of "low-pay, low-skill, part-time, temporary, high-turnover jobs."

But the middle is shrinking, Donahue stressed, as plant shutdowns and layoffs resulting from trade deficits and unregulated corporate mergers wipe out the jobs "that have been the foundation of America's solid, middle-income, middle-class society."

Family income measured in terms of constant buying power has declined since 1979—and would show a much bigger decline if it weren't for the huge increase in two-earner families, Donahue testified. He pointed to more than 15 million persons in jobs paying close to the federal minimum wage of $3.35 an hour—an amount that buys 25 percent less than it did six years ago.

Meanwhile, the safety-net protections for jobless workers have been cut and two out of three receive no unemployment compensation. "The bottom line is a lot of human misery," Donahue stressed.

His testimony outlined labor's comprehensive legislative program, including measures to bring trade into balance, provide advance notice of plant closings, and protect worker rights and benefits in mergers, acquisitions and bankruptcy filings.

USX priorities challenged

In exchanges with members of the committee, Donahue questioned whether the former U.S. Steel Corp., now USX, would be so embattled with its workers if it had put the billions it spent buying Marathon Oil into modernization of its steel operations.

Workers are being lectured to "cooperate, to make concessions, to work harder" in the name of "competitiveness," Donahue noted.

But he reminded the panel that "human sweat is not the only component in productivity." Essential components are "education, training, research, investment, new technologies, rebuilt plants and a safe and healthy workplace."

Donahue called for a cooperative effort by "employers, the federal government and wage earners" to strengthen the economy. Otherwise, he warned, America faces "a polarized two-tier society with America's middle class disappearing and everyone's standard of living sinking lower and lower."

Nussbaum, who is also director of 9 to 5 National Association of Working Women, told the committee that women who have gone to work to supplement their husbands' income are not earning enough to make up for the loss of earnings Americans have suffered in recent years.

The situation is even worse for the 10 million women heading single-parent families, she testified. Many work part-time only because full-time jobs aren't available she said. And an increasing number are forced to work at two jobs to manage.

Mandatory health coverage for part-time as well as full-time workers, a higher minimum wage and pension portability are all needed, she urged.

Bishop Sullivan, testifying for the U.S. Catholic Conference, stressed the emphasis of the recent pastoral letter that "full employment is the foundation of a just economy."

He called on Congress to give urgent priority to "creation of new jobs with adequate pay" and working conditions.

The agreement by the non-government witnesses on the need for a jobs policy distressed conservative Republican Sen. Gordon J. Humphrey (N.H.). The committee should be hearing from "mainstream economists" and representatives of the Chamber of Commerce and National Association of Manufacturers, he said.

Shell fined for 64 safety violations

The Occupational Safety & Health Administration, at the prodding of an Oil, Chemical & Atomic Workers local, has cited the Shell Oil Co.'s complex in Deer Park, Tex., for 64 "willful" and "serious" violations of federal safety regulations. It proposed a fine of $244,960.

As part of its special emphasis program aimed at chemical companies, OSHA examined the hydrogen sulfide manufacturing units at the Deer Park facility where about 2,800 workers are employed. From this, it charged the firm with three serious violations of the regulations regarding respirators, hazard information, and shower and wash facilities. OSHA proposed fines totaling $960 for the three violations.

Following discussions with members of OCAW Local 4-367 and the filing of a complaint by a Shell worker, OSHA examined the company's safety records and found 61 willful violations of the injury and illness recordkeeping provisions.

The company had failed to log in such injuries as burns, inhalation of toxic substances, strains of the back, groin, shoulder and neck, and bruises. For this, OSHA recommended fines of $4,000 for each violation.

In recent months, OSHA cited Union Carbide, Chrysler Corp., Du Pont, Fina Oil & Chemical Co., Monsanto and USX Corp. for similar recordkeeping violations and recommended stiff fines.

The AFL-CIO American
Federationist
VOL. 94 NO. 1 JANUARY 17, 1987

The New Immigration Law

Its Impact on Workers and Unions

The immigration law that Congress passed last year seeks to accomplish two goals long sought by the trade union movement.

One objective is to reduce the flow of illegal immigration that has depressed wages in many parts of the United States, added to unemployment and allowed employers to exploit workers subject to deportation if reported to immigration officials.

The new law seeks to accomplish this by imposing penalties on employers who hire illegal aliens. At the same time, it strengthens anti-discrimination remedies in an effort to prevent employers from turning away job applicants of Hispanic appearance who are legal residents of the United States.

The other labor-supported goal is a legalization program that makes it possible for a large portion of illegal aliens already in the United States to obtain legal status that will make them eligible for employment. After a waiting period, they will be able to follow the pattern of earlier generations of immigrants from all over the world and apply for citizenship.

The legislation Congress passed was a compromise, which in some areas fell short of labor's goals. But the AFL-CIO considers it important that persons affected by the law and the unions that represent them have accurate information about its often complex provisions.

At AFL-CIO President Lane Kirkland's request, the federation's Legal Dept. prepared this Question-and-Answer explanation of the law's principal features:

EMPLOYER SANCTIONS

Q: What is prohibited?

A: —to hire, or to recruit or refer for a fee, an alien known to the employer, the recruiter, or the referrer not to be legally authorized to work in the United States;

—to hire, or to recruit or refer for a fee *any* person without checking the required documents (listed below);

—after hiring an alien lawfully (that is, complying with the requirements above), to continue to employ that person after learning that the alien is not, or is no longer, legally authorized to work in the U.S.;

—to use a contract or subcontract or swap to obtain the labor of an alien known not to be legally authorized to work in the U.S. (that is, to try to evade the ban on "hiring" by using a contract, a subcontract, or a swap arrangement)

Q: Are *all* employers covered?

A: Yes.

Q: When does the prohibition go into effect?

A: Technically, November 6, 1986, was the effective date *BUT* until June 1, 1987, there will be no enforcement; that period is to be used for education of the public and dissemination of the necessary forms for use by employers, recruiters and referrers for a fee. Additionally, during the 12 months beginning with June 1987, only a citation (a warning) will be issued for any person's or organization's *first* violation.

[NOTE: here, as elsewhere, there are special rules for seasonal agricultural work, all of which will be described below in the section on that subject.]

Q: Is it a violation of this law to continue to employ an unauthorized alien hired before this law was enacted?

A: No.

Q: Which aliens are legally authorized to work in the U.S.?

A: An alien who has lawful permanent resident status, and any other alien with special authorization from the Immigration and Naturalization Service (INS), either in the form of a visa or some other document.

Q: What are the document-checking requirements that must be met by one who hires, or recruits or refers for a fee?

A: First, the employer, etc., must state on a form, under penalty of perjury, that the eligibility of the person being employed, recruited or referred has been verified by examining specified documents. Second, the person hired, etc., must also swear to his/her eligibility on a designated form. And third, the employer, etc., must retain the form(s) for 3 years or (in the case of hiring) until 1 year after the employment is terminated if that date is later.

The documents to be checked must show both authorization to work and identity:

Some documents show both:

—a U.S. passport,

—a certificate of U.S. citizenship or of naturalization, a foreign passport bearing the Attorney General's authorization to work,

—a resident alien card or other alien registration card that bears the person's photograph, or

—some other means of identification that has been approved in the Attorney General's regulations and that shows authorization to work in the U.S.

The job applicant need show only one of these.

If none of the documents listed above is available, the employer, etc., must examine one each of two kinds of documents.

Category one—those that will show employment authorization:

—a social security card,

—a U.S. birth certificate or certificate of nationality, or any other document that the Attorney General approves in the regulations that he must issue under these provisions.

Category two—documents that will show identity:

—a driver's license or other identification document issued by a state so long as it contains the person's photograph or other personal identifying information okayed by the Attorney General, or

—if none of those is available, then any document showing personal identity that the Attorney General approves in his regulations.

Q: Does the employer, etc., have to guarantee that the required documents are genuine?

A: No. So long as the employer, etc., shows that the requirements have been complied with in good faith—that is, that every necessary document has been examined, each reasonably appeared to be genuine, the required signatures were obtained and the forms retained—the employer, etc., has established an affirmative defense that it has not violated the law.

Q: Does a state employment agency have to check the documents of persons the agency refers for jobs?

A: No. But if a state agency does so, the employer, etc., to whom the applicant is referred will be treated as in compliance with the Act's verification requirements without itself checking them so long as the employer, etc., obtains and retains documentation of the state agency referral certifying that the agency has done the necessary checks for that individuals' referral.

Q: May an employer (or a recruiter or referrer for a fee) require an employee or an applicant to put up money to reimburse the employer, etc., in case that hiring etc. leads to a fine under this Act?

A: No. The Act makes any such requirements unlawful, with a $1,000 penalty plus return of any money required and paid.

Q: What are the penalties for violation of the sanctions provisions?

A: For a violation of the hiring, etc., prohibitions, the civil penalties are as follows: for a first violation, $250 to $2,000 per unauthorized alien with respect to whom the violation occurred; for a second violation, $2,000 to $5,000 per such alien; for a subsequent violation, $3,000 to $10,000 per such alien.

In the event of a pattern or practice of violation, the Attorney General may seek a criminal fine up to $3,000 per each such alien, up to 6 months imprisonment, or both.

For a violation of the requirement that documents be checked for each and every person hired, recruited or referred for a fee, the civil penalty is $100 to $1,000 for each individual with respect to whom the violation occurred.

Q: Do the sanctions provisions of the Act have any effect on state or local law?

A: Yes. These provisions preempt any state or local law that imposes civil or criminal sanctions (other than through licensing and like laws) on those who employ, or recruit or refer for a fee for employment, aliens not legally authorized to work in the U.S.

ANTI-DISCRIMINATION PROVISIONS

Q: Why are these provisions in the Act?

A: As the congressional managers of the bill explained, these provisions which protect both citizens and legal aliens were included to meet the concern of some Members of Congress and others around the country that people of "foreign" appearance or with foreign accents may be made more vulnerable to job discrimination because of the adoption of employer sanctions. The Act itself is not discriminatory, but there is concern that some employers may decide not to hire persons they believe to be "foreign" in order to avoid sanctions.

Q: What do these provisions prohibit?

A: Discrimination against a citizen or legal resident alien "with respect to the hiring, or recruitment or referral for a fee," or discharging such a person, because of the person's national origin or because of the person's citizenship status. "Citizenship status" is a technical term, defined in Section 274B(a)(3). The Act specifies that a preference for an individual citizen over an equally qualified alien is not made unlawful. Nor does the Act prevent a particular language requirement where that would be a "bona fide occupational qualification" under Title VII of the 1964 Civil Rights Act.

Q: Are there employers to whom these discrimination prohibitions *don't* apply?

A: Yes. Employers of three or fewer employees are not covered.

Q: Are there discrimination violations that cannot be processed under this Act?

A: Yes. Discrimination because of a person's national origin that violates the Civil Rights Act of 1964 must be challenged under that Act. The Civil Rights Act of 1964 covers only employers who employ 15 or more employees for 20 or more weeks a year. (Thus, national origin discrimination by an employer of more than three but fewer than 15 employees may be challenged only under the Immigration Act.)

Q: What are the remedies for a violation?

A: In every case, a cease-and-desist order (an injunction). Where appropriate, an order to hire individuals "directly and adversely affected" by the violation, back pay, and up to $1,000 in civil penalty for each person discriminated against (first violation) or up to $2,000 per such person (repeat violation). Attorney's fees may also be awarded in certain cases to a prevailing party other than the U.S.

Q: How are these prohibitions enforced?

A: A new administrative structure and process is to be established in the Department of Justice modelled on the NLRB procedures but with strict timetables and with these other significant differences:

(1) cases may be initiated not only through the filing of a charge by a person "adversely affected directly" or that person's representative, but also by the Special Counsel for Immigration-Related Unfair Employment Practices who is to be appointed by the President with the advice and consent of the Senate to prosecute these cases;

(2) if the Special Counsel has not filed a complaint of violation before an administrative law judge within four months after the filing of a charge, the charging party may file such a complaint and pursue the case through the administrative process and subsequent judicial enforcement;

(3) the order of an administrative law judge is the final agency order (that is, there is no equivalent to the National Labor Relations Board itself);

(4) there are provisions that should make judicial enforcement of an administrative law judge's order speedier than is the case with the NLRB orders.

Q: When do the discrimination prohibitions go into effect?

A: On November 6, 1986, when the President signed the bill into law.

THE LEGALIZATION PROGRAM

Q: Who is eligible?

A: An alien:

—who entered the country illegally, or whose legal authorization to be here lapsed, before January 1, 1982;

—who has lived here "in an unlawful status" continuously from then on;

—who has not been convicted of serious or multiple crimes committed here and is not ineligible by certain other criteria; and

—who applies within the designated one-year application period.

(Brief, casual and innocent absences from the country during the time since 1/1/82 do not break continuity).

Q: Is this program limited to aliens who have worked in certain occupations?

A: No. This program is open to all aliens who meet the requirements set out just above.

[There is a separate and additional program providing legalization for persons who entered the U.S. illegally and did seasonal agricultural work during specified periods in the past. See the section on agricultural workers below.]

Q: When must an alien apply for legalization?

A: During the 12-month period that will begin no later than early May 1987 on a date to be fixed by the Attorney General.

Q: What is the status of a successful applicant and how long will that status last?

A: Persons who meet the requirements set out above will become aliens "lawfully admitted for *temporary* residence." In order to maintain their right to remain in the U.S., such persons must later apply for permanent residence.

Q: When does a person legalized temporarily apply for permanent legal status, and what must that person show?

A: The application for permanent resident status is to be filed during the one-year period beginning immediately after the alien has held temporary resident status for 18 months. To be eligible for permanent resident status the alien must show continuous residence here since temporary status was granted, and either a minimal understanding of English and of U.S. history and government or that s/he is pursuing that understanding in an approved course of study. The alien also must not have been convicted of certain crimes in the U.S. and must not be inadmissible under certain other criteria.

Labor's Outreach f

America's unions are joining in an unprecedented outreach campaign in the Hispanic community and in the nation's workplaces to help undocumented workers attain legal status and prevent discrimination by employers.

Labor's special contribution will include telephone hotlines, trained union counsellors, mobile vans, public service television spots, union publications and pamphlets. In some locations, labor programs are already in operation.

AFL-CIO headquarters departments are monitoring the administration and enforcement of the new immigration law, reviewing proposed regulations, and providing assistance to international unions and central bodies on immigration-related matters.

In addition to advice on procedures for qualifying for amnesty, federation departments are providing guidance on such matters as entitlement to social services, civil rights protections, and establishment of adult education classes to help bridge the gap from legal resident status to eventual citizenship. The Human Resources Development Institute (HRDI) of the AFL-CIO plans to seek certification to allow affiliated unions to process legalization applications.

The Labor Council for Latin American Advancement is in the forefront of the trade union effort, President J. F. Otero reports.

"There may be as many as 6 million Hispanics eligible for amnesty," he stressed. "Some of them are already union members and many more will become eligible to become union members as they assimilate fully into American life and work."

LCLAA has put together an Amnesty Assistance package for union and community use. It includes video programs explaining the new law, news reports for television programs and public service announcements for use by Spanish-language stations.

Unions with large numbers of immigrant members and central bodies in areas with large numbers of undocumented workers are especially involved in labor's outreach effort. While Hispanics are the largest group affected by the new law, labor's outreach program in a number of communities is also aimed at concentrations of Asian workers.

One of the most ambitious local union programs has been launched by California's big Local 770 of the Food & Commercial Workers, with some 33,000 members in the Los Angeles area.

Local 770 President Ricardo F. Icaza, who is also a vice president of LCLAA, reports that his union has set up information hotlines staffed by trained bilingual advisers to answer questions about amnesty and other provisions of the immigration law. The union has been "besieged by calls" for assistance, he said.

Icaza said Local 770 is also using its hotlines "to issue warnings about unscrupulous operators who are preying on unwary and often fearful immigrant workers during the law's transition period." The union has received many complaints about self-styled immigration consultants, he noted.

Some of those helped are Local 770 members—such as the young mother who is supporting her two-year-old daughter by working as a meatcutter. She has been living in the United States illegally since 1979. Through the amnesty program, Icaza said, she can free herself "from the fear and insecurity which plagues so many illegal workers."

The union, he stressed, feels "a duty to the entire community" and is providing advice and assistance "to all workers without papers, whether they are union or non-union." Through amnesty and eventual citizenship, Icaza predicted, workers who qualify will be able to participate fully in the social, economic and political life of their communities.

Q: What if an alien who has obtained temporary status doesn't apply for permanent status during the prescribed time?

A: The Act directs the Attorney General to "provide for termination" of the temporary status in this situation, which would mean that the alien could be deported.

Q: Is an alien legally authorized to work in the U.S. while in temporary or permanent resident status under the Act?

A: Yes. The Attorney General is to provide aliens holding temporary status an appropriate work permit. An alien with permanent resident status is a so-called green carder, authorized to work.

...fforts Fill a Need

"Labor has historically been in the forefront of civil rights and equal opportunity battles," he stressed. In the same tradition is the current effort of "helping to bring undocumented workers among us out of the shadows."

Local 770 is hardly alone in the Los Angeles area. Even as the AFL-CIO News was going to press, an all-day conference organized by the Los Angeles County AFL-CIO was under way.

It was set up by the central body's Immigration Committee, composed of representatives of a cross-section of the area's unions. AFL-CIO Organization & Field Services Director Charles McDonald, HRDI Director Michael McMillan and Regional Director David Sickler were among the speakers, along with attorneys expert in the immigration law and community leaders from affected groups. Los Angeles also has a large Korean population that includes undocumented workers who will be seeking legal status.

McDonald anticipates a new spurt in organizing as workers become free from intimidation by employers and the implicit threat of being reported to immigration authorities if they actively support a union campaign. He also sees an important reservoir of good will for the trade union movement as a byproduct of labor's efforts to assist the immigrant community.

The Dept. of Organization & Field Services has prepared an easy-to-understand pamphlet on the new immigration law as guidance for undocumented workers and employers. It includes practical suggestions on obtaining documents to show residence in the United States for the period required under the amnesty program and notes that both current and former employees have a right to employment records to help document their eligibility for amnesty.

The Clothing & Textile Workers and the Ladies' Garment Workers, unions that in their early years helped generations of European immigrants become Americans, have set up active programs in cities across the country.

An ILGWU Task Force, operating out of the union's headquarters in New York, is concerned both with helping undocumented workers obain legal status and preventing discrimination by employers against job applicants with Hispanic names or who speak with an accent. Union immigration counsellors are being trained to assist members. The union's big Chinatown local in New York has set up an extensive immigration assistance program.

For its southern California members, the ILGWU already has in operation an office staffed by a union attorney and a paralegal to give free advice on amnesty procedures.

The Farm Workers, operating in an area where a large part of the agricultural workforce is made up of undocumented workers, is planning a major information and education effort, UFW Vice President Delores Huerta said.

So are the Service Employees, and unions as diverse as the Carpenters and the Hotel Employees & Restaurant Employees. In communities with large numbers of undocumented workers, just about every element of the trade union movement is involved in amnesty assistance programs.

Many unions have also taken steps to make sure that the employers with whom they have contracts are aware of the anti-discrimination provisions of the law and understand that employers may not require documentation from workers who were on the payroll before the new immigration law went into effect.

For workers who have been in the United States long enough to qualify for the amnesty program, the trade union message is a helping hand to achieve legal status and equal rights—under the law and in actuality.

Q: May an alien who has applied for temporary status but on whose case no decision has yet been made—and, for that matter, an alien who believes s/he will be eligible but cannot apply because the application period has not yet begun —legally work in the U.S.?

A: The Act directs that aliens who are able to show "prima facie" eligibility prior to the time s/he files an application, and those who file a prima facie valid application, *may* legally work here until the next step is taken. The Attorney General is required to carry out these directions and to issue appropriate work permits.

Q: May the INS deport an alien before applications may be filed or deport an alien whose application has not yet been acted on?

A: An alien entitled to work as described just above also may *not* be deported during the same periods applicable there.

Q: Does an alien who believes s/he is eligible for legal status have to go to the INS in order to apply?

A: No. An application may be filed either with the INS or with a qualified organization designated by the Attorney General. Only the Attorney General may approve an application, but the alien may consult with, and file with, the organization and his/her application is not to be forwarded to the government without the person's consent. Confidentiality of dealings with these organizations is to be maintained, as is "the information furnished pursuant to an application" to the Department of Justice.

Q: May a union act as a "qualified designated entity" to which aliens may go in seeking legalization?

A: The Act states that "for purposes of assisting in the program of legalization" the Attorney General "shall designate qualified voluntary organizations and other qualified state, local, and community organizations." (The Attorney General also may designate "other persons" who have substantial experience, competence and "traditional long-term involvement in" the preparation and submission of applications for adjustment of status under certain other provisions of the immigration laws.)

Q: What proof must an alien provide to establish eligibility for temporary legal resident status under the Act?

A: The Act directs the Attorney General to require that "continuous residence and physical presence" in the U.S. as defined in the Act be established through documents that are "employment-related" if such are available, together with "independent corroboration of the information contained in such documents." Beyond this, a precise answer must await the issuance of regulations by the Attorney General after consultation with the congressional judiciary committees.

Q: Are aliens legalized under these provisions entitled to welfare?

A: Generally, newly legalized aliens will be ineligible for five years for any federally-funded financial assistance that is based on need, and states are authorized to exclude them from certain state and local assistance. There are, however, a number of exceptions, particularly with respect to the aged, blind and disabled and to emergency medical assistance, services to pregnant women, and a number of educational programs, programs for children, and the Job Training Partnership Act.

AGRICULTURAL WORKERS

Introduction:
The Act contains two different programs with respect to agricultural workers. The first one is a permanent program allowing employers to bring in foreign workers temporarily to do temporary or seasonal work in agriculture (this is an amendment to the pre-existing "H-2" program which adds a Subsection H-2A).

The second is a temporary program allowing aliens who have done or will in the future do seasonal agricultural work to acquire legal resident status (whether they are new entrants or persons who are here illegally).

Each of these programs is described below.

The H-2A Agricultural Worker Program

Q: What must an employer show to be allowed to bring in an H-2A worker?

A: The assumption underlying the H-2 program is that there are not "unemployed persons capable of performing such service or labor /*to*/ be found in this country." An employer or other person (see below) who seeks to bring in an H-2A worker must petition the Attorney General for a visa and, in doing so, show that he has previously applied to the Secretary of Labor for a certification that:

(A) there are not sufficient workers here who are able, willing and qualified and who will be available at the time and place where the work will be done, and

(B) employment of the alien in this work won't adversely affect the wages and working conditions of U.S. workers doing similar work.

Q: What are the restrictions on the Secretary of Labor issuing a certification?

A: A certification is not to be issued if:

(1) the requirements in (A) or (B) above aren't met;

(2) there is a strike or lockout of the kind described in federal regulations;

(3) the employer substantially violated a term of an H-2A labor certification within the previous two years;

(4) the employer hasn't guaranteed occupational accident and illness insurance, if the state's workers' compensation law doesn't cover the work;

(5) the employer hasn't made positive efforts to recruit U.S. workers in a multi-state region designated by the Secretary of Labor; or

(6) the employer has, or has referrals of, qualified eligible U.S. workers who've agreed to a job offer meeting the requirements of the Secretary of Labor.

Q: Is a qualified and able U.S. worker who is available for, but doesn't learn of a job until the H-2A worker is on the job just out of luck?

A: Often not. For at least three years, such a person will be entitled to the job if s/he applies to the employer before 50 percent of the period of the H-2A work contract has elapsed. The Secretary of Labor is authorized to extend this rule after studying the matter.

Q: Is an employer required to provide any particular working conditions?

A: Yes. In addition to workers' compensation or equivalent insurance, H-2A employers are required to furnish housing meeting specified standards to all workers who would have been entitled to housing under the Department of Labor regulations that were in effect on June 1, 1986. In addition, the Secretary of Labor is authorized to set qualifications for a job offer as a condition of issuing a certification.

Q: Are there timing rules in this program?

A: The Act provides timetables for every step of the process both for employers, etc., applying to bring in H-2A workers and for the Secretary of Labor in granting or denying a certification.

Q: Who may bring in H-2A workers?

A: An employer (individual, corporate, etc.) of temporary or seasonal agricultural workers or an association of agricultural producers that use agricultural services. There are special rules as to when H-2A workers may be transferred among the producers who are members of such an association, and as to when an association's violation of H-2A requirements will disqualify its producer members and when a producer member's violation will disqualify the association or other employers.

Q: How are an employer's (or association's) contractual obligations to its H-2A workers enforced?

A: The Secretary of Labor has enforcement authority, and the H-2A workers are also eligible for Legal Services assistance on matters relating to wages, housing, transportation, and other employment rights as provided in the worker's employment contract.

Q: When do these amendments to the H-2 law take effect?

A: These amendments will apply to visa petitions and certification applications filed on and after June 1, 1987.

Q: Do these amendments have any effect on state or local law?

A: Yes. These and related provisions of the federal immigration law "preempt any state or local law regulating admissibility of nonimmigrant workers."

Q: Does any Federal official other than the Attorney General and the Secretary of Labor play a role in the H-2A program?

A: Yes. The Department of Agriculture (as well as the Department of Labor) is entitled to be consulted by the Attorney General in the approval of all

regulations under the H-2A program and on particular visa applications.

Q: Does the 1986 Immigration Reform and Control Act change the H-2 program outside the area of agriculture?

A: No.

The Special Agricultural Worker (SAW) Program

Q: How does the SAW program differ from the H-2A program just described?

A: The SAW program is a temporary seven-year program added to the legislation in order to meet the claims of western agricultural producers that because their workforce consists in great part of aliens not legally authorized to work in the U.S., the enactment of employer sanctions will deprive those producers of needed workers to do seasonal agricultural work. In order to protect the workers and U.S. working conditions, the SAW program makes the workers whom the program authorizes legal residents of the U.S. Thus, the special agricultural workers under this program (SAWs) will be U.S. residents not tied to a particular employer rather than aliens temporarily admitted to do a particular job.

Q: Who may become a SAW?

A: Any alien who resided in the U.S. and did seasonal agricultural work in the U.S. for at least 90 days between May 1, 1985, and May 1, 1986, who is not inadmissible under criteria generally applicable to would-be immigrants, and who applies within the designated application period may become a SAW.

Q: When is the SAW application period?

A: It is the 18 months beginning June 1, 1987.

Q: What is "seasonal agricultural work"?

A: The Act's definition is: "the performance of field work related to planting, cultural practices, cultivating, growing and harvesting of fruits and vegetables of every kind and other perishable commodities, as defined in regulations by the Secretary of Agriculture."

Q: Are there special provisions concerning the application of employer sanctions to employment in seasonal agricultural work?

A: Yes. There is to be no enforcement for alleged sanctions violations with respect to employment of an individual in seasonal agricultural work until the end of the SAW application period (that is, for six months longer than will be true for a first violation in all other employment, and there is no limitation here to a first violation).

The Act also provides, however, that during the SAW application period, it is unlawful for anyone to recruit outside the U.S. a person who is not legally authorized to work in the U.S., to come into the U.S. to do seasonal agricultural work unless the recruiter reasonably believes the alien qualifies as a SAW. A violation of this prohibition after June 1, 1987, will subject the violator to sanctions penalties.

Q: What is the status of a SAW?

A: A SAW obtains legal temporary residence. That status is to be adjusted to permanent residence as follows:

(1) An alien who shows that s/he did the 90 days work between 5/1/85 and 5/1/86 described above will be entitled to permanent status after two years in temporary status (counting from the day that status was obtained or the last day of the 18-month application period, whichever is later). There is no limit on the number of aliens who may become permanent residents by this route.

(2) An alien who shows that s/he did at least 90 days of seasonal agricultural work during each of the three years ending on May 1, 1984, 1985 and 1986, will be entitled to permanent residence after one year in temporary status (counting in the same way) *IF* the alien is among the first 350,000 eligibles to apply. If an alien with these qualifications is not among those 350,000, s/he will have to wait another year and thus qualify under (1) just above.

Q: What limitations are there on the rights of a SAW?

A: While in temporary status, the SAW may not petition to bring in relatives; and for the first five years after temporary status is acquired, the alien will not be eligible for certain welfare programs.

Q: Is a SAW legally authorized to work in any job in the U.S.?

A: Yes. A SAW may legally work in any occupation in the U.S. and is entitled to a "work permit" from the Attorney General. A SAW may also travel abroad, and may commute across the border to a U.S. job.

Q: May an alien who has applied to become a SAW but whose application has not been passed upon—and, for that matter, an alien who believes s/he will be eligible but cannot apply because the application period has not yet begun—remain in the U.S. and work here?

A: The Act directs that an alien who is picked up by the INS before the application period and can make "a nonfrivolous case of eligibility," as well as an alien who presents such a nonfrivolous application, may *not* be deported and may legally work here until the next step is taken. The Attorney General is to provide work permits to such persons.

Q: Does an alien have to go to the INS in order to apply for SAW status?

A: No. Within the U.S., an application may be filed with the INS or with a qualified organization designated by the Attorney General. Only the Attorney General may approve an application, but an application is not to be forwarded to the government without the applicant's consent. Outside the U.S., an alien may apply at a U.S. consular office. Confidentiality of an organization's files and records and information provided to the government is to be maintained.

Q: May a union act as a "qualified designated entity" with which aliens may file SAW applications?

A: Yes. The Act states that the Attorney General *shall* designate "qualified voluntary organizations and other qualified state, local, community, farm labor organizations, and associations of agricultural employers"; and may also designate qualified persons experienced in processing applications for adjustment of immigration status.

Q: What proof must an alien provide to establish eligibility for SAW status?

A: The alien may use government employment records, records supplied by employers, farm labor contractors, or collective bargaining representatives, "other reliable documentation," or other evidence from which the required work history may reasonably be inferred.

Q: Does the Act provide for the admission or authorization of additional special agricultural workers if a shortage of workers to do seasonal agricultural work develops after the SAW application period has ended?

A: Yes, the Act authorizes additional workers—newly admitted or newly legalized—in specifically limited circumstances and only during the four fiscal years 1990-1993.

These Additional Special Agricultural Workers (ASAWs, or as they are sometimes referred to, Replenishment Agricultural Workers or RAWs) may be authorized only pursuant to a complicated formula to be applied by the Secretaries of Labor and Agriculture in order to determine whether a shortage exists. Any shortage number found is then subject to a numerical cap that lowers over the four years.

Q: Assuming ASAWs are authorized for a year, who is eligible?

A: An alien who petitions for temporary resident status and is not inadmissable under criteria generally applicable to would-be immigrants.

Q: What are the rights of an ASAW?

A: After three years of lawful temporary status, the ASAW will be entitled to adjustment to permanent legal residence. During those three years, the alien may work in the U.S., is entitled to a work permit, may travel abroad and may commute to U.S. work from across the border. But, during those three years, the ASAW may not petition to bring in relatives, and is generally subject to the same five-year public assistance disqualifications that apply to persons legalized under the general legalization program (see that section above), with the notable exception that the alien is not ineligible for Legal Services assistance or certain housing assistance.

Q: Is an ASAW obliged to do agricultural work in the U.S.?

A: An ASAW is liable to be deported unless s/he can establish to the Attorney General that s/he has done agricultural work for at least four hours on each of 90 days during each of the three years s/he is in temporary resident status.

In addition, an ASAW will not be eligible for citizenship unless s/he has met the same 90-day work requirement during each of five fiscal years.

Q: Does the Act have any labor protections for ASAWs or U.S. workers doing comparable seasonal agricultural work?

A: Yes. In addition to the ASAWs' entitlement to Legal Services assistance, the Migrant and Seasonal Agricultural Worker Protection Act protections apply. And an employer who provides transportation for ASAWs doing seasonal agricultural work must provide comparable assistance for others doing such work.

OTHER PROVISIONS OF NOTE FOR UNIONS

I. Throughout the Act there are provisions prohibiting the knowing use of false or fraudulent documents and the deliberate making of false statements. These provisions carry very stiff penalties, including significant prison terms.

II. For the first year after enactment, the Act prohibits admission of alien crewmen to the U.S. under "D" visas to serve on board a vessel or aircraft "at a time when there is a strike in the bargaining unit of the employer in which the alien intends to perform such service." This prohibition is not to apply, however, to an alien employed prior to commencement of the strike and who is seeking entry to continue service as a crewman to the same extent and on the same route as that person performed prior to the commencement of the strike.

III. The Act authorizes a three-year pilot "visa waiver" program involving up to eight countries, each of which must extend reciprocity to U.S. citizens and nationals. Those freed of the need to obtain visas are persons seeking to enter as nonimmigrant visitors (tourists) for 90 days or less; they are persons who otherwise would need "B" visas. The program is in the hands of the Attorney General and the Secretary of State.

IV. The Act bars INS entry without a warrant (or the owner's consent) onto the premises of a farm or other outdoor agricultural operation for the purpose of questioning a person believed to be an alien as to the person's right to be or to remain in the U.S.

V. The Act expands the present pilot SAVE program (System for Alien Verification of Eligibility) to require states to verify the legal status of all aliens applying for benefits under certain programs by checking through INS computer records, with a significant exception: a waiver may be granted by the federal Secretary in whose jurisdiction the program falls where a state has an alternative in place or where the verification program would not be cost-effective. The affected programs are: AFDC, Medicaid, Unemployment Compensation, Food Stamps, Housing Assistance and Higher Education.

VI. The Act authorizes supplemental appropriations for the INS of $422 million for FY 1987 and $419 million for FY 1988, of which sufficient funds shall be allocated to increase the border patrol personnel so that the average number shall be at least 50 percent higher in each of the fiscal years than the level in FY 1986. (There are also authorizations for enforcement activities of the DOL Wage and Hour Division and its OFCCP of the sums necessary to deter employment of aliens not legally authorized to work in the U.S. and to remove the economic incentives for employers to exploit and use such aliens.)

Robert M. Healey

Robert M. Healey named president of Chicago Fed

Chicago—Robert M. Healey, secretary-treasurer of the Chicago AFL-CIO since 1984, was elected president by the central body's executive board. The board also named Michael Bruton, an assistant to the central body president, as acting secretary-treasurer.

Healey, 58, was elected by acclamation to complete the term of the late Edward F. Brabec, which ends June 30, 1990.

An English teacher and department chairman at several city schools, Healey served as financial secretary and president of Teachers Local 1 before his election as secretary-treasurer of the central body. He served as second vice president and on the central body's executive board, and continues to serve as president of the Illinois Teachers and as a vice president of the AFT.

Bruton, 50, was appointed as assistant to Brabec in January 1986. A 32-year member of Electrical Workers Local 134, he served on the local's executive board and as business representative before being elected to his current post as vice president in 1980.

The Chicago AFL-CIO will take nominations for secretary-treasurer at the board's February meeting. The new secretary-treasurer also will serve through June 1990.

On of the federation's oldest councils, the Chicago AFL-CIO received its charter from the American Federation of Labor on Nov. 9, 1896.

The central body represents 440,000 union members from 277 affiliated unions in the Chicago-area.

Small hike sought in OSHA funding

Reagan proposal on safer workplaces called long overdue

By Arlee C. Green

The Reagan Administration's request for a 6.8 percent increase in the fiscal year 1988 appropriation for the Occupational Safety & Health Administration could spell some long overdue relief for workers concerned about the agency's declining ability to protect them on the job.

Margaret Seminario, associate director of the AFL-CIO Dept. of Occupational Safety, Health & Social Security, said organized labor "is relieved to see that OSHA was not targeted for major cuts and that in fact it got a small increase."

She stressed, however, that President Reagan's request of $244.4 million for fiscal year 1988 is only slightly higher than the $242-million request submitted by the Carter Administration for fiscal year 1982. The Carter budget was trashed by Reagan budget-cutters and it has taken six years to return to the Carter level.

Seminario added that in 1980, OSHA had about 3,000 employees and now has just 2,200. Because of staff reductions, heavy cuts in OSHA funding early during the first Reagan term, and increases in inflation, the current OSHA request is "nothing for workers to cheer about," Seminario said.

The largest funding increases were sought for federal enforcement, technical support, state programs and compliance assistance.

The Administration asked for $100.1 million for federal enforcement, up from the $91.9 million appropriation for this year. The agency said that even though additional funding may be given for fiscal 1988, it is planning to conduct about 59,000 federal inspections, down from the 63,000 it expects to do in 1987.

Seminario said that for quite some time organized labor has tried to get Reagan's OSHA away from the numbers game in which it was trying to match the annual number of inspections done under the Carter Administration, even though its personnel had been severely cut.

Slipshod inspections

"We've always insisted that the agency do thorough inspections at every site," she said. "Instead, the agency did thousands of safety records checks and considered those as workplace inspections." OSHA is now "finding out that the employers don't keep complete health and safety records," she said, referring to the recent large citations against Union Carbide, Chrysler Corp., DuPont, Monsanto and USX Corp.

The request for standard-setting activities was increased to $6.8 million from the current $6.3 million. OSHA said it expects to complete a half dozen health standards in the coming year, one more than in fiscal 1987, and nine safety rules, compared to eight this year.

The Administration requested $66 million for the National Institute for Occupational Safety & Health, down from the $67 million appropriation for this year. Of this amount, $53 million will be for research program operations, $6.5 million for research grants and $6.6 million for several university-based occupational safety and health programs, called educational resource centers. This request was the first time in five years the Administration had sought funds for the ERCs. In the past Congress added the funding for them.

Seminario noted that while there is a "small decrease in the NIOSH budget, this agency has been cut to the bone in the past and this will require even more." She said that again Congress will likely restore needed funding.

Hearings set on laboratory health hazards

The Occupational Safety & Health Administration, responding to requests from the Steelworkers and Standard Oil Co., has scheduled hearings for Mar. 24 on a proposed standard for laboratory workers who are exposed to toxic chemicals.

But the agency's proposal has been branded by unions to be "so weak and so vague that it will provide little protection to laboratory workers exposed to hazardous substances," said AFL-CIO occupational safety expert Margaret Senimario.

The OSHA proposal would require employers to develop chemical hygiene plans to prevent overexposures through safe work practices and procedures. Current exposure limits for certain chemicals would still apply, but greater latitude would be allowed in meeting other provisions because OSHA contends that laboratory workers are trained to use only small quantities of chemicals.

Message to White House

House approves clean water bill

The House passed a clean water bill identical to the measure President Reagan pocket-vetoed last November after the 99th Congress adjourned. The 406-8 bipartisan vote sent a clear message that another veto will be overridden.

White House officials sought to delay Senate action in order to head off a bipartisan repudiation of the President's position at the start of a new Congress. But the Senate is expected to pass the House bill intact on Jan. 21—almost certainly by a veto-proof margin—after rejecting a face-saving substitute proposed by Republican Leader Robert Dole.

At issue is the future of a widely praised program launched in 1972, when pollution of lakes and rivers threatened the nation's water supplies. Congress required cities and industries to clean wastes to nonpolluting standards before discharging them into waterways. It provided financial help to construct sewage facilities.

The labor-backed measure that the House repassed authorizes $20 billion over eight years for clean water programs, mostly to help state and local governments finance sewage treatment plants.

Reagan wanted phaseout

Reagan last year proposed a $6-billion phaseout of the program. But when both the House and Senate unanimously voted a larger program, he waited until after the election to veto the bill. The White House was concerned that a pre-election veto might hurt the chances of Republican candidates.

Democrats in control of both the House and Senate in the new Congress declared their intent of repassing the clean water bill as the first substantive action of the 100th Congress. The bill was given the coveted H.R. 1 designation in the House and its companion measure was listed as S. 1 in the Senate.

The President responded to the challenge by using his first national radio address of 1987 to assail the program as a budget-buster.

"If the Democratic leadership decides to push this bill, they'll be sending a clear signal that they've sided with those who want to raise your taxes," Reagan charged.

Bipartisan sponsors of the measure answered Reagan at a Capitol Hill news conference. The president "will have to brace himself for an overwhelming veto override" if he persists in fighting the bill, Sen. Robert T. Stafford (R-Vt.) said.

The measure would initially continue the federal sewage construction grant program at the present $2.4-billion rate, drop to $1.2 billion for the 1989 and 1990 fiscal years, and then provide $8.4 billion over five years to help states set up revolving loan funds to help local governments build sewage plants. Additional funds would be made available for programs to control pollution from runoffs from farms and city streets.

An important feature of the bill is an "anti-backsliding" provision that prohibits either the Environmental Protection Agency or state governments from weakening existing anti-pollution standards.

Worldwide organizing drive targets 400,000 IBM workers

London—A global organizing drive among 400,000 workers of International Business Machines Corp. was launched by union leaders from 24 countries.

The organizing conference was sponsored jointly by the Postal, Telegraph & Telephone International, the International Federation of Commercial, Clerical, Professional & Technical Employees, and the International Metalworkers Federation.

As the two-day session opened, conference chairman Morton Bahr, president of the Communications Workers, charged that IBM's much-publicized decision to withdraw from South Africa was a "sham," with the multinational continuing to do "business as usual" there.

Bahr released the text of a confidential letter from the multinational's South African director, offering an "unequivocal" pledge that it would continue to offer "a full range of IBM products and services." The letter also pledged to honor all of its commitments to customers, dealers, agents and suppliers in South Africa.

Among the firm's customers are the police and military forces which have been used to bust unions and impose harsh restrictions on dissent against the white minority government's racist policies.

The CWA president called the action a "moral outrage" to the millions of people around the globe "who stand in opposition to apartheid and is indicative of IBM's type of silent but deadly corporate arrogance."

Mapping a common strategy to deal with the world's largest computer multinational, delegates agreed to a range of actions, including an aggressive drive to turn the public spotlight on IBM's union-busting tactics.

Other measures approved by the delegates include establishment of toll-free telephone lines for IBM employees to contact union organizers and creation of an international clearing house for the unions to swap information about the company.

Matt Gillen named to head safety and health institute

Matt Gillen has been named executive director of the Workers' Institute for Safety & Health, established several years ago to provide unions with a broad range of information on worksite health and safety issues.

Gillen joined WISH in 1985 after having worked with the Occupational Safety & Health Administration and as an industrial hygienist for the Clothing & Textile Workers. He was formerly on the faculties of the State University of New York, Empire State College and Cornell University.

He succeeds Vernon McDougall, who is now associate health and safety director of the unaffiliated Teamsters.

Swing time

A new play area for youngsters at the Green Bay Day Nursery in Wisconsin is in full swing, as union members put the finishing touches on newly installed playground equipment. Nearly 30 volunteers from five unions—the Auto Workers, Bricklayers, Operating Engineers, Postal Workers and Steelworkers—joined the day-long project, sponsored by the community services committee of the Green Bay AFL-CIO.

Auto Workers win fight over illegal lockout

Rockford, Ill.—Management violated federal labor law when it locked out 1,100 Auto Workers last year after arbitrarily deciding that their contract had expired, the U.S. District Court for the Northern District of Illinois ruled.

The agreement between UAW Local 592 and Sundstrand Corp. provided that the contract would be automatically renewed unless either party gave notice to amend or terminate it at least 60 days prior to its expiration date. In such an event, the contract stated, all provisions would continue in effect except those specific sections subject to negotiations.

The court held that in terminating the entire contract after the union gave notice that it wanted to negotiate only some of its clauses amounted to "selective reading" by management that "wholly ignores" the other provisions in the contract.

In March 1986, 80 days before the contract's scheduled May 26th expiration date, the UAW notified management that it wanted to amend provisions dealing with wages, health insurance and other selected items. No mention was made by the union of any intent to reopen the no-strike and no-lockout provision.

Over the next two months, the two sides held some 20 bargaining sessions but failed to come to terms on any changes. Just prior to the contract deadline, the UAW delivered a letter to Sundstrand, withdrawing its notice to amend the contract. Under those circumstances, the union said in its letter, the agreement would be "automatically renewed" for another year and the UAW members would report to work on their normal shifts.

Lockout followed

Sundstrand responded by declaring that the agreement was terminated and locked out UAW members for 45 days.

In its court suit, the UAW argued that withdrawal of its proposed amendments before the contract's termination date meant that the entire agreement should have been renewed automatically. Alternatively, the union insisted that since it did not propose to alter the no-strike and no-lockout provision, at least that section automatically renewed on May 26.

Writing for the court, Judge Stanley J. Roszkowski rejected management's claim that the union's withdrawal of its notice to amend the agreement was not legally effective and that the entire contract was void. Such a narrow interpretation of the language, he said, was "untenable."

Concluding that the contract should have been renewed "in some form," and that such renewal should have embraced the no-lockout provision, Roszkowski ordered both parties to appear before the court on Jan. 16 for a settlement conference.

Applying heat

Cold weather in Crown Point, Ind., didn't deter Denise Adelsperger from handing out leaflets at a Cheker gasoline station to make the public aware of USX Corp.'s five-month-old lockout of 22,000 Steelworkers nationwide. Adelsperger is a member of Frontlash, the federation's youth arm that has mobilized high school, college and young worker volunteers for a variety of projects, including activities in seven states on behalf of the locked-out USWA members. Adelsperger took up her post at the Cheker station because it's owned by Marathon Oil Co., a USX subsidiary.

Reagan education budget cuts penalize children of workers

Federal dollars spent for education return their cost many times over, the AFL-CIO and the affiliated Teachers union stressed at Senate hearings.

The federation's testimony, submitted by Education Director Dorothy Shields, expressed concern that higher education is being priced out of reach of working families and that President Reagan's proposed budget would make the situation worse. Reagan wants to cut back on guaranteed student loans and has proposed to wipe out all federal aid to vocational education.

Quality public education "should be available for all who seek it to the limit of their potential," she insisted.

AFT Vice President Jaqueline Vaughn, who is also president of the union's 26,000-member Chicago local, told the Senate Labor & Human Resources Committee that the quality of education will determine whether the United States remains a world leader or slips to second-rate status.

Hamstrings economy

"If the federal government doesn't fulfill its role," she warned, "we may well be faced with an economy hamstrung because of a shortage of qualified people."

The hearings were part of a series called by Committee Chairman Edward M. Kennedy (D-Mass.) to get an overview of the issues the panel will be dealing with in this session of Congress.

Vaughn said the Administration had done a good job in identifying educational shortcomings in the 1983 report on "A Nation at Risk." But "pointing out shortcomings is not the same as helping to solve them," she stressed.

In the three years since the report was issued, Vaughn said, "this Administration has been long on rhetoric and short on money."

It has "become expert at telling others what needs to be done while turning its back on the problems," she said, pointing to a proposed 28 percent cut in the education budget.

Solutions outlined

Vaughn urged an expansion of compensatory education programs, stronger mathematics, science and language programs in elementary schools, and greater use of public schools to meet the need for quality day care programs.

Shields noted that people already in the workforce also need educational opportunities, whether it be computer courses to enhance skills or language and literacy courses for immigrants and displaced workers.

She cited various union-operated programs, sometimes established through collective bargaining and integrated with local school systems, as fulfilling labor's goal of "extending the opportunity for education for all who need it."

ILO parley to focus on jobs crisis

Geneva—The deepening problem of global unemployment will top the agenda when the International Labor Organization convenes its 73rd conference here June 3.

The three-week session of government, labor and business representatives will focus on the need for developing new standards to deal with joblessness and unemployment compensation.

The conference call noted that existing conventions on these issues have not been modernized since their adoption a half century ago.

Protection of construction workers against on-the-job injuries will also be in the spotlight as the ILO continues to press for actions to promote the reduction of occupational accidents and disease among all workers.

The construction industry "has changed significantly over the 50 years that have elapsed" since the adoption of existing ILO instruments in this field, the announcement pointed out. Present standards "are no longer adequate" in the face of "new methods of construction and associated hazards." The ILO has been studying this issue since 1977.

Also on the agenda for the three-week conference will be:

- The ILO's role in providing technical cooperation in a period of "changing needs and priorities," and at a time when member countries are at different stages of economic development.
- A review of the actions taken by the international labor body since its 1981 call for an end to apartheid in South Africa. Delegates will receive a special report from the director general on the steps being taken to defuse the explosive situation in that racially divided nation.
- Election of the 28 government, 14 labor and 14 employer representatives who will serve on the ILO's governing body for the next three years.

The size of the U.S. delegation has not yet been determined because of budget considerations, the State Dept. said, and government, worker and employer representatives have not yet been selected.

SEIU agreement ups weekly wage $62 for 30,000

New York—A last-minute agreement, worked out by the Service Employees and an employers' group representing about 1,000 commercial buildings to avert a strike, provides wage increases totalling $62 a week and other benefits over its three-year term.

The contract, covering 30,000 porters, cleaners, elevator operators and other building maintenance workers, is between SEIU Local 32B-32J and the Realty Advisory Board on Labor Relations Inc. The agreement will likely set the pattern for virtually all the other major commercial buildings in the city, said Local President Gus Bevona.

"In these days of givebacks, nothing comes easily to any union," Bevona said. "Through hard work, however, we were able to achieve the best possible contract for the members and there were no givebacks."

Unanimous approval

The new accord, approved unanimously by the negotiating committee, will increase wages $21 a week initially and by the same amount next January, and increase pay another $20 in January 1989. The average weekly pay rate in the bargaining unit was $409 under the old agreement.

The lifetime limit on major medical benefits was doubled to $1 million and life insurance was increased to $20,000 from $17,500. Dental and surgical benefits were improved and vision care was added for the first time.

The maximum monthly pension benefit was boosted in $25 increments from $425 to $500 for future retirees with 25 years' service who retire at 65. A new employee annuity fund will be set up with employer contributions beginning at $3 a week in the final year of the contract.

Deficits cloud '87 economic outlook

Continued from Page 1

was a major factor underlying the consensus forecast for 3.1-percent GNP growth in 1986. In reality, the trade deficit worsened and economic growth slowed accordingly."

The currency decline has failed to stem the gush of red ink in the trade area for a number of reasons:

- Even though the dollar dropped 40 percent against the Japanese yen, the trade deficit with that country has continued to deteriorate, partially because Japanese suppliers "have been willing to hold down prices and accept lower profit margins to protect" their growing share of the U.S. consumer market.
- There has been little or no decline against the currencies of such nations as South Korea, Taiwan, many Latin American countries and Canada, all of which "have been or are becoming major exporters to the United States."
- Many Asian and Latin American countries link their currencies to the American dollar, "and with cheap labor and more competitive currencies they are displacing Japan as a source of machine tools, cars, steel and electronics."
- The dollar's depreciation doesn't address "the whole array of unfair trade practices used by other nations to close their own markets while they promote their exports to the United States."

Aggravating the trade problem still further, Oswald said, is the huge wage gap between American workers and those in Third World nations—a differential which can't be overcome by pay cuts in this country to achieve the Administration's goal of international "competitiveness" without causing "a substantial deterioration in U.S. living standards which in turn would disrupt worldwide economic growth."

IMF policy hit

Oswald pointed out that the insistence by the International Monetary Fund and the banking industry that debtor nations restrict their imports in order to pay at least the interest on their loans continues to "impede improvement in the U.S. trade balance."

The gloom that has settled over the economy at the start of the new year is evident in the most recent Commerce Dept. data showing that American businesses generally plan no increase in real investment spending in 1987. The reasons, Oswald said, are the continued sluggishness in demand, the low utilization of existing industrial capacity and tax reform provisions dealing with investment tax credit and reductions in depreciation allowances.

Despite Reagan Administration claims that "supply-side economics" would lift the nation out of the doldrums, the fact is that it was consumer spending—demand-side economics—that fueled what little growth took place in 1986.

But installment debt is now at a historic high and that will tend to curb purchases in the months ahead. And workers face a slow advance in personal income because of the loss of better-paying industrial jobs, deregulation, import competition and high unemployment. All of these add up to continued sluggishness in economic growth.

Moreover, there is the specter of a step-up in inflation next year to about 4 percent, the result of anticipated higher oil prices—now that the squabbling seems to have ended between the members of the Organization of Petroleum Exporting Countries—coupled with upward pressure on import prices because of the decline in the dollar's foreign exchange value.

The bottom line in all the optimistic predictions that this year will mark a turnaround in the ailing economy, Oswald said, is the "assumption that the trade balance will improve significantly in 1987." It is an assumption, he declared, that simply isn't borne out by the facts.

EDITORIALS

Cure for a Sick Economy

JOBS PAYING at least a decent living wage are the key to a sound economy and to a healthy society. Low-wage jobs are not a solution to this nation's economic problems.

Plant shutdowns and layoffs resulting from massive trade deficits and waves of unregulated corporate mergers and takeovers are adding to the elimination of jobs that have been the foundation of America.

The shift from goods production to service and sales is leading to fewer middle-income jobs and more low-wage jobs.

Too often, workers are expected to adjust and adapt to the workplace. We are told to cooperate, to make concessions, to be flexible, to be restrained, to work harder.

But the worker alone cannot solve all the nation's problems and make us competitive. Human sweat is not the only component in productivity.

Education, training, research, investment, new technologies, rebuilt plants and a safe and healthy workplace all are components needed to make the worker's arm longer and stronger.

It's time for everyone—employers, the federal government and wage earners—to pull together.

If we don't do what needs to be done, there will be a permanent underclass of 4 to 6 million unemployed in a polarized two-tier society with America's middle class disappearing and everybody's standard of living sinking lower and lower.

—From testimony by AFL-CIO Sec.-Treas. Thomas R. Donahue before the Senate Committee on Labor & Human Resources, Jan. 13, 1987.

Remembering a Friend

THE YEAR was 1961. The occasion was the Fourth Constitutional Convention of the AFL-CIO. It was the afternoon of the third day of the convention and, as is the nature of such occasions, the delegates had sat through quite a few speeches.

They had heard memorable addresses from such notables as President John F. Kennedy and Eleanor Roosevelt. And they heard a memorable address from a young black minister who had come to public attention as the leader of the now famous bus boycott in Montgomery, Ala.

George Meany introduced Dr. Martin Luther King Jr. as a courageous fighter for human rights, and he was welcomed with polite applause. When he concluded, it was to a standing ovation.

Dr. King spoke of the "duality of interests" that unite the labor and civil rights movements, making "any crisis which lacerates you a crisis from which we bleed."

He acknowledged that the labor movement "has done more than any other force in American society" to advance Negro rights. But he had no apologies for black impatience with the pace of labor's commitment. The black community expects more from the trade union movement "exactly as a member of a family expects more from his relatives than he expects from his neighbors."

He spoke of his "dream of equality and opportunity," of his "dream of a land where men will not argue that the color of a man's skin determined the content of his character."

And with a prophecy that so sadly came to pass, he told that AFL-CIO convention:

"Some of us will have to get scarred up, but we shall overcome. Before the victory of justice is a reality, some may even face physical death. But if a physical death is the price that some must pay to free their children and their brothers from a permanent life of psychological death, then nothing could be more moral."

Dr. King met his death from an assassin's bullet while in Memphis to support the strike of sanitation workers, members of the State, County & Municipal Employees.

Is it any wonder that the trade union movement supported the campaign to declare his birthday anniversary a national holiday?

In his too brief lifetime, Martin Luther King Jr. was our warm friend and staunch ally. We cherish his memory.

Washington Window

Spotty economic recovery leaves neediest out in cold

By Press Associates

"Increases in hunger and homelessness in recent years are evidence that the 'economic recovery' has had little perceived impact for the better. Rather, rising housing costs, waiting lists for public housing and the continuing lines at food pantries provide the best argument to the contrary."

This comment is from the U.S. Conference of Mayors' recent report on the rising number of hungry and homeless Americans in the nation's cities in 1986.

The quote is from Boston, which enjoyed relatively strong economic growth during the last few years. Other cities that also reported general economic improvement agreed that gains are not trickling down to the hungry and homeless.

San Francisco: "Generally, the business climate has improved. This improvement, however, has not been experience by all segments of the population, with many individual situations becoming even worse than in previous years. For many, the gap is widening."

Detroit: "While the city has experienced growth . . . for those with no skills, for those with minimum educational background, and for those who have been displaced from jobs because of changing technology, there are not enough training programs and job opportunities. Jobs secured are often at substantially lower salaries than those previously held."

Other cities said that economic conditions have not improved much for any sector of the population, much less for the poor.

Louisville, Ky.: "We see less unemployment, but the positions are usually part-time and without benefits. The statistics show that a family of four needs a wage earner that makes at least seven dollars an hour . . . Because families cannot meet the basic needs on their salary, we are seeing an increase in shelter needs."

Portland, Ore.: "What economic recovery? If poor people have been helped, it is because of the commitment and concern of many in the city, not because of any economic recovery."

Denver: "Our economy has relied on oil and gas, mining and high tech. It is a classic situation of the rich getting richer and the poor getting poorer . . . What economic recovery?"

Of 25 cities included in the survey, all but three reported an increased demand for emergency food assistance averaging 25 percent.

In 24 of 25 cities, requests for emergency shelter rose an average of 20 percent. Low-income households asking for housing assistance increased an average of 40 percent in all but three cities, where it remained the same.

Families needing aid

A significant change in the situation, according to the cities, was the sharp rise in the number of families with children requesting assistance. Four out of five cities reported an average increase of 24 percent.

Reasons cited by the cities for the growing number of hungry and homeless include continued high employment, low-wage jobs, lack of low-cost housing, and cuts in assistance.

The survey demonstrates that, contrary to the Reagan Administration's insistence, charities and local services cannot carry the burden for national recession-level problems.

Most cities reported that nearly one-fourth of the requests for emergency food and shelter were turned down in 1986 due to lack of resources. And 21 cities said they expect the demand for assistance to continue rising in 1987.

The Reagan Administration, however, proposes to kill programs that help state and localities provide emergency food and built low-income housing. The President also wants more cuts in nutrition programs for the poor and children, in community services and in the Medicaid health care programs for the poor.

The Mayors' report confirms what organized labor has been saying for years: There has been no economic recovery for the millions of unemployed, underemployed and poor Americans. Since the President does not fathom the depth of the problem, Congress must act to restore decent living standards for all Americans.

MEMO FROM COPE

Odds 'n Ends

WHEN DOES LOSING PAY? When you're a staff member of the Republican Senatorial Campaign Committee. The 87 staffers of that committee received $255,250 in *bonuses* the day after their party's Senate candidates took a shellacking at the polls and lost eight seats—along with control of the Senate. Bonuses ranged from $90,000 top to Finance Director Rodney Smith down to $250 for most of the peons. One of the big questions during campaign was how Republicans could possibly get rid of all the money they had. "Bonuses" is one answer.

ANOTHER ANSWER IS, hire a whole bunch of consultants and make sure a lot of them have well-placed relatives or friends. As a recent *Washington Post* story reveals, "The three major Republican committees have become consulting bonanzas for a network of (their own) former employees, White House aides and close relatives of major politicians." Contracts for such consultants start at $3,000 a month and soar from there. President Reagan's daughter, Maureen, collects $5,000 a month. So does daughter of retired Sen. Paul Laxalt. A former Reagan Administration advance man set up a PR shop and collected $220,000 in 1985-86 election cycle. Ed Rollins, Reagan's one-time political aide, got $101,000 for his firm in that same period. Richard V. Allen, Reagan's first national security adviser, is on GOP National Committee tab for $3,500 a month. PR firm of Charles Black, erstwhile RNC political director, pulled in $278,000 in 1986-86, and another former RNC political director was paid $130,000. Apparent champ, however, is Linda DiVall, former high-level employee of GOP House campaign committee. She left that job, set up polling firm, and hauled in $1.2 million in business from GOP committees.

CAMPAIGN FINANCE is expected to be center stage during this Congress. Legislation already has been introduced for partial public financing of U.S. Senate campaigns and for spending and contributions limitations. Other bills will be filed.

LOOKING TO 1988, it appears presidential nominating process will be telescoped even more than originally thought. So-called "Super Tuesday," with primaries/caucuses in 19 states is scheduled March 8. Another large cluster of states might schedule their primaries/caucuses one week later, March 15. Whole shooting match starts February 8. Thus, in five short weeks, nominations conceivably could be locked up in each party.

MONEY HELPS, but it's no guarantee in a political contest. GOP's Marc Holzman spent $1.1 million by October 15 in effort to unseat incumbent Rep. Paul Kanjorski (D) in Pennsylvania's 11th District. He got only 29 percent of vote—46,639. That figures out to $22.77 per vote, and cost will be higher when all accounts are closed out. His opponent spent less than half that.

REAGAN ADMINISTRATION boasts of 9.1 million new jobs created, so don't worry about millions of jobs that have been lost. Administration flacks don't point out that new jobs are mostly in service, technology areas and pay an average of $272 a week, while jobs lost—basically in major industries—paid average of $444. Also, benefits don't measure up in newly created jobs.

WHO'S-IN-CHARGE-GATE brings spate of confessions from journalists who treated President Reagan with kid gloves for years. Many now say they knew all along his "limitations." One who wasn't so easy on the President, but who didn't take the gloves off as often as he now thinks he should have, is *Washington Post's* political columnist Dave Broder, who recently wrote: "Nearly every reporter in Washington—and politician too—knew Reagan had only a fleeting interest in the day-to-day policies and operations of government. But too many of us convinced ourselves that it made no difference, that it was enough to be lucky and popular. Even those of us who were not so bemused generally decided not to make pests of ourselves by harping on our concerns about Reagan's limited intellectual energy."

GOP Sets Targets for Upcoming State Legislative Control Fights

Republicans have started their drive for major state legislative gains in 1988 and 1990 elections. They seek to increase dramatically the number of legislative bodies they control. They want to be the ones to draw the new lines for congressional and state legislative districts following the 1990 Census.

They call it their 1991 Plan. Their ambitions got a hefty boost from the pick-up of eight governorships in 1986, bringing them to a narrow 26-24 deficit in statehouse control.

The GOP aims to hone its program in the few elections scheduled in 1987—gubernatorial and state legislative contests in Louisiana, gubernatorial contests in Mississippi and Kentucky, and legislative races in Mississippi, New Jersey and Virginia.

Planners recently identified targeted states in a publication of the GOP National Committee and noted the number of seats they need to add to win control. These follow:

State Senate—Wisconsin, 4 seats; Washington, 2; Vermont, 5; Texas, 10; Tennessee, 7; Oregon, 3; Oklahoma, 8; North Dakota, 1; New Mexico, 1; New Jersey, 4; Montana, 1; Missouri, 5; Maine, 3; Iowa, 6; Illinois, 2; Florida, 6; Delaware, 3; Connecticut, 8, and California, 5.

State House (or Assembly)—Vermont, 2; Wisconsin, 5; Pennsylvania, 2; Oregon, 2; Michigan, 10; Nevada, 9; Illinois, 9; California, 5, and Alaska, 5.

The party will spend millions of dollars implementing the 1991 Plan by, according to its publication, assisting state and local party bodies, with emphasis on organization at the county level.

Republicans aren't alone in the field. Democrats also got wind of the fact redistricting and reapportionment will follow the 1990 Census and launched their own Project 500 to defend, and gain, control in state legislative houses.

In fact, Democrats were encouraged by recent completion of the count of state legislative results in 1986. The numbers are better for Democrats than they looked in the weeks immediately after the election.

About 7,500 state house and senate seats were up. Both the GOP 1991 Plan and Democrats' Project 500 operated. The most recent count shows Democrats gaining about 180 seats nationally. Overall, Democrats now control 68 of 98 partisan state legislative bodies (Nebraska's legislature is nonpartisan), an increase of five as a result of 1986 voting.

Senate TV Gear Foreign-Made

Trade will be a major issue debated in Congress this year. In the Senate, passionate speeches will be made (for and against improved trade arrangements). The speeches will be telecast now that the Senate cable-beams its sessions.

It's a pity the equipment that's used in the Senate is not American-made. The six cameras and lenses that record the Senate's proceedings were made in Japan, according to an item in the *Wall Street Journal*. The equipment that controls the cameras was made in England.

Only the speeches will be made in America.

Buchanan Boomlet

Move over Jack Kemp, Bob Dole, Pat Robertson, Howard Baker, George Bush, Pete DuPont and others openly interested in the 1988 Republican presidential nomination. You might have unexpected company:

Pat Buchanan.

Pat who?

Pat Buchanan is President Reagan's director of communications. He has a mean bite. He wrote for President Nixon some years back, and is said to have provided Spiro Agnew with some of that pugnacious Vice President's most aggressive lines. He is a political pit-bull with an instinct for the jugular.

He contends Nixon's Watergate mess, and now Reagan's Iran mess, were grabbed by Democrats as an opportunity for "ruination of a Republican presidency," not conceding that the Presidents involved brought on their own troubles.

His presidential boomlet is fueled by right-wing groups and leaders who are all over the map on other potential GOP candidates but seem able to unite behind Buchanan. One of them, a top Jesse Helms operative, even says Buchanan "may be the Churchill of our times." Rightists think they could scrape up $12 million for a Buchanan primary campaign and get $12 million in federal matching funds, certainly enough for openers.

Buchanan himself has not publicly discussed a nomination try, but he's reported to be interested.

Few Last Words For The Dear Departed

"Realignment" died last November 4 at the polls. Many question if it ever existed at all . . . that is the massive and long-term shift of allegiance to their party that Republicans interpreted the 1984 election as representing.

Whether or not realignment ever was, it ain't no more. Post-election surveys demonstrate that among most major voter groupings, a majority voted in November 1986 for Democratic House candidates—or there was a 50-50 split.

Among all voters, the margin was 52-48 Democratic, among males 51-49, among women 54-46. Whites voted 51-49 Republican, blacks 86-14 Democratic and Hispanics 75-25 Democratic.

Union *households* voted 63-37 Democratic, according to the New York Times/CBS poll whose figures follow, but AFL-CIO union *members* exceeded 70 percent.

Apart from the 51-49 GOP edge among whites, the only grouping covered in the Times/CBS survey that favored GOP candidates were persons over $50,000 yearly income.

The figures below demonstrate forcefully that the notion of any long-term realignment was, at best, fanciful. (They demonstrate, as well, that Democrats don't have such a lock on the electorate that they ought to get heady about it.)

Balanced trade policy pressed

Lane Kirkland testifies at Senate foreign trade hearings with Research Director Rudy Oswald, left, and Legislative Director Robert McGlotten.

Kirkland calls for tough bill to curb rampant import glut

By David L. Perlman

AFL-CIO President Lane Kirkland pressed for early passage of a "tough, effective trade bill" to close the gap between exports and imports and to regain lost production, jobs and paychecks.

Any bill that doesn't reduce the trade deficit would be merely "a hollow shell," Kirkland told the Senate Finance Committee. He warned that America's massive trade deficit is a "clear and present danger" to the economy.

Nations that have used unfair tactics to run up a big trade surplus with the United States should be required to reduce exports to this country or buy more American-made products, Kirkland insisted.

Such a deficit-reduction formula was a key provision of the trade bill the House passed in the last Congress, which died when the Senate failed to act. The bill has been reintroduced with a multitude of sponsors and House hearings will soon get under way.

Kirkland, joined by Auto Workers President Owen Bieber and Steelworkers President Lynn R. Williams, made clear labor's expectation that in this Congress the Senate will no longer be the graveyard for House-passed trade legislation.

The start-of-the-session trade hearings reflected the agenda set by the new Democratic majority of the Senate. But committee members from both parties indicated in their comments and questions that they shared many of labor's concerns about trade imbalance.

American workers are the world's most productive, Kirkland noted. But they shouldn't be expected to compete with foreign workers "making a buck-and-a-half a day" in countries that maintain a price advantage by denying workers the right to organize, by using child labor, or by refusal to abide by "even the most minimal health and safety standards."

No country that defies internationally accepted labor standards should be given most-favored-nation trade advantages in selling to the U.S. market, Kirkland insisted.

Falling standards

Kirkland, Bieber and Williams stressed in their testimony and response to questions the human impact of a trade policy that has sacrificed millions of manufacturing jobs and forced down America's standard of living.

"For the first time in our history," Kirkland said, "we have a generation of Americans who cannot reasonably be expected to do as well as their parents did. The middle class is shrinking. Scores of American industries and millions of American workers have been left defenseless against an onslaught of imports."

A collapse of the nation's industrial base would be a hollow victory for the nations that have based their economies on penetrating the U.S. domestic market, Kirkland warned. "If we go down, the entire world economy will go down with us."

USX accord reached on six-month lockout

By Candice Johnson

Strong language on contracting out and a profit-sharing plan with a guaranteed minimum payment are key points of a tentative agreement reached between the Steelworkers and USX Corp.

If ratified by the USWA members, the four-year agreement will end a nearly six-month-long lockout, the lengthiest work stoppage in steel industry history.

Local union presidents representing locked-out USX workers at 25 locations approved the settlement by a 38-to-4 vote, with one official absent. The USWA's 31-member executive board also approved the agreement, authorizing mail ballots to be sent to 33,000 active and laid-off workers who are eligible to vote on the proposal.

Under guidelines established by the USWA's Basic Steel Industry Conference, workers who have been laid off for more than two years cannot participate in contract ratification. The ballots will be counted at USWA headquarters on Jan. 31. The union will hold regional meetings in eight states prior to the vote to give workers an opportunity to discuss the proposed settlement.

Pact's provisions

At a news conference in Pittsburgh, USWA Treas. James McGeehan, the chief union negotiator, outlined the proposed settlement, calling restrictions on the steelmaker's use of outside contractors a central issue in the dispute.

The agreement prohibits contracting out new work inside or outside the plant unless the union agrees or USX can prove that the work is covered by a few exceptions. Work contracted out since March 1983 will be awarded to USWA members unless the company meets 11 criteria proving that contracting out a given job is more "reasonable." The proposed pact eliminates comparative cost and efficiency as valid reasons in most cases and requires the company to give notice to the union of all work to be done by outside contractors.

The settlement would cut the base wage rate by $1.12 an hour, suspend cost-of-living payments, reduce Sunday overtime rates and eliminate three holidays. This adds up to an average hourly wage and benefit reduction of about $2. Workers would give up one week of vacation in the first contract year only, accepting one less holiday and reduced shift differential pay during the first two years of the agreement.

But a negotiated profit sharing plan "gives employees an opportunity to recover their full sacrifices," the union said, with a guaranteed minimum in the form of lump sum payments. Under the plan, workers will earn 10 percent of the first $200 million of pre-tax income reported by the USX steel unit and 20 percent of additional income.

Under the agreement, USX can eliminate 1,346 jobs. But the union won pension improvements and "sweeteners"—including removal of a cap on benefits and eligibility after five years of service—that will allow nearly 2,700 workers to retire. USX also agreed to recall one laid-off worker for every two who choose the early retirement pension plan.

Congress rebuffs veto threat to pass clean water measure

The first substantive legislation to pass the 100th Congress put back on President Reagan's desk the clean water bill he vetoed last fall after the previous Congress adjourned.

Both the House and Senate passed the identical bill Reagan had vetoed by margins big enough to assure that a second presidential veto will be easily overridden. The Senate passed the measure, 93-6, after having rejected a Republican-sponsored compromise by an 82-17 margin. It had passed the House, 406-8.

The legislation is intended to complete the program that was begun in 1972 with the passage of the Clean Water Act to provide federal aid to state and local governments for construction of sewage treatment plants. The labor-supported law has forced cities and industries to purify wastes to acceptable standards before discharging them into waterways.

Funds for the program had been slashed by budget cuts imposed in the first year of the Reagan Administration, but Congress balked at continued White House efforts to downscale the program.

Funding levels

The bill that both the House and Senate passed unanimously last October authorized $18 billion over eight years for sewage treatment, with construction grants gradually being replaced by low-interest loans.

That was three times what the White House had proposed for the phaseout. The vetoed bill also authorized an additional $2 billion for other anti-pollution programs. It included an "anti-backsliding" provision to

Attack on health care options scored

Reagan scheme would destroy workers' dual choice concept

By Gene Zack

The Reagan Administration is undermining health maintenance organizations by proposing to relieve employers of their present responsibility to give workers freedom of choice in picking health care providers, the AFL-CIO charged.

Under existing law, employers offering health benefit plans to their workers must give employees the right to choose between either the private insurance company chosen by management or an HMO that offers comprehensive doctor and hospital services for a prepaid fee. Management's contribution to the HMO must be at least equal to what it pays to a private insurance company.

The Administration scheme would "destroy the dual choice concept," said Bert Seidman, director of the federation's Dept. of Occupational Safety, Health & Social Security. He charged that the proposed change, published in the Federal Register, was "inconsistent with the Administration's campaign for cost effectiveness in the delivery of health care services."

Seidman said the Administration proposal grows out of Reagan's "ideological opposition to any form of government regulation" in the health care field. Congress enacted legislation in 1973 requiring dual choice to prevent employers from discriminating against health maintenance organizations.

If the Administration removes this requirement, as it proposes to do, it would put "a major financial burden on the backs of workers who want to take advantage of the full range of medical services that HMOs offer," he declared.

In the absence of a dual-choice requirement, Seidman warned, some employers might not only discourage HMO enrollment but also take "a new look at the entire range of health care coverage with

1/24/87

Beth Zacovic of the National Center for Immigrant Rights explains amnesty program for undocumented workers to 300 union delegates at a Los Angeles County AFL-CIO planning session.

Labor seminar

New immigration rules explored

Los Angeles—A major effort to help undocumented aliens qualify for amnesty under the new immigration reform law was kicked off by the Los Angeles County AFL-CIO.

At the national level, labor has committed substantial resources to the immigration assistance program, Federation Organization & Field Services Director Charles McDonald told a conference here.

The AFL-CIO will work through local and state bodies, McDonald said, praising the 300 participants for their "enthusiasm and energy" in extending aid to members and their families who qualify for legal resident status under the new law.

Steve Nutter, regional director of the Ladies' Garment Workers and chairman of the assistance committee, said the program is in keeping with labor's long-standing commitment to help ease "economic and social dislocations."

With a million of the potential new citizens concentrated in the Southern California area, said Director David Sickler of AFL-CIO Region VI, the committee will hire a full-time coordinator to help with the amnesty applications.

"There's never going to be enough money, enough staff or enough time to satisfy the need to help immigrants in the Los Angeles area," Sickler said. "But there could never be more passion and commitment to bettering their lives and to expanding our labor family."

Nationwide program

The federation will invest substantial funds to underwrite the nationwide program, McDonald said, and has taken these additional steps to help ease the transition of workers from undocumented status to citizenship:

- Creation of a task force chaired by Research Director Rudy Oswald to coordinate the activities.
- Preparation of a summary of the law by Associate Legal Counsel Janet Kohn, who is working with the AFL-CIO Lawyers Coordinating Committee to advise local unions and their members.
- Distribution of a new pamphlet summarizing the new law for undocumented workers and employers. It will be available in Spanish, Korean, Cantonese and other languages.
- Application by the Human Resources Development Institute for designation as a voluntary agency that will receive federal funds in return for counseling undocumented workers and processing their applications for citizenship.
- Appointment of Kevin Kistler of the organizing department to coordinate distribution of training materials, amnesty assistance kits and audio-visual materials developed by the Labor Council for Latin American Advancement.

Taking part in immigration conference are, from left, AFL-CIO Organizing Director Charles McDonald, Los Angeles AFL-CIO President J.J. Rodriguez, ILGWU's Steve Nutter, Region IV Director David Sickler and County Federation Executive Sec.-Treas. William Robertson.

Executive Sec.-Treas. William Robertson of the county central body told conferees labor has a "debt and duty" to help immigrants achieve decent working and living conditions, and to be free from fear of exploitation.

"For a century, organized labor has been a gateway for welcoming immigrants to the freedoms and benefits of American life," Robertson said. "As our grandparents and parents were helped, so unions must pull together now to help this newest wave of legalized aliens and future citizens."

INS outlines strict policy on new hires

Employers will be required to verify the citizenship or legal alien status of all new employees within 24 hours after they're hired, according to preliminary rules drafted by the Immigration & Naturalization Service.

The proposed regulations, intended to carry out provisions of the new Immigration Reform & Control Act, would mark the first time that Americans will be required to present proof of citizenship when applying for jobs.

Applicants would have to show two documents that could include a driver's license bearing the individual's photograph and a social security card. Employers would be required to examine these documents and certify that they "reasonably" appear to be genuine.

The new law subjects employers to civil fines ranging from $250 to $10,000 for each illegal alien hired, depending on the number of prior violations. The proposal to include all new workers in the procedure was designed to prevent discrimination against job applicants based on race, color or ethnic surname.

Proof needed

Undocumented aliens seeking amnesty will have to show proof of "continuous residence" in the United States since Jan. 1, 1982. Such evidence could include pay stubs, utility bills, letters from employers, school or hospital records, rent receipts, bank statements or motor vehicle registration certificates.

A draft of the new regulations indicated that the government is considering imposing application fees on those seeking legal status. The fee would be $100 for each application and $50 for any appeal from an INS denial of amnesty.

Agency officials made clear that this and other provisions are still in a "highly preliminary" stage. The INS will be accepting comments on the draft until Feb. 5 before publishing a final version in the Federal Register.

The requirement for documentation does not apply to present employees. But new job applicants must fill out a government form that requests biographical information and requires the applicant to certify, under penalty of perjury, that he or she is a citizen or an alien legally entitled to work in the United States.

The employer must also sign the form and list the documents examined to establish the worker's identity and eligibility. The employer must keep the form for three years or for a year after the worker has left the job, whichever is longer.

Several AFL-CIO affiliates, including the needle trades, Service Employees, Carpenters, Farm Workers and Hotel Employees & Restaurant Employees have established counseling and legal assistance programs to help undocumented workers achieve legal status.

Donahue calls for U.S.-Japan trade cooperation

Tokyo—American and Japanese trade unions must work together to assure "growth and economic expansion" that will enable workers in both countries to improve their living standards, AFL-CIO Sec.-Treas. Thomas R. Donahue asserted here.

Addressing the 23rd national convention of the Japanese Confederation of Labor (Domei), Donahue called for "labor solidarity across political borders" to solve the vexing problem of international trade.

Donahue conceded that dealing with the "particularly painful issue" of trade is not easy for the respective trade union centers.

"It is one thing to agree on the need to speak out or take action on some question of morality or human rights, such as South African apartheid or Soviet aggression in Afghanistan," he said. "It is quite another matter to speak with one voice on matters of international trade policy and competition."

This is because the problems of employment and unemployment are "national problems . . . which touch on sensitive issues of national pride and prosperity and members' jobs," Donahue told convention delegates.

But the AFL-CIO and Domei have already made progress in this area, through the Trade Union Advisory Committee of the Organization of Economic Cooperation & Development. Last year, Donahue recalled, the two labor centers issued a joint plea to their respective governments to take specific action to spur full employment and economic growth.

"The United States faces a national crisis resulting from our enormous trade deficits, which have increased steadily over the past six years to reach $173 billion in 1986," Donahue declared.

Deficit burden

"No nation can accept such deficits, and the international system of trade will be threatened by it," he continued. "No other nation in the world would have allowed this situation to reach these serious proportions. No other nation in the world would have left its markets as open as we have, to our detriment and at the expense of U.S. workers' jobs."

The toll has been devastating, Donahue said. Unemployment has been stuck at 7 percent for more than six years. More than 2 million manufacturing jobs have been lost. Average weekly earnings have declined 9 percent since 1977. And 60 percent of the new jobs created in retail trades and services pay less than one-third the average manufacturing rate.

He reminded his audience that of the total $173-billion trade deficit last year, one-third—or $58 billion—was with Japan. That's nearly five times the $12-billion trade shortfall of six years ago and "some strong and definitive action must be taken to cut that deficit" drastically this year.

Donahue expressed pleasure that Domei and the Japanese government are about to launch a "serious effort" to reduce the standard workweek to 40 hours. He pointed out that there is a belief that the American workweek must drop to 35 or 32 hours "if we are ever to provide full employment."

He acknowledged that Japanese workers and their unions have had to wrestle with "grave dangers" in the past year. Among the problems have been enormous and rapid technological changes, the development of trade competition from many other countries and the hardening of the yen on the international money markets. All of these developments, he agreed, "create difficulties for Japanese workers."

American workers "have no desire to make things harder for Japanese workers or for themselves," Donahue told delegates, "but we must insist that our movements and our governments work to find rational solutions to these problems immediately. A failure to take prompt action will make the eventual solution even more painful."

Exploiting workers

The current trend, in which both Japanese and American employers "seek to exploit the cheapest labor force they can find anywhere in the world, is no answer for anyone," he emphasized, adding:

"In the long term, there is no alternative to economic expansion. Unless the world economy can sustain greater economic growth, the crisis will worsen and trade relations will further deteriorate.

"It is only in growth and economic expansion that the workers will receive a more equitable share and be able to improve their living standards. And it is only through growth of internal economies that workers in less-developed countries can hope to improve their conditions."

Economy fizzles in '86 as real earnings plunge

GNP growth slips to four-year low

The nation's sputtering economy, tethered to a soaring foreign trade deficit, posted a recession-threatening 1.7 percent growth for the final quarter of 1986, ending the year with an anemic 2.5 percent rate. That was the lowest level of economic growth since the 1982 Reagan Recession. The gross national product represents the value of all goods and services produced during the year.

The GNP bombshell came close on the heels of a report showing that the real earnings of American workers nosedived nine-tenths of 1 percent in December.

This left workers' families stuck in an economic rut, with the purchasing power of their earnings an insignificant one-tenth of 1 percent ahead of where it was in December 1985.

As a result of Reagan Administration policies, particularly in the area of a gaping foreign trade deficit, the buying power of workers' paychecks has been driven down a sharp 4.8 percent since 1979.

Hours fall

The December loss resulted from a one-tenth of 1 percent drop in hourly earnings and a sixth-tenths of 1 percent decrease in average weekly hours. These factors were accompanied by a two-tenths of 1 percent rise in the consumer price index.

AFL-CIO Research Director Rudy Oswald said the economy's poor performance in the closing months of 1986 "further dampens the chances of a pickup this year." The nation's foreign trade deficit has become an anchor on the economy, Oswald said.

The slump in the economy in the fourth quarter confounded Reagan Administration economists, who had predicted an upturn. The 2.5 percent GNP growth for the entire year contrasted with the Administration's prediction a year ago that the growth rate would be 4 percent for all of 1986.

Instead of rebounding from the 1985 growth level of 2.7 percent—which was considered a subpar performance—the slump worsened. The result was the poorest showing since the GNP declined 2.4 percent at the recession's height.

The Bureau of Labor Statistics reported that 1986 saw the biggest respite from inflation in a quarter-century, as consumer prices rose only 1.1 percent.

But the figures were distorted by a 60-percent plunge in crude oil prices that followed last winter's collapse of the Organization of Petroleum Exporting Countries' cartel. This translated into a 30.7-percent drop in retail gasoline prices over the year and a 29.9-percent decline in home heating oil costs.

Except for energy, consumers found little relief from inflation. Prices rose 5.8 percent for new automobiles, 3.7 percent for food, 1.8 percent for housing and nine-tenths of 1 percent for clothing. And the cost of medical care still raced ahead of all other components in the marketbasket of goods and services—up a steep 7.7 percent in the past 12 months.

In other economic news:

- The Federal Reserve Board reported a five-tenths of 1 percent gain in industrial output for December. The increase was primarily in the production of consumer goods, defense equipment and nondurable items.

While the Administration took a rosy view of the third successive monthly increase in output, most economists were wary. At least some of the spurt, they said, was generated by pressure on consumers to make major purchases before the repeal of the sales tax reduction as part of the new income tax structure.

Slowdown forecast

The result, analysts said, could be a slowdown in growth in the first quarter of 1987.

- The government reported that the operating rate of the nation's factories, mines and utilities rose two-tenths of 1 percent between November and December. But the latest rate was still 1 percent below the level for the same month in 1985.
- Housing construction jumped sharply in December, helping to give the industry its best year since 1978. The figure was 13.7 percent higher than for November—the first monthly increase in housing starts since August—and was a 3.7 percent improvement over 1985.

For the entire year, the Commerce Dept. said, construction began on 1.8 million homes and apartments. It was the highest annual total since the 2-million mark set eight years earlier.

- Applications for building permits, considered a good sign of future construction industry activity, shot up 17.4 percent in December. It was the biggest monthly increase in more than six years. However, government analysts pointed out that much of the spurt was concentrated in California where builders were trying to beat higher permit fees that took effect Jan. 1.

AFGE suit blocks random drug testing

Savannah, Ga.—A suit by the Government Employees has blocked imposition of a random urinalysis drug-testing program at the Ft. Stewart-Hunter Army Airfield complex in Georgia.

District Court Judge D. Avant Edenfield issued a preliminary injunction to halt the program pending further court consideration. The AFGE suit challenged the constitutionality of the random testing program, which had been put into effect for civilian police officers represented by the union.

The court order bars the Army from further testing of Ft. Stewart police officers without reasonable suspicion of drug use and stops the facility from requiring consent to such random testing as a condition of employment.

Lynn R. Williams

Owen Bieber

'Tough trade bill' pressed to curb job-gutting imports

Continued from Page 1

Williams said U.S. steel companies can't compete with foreign producers that have used unfair trading practices to capture a large share of the U.S. market.

Steelworkers have made "painful" wage concessions to help their employers stay in business, Williams reminded the panel. But wage cuts without a new direction in U.S. trade policy merely "lower our standard of living," he pointed out. And efficiencies in production haven't kept steel employment from plunging from more than 400,000 production workers to a current level of about 172,000.

Bieber said the opening of the U.S. market to unrestricted auto imports has had an impact that has spread through the entire economy, with the threat of worse to come. Yet another half-million U.S. jobs may be lost in the absence of a policy shift, he warned.

The Administration's "commitment to the policies of the past," Bieber said, has translated into higher unemployment and greater income inequality. U.S. trade policy should seek to strengthen domestic production, he urged.

Kirkland noted that neither the Administration's "rhetoric" nor two years of declining dollar exchange rates have kept the trade deficit from rising. And any relief through the lengthy process of multilateral negotiations is "years away" at best, he warned.

No solution

While any trade relief is welcome, he testified, the focus of the Administration's effort "leaves something to be desired." America's trade deficit with Korea isn't going to be reduced significantly by making it easier for U.S. firms to sell insurance in Korea, Kirkland suggested.

Kirkland and the other labor witnesses opposed Administration proposals to end the vestiges of the trade adjustment assistance program that Congress established to help workers hurt by the nation's liberalized trade policies. When originally instituted, it provided a higher and longer level of unemployment compensation for workers whose jobs were wiped out, along with retraining and job search assistance. Benefits have since been cut back.

The Reagan Administration, which has sought for several years to end the program entirely, is now proposing to substitute an expanded program of job assistance for dislocated workers, regardless of the cause of a plant closing or major layoff.

In response to a question from Committee Chairman Lloyd Bentsen (D-Tex.), Kirkland said trade adjustment assistance should be restored to its original level, not brought to an end.

Broken promise

He said the AFL-CIO would welcome additional funds and resources to deal with the problems of the unemployed, "regardless of the cause of unemployment."

But he reminded the panel that trade adjustment was part of the "bargain" that led to approval of the original trade liberalization bill back in the Kennedy Administration. All the news and editorial comments at the time, Kirkland noted, emphasized the "generous" trade adjustment provisions.

That promise should be redeemed, he urged. As for the cost of the program, Kirkland suggested that it would be fair to require that "a major share of the cost of trade adjustment" should be borne by "those who exploit American markets." An import tax to fund adjustment assistance came close to enactment in the last Congress.

Kirkland said countries that have relied on exports to the United States to support their expanding and often subsidized industries should be encouraged to enlarge their own domestic markets for the goods they produce.

"That means expanding consumer purchasing power—higher wages," Kirkland said. "One sure way to do that is by recognizing the legitimate rights of labor," he insisted.

"American workers are not too well paid, and the American standard of living is not too high. Foreign workers are too often too poorly paid, and their standards of living are too low," Kirkland asserted.

Raising standards

Kirkland endorsed legislation introduced by Sen. Bill Bradley (D-N.J.) to reduce the heavy debt burden incurred by less-developed nations. That would ease the pressure on these economies for expanding exports and holding down domestic living standards, he noted.

"The task is not to reduce the quality of life in America to the lowest common denominator but to raise it—and to raise the world to that higher level. Let us do that by exchanging our goods with other countries, and not our standard of living," he urged.

It's up to Congress to "exercise its responsibility," Kirkland insisted. "We need legislation that recognizes the magnitude of the problem, and takes the steps needed to bring about a solution. Anything less is just smoke and mirrors."

Trade privileges lifted for rights abuses

The Reagan Administration ended special trade privileges for Nicaragua and Romania and "suspended" Paraguay from receiving preferential treatment because the three countries systematically violate workers' rights.

At the same time, Special Trade Representative Clayton Yeutter indicated he would continue to review the workers' rights issue in Chile for another year.

When Congress voted an eight-year extension of the Generalized System of Preferences—which grants duty-free status to imports from less-developed countries—it directed the trade representative to make sure that beneficiaries adhere to the International Labor Organization's criteria for workers' rights.

These include the right of association, the right to organize and bargain collectively, prohibitions against forced or compulsory labor, an end to child labor and acceptable standards for wages, hours of work and occupational safety and health.

The trade representative began a two-year study of compliance in 1985. At that time, the AFL-CIO called for ending the preference for ten countries with the worst workers' rights records. In addition to Nicaragua, Romania, Paraguay and Chile, the list included South Korea, Suriname, Taiwan, Guatamala, Haiti and the Philippines. The federation detailed working rights violations in each of these countries and called for effective enforcement of the new law.

Decisions delayed

Since then, there has been a change of government in the latter three countries. The federation asked that the decision on those countries be suspended to give them a chance to put fair labor programs in place.

The Administration gave no explanation of what it meant by "suspension" of Paraguay. Nor did it indicate that it would continue to review the practices in any of the offending nations except Chile.

In a related action, the Administration reduced by some $3 billion the amount of trade from the 140 countries currently eligible for duty-free treatment under GSP. But it accompanied this decision with an open-ended "waiver" that could mean as much as $2 billion more in imports—primarily from Singapore, Malaysia, the Philippines, Hong Kong, South Korea and Taiwan.

Among imports being given a free hand under this procedure will be telecommunications equipment.

Testifying before the Senate Finance Committee on the need for strict trade legislation, President Lane Kirkland made clear the irony in granting the waiver to Singapore.

In 1985, Kirkland told the committee, American Telephone & Telegraph Co. announced the closing of a telephone equipment plant in Shreveport, La., throwing more than 1,000 American workers out of their jobs.

At the same time, AT&T disclosed it was opening a similar production facility in Singapore. The output from that plant will now be admitted to the United States without restrictions as a result of the Administration action.

Teachers Pat Mangum, left, and Donna Thompson lay brick with BAC's Rod DuChemin and Bruce Voss for Christa McAuliffe memorial.

'Friends of Christa' honor fallen astronaut-teacher

Lanham, Md.—Several AFL-CIO affiliates are building a memorial to astronaut-teacher Christa McAuliffe, who died a year ago in the NASA Challenger space shuttle disaster.

The memorial, a brick and glass display case, is being erected in the lobby of the Thomas Johnson Middle School in Lanham, where McAuliffe worked from 1971 to 1978 as an active member of Teachers Local 2150.

The teamwork to build the memorial involves members and officers of the Teachers, Bricklayers, Painters and the State, County & Municipal Employees.

Following the Jan. 28, 1986, explosion of the National Aeronautics & Space Administration Challenger seconds after blast-off, the "Friends of Christa" was formed to raise funds for the display case to preserve the memory of McAuliffe's ideals for future students at the school.

The display case will include an astronaut's flag with black border, a letter from the President, and pictures and other mementoes of McAuliffe's, showing her dedication and her life's work.

McAuliffe, a staunch union supporter, was on the local AFT bargaining committee and was instrumental in getting fellow teachers at the Johnson school to join the union. It was because of her strong union sympathies that her friends sought labor support for the memorial.

Journeymen Bricklayers and apprentices from BAC Local 6 in Washington, along with several members of the union's international staff, built the brick base that will support the display case. The BAC volunteers worked on the project along with two of McAuliffe's close friends, Pat Mangum and Donna Thompson, who laid the final bricks on the monument's base.

"It is really appropriate to have apprentices working on this project," said Mangum. "Christa was so involved in teaching the young, and she had a hands-on philosophy of trying to bring the two kinds of education together—the practical and the theoretical. She would have liked to see these young people working."

Union painters are preparing the display case that will be installed on the brick base.

The AFT has established a scholarship program at Maryland's Bowie State College in memory of McAuliffe where she earned a graduate degree while teaching at Lanham.

Injury logs 'sanitized'

Union says Iowa Beef fakes OSHA reports

By Arlee C. Green

The Food & Commercial Workers charged that the nation's largest beef packing company, Iowa Beef Processors Inc., "willfully and knowingly" deceived the Occupational Safety & Health Adminstration by keeping two sets of books, one of which "sanitized" the injury and illness logs in 1985 and 1986 at its Dakota City, Neb., plant.

UFCW Local 222 which represents 2,800 workers at IBP's flagship packinghouse filed a complaint with OSHA against the firm, citing "extensive evidence" of dual record-keeping, including proof that the log with the "sanitized" figures was presented to OSHA inspectors. Local 222 Business Agent William Schmitz called the injured IBP workers "victims of a lawless workplace."

IBP, which had sales of $6.5 billion in 1985 and profits of $144 million, locked out its Dakota City employees after the Local 222 members voted 2,250 to 50 to reject a take-back contract offer in December. The company proposed to freeze wages for four years, end time-and-a-half after eight hours work, raise worker costs for health insurance, and set up a two-tier wage scale.

IBP workers have not had a general wage increase in five years, and in the last contract, pay was cut $1.07 an hour. Wages now range from $5.90 an hour to $8.20.

Tip of iceberg

UFCW Vice President Lewie Anderson, head of the packinghouse division, said the union's complaint rests squarely on IBP's own injury and illness records. He explained that local union officers asked for and received the records for 1985.

In response to a later request, the company provided a different set of records to the union. The first set, Anderson said, showed 1,800 injuries and illnesses occurring in a portion of the plant over a three-month period. The second set showed only 160 incidents for the same period.

Pointing out that the records cover only a portion of the plant, Anderson said, "We believe OSHA will find the UFCW's complaint against IBP and our evidence of fraudulent record-keeping to be the tip of a hideous iceberg.

"We demand that OSHA immediately conduct a detailed investigation of IBP, and that evidence of illegality be turned over to the U.S. Attorney's office for possible criminal prosecution."

Further, the union called on OSHA to abandon its policy of relying on employer-maintained injury and illness logs to conduct inspections. "This misguided policy is an invitation to employer abuse of workers' rights to a safe workplace," Anderson said. The last full wall-to-wall inspection of the meat packing plant was in 1983.

Most concealed

Stressing that even if the company had erred by providing records kept at just one of the two nurses' station, a careful comparison of the two logs "proves that IBP grossly underreported injuries and illnesses in its 'official' submission to OSHA, and there may be thousands more," Anderson said.

The complaint cites a number of cases not reported in 1985 that should have been and incidents recorded on one set, but not the other. "The first set of logs shows a typical week at IBP," Anderson, while the "logs that OSHA got did not."

In analyzing the sets of records, the UFCW found 117 separate incidents registered in one week. Of this, 21 cases or 18 percent were reported to OSHA, while 30 others should have been, bringing to 21 the number of recordable incidents—44 percent. The union lacked enough information on 21 cases to classify them, and 45 others were not required to be reported under OSHA standards.

In addition, a mathematical error on the "sanitized" log lowered the recorded lost workdays by 100, thereby improving the lost workday rate, Anderson noted.

"How do you explain injuries ranging from knife cuts causing nerve damage or requiring stitches, dislocated wrists resulting in months of restricted work, back injuries from which workers never recover, and illnesses like carpal tunnel syndrome that have permanently crippled young workers not being reported to OSHA at all, or being trivialized because IBP underreports the number of lost workdays that results?" Anderson asked.

The union has signed affidavits from workers testifying in all these cases, "yet OSHA never hears—or reads—of their pain," Anderson said.

Reagan health care proposal attacks options for workers

Continued from Page 1

the objective of reducing the level of benefits they now provide their workers."

The Administration's plan to issue regulations undoing the will of Congress could mean the loss of millions of dollars in payments to HMOs, he pointed out.

"This could force these health care providers either to raise their premiums substantially or make drastic cuts in the comprehensive care they now provide," Seidman warned.

HMOs have enjoyed a rapid growth in recent years, Seidman noted, precisely because they have been more cost effective than the fee-for-service plans offered by private insurers. Some 23 million Americans currently are members of health maintenance organizations.

Dr. William L. Roper, administrator of the Health Care Financing Administration in the Dept. of Health & Human Services, defended the Administration decision on the ground that the present law "unduly restricts the ability of employers to manage their employee benefits."

Roper called it an "unnecessary intrusion" by the government in the health insurance business and contended that dual choice has "the potential to increase considerably an employer's overall health benefit costs."

Seidman sharply disagreed. "The employer is not required to put one more cent into prepaid health insurance plans than he does in the fee-for-service policies he now buys in the marketplace," he declared.

Moreover, HMOs offer coverage at, or below, the rates charged by private insurers, he emphasized, and therefore act as a spur to the insurance industry to keep its prices at reasonable levels.

The government has recognized the value of HMOs in connection with Medicare. They offer beneficiaries the opportunity to have their Part B payment channeled into health maintenance organization plans.

Nearly 1 million Medicare beneficiaries have opted to go this route in order to keep their out-of-pocket medical costs from skyrocketing.

Veto-proof clean water bill passed

Continued from Page 1

prevent the weakening of existing pollution control standards. And it set up a new program to identify and clean up toxic pollutants in water.

Reagan sought to mobilize the Republican votes he would need to prevent a second veto from being overridden.

Despite the bill's bipartisan sponsorship, the President used his weekly radio broadcast to the nation for a political attack. If the Democratic leadership of Congress continued to push the legislation, Reagan charged, it would send "a clear signal that they've sided with those who want to raise your taxes."

That didn't scare the Democratic leadership, nor did it win many Republican votes.

In the Senate, newly switched from Republican to Democratic control, GOP Leader Robert Dole tried to save face for Reagan with a $12 billion substitute that included fewer federal controls.

But a majority of his own party joined with all 55 Democrats to defeat the substitute and in effect serve notice that they were also prepared to override a veto.

Dole read some prepared remarks about federal funds for sewage treatment plants being "poisoned with federal controls" and warned that Congress would be giving the Environmental Protection Agency "more power than a king."

But when his substitute was defeated, he joined in voting for the once-vetoed bill, leaving only a corporal's guard of hard-core Reaganites to oppose the legislation.

The clean-water bill carried the priority designation, H.R. 1, a coveted number assigned by the House leadership. As the Senate was approving H.R. 1 intact, sending it to the White House, the House passed another high-priority bill, H.R. 2.

That measure renews funding for labor-supported highway and mass transit programs. It had been derailed in the closing days of the last Congress by a House-Senate conference dispute over easing the 55-mile-an-hour speed limit and some other differences.

For the record, the House leadership gave the designation H.R. 3 to the trade bill it passed last year which died in the Senate when Congress adjourned. Hearings on the measure are expected in early February.

Union members on the march in Atlanta.

Sharing King's dream

Across the country, union members and civil rights activists joined in community celebrations and paid tribute to the dream of Martin Luther King.

In speeches, marches, religious rites and other observances, Americans joined hands to honor the civil rights leader who was slain in Memphis, Tenn., where he went to lead a peaceful march of striking sanitation workers.

In Memphis, union members, church leaders and the civil rights community joined in a sad march to the Lorraine Hotel—the place where King was shot nearly 19 years ago—then gathered at the State, County & Municipal Employees' union hall for an afternoon tribute to the civil rights leader.

A weeklong celebration in Atlanta was organized by the King Federal Holiday Commission—a coalition of labor, management and government organizations—and the Martin Luther King Jr., Center for Nonviolent Social Change, headed by Coretta Scott King.

Awards and discussions

Activities included a breakfast, where Farm Workers President Cesar Chavez and Georgia AFL-CIO President Herb Mabry received awards from the King Center, and a social responsibility seminar, where Sec.-Treas. Jacob Sheinkman of the Clothing & Textile Workers spoke of labor's commitment to public education as a means to achieve a fair and just society.

And on Jan. 19, a week of gray skies gave way to sunshine as the day's tribute to King began with a wreath-laying ceremony at his grave and an ecumenical service at the Ebenezer Baptist Church, followed by a parade through the city with floats, bands and marchers.

Despite freezing weather, residents of Phoenix were on the march Jan. 19, to protest the cancellation of the King holiday by incoming Republican Gov. Evan Mecham.

Last year, the Arizona Senate designated the third Monday in January as a state holiday, but the effort was defeated in the House by one vote. Gov. Bruce Babbitt (D) then issued an executive order proclaiming the state holiday, but his order was rescinded by Mecham earlier this month.

Candlelight vigil

Union members joined in an evening candlelight vigil honoring King, then marched to the state capitol the following day with more than 50,000 petitions demanding recognition of the national holiday.

In Mobile, Ala., Columbus, Ohio, and Miami, union members joined in community marches honoring King, while rallies and religious observances marked the day in Chicago, New York and Baltimore.

Special labor programs celebrating King's memory were held in Philadelphia, St. Louis and Bloomington, Ind., while Los Angeles-area union members joined in a labor breakfast.

In Detroit, the Teachers paid tribute to King with a $10,000 contribution to three scholarship funds that help students who are planning to become teachers.

As part of the celebration, the AFL-CIO distributed posters, flyers, pamphlets and a video on King's life to affiliates and union members. Many labor newspapers paid tribute to King in editorials and special editions, some reprinting King's "I have a dream" speech, others recalling his visits to their communities.

ITC pressed to keep lid on steel imports

The Steelworkers and management called for a three-year extension of import restraints on specialty steel imports to restore jobs and help the industry get back on its feet.

Battered by competition from abroad as the result of overt subsidies by foreign governments, employment in the industry has plummeted 26 percent since 1979—from 48,000 jobs to 34,000 jobs. Imports claimed 19.3 percent of the domestic market in the first 10 months of 1986. A year earlier, foreign shipments of stainless and tool steels took only 16.5 percent of the market.

"Loss of markets is more than a numerical abstraction," said USWA President Lynn R. Williams. "In human terms, it has cost thousands of specialty steelworker jobs and drained the lifeblood of proud communities" in key industrial states, he said.

Imports are "the root cause of the problem," Williams asserted, and workers and their employers "have paid a steep price for our nation's failure to enact new and more effective trade legislation, let alone to aggressively enforce the laws now on the books."

The union and industry asked the U.S. International Trade Commission to renew limitations due to expire July 19. They were originally imposed by President Reagan in 1983.

The import relief program has "proven beneficial" in curbing the worst abuses caused by the massive surge of imports in 1982 and 1983, the ITC was told. But jobs, production and the utilization of American capacity remain well below 1981 levels.

An additional three-year respite from "unfairly traded imports," the USWA and management said, will help the industry "recover from years of depressed profits."

USWA Treas. James McGeehan answers questions on USX settlement.

Steelworkers to vote on pact ending 6-month USX lockout

Continued from Page 1

In other highlights of the proposed settlement:

- USX pledged in a written, binding agreement to spend nearly $1 billion to modernize its Monongahela Valley and Fairfield, Ala., plants, the work to begin by the end of the contract period.
- Workers won improvements in medical and dental coverage and establishment of health care cost containment measures.
- The steelmaker will officially close several of its idle facilities, allowing more than 4,000 USWA members to collect early pensions or severance pay.
- Under an expedited grievance and arbitration process, the company must respond to grievances within strict time limits and add interest to back-pay awards and settlements if it has not made the payment within 45 days.

If ratified, the new contract will run through Jan. 31, 1991.

In other steel industry developments, the USWA is seeking to overturn a court order that terminated two pension plans for hourly workers at LTV Corp.

In a motion filed in U.S. District Court for the Southern District of New York, the USWA challenged the Pension Benefit Guaranty Corp.'s assertion that LTV cannot make the minimum contributions to the funds and disputed the agency's failure to give advance notice of the terminations. The PBGC is the federal agency that guarantees basic retirement benefits.

Following the PBGC's testimony, the court terminated three plans, including one covering salaried workers.

Wage rules welcomed by public unions

Federal regulations regarding coverage of state and local government workers under the Fair Labor Standards Act have a "few minor problems," but generally "reflect Congress's intent and strengthen employee rights," said President Gerald McEntee of the State, County & Municipal Employees.

Final action implementing the Labor Dept. regulations came this month nearly two years after the Supreme Court ruled that employees of state and local governments are protected by FLSA's wage-hour provisions.

The Labor Dept. estimated 13.8 million public workers were brought under FLSA coverage by the court decision and that 266,000 were earning less than the federal minimum of $3.35 an hour before the amendments went into effect last Apr. 15.

McEntee said the amendments, passed by Congress in November 1985, strengthen employee rights in the workplace. He pointed out, however, that there is a "serious problem" concerning how much a volunteer may earn in wages and benefits before being considered an employee subject to the overtime requirements.

"We believe it is outrageous," McEntee said, "for the regulations to suggest that comprehensive benefits, such as health and life insurance, can be paid to individuals without affecting their status as volunteers."

Concern raised

He warned that some employers may be encouraged to stretch the rules "beyond any reasonable interpretation and deny employees their overtime rights under the law."

Service Employees Research Director Peggy Connerton said the final regulations "for the most part embody the spirit of Congress's intentions." She added, "We are sorely disappointed to see the Labor Dept. has chosen to ignore congressional intent that employees in the public sector be able to designate a representative to negotiate with management over the form of payment for overtime."

She explained that because the provisions regarding worker representatives must be consistent with state laws, in some states, the state and local governments will be able to set the rules governing compensatory time off unilaterally.

The regulations were drawn up to ease the financial burden on governments, while preserving some of the benefits accorded to public workers. The amendments allow governments to award compensatory time off at a time-and-a-half rate to employees who work overtime. The arrangement is permitted only when employees have agreed in advance to accept "comp-time."

Public safety, emergency and temporary workers can accrue up to 480 hours of comp-time before their employers are required to pay overtime. All other government workers can accrue up to 240 hours before cash payments are required.

Supreme Court denies review

HERE successor clause upheld

An appellate court ruling that a former Las Vegas, Nev., casino operator was bound by the conditions of a hotel workers' contract, even after the firm went out of business and sold its property, became final as the Supreme Court rejected a second petition for review.

The ruling issued last August by the 9th Circuit U.S. Court of Appeals upheld a lower court decision, in which Royal Center Inc. was ordered to arbitrate two grievances with Hotel Employees & Restaurant Employees Locals 226 and 165.

RCI closed its casino-hotel operation in March 1982 and later sold the property to a limited partnership, 305 Convention Center Drive Associates, which reopened the complex in November 1983. The union then filed unfair labor practice charges with the National Labor Relations Board against RCI. Those charges were dismissed and the union's appeal to the NLRB General Counsel was later denied.

Meanwhile, the local unions sued RCI charging it violated a successorship clause of the collective bargaining agreement, and ignored hiring and other contract conditions when the complex reopened. The U.S. District Court for Nevada ordered RCI to arbitrate the matters, and the appellate court upheld that ruling.

Precedent cited

The Supreme Court vacated that ruling and ordered the 9th Circuit to reconsider its decision in light of the recently issued ruling in AT&T Technologies v. Communications Workers, defining the scope of arbitration.

The appellate court reaffirmed its initial decision last August. Judge Jerome Farris observed that a successorship clause would be of little value to the union unless it remained in force following the shutdown of the employer's business.

The union noted that RCI continues to operate the gaming devices at the casino, employing about 50 workers, not all of whom are in classifications covered by the collective bargaining agreement.

HERE Local 226 Sec.-Treas. Jeff McColl Jr. said the local would try to organize the current workers. The local's attorney, Richard McCracken, said that in the arbitration, the union would be trying to win a backpay for those workers who should have continued in their jobs with the casino reopened and "also union pay and conditions for those workers who have been filling those jobs."

Sugary Rose Bowl float

Bakery, Confectionery & Tobacco Workers sponsored this delectable float in the Rose Bowl parade at Pasadena, Calif. Titled Sweet Switzerland, the BCT entry featured a gingerbread cottage set in a spring garden of daffodils, irises, roses and tulips with snow-capped mountains of mums. The 50-foot-long entry marked BCT's 38th year of participation in the annual event.

Profit-sharing called secondary issue

Madison, Wis.—Profit-sharing plans have some potentially attractive aspects for workers, but should be the smallest part of any total economic package negotiated at the bargaining table, union officers and staff members agreed here.

The 65 unionists attending a conference sponsored jointly by the University of Wisconsin School for Workers, the Wisconsin AFL-CIO and the federation's Dept. of Economic Research heard specialists stress that workers must be assured of adequate basic wages so they can meet the responsibilities of home mortgages, food, utilities and other necessary expenses.

Failure to de-emphasize employee stock ownership plans or other forms of profit-sharing at the bargaining table could leave workers in the position of having too much of their basic income dependent on the uncertain rise and fall of management's corporate decisions.

Profit-sharing often is promoted by employers whose economic outlook is threatened by imports—as in the steel, automobile and textile industries—or the predatory competition that exists in the airline industry.

But, experts told the unionists, profit-sharing schemes are unlikely to save firms threatened by economic downturns in the absence of other measures taken by the employer, nor are they likely to assure increased employment opportunities for union members.

Accountants cautioned union negotiators to be on the lookout for management efforts to manipulate the books for tax purposes or to enhance the value of their stock—actions that could adversely affect the share of profits to which workers would be entitled.

Drug treatment added to AFTRA program

New York—The Radio & Television Artists expanded alcohol counseling and rehabilitation services to include treatment for drug dependency.

The AFTRA-Industry Program for Alcoholism and Drug Abuse—a joint project of AFTRA, the three major television networks and the radio industry—provides for treatment and referrals of union members needing help through AFTRA's 40 local unions.

EDITORIALS

No Hiding Place

NO SECTION of the economy is immune. The trade deficit and the terrible swath of destruction it has left in its wake is not confined to the so-called Rustbelt, the tier of states where America's industries were born and flourished for so many years.

It has afflicted the Sunbelt and communities from coast-to-coast. At its grimmest, closed plants have turned union halls into welfare centers, where proud workers come in for bags of groceries or to check out job training opportunities. In other areas, there are jobs to be had—at half the wages of the jobs lost.

These were some of the things that AFL-CIO President Lane Kirkland told the Senate Finance Committee to convey the urgency the trade union movement assigns to the task of bringing down the nations's trade deficit.

Ironically, the American marketplace that is so attractive—and so open—to the nations of the world is built on the middle-income purchasing power generated by America's workers. Yet there are those who lecture workers on the need to reduce their living standards to stay "competitive."

It is up to Congress to act, because a large portion of the world's trade is controlled by multinational companies, because capital can flow overseas and take with it technology to create new products, but workers are not articles of commerce.

DOES AMERICAN labor's concern for the jobs of the workers it represents amount to turning away from the international worker solidarity that has for so long been a part of the trade union mission?

In Japan, AFL-CIO Sec.-Treas. Thomas R. Donahue gave the answer in a fraternal address at the convention of that nation's trade union federation.

"Labor solidarity is just as important today," Donahue said, while acknowledging that it is easier to agree on opposition to South African apartheid or Soviet aggression in Afghanistan than on the impact of trade policies.

He spoke to the representatives of the Japanese workers of the effect of the trade deficit on jobs and living standards in the United States. And he noted that Japanese employers, like American employers, "seek to exploit the cheapest labor force they can find, anywhere in the world."

The only rational solution, Donahue said, is worldwide growth and development of internal markets that have the buying power to absorb a large portion of a nation's productive capacity.

That's what Lane Kirkland was telling the Senate Finance Committee back in Washington.

Lives at Stake

THE UNFINISHED business of the 99th Congress included a labor-supported bill to set up a federal program that would identify, notify and offer medical counselling to workers whose health may be at risk because of past on-the-job exposure to cancer-causing substances or other highly toxic materials.

Its enactment remains a task for the new Congress. The legislation is still needed.

Each year, some 100,000 workers die and another 340,000 are disabled because of work-related diseases. Too often, realization of a particular hazard comes only after years of unknowing exposure. Many whose health is at risk have moved on to other jobs or other locations.

New bills have been introduced by Rep. Joseph M. Gaydos (D-Pa.) in the House and by Senators Howard M. Metzenbaum (D-Ohio) and Robert T. Stafford (R-Vt.), with numerous co-sponsors.

The legislation envisions a relatively small-scale program to be run by a nine-member Risk Assessment Board in the Dept. of Health & Human Services. Through a medical followup, the goal would be to prevent illness where possible, and detect symptoms at an early and curable stage.

It wouldn't take many such cures to make such a program one of the best investments government can make.

The early start by the sponsors is welcome. Lives are at stake.

Washington Window

Gap in health insurance leaves millions lacking

By Press Associates

No decent job, no health insurance.

That, in a nutshell, is why 37 million people in families without a wage-earner or with a member in a low-paying job are without health insurance, health experts told Congress.

"We cannot be complacent, when America ranks 17th in the world in infant mortality," declared Sen. Edward M. Kennedy (D-Mass.) at Senate Labor & Human Resources Committee hearings on ways to extend health care to all Americans.

Kennedy, who chairs the committee, pointed out that "37 million of our fellow Americans, including more than 11 million children, lack basic health insurance. Millions of senior citizens, despite the promise of Medicare, are vulnerable to the high cost of catastrophic illness."

What's more, witnesses stressed, the nation's patchwork health care arrangement is shrinking as high-paid workers in the eroding manufacturing sector lose their jobs and health coverage while the growing service sector offers little or no health insurance.

Robert M. Ball, Social Security Commissioner under Presidents Kennedy, Johnson and Nixon, declared that "things are getting worse, not better."

Ball said some people think that group health insurance tied to the job takes care of workers and their families, while those lacking such protection are covered by the federal-state Medicaid program for low-income people. "This is not the case," he said, adding:

Many uncovered

"Group health insurance for workers is widespread, but many in low-paying or part-time jobs or who work for small employers are not covered. And things are getting worse, not better. Between 1978 and 1984 the number of persons without health insurance has increased from 28 million to more than 37 million."

In the great recession of 1981-82, when the unemployment rate went up to 10 percent, Ball said, the growth in the uninsured group rose quickly. But even with the spotty economic recovery, health insurance coverage failed to increase, he noted.

"If we face another recession in the next several years, the number of uninsured could easily rise to 50 million," Ball said. "And we should add to the number of uninsured some 10 million more whose health insurance is woefully inadequate."

Ball also said "the vaunted safety net of the means-tested Medicaid program is full of holes," available to less than 50 percent of those below the official rock-bottom poverty line of $10,989 for a family of four.

Lack of care

Ball made the point that people without insurance tend not to seek care when they need it because they can't afford it. He said many high-risk pregnant women go without care and infants are exposed to permanent damage.

Ball spent the bulk of his testimony on Medicare for the elderly where, he said, "here, too, things have been getting worse." He noted the hospital insurance deductible has soared from $40 when the program began to $520 today. Hospital coinsurance is up from $10 a day to $130 a day for 61 to 90-day stays and up from $20 to $260 a day for covered days above 90.

Beyond such a "major burden" on the elderly, Ball said, Medicare has deteriorated as a result of Reagan cutbacks of $14 billion over the past five years as well as his new budget proposals for cuts that will cost beneficiaries an additional $15 billion.

Ball praised Health & Human Services Sec. Otis Bowen, as did Kennedy, for calling national attention to two major gaps in Medicare: catastrophic protection against acute care costs and the nearly total lack of protection on the cost of long-term care.

Ball proposed a number of reforms to improve Medicare. His major proposal was for federal long-term care insurance. Only 10 percent of the elderly will stay more than a year in a nursing home, with costs averaging $100,000, he said. Insurance is the ideal answer, he explained, because a large number of elderly face the risk, but few will experience it.

Video focuses on health care options

How-to-do-it series aids unions at bargaining table

Beating the health care cost containment crisis is the focus of a continuing video series produced by the AFL-CIO.

The program, a project of the Dept. of Occupational Safety, Health & Social Security, the Labor Institute of Public Affairs and the George Meany Center for Labor Studies, was designed to help local unions meet management demands for concessions with alternatives for better, more effective health care options.

The latest program in the series, "Beyond the Bargaining Table," examines the need for community and legislative action in keeping down health care costs while maintaining benefiits for workers.

Shows negotiations

The video continues the drama of health care negotiations underway between a fictitious retail clerks' union and "Mammoth Stores." Health care experts from 12 unions play management and labor roles, with others cast as insurance company representatives, a legislative assistant and consultants.

Meeting nine months before their contract is set to expire, the labor and management teams debate benefit levels, mandatory second opinions, insurer policies, alternative health care systems and other concerns before reaching an agreement.

In addition to the bargaining drama, union and state federation officials examine concerns and alternatives in health care in discussions with Karen Ignagni, assistant director of the Dept. of Occupational Safety, Health & Social Security, focusing on the role of community coalitions and legislative action.

Alberta Johnson, coordinator of the Meatcutters Health & Welfare fund in Cleveland, stressed that a community coalition has been an important part of monitoring and offsetting rising health care costs there since 1977.

A 20-union coalition in New York has developed a health care program serving 50,000 retired workers, said Dan Tilson, marketing director for the plan. He called the program a tool "not only to help people but a good tool for organizing as well."

Union representatives also discussed the immediate need for health care coverage for the more than 35 million Americans who have no protection and improved benefits for the 50 million with inadequate coverage.

Panelists examined the growth of for-profit facilities and the need to compensate those mostly public hospitals that provide care for the needy.

Federation Legislative Director Robert McGlotten called comprehensive health care an "important priority for the whole labor movement," noting that some members of Congress still look on health benefits as "a charity issue."

Strategies examined

The series gives local unions a good idea of strategies that employers often use in their efforts to cut health care costs. A discussion guide includes detailed information on how to analyze a health plan, how to combat employers' efforts to shift costs onto workers and what actions union negotiators can take at the bargaining table to contain costs.

The newest video will be distributed by LIPA in its Labor Video Bulletin series and also will be available through the Dept. of Education.

The AFL-CIO has called for a national health care system, that will make "access to basic health care services a right for all Americans." Expressing strong opposition to the views of "those who claim that the access problem can be solved through a competitive health care market," the federation has outlined responsibilities of employers, insurers, providers and the government in a public-private sector strategy to meet the health care needs of all Americans.

Toxic material called factor in hotel deaths

Governments at all levels must improve fire protection, limit toxic construction materials, stiffen building codes and require post mortem examinations of fire victims, Fire Fighters President John A. Gannon emphasized.

Gannon issued this assessment of responsibility after returning from a fact-finding mission to San Juan in the wake of the tragic Dupont Plaza Hotel fire that killed 96 persons.

He said that lives probably would have been saved if the hotel had been equipped with proper fire alarms and sprinkler systems. He also said synthetic building materials fueled the inferno and might have spewed toxic fumes into the air, killing or incapacitating some victims before they had a chance to escape.

Gannon told a press conference that he and other IAFF members who interviewed firefighters and others were dismayed to learn that the city was able to only turn out fewer than 60 on-duty firefighters. Even with equipment borrowed from the military, they had less than 20 breathing apparatus at the fire.

Gannon commended the firefighters and civilians for their bravery, but stressed that "a fully equipped, well-trained and fully staffed fire fighting department is essential in San Juan and every other community that does not wish to have its own Dupont Plaza story." Effective fire fighting should "save lives, not risk them," he added.

Years of neglect

IAFF member Victor Rosario, fire chief at the Navy's Sabana Seca Communications Station, said that morale among firefighters on the island is low, and fire prevention and protection have been badly neglected by the government for many years. It will take more than the $4 million in improvements recently proposed by Puerto Rico's governor after the fire to improve firefighting conditions, Rosario said.

Keying on the building materials used in the hotel, Gannon noted the IAFF brought up this same point following fires at the MGM Grand Hotel in Las Vegas, Nev., the Beverly Hills, Calif., Supper Club, and aboard an Air Canada aircraft. "Some materials do not belong in building construction in the forms used today," he said.

Construction with an eye to retarding fires coupled with better knowledge about how fires kills, "betters our chances of designing, building and protecting against it," Gannon said.

The IAFF fact-finding team learned that island officials refused to allow military forensic specialists to examine victims of the fire. Gannon said this means "we will have no further knowledge of how they perished or how we might protect others from the same fate." He urged establishment of official post mortem procedures for fire fatalities.

Court affirms benefit cutoff on pregnancy

The Supreme Court ruled that a woman worker who did not get her job back after taking a leave of absence to have a baby was not entitled to unemployment compensation under Missouri law.

The unanimous decision held that the state's denial of unemployment benefits did not violate a federal ban on discrimination on the basis of pregnancy.

But just a week earlier, the court in a 6-3 ruling upheld a California law that requires employers to grant women workers the right to take time off without pay during and after pregnancy—with a guaranteed right of reinstatement.

As the Supreme Court saw it, the Missouri law was not discriminatory since it did not single out pregnancy as a cause for disqualification. It disallowed benefits to anyone whose reason for leaving a job was not caused by anything connected with their work or the action of an employer.

Most states do not have such blanket disqualifications and would probably not be affected by the Supreme Court decision in the Missouri case. It was because so many causes of unemployment were ruled out that the court concluded there was no attempt to discriminate on the basis of preganancy.

In the case that reached the court, a cashier at a J.P. Penney Co. store took a pregnancy leave two months before giving birth and sought to return to work three months later. The employer did not have a policy of guaranteeing reinstatement and the woman was told that no job was available for her.

Benefits denied

The state denied unemployment benefits on the ground that the employee had voluntarily left her job without "good cause attributable to the work or her employer." An intermediate court sided with the worker, but the state's highest court agreed with the denial of benefits

Justice Sandra Day O'Connor, who wrote the Supreme Court decision, termed the state unemployment compensation law "neutral" and therefore nondiscriminatory since it didn't single out pregnancy.

She noted that during the congressional consideration of the 1976 amendment to the Federal Unemployment Tax Act the legislative history indicated that the goal was to ban such clearly discriminatory laws as that of Utah which disqualified a woman from receiving unemployment benefits for 12 weeks prior to the expected date of childbirth and for six weeks thereafter.

Screen Extras reject slash in wage scales

Los Angeles—The Screen Extras Guild overwhelmingly rejected a contract proposal from the Alliance of Motion Picture & Television Producers that would have cut wage rates and eliminated overtime pay.

By a 2,765-to-315 vote, the extras spurned the management package and called on the union's executive board to hold a strike authorization vote. SEG members have been working under an agreement that expired last May.

Study finds elderly still losing war on poverty

At least 42 percent of the nation's aged live in or on the fringes of poverty, according to a study by the Villers Foundation, a Washington-based philanthropic organization.

Some 3.5 million of the nation's elderly have incomes below the official poverty threshold of $5,156 for an individual or $6,503 for a couple—$99 a week for an individual and $125 for a couple.

Another 8 million seniors are "economically vulnerable," the study pointed out, because their incomes are less than twice the poverty line.

The report "shatters any suggestion that we are winning the war against poverty among our nation's elderly," said Rep. Claude Pepper (D-Fla.), chairman of the House Rules Committee and a Select Subcommittee on Aging. "It underscores the sad truth that the sickest and most fragile live out their last days in economic fear," Pepper said.

Joining him in making the study public was Sen. John Heinz (R-Pa.), ranking minority member of the Senate Special Committee on Aging. Heinz noted that escalating medical costs fall heavily on the elderly, who pay the same 15 percent of their incomes on health care as they did before enactment of Medicare and Medicaid.

Budget victims

"For over 20 years we struggled to make high quality health care available to all older Americans," Heinz observed. But that drive has been thwarted by "compulsive budgeteers" in the Executive Branch, he charged, and Congress must "reaffirm the right to essential health care."

The Villers report—titled "On the Other Side of Easy Street; Myths and Facts About the Economics of Old Age"—presented this profile of the problems of the nation's elderly:

- Elderly women have a poverty rate nearly twice that of men and account for 72.4 percent of the economic injustice suffered by those over 65.
- The 31.5-percent poverty rate for elderly blacks is three times that for elderly whites.
- Almost three-quarters of the nation's black elderly are either poor or economically vulnerable. That's because so many of them held what the foundation called "second-class jobs," suffered more frequent unemployment, received "fewer if any pension benefits" and ended up with lower savings.
- The "safety net" for seniors is full of holes: Only 32 percent of those below the poverty line receive Supplemental Security Income benefits; Medicaid reaches a mere 36 percent of them; only 29 percent get food stamps, and only 16.5 percent live in federally assisted housing.

Living in poverty

"Our findings underscore the basic fact that, although significant progress has been made in the past quarter century, a very large number of elderly Americans are living in poverty or dangerously close to it," said Ronald F. Pollack, executive director of the foundation.

"We clearly have a long way to go before we can declare victory against poverty and economic vulnerability among older Americans," he added.

AFL-CIO LEGISLATIVE ALERT!
PAGE 8

Mexican connection devours American jobs

By Gene Zack

The "maquiladora" program, under which American plants have migrated to Mexico with the blessings of the U.S. government, is "the biggest con job" that has been foisted on American workers.

That's the view from Texas of Victor Munoz, president of the El Paso AFL-CIO, who pointed out that the program was promoted as a "twin plant" concept that would provide jobs for "the same number of employees" on each side of the border.

But the program hasn't worked that way, Munoz said, citing these statistics:

- In the neighboring city of Juarez, Mexico, 80,000 people work in the maquiladoras; the supposed "twin plants" in El Paso have only 5,000 employees.
- The annual payroll for Juarez employees is $160 million; for the El Paso workers it's $60 million.
- The Mexican workers average less than 40 cents an hour; the American jobs pay $5 to $6.
- Although American firms exploit the low-wage climate in Mexico and take advantage of customs regulations that give them a break on import duties, "the price of the final product remains the same."

In short, Munoz stressed, the maquiladora program is "a monster that every day devours our jobs, closes our plants and adds to our trade deficit."

The central body president pointed to a consistent pattern of the destruction of American jobs. Zenith Corp. laid off 1,400 people at its Evansville, Ind., plant, hired thousands of low-wage Mexicans and provided jobs for only 40 people at its El Paso warehouse.

The same thing happened with Westinghouse, General Motors, General Electric, United Technologies, General Instrument, Ford "and dozens of other corporations that have laid off thousands and thousands of workers in their plants across the country," Munoz said.

They built new plants in Juarez and hired "the cheapest and most repressed labor" across the border, he said. Then they threw a bone to El Paso's workers by hiring "a dozen or two local folks" to handle warehousing of the products assembled in Mexico.

The outrage over the maquiladora program isn't confined to border communities like El Paso.

It has been expressed in Washington, where Congress prohibited the Commerce Dept. from using taxpayers' dollars to promote the migration of American firms abroad. Two House committees have already held hearings, and the General Accounting Office is continuing an investigation into the extent of this practice within the Reagan Administration.

Congress to set own legislative priorities

Response to Reagan stresses trade gap

By David L. Perlman

House and Senate leaders gave courteous applause to President Reagan's State of the Union address but quickly served notice that Congress has its own agenda, topped by measures to reduce the trade deficit and restore American jobs.

House Speaker Jim Wright and Senate Majority Leader Robert C. Byrd came on national television moments after the President's address to give the Democratic Party response.

More significantly, it was also the congressional response. Last November's election gave the Democrats firm control of the Senate as well as a strengthened majority in the House.

Reagan's State of the Union message was rich in rhetoric, skimpy in program and virtually devoid of specifics.

He touched on foreign trade in only two of the 83 paragraphs in his speech. The President said he is "as opposed as ever to protectionism," but wants trade to be "fair" as well as "free."

Wright, who focused on domestic issues while Byrd dealt with world concerns, put trade concerns and a modernization of America's industrial plant at the top of the congressional agenda.

Over the past four years, he reminded Reagan, the trade deficit "robbed us of 3 million American jobs" and transformed the United States from "the world's largest creditor nation" to "the world's largest debtor."

Last year, Wright noted, "the House passed a comprehensive trade bill with a huge bipartisan vote." Administration opposition bottled it up in a Senate that was then under Republican control.

Action assured

With Senate Majority Leader Byrd at his side and nodding agreement, Wright pledged that this year majorities in both bodies "are determined to act."

It's a "scandal," Wright said, that the biggest U.S. exports from the Port of New York are scrap metal and waste paper that "is shipped to the Far East and made into cardboard boxes for the foreign-made clothing and shoes they sell back to us."

Reagan called for improving education and a drug-free learning environment.

Worthy objectives, Wright agreed. But "the sad truth," he said, is that the budget Reagan sent to Congress "would actually cut our educational commitment by about

UAW staves off takebacks to end long Deere strike

Moline, Ill.—Some 13,000 Auto Workers beat back all management demands for takebacks as they hammered out a tentative settlement with Deere & Co. The accord could pave the way for an end of a five-month labor dispute at the farm implement manufacturer.

The agreement, scheduled to be submitted to members at 13 plants in Illinois and Iowa, meets the UAW's target of job security and income security, a union spokesman said. It also provides significant improvements in the pension program.

Union committees were still meeting with management at the various plants on the resolution of local issues, but the UAW anticipated the three-year contract would be ready for ratification by Feb. 1.

Full details of the settlement were not available, pending its submission to the

Tossing out imported stainless steel flatware on Capitol Hill are, from left, Jack Sheehan, Steelworkers' legislative director; President Richard P. Simmons of Allegheny Ludlum Steel Co., House Speaker Jim Wright, and other members of the House and Senate.

House junks import flatware

"Made in the U.S.A." became the motto of the House of Representatives, as Speaker Jim Wright junked foreign-made stainless steel forks, knives and spoons used in the members' dining room and replaced it with American-made products.

The symbolic scrapping of flatware imported from Japan, Taiwan and Korea took place at a Capitol Hill luncheon sponsored by the Steelworkers and American steel manufacturers.

As several hundred congressmen, union members and industry officials looked on, waiters gathered up the imports and replaced them with new flatware donated by the USWA and the specialty steel industry.

"I bent mine a bit before I threw it into the box," said Rep. Austin Murphy (D-Pa.).

The USWA and industry officials met with members of Congress to focus attention on the current import restraint program, which President Reagan may not extend beyond its July 19 expiration date.

The union and industry have filed a petition urging a four-year extension of the program.

Continental Can guilty of pension rigging

Philadelphia—Continental Can Co. violated the federal pension protection law by manipulating its workload and workforce to avoid paying early pension benefits, the 3rd Circuit U.S. Court of Appeals ruled.

That's what the Steelworkers have been contending in a series of legal challenges to a computer-driven strategy of basing business decisions, at least in part, on the pension status of employees. Evidence that has come to light in this and other court cases show plant closings, layoffs and recalls influenced by the potential pension cost to the company.

Besides the case considered by the appellate court—involving a Pittsburgh steel container plant—the union has suits pending in federal courts in California and New Jersey.

While issues such as statutes of limitations and the jurisdiction of federal courts have been involved, the heart of the union's legal challenge is that Continental's actions violate a provision of the Employment Retirement Income Security Act.

ERISA prohibition

Section 510 of ERISA prohibits employer actions that are intended to prevent an employee from attaining any right to benefits under a pension plan.

The evidence showed that Continental barely waited until the ink was dry on a contract liberalizing early pension rights before undertaking a "liability avoidance" program to ensure that as few people as possible qualified for the early payments.

Continental Can agreed to liberalize its early retirement plan in 1977 negotiations with the Steelworkers. In case of a plant closing or a layoff lasting at least two years, workers with various combinations of age and service would receive employer-paid benefits to carry them until they would normally be eligible to retire. The issue was important because the can industry was in a period of retrenchment that would mean fewer jobs and fewer plants.

But according to documents obtained by the Steelworkers in the course of the court

Long struggle for justice

Workers Defense League marks 50th anniversary

General Electric workers and WDL allies clash with Philadelphia police in the turbulent '30s.

By Burt Beck

Looking back to 50 years ago, it seems to have been a different civilization and a different time.

It was at the depths of the Great Depression and opposition to the labor movement was fierce. In Terre Haute, Ind., Gov. Paul V. McNutt used martial law to break a strike. When the unemployed tried to fight back in Tampa, Fla., one of them was murdered by Klansmen and local police.

The most embattled of all were the farm workers, whose only supporters were the Southern Tenant Farmers Union. Farm workers were virtual slaves, flogged by the bosses who were completely supported by the local authorities.

It was a situation—for both industrial workers and the poor farmers—that cried out for help. And there were no answers except from politically inspired people who wanted to use these people for their own partisan propaganda reasons.

What was needed was a new organization, an honest broker who would speak out in public and fight in the courts, free from any political agenda.

And so, in the offices of a law firm whose main activity was on behalf of labor unions, a small group of activists and attorneys, led by Socialist Party spokesman Norman Thomas, met to build that new organization.

The year was 1936 and the organization was the Workers Defense League.

One of the activists was David L. Clendenin, a Socialist Party member and a strong advocate of democratic trade unionism. During the 1930s, he was an organizer for the maritime unions. With family money, he was able to support the initial efforts of the WDL. He became the league's first treasurer and later was its national secretary.

Others in that original group were Francis Heisler and Max Delson, attorneys who already had formidable reputations as advocates of civil rights and civil liberties, and Aaron Gilmartin, an ordained minister cast in the same mold.

Fine legal minds

They were joined over the years by what would become a roster of the finest legal minds in the nation, all serving in the WDL tradition of "expenses only." They included David Carliner, Wilbur Daniels, Patricia Eames, John Finerty, Curtis F. McClane, Ernest Fleischman, Basil Pollitt, Carl Rachlin, Joseph L. Rauh Jr., I. Philip Sipser, Stephen C. Vladeck and A. L. Swerdling.

One of the attorneys who became part of the legal team was Rowland Watts, who has served the WDL in many posts and won many precedent-setting cases. His career was crowned in 1984 when he

Cesar Chavez leads striking farm workers.

Burt Beck, for many years was editor and public relations director for the Clothing & Textile Workers. He retired in 1983.

was awarded the $25,000 Durfee prize, given under the auspices of the California Western School of Law for enhancing "the dignity of others through processes of law or legal institutions."

In its efforts for workers, the WDL has never sought to place itself in the role of a trade union. It is built on the principle that the struggle for economic and social justice and the protection of workers' rights has been—and will continue to be—fought by workers themselves through their own institutions. But in the beginning, those institutions needed help and the WDL was a valued ally.

In accepting the WDL's David L. Clendenin Award last month, AFL-CIO President Lane Kirkland lauded the organization for "helping the helpless and defending the defenseless."

For a democratic society to exist, Kirkland said, "we need a common ground of principle and belief." The underlying premise, he continued, is that "no human being has a right to kick other human beings around and that we are all responsible for doing what we can to prevent it."

That belief brought the WDL into being, he noted, and sustains it today in pursuing "justice in all its forms—legal, social and economic," and in being concerned about "humanity in general—and of flesh-and-blood human beings in particular."

Early battles

The work of the WDL in the beginning was devoted strictly to the cause of labor organization and the Southern Tenant Farmers Union—later the National Farm Labor Union—whose leader was a dedicated farmer himself, H.L. Mitchell.

Although the league did much in supplying legal talent for workers and farmers and their cause, it was not until 1938, when the CIO challenged Jersey City, N.J., Mayor Frank "I Am the Law" Hague, that the organization got much recognition.

Ordered by the mayor to stop distributing organizational material in Jersey City, the CIO staged a mass demonstration in Journal Square. Norman Thomas and the WDL were there. Thomas was stoned, pelted with rotten eggs and run out of town. Many WDL members and union members got to know the inside of Jersey City jails. But Hague was forced to retreat, and organized labor was able to make inroads in that section of New Jersey.

The industrial union movement of the 1930s welcomed the assistance of the WDL. Major legal battles fought on behalf of union organizing included the defense of 10,000 striking pecan shellers in Texas; fighting a Griffin, Ga., anti-leafleting ordinance all the way to the U.S. Supreme Court; pressing for the prosecution of Ku Klux Klansmen for numerous assaults on union organizers; Norman Thomas and other WDLers interposing themselves between striking National Biscuit Co. workers and mounted New York City policemen to avert a massacre and then defending the strikers in the courts, and the early assistance given by WDL adherents in various cities around the nation when the Textile Workers were building their organization.

As historical circumstances changed, so did the needs of the unions. By the mid-40s and from then on, unions established firm foundations, won legislation legitimizing their efforts and built their own legal departments.

Since unions had less need for outside aid in their everyday efforts, the WDL turned its attention to the unorganized and to those who had no one to take up their defense. In these efforts, the league has had the support of the trade union movement.

On the farm labor front, the biggest case the WDL handled in the formative days was in the field of civil rights. It involved, in simplest terms, the right to a fair trial. But it epitomized the economic plight of black workers in farm communities, particularly in the rural south.

Odell Waller, a black sharecropper, and Oscar Davis, a white tenant farmer, had a dispute in the spring of 1940 over the sharing out of a crop of 208 bushels of wheat. It was in rural Gretna, Va., and both families were in dire poverty. In the heat of the dispute, and under circumstances strongly suggesting self-defense, Waller shot Davis, who died two days later after surgery. Waller was sentenced to the electric chair, in good part due to the non-efforts of his court-appointed attorney and to the injustice of the poll-tax jury which excluded sharecroppers.

The WDL took his case on appeal. After a two-year battle through the courts, Waller died in the electric chair. But his death was not in vain. The defense work in the case brought to light the harsh life and cruel injustices faced by sharecroppers and the powerlessness of black families against the white man's law. One of the eight black ministers officiating at the funeral service, to which only one white person was invited—the WDL national secretary—thanked the league for having "taught Gretna Negroes to fight."

H. L. Mitchell, whose historic role in the organization of farm workers is secure, defined the role of the WDL in the years of the struggle: "Down through the years, whenever there was injustice being done to farm workers, you could find the Workers Defense League."

During this period, the WDL took on cases where those convicted of even minor crimes were hired out to friends of the authorities and forced to work on the notorious "chain gangs" of that era. After the WDL fought a case up to the U.S. Supreme Court, the exposure given chain-gang "justice" brought about the abolition of the system.

In the more recent past, the WDL has continued to raise strong protests for those needing help. In 1949, the league organized a Commission of Inquiry into Forced Labor that exposed slavery in the Soviet Union, Soviet satellite states, China and South Africa, as well as debt-peonage in the United States. With the support of the trade union movement, this led to a United Nations inquiry into forced labor.

Challenge to illegal firings

Again, when employers used the fear and despair of the McCarthy era terrorism to dismiss union activists, the WDL repeatedly mounted a challenge to the practice of firing people based on unsubstantiated allegations and brought about reform of the National Industrial Personnel Security Program.

The league responded to discrimination in the construction industry by organizing the WDL Apprenticeship Program—in cooperation with unions in the field—that created training classes for minority youngsters to prepare them to pass apprenticeship entry tests. More than 300,000 young minority men and women have benefitted and obtained jobs.

But the WDL has more than a proud past.

Under its current leadership of Chairman Harry Fleischman and Executive Director Catherine Lewis, it has a vibrant and useful future. Its programs include representing unemployed workers who have been unjustly denied jobless benefits, supporting a work-sharing program to spread work in slack times with the time off paid for in unemployment compensation, and fighting for migrant farm workers and their families.

The WDL continues to welcome the difficult tasks. It continues to make a difference and its close alliance with organized labor continues to be beneficial to the whole fabric of American life.

Reagan's economic report scorns federal role

President Reagan sent Congress an economic report that prescribes less government spending on nonmilitary programs as a principal cure for the nation's huge trade deficit and seeks a further downgrading of already neglected job safety and occupational health enforcement.

The President's recommendations, spelled out in the annual report of his Council of Economic Advisers, would continue the pattern of high unemployment, low economic growth and big trade deficits, AFL-CIO Research Director Rudy Oswald stressed.

Oswald said the report reflects the Administration's "ideological dependence on the magic of the marketplace" and deep hostility to government. Its confident assumption that problems will disappear if left to fester amounts to "economic faith healing," he suggested.

While the report claims a prosperity stemming from the "longest peacetime expansion in the nation's history," Oswald noted the reality that economic growth in each of the past two years has been close to stagnant—and far below the predictions of Reagan's economic advisers.

But even if its basically rosy expectations are fulfilled, the President's council doesn't see unemployment dipping below the 6 percent level until the 1990s.

As required by the Humphrey-Hawkins Full Employment & Balanced Growth Act, the report includes long-term projections of the path to the 4 percent unemployment level set by the 1978 law. But by 1992, the final year of the projection period, it sees unemployment no lower than 5.5 percent.

While the Administration remains "dedicated" to full employment, the report asserts, "there are no quick fixes" and "government best serves these goals by allowing private enterprise to flourish."

Attack on job safety

The anti-government bias comes through especially strongly in the report's approach to the regulatory role of the Occupational Safety & Health Administration.

It demonstrates "a shocking disregard of the law's mandate for a safe and healthful workplace," said AFL-CIO job safety expert Margaret Seminario.

The report argues that government regulations should be minimal because the economics of the marketplace "provides strong incentives for employers to improve safety." If a job is hazardous, the report reasons, employers will have to pay higher wages to get workers and therefore have an incentive to reduce the hazards.

It is precisely because such a marketplace incentive didn't work that Congress enacted the federal job safety law in 1970. Seminario said.

The cost-effective concept that the President's report advocates, such as substituting ear plugs and cheap respirators for engineering controls to keep down noise levels and screen out cancer-causing air contamination would sacrifice lives and health of workers, she charged.

The trade section of the President's Economic Report also reflects the Administration's "blame-the-victim" ideological tilt.

"The deterioration of the U.S. trade balance over the past four years is a macroeconomic phenomenon," the report asserts, rather than the result of any specific actions by the countries that have swarmed onto the U.S. market.

The plight of the nation's import-shrunken steel industry and the workers whose jobs have been wiped out is, in the words of the report, "an instructive example" of wages rising higher than productivity.

By letting the marketplace alone, the report suggests, things will right themselves because "in the absence of government intervention, investment in new plant and equipment and in research and development tends to concentrate in the most efficient sectors of the economy."

Skewed outlook

To put money into reviving and modernizing basic industries, according to the Reagan economic prescription, would produce "distortions" in the economy.

Besides, the report assures, there are "political gains from free-trade policies" because countries that trade with each other "are more likely to settle international disputes through negotiations rather than hostile action."

A chapter devoted to women in the labor force manages to avoid the issue of comparable worth and warns that "regulations to mandate wages or benefits" would "restrict the ability of markets to adapt."

Bieber sees jobs key to achieving bishops' objective

The recent Catholic bishops' pastoral letter on economic justice "points the way to progressive renewal" of the trade-battered American economy, Auto Workers President Owen Bieber asserted.

Bieber hailed the historic document for its defense of trade union rights, its concern for the poor and its "clarion call for full employment as the most important unmet need on our nation's economic policy agenda."

He made his remarks as 500 diocesan leaders gathered in Washington under the auspices of the U.S. Catholic Conference in the first step toward putting the aims of the pastoral letter into practice.

The letter, issued by the National Conference of Catholic Bishops, was five years in the making. It called for intensified government efforts to deal with the twin evils of poverty and joblessness.

Bieber, the principal lay speaker at a conference that brought together religious leaders and key diocesan lay people, was harsh in his criticism of the Administration for promoting "an excess of self-interest" in the country.

"Without expressly saying so," the UAW president declared, "the Reagan Administration has made greed respectable. And sanctioning greed ultimately encourages the financial chicanery of an Ivan Boesky or the blatant self-dealing of a Michael Deaver."

Tainted dealings

Boesky is the multi-millionaire Wall Street manipulator who was fined $100 million and suspended from stock dealings by the Securities & Exchange Commission for illegal insider trading. Deaver, a former Reagan aide, is under investigation for alleged violation of conflict-of-interest laws in representing foreign governments since leaving the White House.

The bishops' letter, Bieber observed, is a recognition that "somewhere deep down in the heart of the American establishment, there is the still small voice of conscience. The Reagan Revolution tried to smother it. They almost succeeded."

The pastoral document—titled "Economic Justice for All: Catholic Social Teaching and the U.S. Economy"—called the current jobless level "intolerable" and branded poverty in America "a social and moral scandal."

Bieber applauded these views. "The bishops offer the question, 'What do they do for the poor?' as a fundamental ethical principle for judging the economic policies of the country," he noted. "The bishops know the best anti-poverty program of all would be to give everyone in this country who is willing and able to work a decent and well-paid job."

Bieber praised the bishops for their unequivocal support of workers' rights abroad. This, he said, must be a key element of an "active trade policy," since many of the imports flooding the domestic market result from "exploitative labor conditions" abroad.

IWA President Keith Johnson and Western States Sec.-Treas. John Ball open the convention.

Two national unions

Woodworkers plan reorganization

Portland, Ore—The Woodworkers 34th convention voted to establish separate organizations in the United States and Canada in an effort to resolve a critical financial situation and declining membership.

The resolution will be submitted to the 70,000 members in the form of a referendum. The vote will be tallied in mid-March.

The 30,000 U.S. members will also vote on whether to merge the IWA's western states and southern states regional councils as the first step toward creating a national union in this country. It would be headquartered in Gladstone, Ore., with an administrative office in Memphis, Tenn.

The 40,000 Canadians are already united in a national union with headquarters in Vancouver.

The decision to establish two national unions can strengthen the IWA's economic and political action, "undiluted by issues of national identity," IWA President Keith Johnson said in his opening address.

"The significant differences in the history and political structures of our two countries," Johnson pointed out, "have made it difficult to establish a single political arm. But our untapped reservoirs of political energy may now become available to a degree never before realized."

Union commitment

The change in structure does not mean any retreat from the determination to improve the wages, hours and working conditions of woodworkers, he stressed. Nor is the IWA abandoning the concept of international unionism.

"Through existing international labor organizations we will be able to plan and execute plans to deal with an industry that knows no national or continental boundaries," Johnson emphasized.

Chartered by the CIO in 1937, the IWA's membership peaked at about 125,000 in the 1970s. Its ranks have been savaged by the Reagan Recession that triggered plant closures, corporate takeovers, and management's union-busting schemes involving abuse of bankruptcy proceedings.

The Woodworkers have always operated a three-level structure, with total autonomy placed at the local union level. Locals were grouped into regional councils which were, in turn, under a loose international structure.

In other actions, the 209 delegates called for state and provincial governments to suspend all trade, commerce and communications with South Africa until it ends its racist policies and establishes a true democracy.

The convention also opposed the Reagan Administration's role in Nicaragua.

Congress rejects do-nothing policy

Continued from Page 1

28 percent" and end federal aid to vocational education.

The $5.5 billion proposed to be cut from education would be spent "on research for just one new weapon," Wright noted.

As for the President's recently proclaimed "war on drugs," Wright pointed out that Reagan's budget would cut in half funds for anti-drug education in schools and for battling drug dealers "in the streets of our cities."

"This is the kind of gap between rhetoric and reality that we just can't tolerate and maintain people's trust in government," Wright insisted.

He said Congress is prepared to work with the White House to shape a fair system of welfare reform and "we'll enthusiastically embrace an insurance plan to indemnify Americans against the sudden financial ravage of a catastrophic illness."

Administration sources said the White House has still not decided on the shape of a catastrophic insurance plan.

Wright took note of the first substantive legislative actions of the new Congress—including reenactment of the clean-water bill Reagan vetoed after the last Congress adjourned, passage of a highway funding bill and House passage of a program of emergency help for the homeless.

Reagan veto

This Administration "put up $4.5 billion of public money to bail out one big bank in Chicago," Wright noted. "But the President vetoed a much smaller bill of loan guarantees that would have allowed local banks to give many thousands of America's farm families a breathing spell to save themselves from foreclosure. Because of that veto, thousands of families have lost their farms."

To Reagan's assertion that the huge budget deficits piled up in his Administration stem from too much spending, not too little tax revenue, Wright retorted that "for the six years of this Administration, Congress actually has appropriated less in total spending than Mr. Reagan asked us to appropriate."

To the President's glowing account of the nation's economic progress, Wright noted the "disturbing new reality" of "downward mobility," with paychecks worth less today than a decade ago.

As did President Reagan, Wright and Byrd expressed a preference for cooperation rather than confrontation in dealing with America's problems. But the two congressional leaders also injected a touch of reality to bring Reagan's soaring rhetoric back to earth.

Byrd spoke of the damage done to America's credibility by the secret sale of arms to Iran, and the need to dispel "a gathering sense of mistrust." He reiterated a Democratic commitment to a strong defense and to "really getting our money's worth" from the billions so spent.

Wright spoke of areas of agreement and of reasonable compromise. But he made clear that there are also some "fundamental differences between the White House and the Democratic Congress."

A battered car is the Dallas home of Meagan Roberts, 3, her brother Joshua, 2, and their parents. The photo by David Leeson was the cover illustration of a special 16-page section on the hungry and homeless that won the Heywood Broun award for a five-member team from the Dallas Morning News.

For stories on homeless

Dallas News wins Broun award

A special report on the hungry and homeless in Dallas won the Newspaper Guild's prestigious 1986 Heywood Broun award for a five-member team from the Dallas Morning News.

Four reporters—David Tarrant, Melinda Henneberger, Leslie Pound and Dan Barreiro—and photographer David Leeson produced the prize-winning entry.

They spent two months living on the streets of Dallas, eating in soup kitchens and sleeping in shelters in the course of producing their 16-page chronicle of suffering and struggle.

In the process, the Broun award judges said, the team of journalists "put faces on the anonymous and revealed an unhidden but invisible world." The story was published on Thanksgiving day, and brought a deluge of contributions for the homeless.

The $1,000 award is made annually for outstanding individual journalistic achievement in the spirit of the Guild's founding president. Broun's daily columns published in the 1920s and 1930s reflected his concern for the underdog and the underprivileged.

Winners honored

The Dallas team was honored at a National Press Club luncheon on the opening day of the winter meeting of the Guild's executive board.

An honorable mention went to reporters Mike Kelly and Mary Kane and photographer Mel Grier, members of Guild Local 9, for their series in the Cincinnati Post documenting the plight of 74,000 slum residents. The articles resulted in housing code enforcement changes. Kelly's father, Tom Kelly, is a former president of the Washington-Baltimore Newspaper Guild.

Steve McGonigle and Ed Timms of the Dallas Morning News also received an honorable mention award for their series of news stories that disclosed the systematic exclusion of blacks from court juries in Texas.

Judging this year's 153 entries were James Polk, an investigative reporter with NBC News; Juliet O'Neill, senior correspondent in the Canadian Press Washington bureau, and Ray Jenkins, editor of the Baltimore Evening Sun's editorial page.

Hugh Harrison, a longtime leader of the Pacific Northwest Newspaper Guild and a former member of the TNG executive board, chaired the contest but did not participate in the judging.

Equity raises negotiated in Seattle accord

Seattle—City workers will share $2.3 million in salary increases this year under a pay equity agreement reached between the Professional & Technical Engineers and the city council.

The settlement stems from the 1983 round of contract bargaining between the IFPTE and the city during which the parties agreed to continue negotiations on the pay equity issue.

The tentative agreement calls for hourly wage increases for nearly 1,100 secretarial and clerical workers of 13 to 43 cents. The raises are retroactive to January 1986 for mostly clerical workers—whose classifications were part of the 1983 contract negotiations—and November 1986 for all others. IFPTE Local 17 represents 2,000 of the city's 10,000 workers.

Mike Waske, business manager for IFPTE Local 17, said the union was not completely satisfied with the methodology used to calculate the pay equity raises and won agreement from the city that an independent consultant—agreed to by both the union and the city council—would be hired to review the next phase of wage increases.

Under the settlement, workers in jobs paying below 85 percent of the average male-dominated salary line will receive a pay equity increase. Washke added that the union is seeking additional pay increases for all victims of gender-based wage inequities.

Union role

Local unions including the Service Employees and unaffiliated Teamsters and a nurses' association took part in writing the standards and specifications that determine the point rating of each job classification. Included in the rating system are such criteria as work hazards, exposure to dangerous substances or contagious diseases and education.

But the application of the standards to specific job classifications by city officials met with some disagreement from the local union, Washke said. For the first round of increases, the city omitted some higher-wage, male-dominated occupations from the system, including fire fighters and police, that the union believes should be included in the classification system.

The local also is continuing negotiations for a new collective bargaining agreement, replacing the contract that expired last September.

Can company guilty of pension rigging

Continued from Page 1

proceedings, Continental management devised a secret scheme to keep employees from qualifying for special benefits or receiving them if they already were eligible.

The appellate decision, written by Judge A. Leon Higginbotham Jr., explains how management sought to do this. The chief means was to adjust business volume from plant to plant, so as to pay the lowest amount of benefits.

The goal was to keep work coming into a plant with a large number of senior employees so that persons eligible for benefits wouldn't have their jobs abolished.

A corresponding goal was to avoid recalling laid-off workers who would be able to achieve benefit eligibility by coming back on the payroll, even briefly. That was especially important because a worker laid off continued to gain years of eligibility for early benefits for the two years after layoff. A rehiring would entitle the worker to an additional two years of qualifying time.

Continental programmed its computers to produce a "red-flag" alert if a worker on the no-recall blacklist was rehired.

Initially, a federal district court ruled that Continental's actions did not violate ERISA, even though it found that Continental's decision to shut down the production of steel container pails at the Pittsburgh plant was motivated in part to prevent employees from attaining eligibility for early benefits.

The Steelworkers appealed and won. The appellate court also rejected a company claim that a two-year or six-month statute of limitations should apply. It found that the district court properly applied a six-year period as provided under state law in cases of employment discrimination.

It also rejected the company claim that the dispute should have gone to arbitration, not the courts. The appellate decision noted that the dispute was over a claimed violation of federal law, not whether a particular worker was entitled to a pension under the service and age provisions of the contract. It sent the case back to the trial court to determine the appropriate relief for employees who were unlawfully laid off before attaining eligibility for benefits.

In a related case involving the closing of a Continental plant in Los Angeles, a federal district court found the company's actions illegal but has not determined an appropriate remedy. The USWA also has a class action suit pending in a New Jersey court on behalf of Continental employees elsewhere who may have been similarly deprived of benefits or eligibility status.

Record companies agree to pact with Musicians

New York—The Musicians reached a tentative settlement with major record companies on a three-year agreement covering nearly 7,000 AFM members.

The new pact preserves both the Music Performance Trust Funds, which pays musicians for admission-free performances, and the Special Payments Fund, which provides royalties to recording musicians, the union said.

The ratification vote will be held by mail balloting and the votes will be counted Feb. 19.

Rubber Workers official Donald Tucker retires

Akron, Ohio—Donald C. Tucker retired Jan. 31 as secretary-treasurer of the Rubber Workers. Tucker, 58, was first elected secretary-treasurer at the URW 1978 convention.

URW President Milan Stone said he will appoint an acting secretary-treasurer to complete Tucker's term, which ends in October.

Wage increases tumble lower in 1986

Bonus payments in union contracts not counted in BLS data

American workers received wage increases averaging 3.5 percent in 1986, down from the 4.4-percent average a year earlier, the Bureau of Labor Statistics reported.

But the AFL-CIO pointed out that the figures were skewed because BLS didn't count in lump-sum bonuses that increasingly mark union-negotiated contracts.

Last year, said federation economist John Zalusky, nearly 1 million union members received bonuses that ranged as high as $4,000 each. "If the government factored those payments into its calculations," he declared, "there would have been a significant gain in the compensation figures."

BLS reported that, for the fourth year in a row, nonunion workers won larger percentage wage gains than union members. The former won increases averaging 3.6 percent while the gain for unionized members was 2.1 percent.

But Zalusky said the statistics mask the reality that there is a significant dollar gap between the wages of union and nonunion workers.

In 1985, he pointed out, weekly pay of union members averaged $419, while unorganized workers received only $315. That's a differential of $104 per week. Figures on those comparisons for 1986 have not yet been released by the government.

Union advantage

"The wage gap between union and nonunion workers is so large," Zalusky pointed out, "that even if this trend were to continue, it would take nonunion workers 20 years to catch up to union members."

BLS said that workers in the manufacturing sector fared better last year than those in the rapidly expanding service sector. Industrial wages rose 3.2 percent last year while pay in service industries went up only 3 percent.

This is just the opposite of what occurred in 1985, when service industry increases averaged 4.7 percent as compared to 3.5 percent in manufacturing.

Regional data showed that the largest wage gains occurred in the Northeast, where increases averaged 3.9 percent. The rate was 3.2 percent in the South, 2.7 percent in the Midwest and 2.4 percent in the West.

BLS gave this preview of activities for the first quarter of 1987:

- Some 470,000 workers will be affected by 82 contracts that expired or were reopened but had not been renegotiated or ratified before Jan. 1.
- Another 262,000 workers are covered by 110 major agreements scheduled to expire or reopen for wage negotiations between now and the end of March.
- About 689,000 workers will receive deferred wage changes averaging 2.4 percent under agreements negotiated earlier.
- Nearly 1.5 million workers are scheduled for cost of living reviews during the three-month period.

New court action

Brock hit for delay on job hazard rule

By Arlee C. Green

A labor-citizen coalition asked a federal appellate court to enforce its 18-month-old order that the federal job safety agency expand coverage of its hazard communication standard to all workers.

The petition to the 3rd Circuit U.S. Court of Appeals in Philadelphia was filed by the AFL-CIO, the Steelworkers and the Public Citizen Health Research Group. It also asks that Labor Sec. William E. Brock be found in contempt of court for failing to obey the terms of the judgment.

Instead of complying with the court order, the suit says, "the Secretary has undertaken to consider at his leisure, in a new full-blown rulemaking proceeding—which, incredibly, is still at the beginning stage—whether and to what extent to broaden the scope of the standard."

There is "no indication that OSHA has taken previous court actions seriously," declared Margaret Seminario, associate director of the federation's Dept. of Occupational Safety, Health & Social Security. The 18 months of inaction shows the agency has "no intention of moving in a timely fashion on this matter."

Once again, labor and other groups have been forced to return to court to compel OSHA to do its job, Seminario said. The last indication was that OSHA "would not have a final standard until Spring 1988, nearly three years after the court decision ordering it to expand the standard."

Seminario stressed that the Administration has often pointed to the hazard communication standard as proof it cares about workers, but the truth is that "Reagan's OSHA is hiding behind the standard. What it comes down to is all talk and no action."

12-year battle

Organized labor has been pressing the agency for a comprehensive hazard identification rule for a dozen years. A standard proposed in the final days of the Carter Administration was withdrawn by the Reagan Administration, which proposed a less onerous rule in 1982.

In November 1983, the agency issued a final standard that limited coverage to a narrowly defined group of workers in the manufacturing sector. Labor's court challenge of this final standard resulted in the July 1985 ruling that directed OSHA to expand the standard's coverage to all workers unless it can "state reasons why such application would not be feasible."

In the year-and-a-half since that ruling, Brock "has failed to comply with this court's directive," the suit states. In November 1985, OSHA requested additional comments on expanding the rule's coverage. Since then, the agency has received over 200 written responses which it said are "in the final stage of review."

But before it can act, OSHA contends, it must publish another "notice of proposed rulemaking," set for this March, and additional hearings.

Fast track cases

Labor's court petition points out the speed with which OSHA acted in limiting the definition of a trade secret, as it was directed by the court in the July 1985 order and in expanding access to trade secret chemical identities by workers and their bargaining agents. In those cases, OSHA published an interim final rule, invited written comments, held no hearings, and chose not to delay implementation of the changes until the close of the comment period.

This response "contrasts sharply with the Secretary's recalcitrance in extending the scope of the standard beyond manufacturing or stating why extension is infeasible," the suite states.

It adds that the "resort to further, time-consuming rulemaking proceedings is but a bald attempt to circumvent the plain terms of this court's judgment."

In pressing for a contempt-of-court finding against Brock, the petition details the reasons for delay in expanding the safety measure. It concludes: "The Secretary has stubbornly sought to accomplish indirectly what this Court has foreclosed him from doing directly."

Senators pressed to correct defects in civil rights law

The AFL-CIO has urged senators from both parties to cosponsor the Civil Rights Restoration Act, a measure needed to overcome the Supreme Court's narrow reading of anti-discrimination laws affecting federal funding.

At issue is the scope of laws prohibiting discrimination because of sex, age or handicap in programs or activities that receive federal funds. In its controversial 1984 decision in the Grove City College case, the Supreme Court ruled that a ban on sex discrimination did not apply to college activities not using federal funds.

There is strong bipartisan agreement that Congress intended the ban on discrimination to apply to the institutions receiving federal funds, not just the specific activity in which the funds were used. But legislation to remedy the Supreme Court decision was sidetracked in the last Congress by a dispute over whether language dealing with abortion should be added to the bill supported by the civil rights coalition.

A letter from AFL-CIO Legislative Director Robert M. McGlotten urged restoring the original intent of Congress without burdening the legislation with "unnecessary controversies."

The proposed Civil Rights Restoration Act "simply clarifies the intent of Congress to ensure that federal funds would not be used to discriminate against minorities, women, disabled persons and older Americans," McGlotten said.

Damian Bursell-Hall of San Diego Symphony, left, is joined on picket line by Michael Nutt of the Los Angeles Philharmonic in a show of support.

San Diego musicians reject symphony giveback demand

San Diego—Symphony-goers here have endured a season of silence since the San Diego Symphony locked out members of Musicians Local 325 last Oct. 16. The musicians rejected contract demands for wage and artistic concessions.

As deadlines passed last fall for reaching an agreement, symphony management began cancelling its winter concert series in three-week segments. Finally under threat of bankruptcy on one hand and the promise of a mini-concert series this March, AFM Local 325 members rejected by a 52-to-2 vote the symphony's final offer.

That proposal would have left more than a half the members earning less in the 1988-89 season than in the 1985-86 season. Local 325 orchestra committee chairman Greg Berton said that the musicians were promised 45 weeks' work annually and major orchestra status. But instead, "they ended up cutting us down to 40 weeks and paying us one of the lowest wages of any major orchestra in the country."

The musicians' salaries average $482 a week. Management's final contract offer would have increased pay by up to $40 a week for an "electronic media guarantee" payment that would serve as advanced compensation on future audio and video recordings.

The union preferred to negotiate compensation on a per-project basis. Small scale increases were also offered, but with only 40 weeks' guaranteed.

Blind auditions, those carried on from behind a screen, have been conducted for years. Management sought to remove the curtain for the final phase of auditions. When the union reluctantly agreed to that, Conductor David Atherton then pressed to get voting power equal to the other eight members combined, Berton said.

Management also sought to get greater control on the review committee that hears appeals of musicians fired by the conductor. Atherton wanted the lion's share of appointees to the committee, the union said.

Frontlash rallies college janitors

St. Louis—Janitors and custodial workers at Washington University won contract gains with the strong backing from students and faculty members.

Through a petition drive and rally spearheaded by the local chapter of Frontlash, the federation's youth support group, university students, faculty and staff members expressed support for the school's custodial crew, members of Service Employees Local 50.

Frontlash volunteers collected 300 signatures supporting the union's drive for wage and benefit improvements, then presented the petition to SEIU Local 50 President William Stodghill at a rally organized by the youth group

During the rally, Stodghill outlined the demands of Contract Cleaners Association, the management firm negotiating with SEIU Local 40 for janitorial services at the university. The company wanted to freeze wages at $3.60 an hour and benefits.

Instead, the local won a wage increase of 25 cents an hour over the two-year term of the contract, Martin Luther King Jr.'s birthday as a paid holiday and improved health benefits.

Other improvements allow union representatives to visit job sites and require management to tell the union where members are working at any specific time.

Stodghill stressed that despite the pay raise, some Washington University janitors will be earning wages below the poverty level. Still, the settlement is "a step ahead for this group of workers," he said.

Mexican connection devours American jobs

Continued from Page 1

In Wisconsin, former Gov. Patrick Lucey (D) has come under fire for trying to persuade firms in that state to move to Mexico where there's a ready supply of cheap labor.

He's been promoting this program while serving as a consultant for Forward Wisconsin, a quasi-state agency charged with attracting new businesses to Wisconsin. Lucey insists that there's "no conflict of interest in my doing everything I could to help Mexico and the self-interest" of American business.

Lucey has been working on the Mexican connection since mid-1981, about a year and a half after resigning as President Jimmy Carter's ambassador to Mexico. Now he's taken on a new client—the Mexican state of Yucatan.

He defends the practice on the ground that a resurgent economy is vital to help Mexico pay off "a horrendous foreign debt of over $100 billion, most of it owned to U.S. banks." What he sees in the future is another $20-to $30-billion American investment in Mexico and the creation of several million new jobs in that country.

To date, at least 13 Wisconsin firms have shifted more than 5,000 jobs in Mexico. That concerns Sec.-Treas. Earl Lepp of the Milwaukee County Labor Council. "Clearly these plants have led to a loss of U.S. jobs and increases in unemployment and the welfare rolls," he declared.

Trade gap worsens

And Jack Reihl, president of the Wisconsin AFL-CIO, pointed out that the maquiladora program has aggravated the nation's trade crisis. "The U.S. had a $167.9-billion trade deficit this year and Mexico accounted for $5.8 billion of that," Reihl pointed out. Yet while American production is going south of the border, he added, Mexico is "one of the nations most closed to American goods."

Protests against the maquiladora program have also been raised by the Southern Arizona AFL-CIO, objecting to the support Rep. Jim Kolbe (R-Ariz.) has given the maquiladora scheme. Apparently not satisfied with the favored treatment given American companies that relocate to Mexico, Kolbe wants to give them further encouragement.

The Republican congressmen went to the posh resort city of Acapulco—scene of a maquiladora conference originally sponsored by the Commerce Dept. until Congress put its foot down—and told 600 American businessmen and Mexican promoters the U.S. government should be doing more.

What does Kolbe want?

- A quasi-government corporation that would sell tax-free bonds in the United States to purchase Mexican facilities.
- Having the Overseas Private Investment Corp. underwrite American investment in plants across the border.
- Accelerated depreciation allowances for runaway firms.

Kolbe insisted that, in the long run, the maquiladoras, or "golden mills," insure continued employment in this country. But President William H. Bywater of the Electronic Workers, disagreed.

"Anyone who says the maquila program gives the United States jobs is being deceptive," Bywater said. "We are losing jobs. We are the victims."

Bankers' bonanza

Rep. James J. Florio (D-N.J.), whose subcommittee was one of those probing the Mexican connection, echoed that view. "You can't tell someone who has just lost his job, 'Sorry, but you're a casualty to the higher purpose of allowing Mexico to pay off its debts to American banks.' That approach just doesn't wash."

And Rep. Ralph Regula (R-Ohio), who cosponsored the ban on Commerce Dept. participation in the maquiladora promotion, pointed out that people are losing their jobs because of the runaways. "I don't think it's the responsibility of the taxpayers to subsidize an effort to move jobs to Mexico," he stressed.

Oregon challenges unemployment data

Federal statistics on workforce dropouts and hiring disputed

Salem, Ore.—The state of Oregon won't issue an unemployment rate for December until its gets some straight statistics from the Reagan Administration.

Oregon's Employment Division is questioning the accuracy of Census Bureau data provided to the Bureau of Labor Statistics, which then transmits the figures to Oregon.

AFL-CIO Research Director Rudy Oswald attributed the inconsistencies to President Reagan's decision to cut funds for BLS economic data-gathering operations and to ignore the recommendations of an independent comission to enlarge the sample of households surveyed in order to improve the state and local statistics on unemployment.

Oregon's Employment Division administrator disputes the federal government's December estimates on the number of people who dropped out of the labor force and the number who re-entered the job market.

Federal officials estimate that 10,000 Oregonians returned to school in December and were no longer looking for work. But Oregon disputed that finding, claiming that the high figure for people entering school three months after the fall term had begun and at a time when schools were closing for the Christmas holidays did not make sense.

The state employment division also disputed BLS's contention that 16,000 workers dropped out of the labor force during the month, noting that December is a prime month for people seeking pre-Christmas employment.

BLS estimated that 7,000 Oregonians reentered the labor force during December, compared to 29,000 in November.

Statistical quirk

Oregon's jobless rate for November was 7.5 percent, the lowest rate in five years. Using the suspect BLS statistics, December's rate would have fallen even lower—to 6.7 percent, the employment division said. While 86,000 persons were officially out of work in November, calculations using the disputed federal figures show only 66,000 jobless for December, with new claims for unemployment benefits totaling 4,000.

Administrator Raymond Thorne of the Employment Division said the public would reject such a low figure when the state is experiencing so many layoffs and plant closings.

The controversy over the December calculations marks the first time the BLS information has been questioned by the state's employment division.

The Census Bureau estimates are based on a telephone survey of just 680 households, with a 25-percent margin for error, BLS said.

Oregon AFL-CIO President Irvin H. Fletcher charged that the artificially low jobless rate would keep thousands of jobless workers from qualifiying for six weeks of additional state-financed unemployment benefits and could jeopardize millions of dollars in federal allocations that on based on the state's official unemployment rate.

Fletcher noted that the trigger for additional benefits is an adjusted 4.5-percent jobless rate for those working at jobs covered by unemployment insurance, the equivalent of an overall rate of 7.5 percent.

But including discouraged workers and those who have accepted part-time work because no full-time jobs were available pushes up Oregon's real unemployment rate to nearly 12 percent, Fletcher said.

"Whenever the Reagan Administration makes an error, it never seems to be in favor of workers," he added.

Chicago Trib must arbitrate transfer issue

Springfield, Ill.—The Chicago Tribune as part of the Chicago Newspaper Publishers Association, has been ordered by a federal district court to arbitrate its dispute over mandatory transfers, hiring of substitute workers and jurisdiction with Typographical Union Local 16.

ITU Local 16 President Dave Donovan said the union filed suit against the newspaper to force it to arbitration. After the newspaper transfered workers out of the union's jurisdiction and introduced new technology in other departments that took away ITU work, the union voted to strike in July 1985.

Joining the walkout were Web Pressmen's Local 7 and Mailers Local 2, which were protesting managements's attempt to do away with the hiring hall. All three locals have been without a contract since January 1983.

The strike continues, even though the unions made an unconditional offer to return to work last February. For its failure to bargain in good faith, the Chicago newspaper was put on the AFL-CIO list of unfair employers.

Donovan said that the company wanted to transfer linotype operators to other jobs outside of the composing room where the ITU has jurisdiction. When the ITU local sought to arbitrate the matter, the Tribune claimed it wasn't a matter for arbitration.

Changing workplace

The jurisdictional dispute centered on the introduction of a computerized page make-up system to which the company planned to assign workers from other departments, although the union maintains that the work is strictly "ITU work."

The third issue concerned the hiring of substitutes to fill in for workers who took time off. "We wanted assurance that substitutes could be put on and the company reneged on it," Donovan said.

Cooling-off order shunts strike on Long Island line

New York—Some 6,600 members of 15 unions ended their 11-day strike on the Long Island Rail Road, returning to work for a federally mandated 60-day cooling-off period.

The unions acted after President Reagan signed the back-to-work order less than 24 hours after its enactment by voice vote in the House and Senate.

The strike began Jan. 18, one day after an earlier cooling-off period expired. Key issues have been wages, health benefits and pensions. The rail line, the nation's busiest commuter line, serves 110,000 people daily.

Congressional intervention marks the fourth time the government has tried to resolve the dispute. Two presidential emergency boards and the National Mediation Board have been involved at various stages of the contract dispute since it began in June 1984.

This time, however, the congressionally passed measure requires the federal mediation board to propose a solution to the impasse if mediation during the cooling-off period fails. Congress would then have to approve or revise the recommendations or the strike could resume.

The walkout began after some of the unions involved in the dispute charged the railroad with dragging its feet in contract talks.

Although 10 of the unions have either settled their contracts or agreed to arbitration, all of the union members stayed off the job to honor the picket lines of the unaffiliated Locomotive Engineers and the Patrolmen's Benevolent Association.

Negotiations have taken place sporadically since the start of the walkout. However, the five unions still without contracts accused rail management of pursuing a heavy-handed strategy that included taking items off the bargaining table.

The five unions still without contracts are the Railroad Signalmen, Electrical Workers, Machinists, Boilermakers and Plumbers & Pipefitters.

Segment of Operating Engineers' "Learning By Doing" video shows corporations are spending 11 times more on equipment than on training.

New video spotlights training as vital for tomorrow's job

American workers will continue to see their standard of living drop unless they are given access to new education and training systems that enable them to gain the skills needed for tomorrow's jobs. That's the strong message of a new videotape produced by the Operating Engineers under a Labor Dept. grant.

The IUOE video, titled "Learning By Doing" is a special report on American workers and the need for a greater corporate interest in worker training. The program, available in either 30-minute or one-hour versions, centers on a 1986 conference that featured former Labor Sec. Ray Marshall and other noted authorities.

The half-hour show keys on three segments—the threat of foreign economic competition, the skills workers will need to survive in tomorrow's workplace and the apprenticeship system as a premier methods of developing the skills through learning by doing.

The hour-long program includes those video segments along with discussions by the panel of experts.

UAW staves off Deere takebacks

Continued from Page 1

membership. However, the UAW hailed the agreement as "a major victory" because it staved off management demands for deep wage and benefit cuts.

The pact follows the pattern set last year in negotiations with Caterpillar Inc., although some of the provisions were different to address problems of specific concern to Deere employees.

The dispute dates back to Aug. 23, when 4,000 UAW members struck three Deere plants after their contract expired. The farm-implement manufacturer retaliated by shutting down production at its 10 other facilities, throwing an additional 9,000 UAW members out of work.

Negotiations between the two sides collapsed on Dec. 4. They were resumed this week after Rock Island County Judge David DeDoncker threatened to hold both sides in contempt of court unless they went back to the bargaining table.

The 159-day labor dispute was the longest in Deere's history. It far surpassed a 110-day UAW walkout in 1950.

Gene Upshaw named to NFL Hall of Fame

Canton, Ohio—Gene Upshaw, president of the Professional Athletes, was elected to the Pro Football Hall of Fame.

Upshaw, an AFL-CIO vice president and executive director of the National Football League Players Association, played guard 15 years for the Oakland Raiders. He is among seven former players who will be inducted to the Hall of Fame on Aug. 8.

The others—all NFLPA veterans—are Len Dawson, Kansas City Chiefs; Larry Csonka and Jim Langer, Miami Dolphins; John Henry Johnson and Joe Green, Pittsburgh Steelers, and Don Maynard, New York Jets.

Schedule of Labor Studies Center courses

The George Meany Center for Labor Studies will offer 10 workshops during February and March. The schedule:

Effective Leadership Styles, Feb. 1-6—An institute on leadership styles that teaches participants how to recognize their own style and modify it when appropriate. Individual coaching and video replays are provided.

Corporate Change, Feb. 2-4—A conference cosponsored with the Industrial Union Dept. on the impact of corporate mergers, acquisitions and takeovers on union members' rights, security and equity.

Negotiating Profit Sharing and ESOPs, Feb. 8-13—A new program for full-time officers and staff on how to design and write profit-sharing and ESOP programs and analyze financial documents.

Arbitration Techniques Feb. 8-13—A workshop on presenting mock cases before professional arbitrators. Sessions will be videotaped.

Basic Labor Law, Feb. 22-27—A workshop on labor law fundamentals, current trends and new decisions on bargaining, servicing and union administration.

Newswriting and Editing, Feb. 22-27—A course for union editors on the basics of publishing newspapers, journals and other materials.

Teaching Techniques for Labor Education, Feb. 22-27—A program to provide union staff with skills to teach educational programs.

Union Administrator and Business Agent, Mar. 8-13—An institute for full-time officers or business agents on identifying and solving problems, time management, monitoring finances and budgeting programs.

Organizing Techniques, Mar. 15-20—An introduction to basic organizing skills for new organizers and a refresher course for veterans.

Evolution of Work and the Labor Movement, Mar. 15-20—A course that examines union strategies for dealing with the new technology as well as the changing workplace and workforce.

AFL-CIO affiliates using the campus in February for their own staff training programs are: American Institute for Free Labor Development, Feb. 1-20; State, County & Municipal Employees, Feb. 8-13; Newspaper Guild, Feb. 13-19; Flight Attendants, Feb. 17-20; Professional & Technical Engineers, Feb. 18-20, and Teachers, Feb. 22-27.

More information about labor studies programs is available from Robert Pleasure, executive director, George Meany Center, 10000 New Hampshire Avenue, Silver Spring, Md., 20903. Telephone 301/431-6400.

EDITORIALS

Let the Worker Beware

THE CALLOUSNESS of the leave-it-to-the-marketplace ideology the Reagan Administration brings to the issue of workplace safety and health almost defies belief.

A chapter of the annual report of the President's Council of Economic Advisers makes grudging acknowledgment that Congress, presumably in one of its more pixilated moments, once passed a law to require employers to provide a "safe and healthful workplace," and set up a federal agency to enforce that law.

The best the report has to say for OSHA is that its "fines and enforcement activities are small." The real incentive for safe working conditions, the White House document insists, is the economics of the marketplace.

LET THE WORDS of the President's economic advisers deliver their own message about the nature of this Administration:

"The labor market provides strong incentives for employers to improve safety. In order to make a hazardous job attractive to workers, a firm must offer higher wages than it would have to pay otherwise. Wage premiums are a critical device for controlling job hazards because they provide employers with incentives to reduce hazards in order to reduce wage costs . . .

"In efficient labor markets, wage premiums result in appropriate matching of workers and jobs based on risk and other factors.

"Workers who are more risk-averse will demand higher wage premiums for risky jobs than workers who are less risk-averse, and thus will be less likely to take jobs with relatively high probabilities of injury.

"Similarly, the labor market offers incentives to both workers and employers to implement job matches based on differing personal vulnerabilities to job hazards.

"For example, if short police officers face greater risks of assault, smaller people will be less likely to take police jobs for a given wage. To some extent, however, legal prohibitions against discrimination limit the ability of firms to screen workers on the basis of vulnerability to job risks."

We Can Do Better

IN THE past few years, we've been hit by a staggering trade deficit. Last year that deficit represented a drain on our economy of more than $2,600 per family. It has robbed us of 3 million American jobs in four years.

Every few days, another factory closes or announces a big layoff somewhere in America. Just four years ago, we were the world's largest creditor nation. Today we're the world's largest debtor nation.

We can do better than that.

For three years, we have implored the President to take action. Last year the House passed a comprehensive trade bill, with a huge bipartisan vote. The bill died without any action in the then-Republican Senate. This year, large majorities in both houses are determined to act. And we will act.

DO YOU know what our Number One export is from the Port of New York? I'm almost ashamed to mention it. It's not machinery. It's not computers. It's junk. It's scrap metal —mostly junked automobiles.

Do you know what the second biggest export is? It's paper. Waste paper. Trash. It is shipped to the Far East and made into cardboard boxes for the foreign-made clothing and shoes they sell back to us.

We need strong incentives to invest in those things that modernize and improve our aging American industrial plants, make them more competitive. Then "Made in the U.S.A." once again can be the badge of quality and value throughout the world.

That is our Number One congressional objective this year.

—From response by the Speaker of the House of Representatives, Jim Wright, to President Reagan's State of the Union address, Jan. 27, 1987.

Big gaming table

Wall Street enjoys boom as Main Street goes bust

By Gus Tyler

The Dow-Jones stock index hit 2000 the first week in January. The media shouted, "Wow Dow!"

Meanwhile, back on his campus in California, Peter Drucker—highly touted oracle of the business world—was shrugging his philosophic shoulders as if to wonder silently, "So what?"

Drucker has been telling anyone who would listen that what is happening on Wall Street has little in common with what is happening on Main Street. The two avenues appear to be running in different, often opposite, directions: the weaker the economy, the stronger the stock market.

Facts are at hand to support his case.

Last year, the economy—the real economy in which people make things and render services —grew by only 2.6 percent, a dismal crawl. But this paper economy—the value of stocks—rose by 30 percent, a jubilant leap.

What happened in the United States happened in other countries as well. The Morgan Stanley Capital International Perspective World Index records that the world stock market was also going "wow." For 1986, the values rose by 30 percent at a time when growth was no better than in the United States. Even in vibrant Japan, the real economy grew by less than 2 percent last year, while the paper economy grew by 43 percent.

Distant worlds

From these puzzling facts it is clear that what happens in the world of stocks and bonds is not a reflection of what goes on in the world of goods and services. Indeed, the boom in the world of speculation may actually be caused by the bust in the world of production. The reason?

In a recent conversation with a well-placed banker friend, I put the question to him, "How come in slow times the Dow is running so fast and so far?"

His answer was very bankerish in its choice of words. "The world," he said solemnly, "is awash with liquidity."

Translated into plain English this means: "People have too much money."

You may object to this idea because it may not apply to you or your family or your neighbors. It certainly does not apply to about three billion people on the planet who are ill-fed, ill-clothed and ill-housed. You and your ilk may be "awash" with nothing but worries.

Capital glut

But those who have what is generally called "wealth" really do have it. And they don't know what to do with it.

They will not invest it in a steel mill at a time when there is too much steel in the world. Or auto making when there is an oversupply of cars. Nor in growing wheat or mining tin or drilling for oil. In these—as well as in other goods and services—there is a glut.

And precisely because of this glut in goods there is a glut of capital. Those "haves" really have and don't know what to do with what they have.

They could put the money into banks and draw 5 percent interest. But after allowing for inflation and taxes, that 5 percent ends up close to zero percent.

So—what to do with all that burdensome restless cash? The answer is to "play the market," get into that great big crap game called speculation, buy and sell pieces of paper.

Wall Street is that Vegas, that casino, that roulette table aslosh with billions of dollars daily.

The fewer real businesses in which to invest, the more money is there for the gambling table, for the street that is the beat of Dow.

AFL-CIO LEGISLATIVE

ALERT!

AMERICAN FEDERATION OF LABOR & CONGRESS OF INDUSTRIAL ORGANIZATIONS

AFL-CIO Urges Relief For Workers And Their Families

The 1980s: The Decade Of Middle Class Decline?

For the first time in our history, we have a generation of Americans who cannot reasonably expect to do as well as their parents.

Lane Kirkland, January 20, 1987

Since the end of World War II, the United States has led the world's economy. Workers were employed to meet the needs of a war-ravaged world. These were mostly unionized manufacturing jobs, and they fed the expansion of a prosperous middle class. Middle class consumption, in turn, created a dynamic domestic market, which ensured more jobs and more prosperity. America was truely a land of opportunity, and hard work seemed to be all that was needed for the average citizen to be able to "get ahead."

The world -- and the country -- have changed:

* Between 1981 and 1986, 13.1 million workers lost their jobs due to plant closure, slack work, or layoffs. (Bureau of Labor Statistics)

* 58% of the new jobs created since 1979 paid less than $7,000 a year -- 36% below the poverty line of $11,000 a year. (JEC)

* Since 1981, the number of people employed in construction and manufacturing has declined by more than 500,000. (JEC)

* Nine million of the people who lived in poverty during 1984 were working, at least part of the year; nearly one-third of them were working full-time year-round. About one out of every six families in poverty had at least two workers in the labor force. (Census Bureau)

A recent study by the Congressional Joint Economic Committee (JEC) on the growth of low-wage employment states that,"The continuing decline in high wage manufacturing combined with the expansion in the low-wage retail trade and service sectors, have led to the popular perception that America may be on the verge of losing its middle class." They add that their findings (some of which are cited above) confirm this conclusion.

The AFL-CIO has called on the 100th Congress to take action to reverse this economic deterioration, and to lessen its effect on workers and their families. On January 13, during hearings on National Goals in Employment held by the Senate Labor and Human Resources Committee, AFL-CIO Secretary-Treasurer Thomas Donahue described the employment situation and detailed some of labor's legislative agenda for the coming year. Among the items called for were:

* New minimum wage legislation,

* Standards to be applied to mergers, acquisitions and bankruptcy filings which protect jobs, collective bargaining rights, health benefits and pension benefits,

* Plant closing legislation with advance notice requirements and other relevant protections for workers and local communities against "sudden death" shutdowns and mass layoffs,

* Legislation on issues such as parental leave and day care, which would protect job security and aid in the fulfillment of family responsibilities,

* Double-breasting legislation to prevent a construction contractor with a union contract from unilaterally taking action to siphon jobs away from union workers,

* Improved job training, not only for new workers and the persistently unemployed, but also for recently dislocated workers,

* More adequate unemployment insurance to strengthen this bridge over economic dislocation for all unemployed workers.

"It's time for everyone," Donahue told the Committee, "employers, the federal government and wage earners to pull together to put into effect government programs and policies that will do something to make the work environment, the economic environment, the social environment better for workers and their families -- better for America."

Opportunity For Fair Trade Legislation This Year

For the last two decades the AFL-CIO has been sounding the alarm about the evolving crisis in U.S. trade. In the last few years, U.S. trade deficits have been the largest ever recorded by any country, and in 1986 they will exceed $170 billion. With economists predicting a bleak economic future and an even larger trade gap -- a possible $1 trillion by the early 1990's -- it is more than time for action to be taken.

Last year, the House passed H.R. 4800, an AFL-CIO supported bill designed to address some of the country's most urgent trade problems; the Senate took no action. This year, an identical bill, H.R. 3, was one of the first pieces of legislation to be introduced in the House.

In the new Democratic controlled Senate, the Finance Committee has been holding hearings. AFL-CIO President Lane Kirkland, United Auto Workers President Owen Bieber, and United Steelworkers President Lynn Williams testified before the Committee on January 20th. Among other measures, labor leaders urged that the Senate adopt a bill with a trade deficit reduction provision and a provision to protect workers' rights in foreign countries.

The trade deficit, the dollar difference between the goods we export and the goods we import, has been a key factor in the erosion of our industrial base and the mass exodus of American jobs. For manufactured goods alone, the U.S. has gone from a surplus of $17 billion in 1980 to a deficit of $148 billion in 1986. During that period, imports have increased by 52%; exports have fallen by 2%.

The fact that nearly all other nations keep tight control over their domestic markets, means that many countries are enjoying huge trade surpluses at our expense. Many also engage in a number of unfair trade practices, such as dumping, industrial targeting and subsidies.

A provision in the House bill would require countries with excessive surpluses and unfair trading practices to begin an orderly reduction of their surpluses. Kirkland stated that any bill without such a provision would be nothing more than a "hollow shell."

One aspect of unfair trading practices which is also addressed in H.R. 3, is the exploitation of workers' abroad. As Owen Bieber testified, "the American sense of fair play is violated when products made under repressive labor conditions are exported to this country and displace our workers."

U.S. workers now find themselves in direct competition with child laborers and other workers in poverty stricken countries who have virtually no job protections or fringe benefits, work 12 or 14 hour days and are paid one-tenth as much as their American counterparts.

Just as an export subsidy lowers the cost of production, so too do restrictions on unions. Therefore, the application of worker rights to imports is an extension of the principle of fair trade.

The American labor movement has long held that the denial of tade union rights in any part of the world affects worker freedom everywhere. This month, it urged the Senate to adopt measures denying most-favored-nation trading preferences to countries such as Chile, South Korea, Nicaragua, Paraguay, Romania, Suriname and Taiwan, which violate internationally recognized labor practices.

"The country needs more than a process bill," Lane Kirkland concluded. "It needs legislation that recognizes the magnitude of our problem and implements recognizable steps to bring about that problem's solution. Anything less is just smoke and mirrors."

What You Can Do: Write to both of your senators and members of the Finance Committee. Tell them you want a fair trade bill like H.R. 3, with a trade deficit reduction provision and provisions to protect workers' rights in foreign countries.

MEMO FROM COPE
PAGE 8

Imports bloat '86 trade deficit

Kirkland asks quick action on remedies

AFL-CIO President Lane Kirkland took labor's case for a job-saving, deficit-reducing trade bill to the House Ways & Means Committee and welcomed assurances of expedited congressional action.

Committee Chairman Dan Rostenkowski (D-Ill.) said when he scheduled the hearings that trade legislation will get "priority consideration." Earlier, House Speaker Jim Wright (D-Tex.) promised to bring a committee-approved bill speedily to the House floor. He set an end-of-April target date for House action, which Rostenkowski said he would "try to meet."

The starting point for the committee's deliberations is the bill that the House passed last year to compel nations that have gained unfair advantages in the U.S. market to reduce their trade surpluses with the United States.

Hot issue

Kirkland welcomed its reintroduction. The Administration-opposed measure died without a Senate vote in the last Congress, but the political turnabout in the Senate has put trade issues on the front burner.

Kirkland, who testified last month before the Senate Finance Committee, was the first public witness at the House trade hearings.

The monumental trade deficit that has undermined the American economy can only be brought down by "tough, effective" legislation, Kirkland stressed.

If negotiations alone could remedy the

Clean water bill

Veto override sends message to Reagan

By David L. Perlman

Congress easily overrode President Reagan's veto of a labor-backed bill to fund the continued cleanup of the nation's water systems by bipartisan margins of 401-26 in the House and 86-14 in the Senate.

Despite the President's objection to the cost, the legislation authorized $18 billion over eight years for a final installment of federal grants for sewage construction facilities, and for transition to a state-administered revolving fund for low-cost construction loans.

It also bars backsliding on clean-water standards and sets up a $2 billion program to control pollution resulting from runoffs from farms or city streets.

Echoing right-wing ideologues, Reagan charged in his veto message that the runoff control program could become "the ultimate whip hand for federal regulators," enabling them to dictate to farmers what type of fertilizer to use and interfere with local zoning decisions.

The President pleaded with congressional Republicans to support his veto of the clean water measure. But on the motion to override, Republicans criticized the veto nearly as strongly as the Democrats, and the outcome was never in doubt.

No. 1 priority

Reagan had pocket-vetoed an identical bill passed near the close of the last Congress. The post-adjournment veto prevented an override vote, but House and Senate leaders gave the new bill fast-track priority at the start of the new Congress. It carried the symbolic bill number, H.R. 1.

Another high-priority measure—to reauthorize expired programs for federal highway construction and mass transit assistance—could also face a presidential veto even though the money to fund it comes primarily from the self-financing Highway Trust Fund.

But while there are differences between the House and Senate versions to be resolved in conference, the basic elements of

Continued on Page 6

Shortfall sets world record of $170 million

By Candice Johnson

The nation's trade deficit swelled to a staggering $170 billion last year, as American jobs and industries continued to be washed away by a flood of imports. The record-breaking shortfall spurred renewed calls from unions for congressional action to reduce the massive trade gap.

AFL-CIO economist Mark Anderson charged that the worsening of America's trade position clearly demonstrates the Reagan Administration's failure to come to terms with the trade crisis and the inadequacy of White House policies.

"The fates of scores of domestic industries and millions of American workers" rest in the willingness of Congress to enact strong, effective trade legislation, Anderson said.

While the overall trade gap in December fell to $10.7 billion from $15.4 billion the previous month, few economists took the sudden one-month drop as a sign that the record flood of imports to the United States last year was beginning to ease.

Record deficit

Anderson pointed out that although the value of the dollar against other currencies has been in decline for the past two years, "the 1986 trade deficit is the largest ever recorded."

The Commerce Dept. reported that for all of 1986, the merchandise trade deficit—which includes trade in agriculture, minerals and manufactured goods—ballooned to $170 billion, an increase of 14 percent over the 1985 record deficit of $148.5 billion.

U.S. goods sold abroad grew a scant 2 percent over the year, reaching just $217 billion, while imports—hitting a record $387 billion—jumped by 7 percent, fueled mainly by $294 billion in manufactured goods.

For December alone, the Commerce Dept. reported a level of $9.8 billion in the import-export gap for manufactured goods, down from a November rate of $16.8 billion. Manufactured imports included $3.9 billion in new autos; $1.8 billion in clothing & footwear; $1.6 billion in electrical machinery; $1.5 billion in telecommunications equipment, and $1.3 billion in office machinery.

U.S. factory exports in December totaled just $12.6 billion, which included $1.5 billion in office machinery, $1.4 billion in aircraft and parts and $1.1 billion in electrical machinery.

Trade off on pay funding assailed

A Reagan Administration maneuver to cut needed domestic programs to fund pay raises for federal workers "is nothing more than a cheap public relations ploy," Government Employees President Kenneth T. Blaylock charged.

The 3-percent pay raise—substantially less than the comparability standard set by law and coming later than the due date—went into effect at the start of this year.

But instead of seeking supplementary funds to pay the added cost, the White House wants Congress to divert $258 million from some 25 program areas the Administration wants cut back. The list includes mass transit, food programs and occupational safety programs, the Office of Management & Budget said.

The Administration doesn't consider the programs it wants to eliminate necessary, OMB said.

The Senate served quick notice that it wants more money, not less money, for emergency food programs. It added to a bill earmarking $50 million for assistance to the homeless an amendment blocking an Administration proposal to shift $28 million from a program that funds distribution of food to needy households to offset the federal pay raise.

Blaylock termed the White House ploy "another example of the Administration's lopsided priorities."

Federal workers provide essential services to the American public, Blaylock said, and resent being put up as scapegoats. Government workers object to being "pitted against our friends and neighbors in this way," he said.

OSHA fines put low value on life

'Petty cash' penalties follow investigations of fatalities

By Arlee C. Green

What is a worker's life worth?

It depends on whom you ask, but workers agree that you shouldn't ask the Occupational Safety & Health Administration. Its price is often under $1,000—a "petty cash" fine.

OSHA recently reported that in 1985 there were 3,750 job-related fatalities in the 280,000 workplaces it surveyed. The federal job safety agency's responsibilities extend to more than 5 million workplaces across the country.

The fines meted out in worker deaths relate only to the infractions involved, such as unsafe wiring or lack of a machine guard. There's no connection between the fine for a safety violation and the death of a worker because of that violation. Further, OSHA is limited by law in the size of fine it can assess—$1,000 for a serious violation and $10,000 for a willful violation.

OSHA does not keep separate statistics on fines assessed in worker deaths, but in figures it provided to a House hearing, OSHA said that in 1983 it conducted investigations of 1,376 accidents where either a worker was killed or more than four workers were hospitalized. From that, it found 2,073 violations—1,022 that were serious, 30 willful, 26 repeat and 995 other than serious. The fines assessed for those violations totaled $589,422—an average of about $284 per violation and only 40 percent of the legal limit it could have assessed.

The Reagan Administration early on attempted to get OSHA "off the backs" of employers and off the shop floor. It slashed funding and the size of the agency's inspection force, but kept inspections figures artificially high by doing only "safety records checks" at many workplaces.

A rise in worker deaths, along with

NLRB—R.S.V.P.

An employer who throws a party for strikebreakers and excludes union supporters is not only rude but violates federal labor law.

That's the message of the National Labor Relations Board to the Desert Inn Country Club & Spa in Las Vegas, Nev. The hotel and casino complex threw a party but not everyone came—because only the scabs in a 1984 strike were invited.

All but 20 of the 900 members of Hotel Employees & Restaurant Employees Locals 165 and 226 walked out in April 1984. However, as the two-month strike dragged on, about 200 workers crossed the picket line and returned to their jobs.

The hotel management later threw the party for the scabs while union members who honored the picket line had to serve the party-goers and clean up afterward.

The two HERE locals filed unfair labor charges with the NLRB. In a 3-to-1 decision, the board rejected the employer's claim that the party was intended to ease tensions in the workplace and ordered the hotel to pay each striker a sum equal to the value of the party—about $30.

The board termed the party a violation of federal labor law because it was a condition of employment given to workers based on their union activities and it discouraged workers from exercising their right to strike.

NLRB Chairman Donald Dotson objected, calling the party "a legitimate way to . . . put an end to the feuding." But the board majority disagreed, declaring, "we fail to see how the employer could accomplish that goal by an employer-sponsored function at which various former strikers worked, catering and cleaning up after their co-workers" who served as scabs.

Food workers get $9 million backpay award

Spencer, Iowa—At least 220 former workers at Spencer Foods will share a pot of $9 million under the terms of a settlement reached between the Food & Commercial Workers and Land O'Lakes, Inc.

The settlement award stemmed from the company's refusal to hire many UFCW Local 152 members when it purchased their plant from Spencer Foods. Of the 220 workers hired by Land O'Lakes, fewer than 40 had been working at Spencer.

The union filed unfair labor practice charges, but the National Labor Relations Board ruled that Land O'Lakes was not a successor company and therefore not required to rehire the Spencer Foods workers.

But the U.S. Court of Appeals for the District of Columbia disagreed, citing "shortcomings" in the NLRB analysis, and overturned portions of the 1984 board decision.

The appellate court directed the NLRB to reconsider its ruling, urging the board to order Land O'Lakes to hire the Spencer workers it passed over and to set back pay awards.

Seven-year battle

The $9 million settlement, reached through negotiations between the UFCW and Land O'Lakes, ends a legal dispute that began in 1979. Land O'Lakes sold the beef plant in 1985.

The back pay award will be distributed to union members over a five-year period, under a formula based on their seniority and outside earnings.

UFCW President William Wynn applauded the settlement. He said that while dollars do not fully compensate union members for their suffering when companies violate workers' rights, "large dollar settlements are understood by corporate executives who will change their behavior only when they learn that violating the law is more expensive than obeying it."

Chicago unions back re-election of Washington

Chicago—Incumbent Mayor Harold Washington won the endorsement of the Chicago AFL-CIO for the Feb. 24 Democratic primary election by a 231-115 vote of CFL delegates. Washington faces former mayor Jane Byrne for the party nomination.

"Washington won it the hard way and he deserves it," CFL President Robert M. Healey said. "We will inform all of our affiliates and members that we can that 'labor is behind Washington.' "

Healey said the CFL will do all it can to bring the story of Washington's labor record to union members and their families as well as providing financial support to the Washington campaign. The general election for mayor is Apr. 7.

For the first time in many elections, the CFL endorsed candidates for alderman. The labor body's endorsement committee and executive board made recommendations in most of Chicago's 50 wards. In some cases it took no position.

In other action, delegates at the monthly meeting elected Michael Bruton as secretary-treasurer. He was unopposed.

Bruton, 50, had been assistant to the president and served as acting secretary-treasurer since mid-January when Healey was elected president following the death of Edward F. Brabec. Bruton's term expires in 1990.

'Tribute' to Christa McAuliffe branded Reagan 'travesty'

The Teachers denounced the Reagan Administration's scheme to cloak an $11-million gouging of education programs for talented teachers under a proposal named for teacher-astronaut Christa McAuliffe. The former AFT member died in the explosion of the Challenger space shuttle last year.

"This is a travesty, not a tribute," AFT President Albert Shanker declared. "The Administration cuts $11 million from programs for talented teachers and then tries to hide behind the name of Christa McAuliffe the year after her death. She deserves much better."

Shanker stressed that taking money away from "worthwhile programs makes no sense." He noted that last year there was a total of $91.2 million for the separate teacher training programs. "Now they are merging the programs and offering $80 million," he said.

The Administration submitted its proposal to Congress on the anniversary of the Challenger accident. Education Sec. William Bennett, speaking at a high school near the U.S. Capitol, said the $80-million "Christa McAuliffe Teacher Training & Improvement Act" would be a fitting tribute to the first teacher-astronaut.

The proposal would consolidate several existing programs now funded at $91.2 million, including the $2-million Christa McAuliffe Talented Teacher fellowship program. This is only part of a larger $5.5-billion funding slash Reagan wants in the overall education budget.

McAuliffe's father wrote Reagan in January to protest the Administration's dropping of the fellowship program. Although the new package was named for McAuliffe following her father's letter, an Education Dept. spokesman denied the events were related.

Rubber Workers keep up campaign to save tire plant

Cumberland, Md.—Rubber Workers Local 26 hasn't given up its effort to save the jobs of nearly 1,000 workers still making Kelly-Springfield tires at a Goodyear-owned plant here.

The tire company, which was a principal employer for several generations of workers, was a casualty of the cash drain incurred by Goodyear last December when it used a costly stock buyout offer to fend off a takeover raid by a British financier.

The financier, Sir James Goldsmith, made an estimated $87.5 million on his stock transaction, according to Wall Street reports.

The victims were the Cumberland workers and employees of a Goodyear plant in Toronto, also an older establishment.

Goodyear gave the six-month notice required under the URW contract, but the union has sought to keep the plant open while pursuing the possibility of another purchaser. The company has agreed only to keep some corporate offices in the community.

A county judge, while expressing sympathy with the union effort, denied a temporary restraining order sought by Local 26 attorneys. Local President Clayton Oster said the union is considering further court action and continuing to explore other possibilities to keep the plant in operation.

"We'll do everything we can do for our members and explore every option," he said.

South Africans bone up on U.S. unions

Black trade union leaders from South Africa are in Washington for a month-long program sponsored by the AFL-CIO African-American Labor Center.

The seminar covers economics, labor relations, organizing strategies and collective bargaining techniques and includes a trip to New York for a meeting with labor representatives there.

Participants also will explore the civil rights movements in both South Africa and the United States, with emphasis on strategies and solutions to the problems faced by black workers.

After three weeks of course work, the 25 participants from 19 labor organizations will be assigned to internships with their American counterparts.

The AALC-sponsored program was developed in conjunction with the University of the District of Columbia Labor Studies Center, with classes held on the UDC campus.

Instructors include labor specialists from the university, as well as representatives from the AFL-CIO Dept. of Organization & Field Services and Dept. of Civil Rights, the George Meany Center for Labor Studies, the A. Philip Randolph Institute and affiliated unions.

The seminar is part of the federation's Program of Action in South Africa, in which American trade unionists offer support and assistance to black trade union leaders in South Africa who are striving to win better living and working conditions and full labor and human rights for black workers.

Washington welcome

The students were welcomed to Washington by AALC Executive Director Patrick O'Farrell, who explained that the purpose of the seminar is to offer advice from American union specialists in organizing and collective bargaining and to learn from the South Africans "what more we can do to help."

AALC Education Director George Martens called the seminar a valuable exchange medium for American trade unionists, providing an opportunity to meet and learn from their South African colleagues and setting the groundwork for a "union to union" network.

Graduation ceremonies will be held at Service Employees' headquarters on Feb. 26.

Black labor organizations participating in the program are: Black Health & Allied Workers; Chemical Workers; Electrical & Allied Workers; Laundry, Dry Cleaning & Dyeing Workers, the Urban Training Project; Black Domestic Workers; Brushes & Cleaners Workers; Building Construction & Allied Workers; Food, Beverage Workers; Insurance, Assurance Workers; Council of Unions of South Africa legal unit; National Union of Public Service; Wine & Spirit & Allied Workers; South African Chemical Workers; Steel, Engineering & Allied Workers; Textile Workers; Transport & Allied Workers, United African Motor & Allied Workers and Vukani Guard & Allied Workers.

African-American Labor Center's O'Farrell opens month-long seminar for South African trade union leaders.

Statistics no relief

Economic index rises but layoffs continue

A rush to cash in on year-end tax breaks pushed up the Commerce Dept.'s index of leading economic indicators 2.1 percent in December. But the statistical pickup provided no relief to workers who were served layoff notices.

Economists warned against viewing the one-month surge as evidence of an economy poised for strong growth, noting that unusual year-end conditions tied to tax reform and other factors played a major role in the increase.

December's increase marks the fourth consecutive month of rising indicators, following a revised nine-tenths of 1 percent rise in November, seven-tenths of 1 percent in October and two-tenths of 1 percent in September. Even so, the government reported earlier, the gross national product rose only 1.7 percent in the fourth quarter and ended the year with an anemic 2.5-percent rate.

Mounting layoffs

Thousands of workers were hit by impending layoffs in January. They include another 5,000 hourly workers at General Motors Corp. auto and parts plants in Michigan and Missouri; 1,500 at Grumann Corp. plants in Long Island, N.Y.; 1,000 at United Air Lines headquarters in Chicago, 324 at Quaker Oats Co. in Rockford, Ill. and a possible 3,000 workers at Fairchild Industries Inc.'s Farmingdale, N.Y., facility.

USX Corp announced it will "indefinitely idle" three steelmaking plants and will limit operations at a fourth, eliminating about 3,700 jobs. The Geneva Works in Orem, Utah, and two Pittsburgh-area plants will be shut down along with part of the Baytown, Tex. facility shut down.

The December economic indicators were bolstered by businesses and consumers stepping up purchases of autos and capital equipment to take advantage of tax credits, depreciation allowances and interest deductions that were phased out under federal tax reform.

Analysts noted that the December jump in building permits—which led the indicator index—was fueled by a rush of California builders seeking to beat higher state fees that took effect Jan. 1. Most termed the increase in the indicator index "temporary."

In other economic developments:

- The Labor Dept. reported that overall business productivity fell 2.3 percent in the fourth quarter while the manufacturing sector edged up two-tenths of 1 percent and 2.7 percent for the year. Overall, the productivity rate—the measure of output per hours worked—rose seven-tenths of 1 percent for the year, along the lines of a five-tenths of 1 percent increase for 1985.
- Orders for durable goods rose nine-tenths of 1 percent in December, the Commerce Dept. reported, with nondefense durable goods orders up 5.5 percent. Orders for machinery edged up seven-tenths of 1 percent, while transportation equipment orders declined, down two-tenths of 1 percent. Overall, durable goods orders rose just 1.5 percent last year, far below a 14.6—percent increase in 1984 and a smaller gain of 3.7 percent in 1985.
- Construction spending fell five-tenths of 1 percent in December, with declines in both residential and nonresidential outlays, the Commerce Dept. reported. Residential building fell 1.1 percent and non-residential spending plunged 3.6 percent, on the heels of a November drop of 2 percent. Overall, construction outlays in 1986 were up 2.8 percent from the year-ago period.
- With the closing of six banks in the Midwest and Southwest, the Federal Deposit Insurance Corp. reported that 17 banks failed so far in 1987. Last year, the FDIC closed 138 banks, up from 116 in 1985 and just 42 in 1982.

Contracts ratified for 45,000 at USX, 13,000 at Deere

Workers at USX Corp. and Deere & Co. ratified new contracts, ending record-long work stoppages at both companies.

The Steelworkers overwhelmingly approved a new four-year agreement, ending a six-month-long lockout of more than 22,000 active workers by USX. Another 23,000 had been laid off before the lockout.

The settlement restricts contracting-out and guarantees payment under a profit-sharing plan in exchange for wage and benefit sacrifices by union members.

The USWA members ratified the agreement by a 19,621-to-4,045 vote.

Maintenance workers have begun returning to work, and USX officials estimated that production start-up procedures would take about three weeks.

Meanwhile, Auto Workers members from 14 Deere locals approved a new contract by margins of 75 to 84 percent. Nearly 13,000 workers had been off the job since Aug. 23, when 4,000 UAW members at three plants voted to strike the farm and construction equipment manufacturer. Workers at 10 other factories then were locked out by the company.

The 20-month contract includes a "protected employee group" job security plan to protect workers from layoffs due to economic and technological changes and improvements in pension benefits, profit-sharing and health care.

The Deere workers also won Martin Luther King Jr.'s birthday as a paid holiday and maintained their cost-of-living payment.

Lt. Gov. Stanley Lundine joins New York State AFL-CIO President Edward J. Cleary, right, at "save our jobs and industrial base" rally in Albany.

New York state rally sounds labor's 'save jobs' crusade

Albany, N.Y.—Union members rallied behind the New York State AFL-CIO and called on the state legislature to "save our jobs" and "save our industrial base."

Nearly 1,000 trade unionists gathered for a noon demonstration putting state legislators on notice that their jobs will be on the line unless quick action is taken to revive the state's shrinking manufacturing industries.

State AFL-CIO President Edward J. Cleary urged state leaders to "provide for economic development throughout the state, so we can fill the void left by the hundreds of plant closings over the past few years" and to establish safeguards to protect workers from "hostile foreign competition in our domestic markets."

"If Washington won't act, we must," he declared.

Cleary dismissed claims that thousands of new jobs are available in the service sector, arguing that at the hourly minimum wage of $3.35, those jobs "leave $134 per week before taxes with which to house, clothe, educate and feed a family."

"We are witnessing the birth of a new impoverished society," Cleary declared, charging that the nation is creating a large class of families destined to live just below the poverty level. "The American dream has given way to the American tragedy."

Joseph Sciotti, president of the Steelworkers Local 2478, agreed, stressing that "not everybody can be a doctor or lawyer. It's these manufacturing jobs or poverty for most of us."

President Rand Connell of the Public Employees Federation blasted the planned layoff of 1,100 state Labor Dept. workers. "The very people who are needed now" to help job seekers and to distribute benefits "are being laid off next month," he charged.

Lt. Gov. Stanley Lundine outlined a $20-million initiative proposed by Democratic Gov. Mario Cuomo that would help retrain workers, develop new industries and make older industries more competitive.

Other speakers included President Ernest LaBaff of the Aluminum, Brick & Glass Workers; Sec.-Treas. Jack Sheinkman of the Clothing & Textile Workers; USWA District Director Norbert Liss, Regional Directors Louis Thomas of the USWA and Tom Fricano of the Auto Workers and President Sal Ingrassia of Electronic Workers District 3.

OSHA fines put low value on life

'Petty cash' penalties follow investigations of fatalities

Continued from Page 1

labor and public pressure, brought in focus the possibility that employers were not keeping accurate safety records. OSHA eventually found widespread recordkeeping problems and in a highly publicized action in 1986, OSHA assessed a record $1.37-million penalty against Union Carbide Corp. for 221 safety violations, including 129 willful record-keeping violations each assessed at the $10,000 maximum. The company is now trying to get the fine reduced before it pays.

In contrast, Virginia's job safety agency recently called for a $900 fine against Avtex Fibers Inc. of Front Royal, Va., for a death resulting from a serious safety violation. The firm, whose 1,300 employees are represented by Clothing & Textile Workers Local 371-T, was also told to enforce a regularly scheduled maintenance program on the type of equipment involved in the accident.

Worker deaths continue in part because federal and state government funding cutbacks for job safety programs. At the federal level, the number of OSHA inspectors has dropped severely under the Reagan Administration. The fiscal year 1988 budget request submitted in January seeks a $15-million increase—which would return its budget to the level of the Carter Administration funding.

Paper tiger

In addition, federal OSHA has set a pattern of inspecting just job safety records rather than doing wall-to-wall inspections. When it does issue citations, it usually groups several violations under one citation. Companies often get their fines reduced or wiped out following a consultation with OSHA officials or on appeal to the Occupational Safety & Health Review Commission.

In the Avtex case, Charles Samborsky, head of the plant's acid-recovery department, was killed last Nov. 11 after he was sucked into a pressurized tank that imploded while he was attempting to make repairs.

Avtex was cited by Virginia OSHA under the general duty clause requiring employers to maintain a workplace free from hazards. Samborsky's death was one of three at the plant in a five-week period.

Robert Kent was killed when a bale of pulp fell on his forklift. He reportedly had stuck his head through the protection cage bars. In the third accident, supervisor Clarence Conard died when overcome by fumes. He reportedly was not wearing a safety harness or a fresh air mask when the accident occurred.

Herbert Easton, business agent of the ACTWU local, said that since the accidents the company has held safety meetings with union members and has accepted "some of our ideas on improving safety. I feel the plant is now doing its part."

Easton, who sat in on meetings between Virginia OSHA and company officials, said he doubted citations would be issued against Avtex in the other worker deaths.

OSHA can and does on occasion refer its worker death findings to federal prosecutors for possible criminal prosecution.

And in Chicago two years ago, a Cook County court handed down 25-year murder sentences to three executives of Film Recovery Inc. for the death of a worker exposed to open vats of cyanide.

Ongoing investigation

OSHA has since referred to the U.S. attorney's office for possible criminal prosecution its investigation of a fatal accident that occurred Apr. 23, 1985, involving Kenny Construction Co. Inc. of Wheeling, Ill., a suburb of Chicago.

There, a foreman died of asphyxiation after he and another worker were lowered in a cage into an unventilated 20-foot shaft. The worker and three others, members of Laborers Local 2, were felled by a lack of oxygen in the subsequent rescue attempt, but all survived.

In that case, OSHA cited Kenny Construction with several serious and willful violations, and noted the firm "has an extensive history of similar violations of OSHA safety standards." The company has appealed those citations to the OSHRC.

Chrysler safety penalty reduced

Chrysler Corp. will pay a $295,000 fine for failing to keep accurate worker injury records at its assembly plant in Belvidere, Ill., along with $10,502 in penalties for similar violations factories in Delaware and New Jersey.

The record fine stems from a settlement Chrysler worked out with the Occupational Safety & Health Administration.

OSHA initially assessed Chrysler with a $910,000 fine for 182 instances in which worker injuries were not recorded in company records as required by federal regulations. Many of the injuries were of a "serious nature requiring medical care and in some cases surgery."

Chrysler, while not admitting it was guilty of the infractions, said it was paying the reduced fine to avoid "further litigation or expense."

An OSHA inspector investigating a worker death at the Belvidere plant initiated the record-keeping probe after becoming suspicious about the plant's low injury rate.

The agency has cited several other companies since then for record-keeping violations, including USX Corp., Monsanto, Fina Oil and Union Carbide Corp., against which it proposed a record fine of $1.4 million. Union Carbide is still contesting those charges.

Administration cribs on food stamps for strikers

Families of strikers are still being denied food stamps because the Reagan Administration has appealed a U.S. district judge's decision that the 1981 law disqualifying them from benefits is unconstitutional.

Until the Supreme Court passes on the issue, the Agriculture Dept. is only authorizing payment of food stamps to families of strikers who are members of the unions that were parties to the original lawsuit, the Auto Workers and the Mine Workers.

Even though the UAW and the UMW won the case in the lower court, they have had to put up a $400,000 bond to guarantee repayment to the government if the Supreme Court overturns the decision rendered last November by District Judge Louis Oberdorfer.

UAW Attorney Richard McHugh said it may be another year before the Supreme Court issues a decision in the case.

The political honeymoon that a conservative-dominated Congress gave to President Reagan when he first came to office led to adoption of the anti-union amendment to the food stamp law.

Congress had previously rejected attempts to disqualify needy households from food stamps if a member of the family was on strike. But in 1981, it rubber-stamped an Administration budget package that changed dozens of laws—including the food stamp law.

The "savings" to the government was relatively tiny since strikers don't qualify for food stamps until their resources are largely exhausted and their family income has dropped below the cutoff level.

Nevertheless, it was a way to take a kick at unions. And as the court decision noted, the effect of the law was to pressure a worker into abandoning a strike by penalizing "other members of his household, including infant children and the dependent elderly." A worker who quits a job is treated better than one who exercises his right to strike, the judge observed.

When it chose to appeal the verdict, the Agriculture Dept. opposed any easing of its anti-striker rule pending final action by the Supreme Court until the unions that brought the case agreed to repay the government for the cost of any food stamps given to families of striking members if the law is eventually upheld.

The law banning food stamps to strikers, which remains in effect until the Supreme Court acts, allows food stamps to be paid to workers who were locked out by their employers, as was the case in the USX dispute, and to households that had qualified for food stamps on the basis of need before a strike.

Concert finale led by Joe Glazer, left, and John Handcox, right.

California labor heritage gala has 'em singing in the streets

Santa Cruz, Calif.—The united voice of labor was raised in song at the three-day Western Workers Labor Heritage Festival that ended with a rollicking concert.

The festival, sponsored by the Santa Cruz County AFL-CIO, focused on how the arts and labor are intertwined. There were displays, workshops and demonstrations on theater, poetry, oral history, writing, painting and photography.

But the main attraction was music and the festival brought a number of noted labor troubadours. Joe Glazer, director of the Labor Heritage Foundation was the keynote speaker for the opening activities, but most of his notes were musical, setting the mood for the Jan. 16-18 weekend.

The festival was the idea of Letter Carrier Jimmy Kelly that had been spawned at last year's labor song fest at the George Meany Center for Labor Studies in Silver Spring, Md.

The weekend's activities also included a tribute to Martin Luther King Jr. whose writings and speeches were read during the finale. Earlier, workshops were held in the civil rights leader's teachings and festival participants joined in a memorial parade through downtown Santa Cruz, singing civil rights and labor songs.

Jack Henning, executive secretary-treasurer of the California AFL-CIO, told the concert audience and performers, "In a movement that must concentrate on immediate objectives, it is easy to lose the vision of the great goals that lie beyond. But this kind of activity provides the movement with an infusion of the liberal spirit so essential to union militancy."

Labor spirit

California AFL-CIO President Al Gruhn noted that he was starting his 53rd year in the labor movement. "This group here has taught me to sing. I've spoken and preached the labor movement and I'm going to be singing it to you tonight," he declared.

Indeed, everyone who wanted to got a chance to sing. On the festival's final day, participants were divided into groups to rehearse for the finale. It included excerpts of "Lady Beth," a play based on the personal experiences of Steelworkers who were thrown out of work when Bethlehem Steel Corp. shut down its blast furnace in Vernon, Calif. It was performed by members of the Theater-Workers Project which has performed the drama before audiences across the country, winning critical acclaim and support.

John Handcox sang "Roll the Union On," which he wrote nearly a half century ago when he was helping to organize the Southern Tenant Farmers Union. Earl Robinson, who wrote the music for "Joe Hill," sang another of his songs—"I Dreamed of Martin Luther King."

Music resources

Workshops, held throughout the weekend, included women's work songs, how to start a labor singing group, the basics of oral histories, using library resources, the use of theater to further labor goals, writing about work and unions, and dramatizing oral histories. Other workshops focused on songs from the civil rights movement, from the Kaiser strike and how to get labor music into the union.

With singing and shouting, humming and strumming, labor's message went out tunefully and at the same time, added several thousand dollars to the Watsonville strikers' relief fund. The Watsonville walkout involves about 1,000 members of unaffiliated Teamsters Local 912 who have been picketing for 16 months against Watsonville Canning & Frozen Food Co.

Rep. Sala Burton dies, staunch ally of labor

Rep. Sala Burton (D-Calif.), a staunch ally of America's workers and their unions, died of cancer Feb. 1 at the age of 61.

She was elected to Congress in a 1983 special election from the San Francisco district that her husband, Phillip Burton, had represented for nearly two decades until his death. Both Burtons, who had met at a Young Democrats convention, were leaders in liberal and civil rights causes.

Sala Burton, who was born in Poland and came to the United States in 1939, believed strongly that "politics is everyone's business."

She compiled a rare 100 percent "right" record on the AFL-CIO's voting record during her tenure in Congress. When illness kept her from the formal swearing-in ceremony at the start of this session of Congress, the House passed a special resolution authorizing the chairman of the California delegation, Rep. Don Edwards, to administer the oath at her home. She entered the hospital the next day.

Parental leave guarantees gain momentum in Congress

A labor-backed parental and family leave bill that was stalled in the last Congress has been reintroduced with 72 cosponsors in the House, bipartisan support in the Senate and strong backing from a broad spectrum of organizations.

The AFL-CIO and a host of affiliates endorsed the bill at a Capitol Hill news conference, along with representatives of women's groups, civil rights organizations and church bodies.

Representatives Pat Schroeder (D-Colo.) and William L. Clay (D-Mo.), the principal sponsors in the House, voiced optimism that the new Congress will be receptive to the measure's goals.

Sen. Christopher J. Dodd (D-Conn.) said the Labor & Human Resources subcommittee he heads will hold a Feb. 19 hearing on a similar bill he is co-sponsoring with Sen. Arlen Spector (R-Pa.). The House Subcommittee on Labor-Management Relations, which Clay heads, has scheduled a Feb. 25 hearing.

Family leave

While there are some differences, both bills would allow employees to take unpaid family leave of up to 18 weeks over a 24-month period to care for a new child or for a seriously ill child or parent.

Another major provision would allow up to 26 weeks of unpaid leave when a serious health conditions keeps an employee off the job. The right to time off would apply equally to men and women.

A company would be obligated to continue any health insurance coverage for an employee during such a leave and to reinstate the worker to the same or equivalent job.

"Passage of the Family & Medical Leave Act would help the United States catch up to the standard most other countries achieved long ago," the AFL-CIO said. It suggested that "members of Congress who like to talk about encouraging family values" should "stand up and do it" by supporting the bill.

Decent action

"Millions of mothers and a great many fathers have found it necessary to take time off from work—without pay—to care for a new child or a seriously sick one," the federation said. The least that a decent society can do, the AFL-CIO insisted, is to make sure that the worker has a job to come back to and doesn't lose health care benefits in the meantime.

The AFL-CIO noted that most union contracts provide some form of parental and medical leave rights, "usually with at least some pay and continued insurance coverage." But millions of workers are without any such protection and "the AFL-CIO is going to do all in its power to persuade our legislators to move in that direction."

Leading employer groups served notice that they will fight the legislation, as they did in the previous Congress. President Alexander B. Trowbridge of the National Association of Manufacturers issued a statement declaring that "employers, not government, are in the best position to decide the type and scope of benefits to be made available to employees."

ATU members vote on pact with new Greyhound buyer

Some 7,500 Amalgamated Transit Union members are voting by mail ballot on a tentative contract reached Feb. 3 with BusLease Inc., a Dallas-based investment group that is buying Greyhound Corp. The accord, strongly recommended by the union's Amalgamated Council of Greyhound Local Unions, will provide job security for most of the members.

The council endorsed ratification of the proposal package by a 21-3 vote. ATU President James La Sala said the package is "concessionary," but stressed that intense bargaining provided for continuation of the existing pension and health-welfare funds.

Job security is assured throughout the agreement for those members with five or more years at Greyhound, he said.

The proposal will permit longer routes for drivers, but the mileage rate they receive reportedly will be less than the 34 cents a mile that was rejected by the members in early December when Greyhound made its final offer.

La Sala indicated that hourly workers—those in clerical, terminal, telephone and maintenance jobs—would receive at least the same rate they currently do, and in some cases more.

The sale of Greyhound to BusLease Inc. for $350 million is expected to be completed by Mar. 19. BusLease is headed by Fred G. Currey, a former chief executive officer of Trailways Inc. Currey said he will recognize the union if the agreement is ratified.

La Sala, ATU Greyhound Council President Domenic Sirignano and other union officers worked out the tentative package in a series of bargaining sessions that began in early January.

ATU members struck Greyhound in 1983 for seven weeks before accepting a new contract that cut pay by 11.8 percent. That three-year package expired Oct. 31, 1986, and the Greyhound employees have been working under a day-to-day contract extension since then.

After ATU members rejected Greyhound's final offer, an agreement was reached on extending the existing contract for three months, but before a membership vote could be tallied, Greyhound announced the sale of its bus lines to Bus-Lease.

C-Span network to cover council meeting

The C-Span public affairs network will broadcast President Lane Kirkland's news conferences and other highlights of the AFL-CIO Executive Council meeting which opens Feb. 16 in Bal Harbour, Fla.

A C-Span television crew will tape Kirkland's daily press briefing as well as news conferences of council guests Senate Majority Leader Robert C. Byrd, House Speaker Jim Wright and Labor Sec. William Brock.

The public affairs network also plans to cover meetings and news conferences held by affiliated unions. The federation segments will be broadcast on Feb. 17 at 7 p.m. and Feb. 18 at 1 a.m. EST.

C-Span's 24-hour coverage of congressional proceedings and other public events is carried by 2,400 cable systems and is viewed by more than 26 million families nationwide.

Work-family issues focus of March forum

The AFL-CIO will be a major participant in a two-day conference on the conflicts between work and family responsibilities to be held Mar. 30-31 in Washington. It will join representatives of government, business and community groups in examining the concerns of today's working parents.

The conference, titled "Work & Family: Seeking a New Balance," is sponsored by the Bureau of Labor-Management Relations of the Labor Dept. in cooperation with the AFL-CIO and the National Association of Manufacturers.

The AFL-CIO Executive Council last year expressed organized labor's longstanding commitment to improving family life, stressing that strengthening the family is "at the heart of the labor movement's long struggle to raise wages and living standards, to democratize education, leisure and health care, to broaden individual opportunity and secure dignity in old age."

Family goals

The council emphasized the need for a broad range of federal actions and variety of programs developed through collective bargaining. These include universal health care, full employment, shorter workweek, increased minimum wage, improved jobless insurance, a national program to make day care available to those who need it, parental leave protections, and restoration of funding for family-related programs that have been cut under the Reagan Administration.

Organizers of the conference point to the dramatic changes that have made the two-earner family the nation's norm and boosted the number of single-parent families to one in four as reasons for initiating new employment policies to reduce the strain between work and family roles.

Panel discussions the first day will focus on family and workplace changes, alternative work schedules in the private and public sector, and new directions in collective bargaining and labor-management relations.

Discussion panels scheduled for the second day will examine parental leave, child care, elder care, employee/family assistance programs and the social and economic costs and benefits of programs aimed at improving the work-family relationship.

Exploring problems

Participants will view a Bureau of National Affairs documentary, "Work & Family: Walking the Tightrope," that examines innovative programs that address worker concerns at private and public workplaces.

AFL-CIO Sec.-Treas. Thomas R. Donahue will be the luncheon speaker during the first-day session. Other labor speakers and panelists are Federation Vice Presidents John Sweeney of the Service Employees, Joyce Miller of the Clothing & Textile Workers, Barbara Hutchinson of the Government Employees and Morton Bahr of the Communications Workers. Also scheduled to participate are Actors' Equity President Colleen Dewhurst, Office & Professional Employees President John Kelly and professional staff from the federation and affiliates.

Import flood erodes industrial jobs

1986 foreign trade deficit surges to record $170 billion

Continued from Page 1

In the overall trade picture for December, imports fell to $29 billion from $38 billion a month earlier—a drop of 23 percent—with exports declining $200 million to $18.4 billion.

In the six years of the Reagan Administration, the merchandise trade deficit has more than quadrupled, from $40 billion in 1980 to the record-shattering $170 billion last year, Anderson pointed out. The turnaround in manufactured goods was even more dramatic, as the United States went from a surplus of $17 billion in 1980 to a staggering deficit of $145 billion last year, he noted.

Electronic Workers President William H. Bywater said the record-breaking deficit "underscores the need for immediate passage of a strong trade bill that saves jobs and enables America to compete on even terms."

To "make America the trading power it can and should be," Bywater called for measures to require the President to act against countries that engage in unfair trade practices, that bar imports from nations that violate labor rights and that aid U.S. workers and communities devastated by imports.

In the footwear industry alone, imports during 1986 soared 11.6 percent above the 1985 level of 843 million pairs of shoes, the Footwear Industries of America reported. It pointed out that foreign-made shoes have now captured 81 percent of the U.S. market.

While footwear exports increased slightly for the first time in several years, domestic production continued to fall and 70 factories were closed. Unemployment in the footwear industry was 15.4 percent last year, the industry group noted.

Some economists have pinned their hopes for a decline in the trade gap on the falling dollar, which earlier had dropped sharply against the Japanese yen and the German mark and declined slightly against the currencies of Korea, Taiwan and other countries.

But that did not improve the trade deficit with the nation's major trading partners. America's import-export gap with Japan hit $59 billion last year, up 18 percent from 1985 and 400 percent since 1980.

Gap widens

The U.S. trade gap also widened from the year-ago period with Germany, by 33 percent; Taiwan, 23 percent, and Canada, 4.5 percent.

And while the Commerce Dept. reported that import prices rose 9.1 percent in the final quarter of 1986, economists feared that even higher import prices will not dramatically change the nation's trade picture, because many products that Americans buy are no longer manufactured here.

In other trade developments, Auto Workers President Owen Bieber called Japan's decision to maintain voluntary limits on its auto exports a positive step, but insisted that additional measures are needed to reduce Japan's "huge and growing surplus" in automotive trade.

Under the voluntary restraint agreement of the past six years, Japan can export up to 2.3 million autos to the United States through March 1988.

The UAW had urged the Japanese to reduce imports below that level, calling the trade surplus in autos "a critical element in the overall trade crisis facing the nation."

Bieber called on Japan to "open its home market to U.S. parts suppliers" and stressed that Japanese assembly operations in the United States "must source far more parts and materials from U.S. firms."

Kirkland presses Congress to pass 'effective' trade bill

Continued from Page 1

imbalance, Kirkland noted, U.S. trade in manufactured goods would not have gone from a surplus of $17 billion in 1980 to a deficit of $145 billion in 1986.

Kirkland spoke of the nearly 8 million Americans without work, and the millions of others taking home less pay. Yet "the government's response to these problems has been one of studied indifference," Kirkland protested.

He expressed concern at the slippage in the American standard of living as jobs wiped out by imports are replaced by low-wage service jobs. Unemployment rates don't reflect the pay cuts taken by most trade-displaced workers when they finally find other work, Kirkland noted.

Kirkland praised the House for having included in its trade bill last year a denial of trade concessions to nations that do not comply with internationally recognized labor standards.

Worker rights

"The AFL-CIO strongly believes that competitive advantage in trade should not be derived from the denial of the right to freedom of association, the refusal to insure a safe work environment, the absence of acceptable standards for minimum wages, the exploitation of child labor or other such reprehensible practices," Kirkland said.

Kirkland noted that the modest steps the Administration has taken to offset unfair trade practices by other nations came only after prodding by Congress and have had only a slim impact on jobs.

As for assertions that effective action to deal with the trade deficit would "feed protectionist sentiment," Kirkland retorted: "The sentiment's not the problem. The trade deficit is."

American workers are willing to help fair employers become more "competitive," Kirkland said, providing sacrifice is shared and competition doesn't become synonymous with wage cuts.

Community safeguards

Certainly laws that require clean air and water, protect workers against hazardous substances, ban child labor and protect collective bargaining could be interpreted as making the United States "less competitive," Kirkland noted.

He served notice that the trade union movement will fight any attempt to roll back the clock in the guise of competitiveness "with all the blood that's in us."

Rostenkowski said the two days of full committee hearings will be followed, if necessary, by subcommittee hearings dealing with specific elements of the trade package.

Other House committees share jurisdiction over sections of the trade bill, but the Ways & Means Committee has the leading role.

The House leadership signaled the priority status of the trade bill by giving it the low-number designation of H.R. 3.

The two bills ahead of it have already been acted on. H.R. 1 is the clean water bill that Congress has just repassed over President Reagan's veto. H.R. 2 is the highway and mass transit bill that has already passed both bodies and is awaiting a House-Senate conference.

Seeger to join Radio Free Europe

Murray Seeger

AFL-CIO Information Director Murray Seeger will leave the federation staff in March to become director of corporate affairs for Radio Free Europe/Radio Liberty.

A veteran journalist, Seeger joined the AFL-CIO staff in January 1982 after ten years as a newspaper correspondent in East and West Europe.

AFL-CIO President Lane Kirkland said Seeger "brought a high degree of professionalism" to the federation's Dept. of Information. "He improved and strengthened our communications program and set up our television institute. We are sorry to see him leave the labor movement, but we understand the attraction of returning to the field of international journalism."

In his new position, Seeger will be in charge of press, governmental and private organization contacts for RFE/RL, which operates radio stations and broadcasts news and information to Eastern Europe and the Soviet Union. Seeger will be based in Washington.

Shipbuilders ratify Ingalls pact for 8,800

Pascagoula, Miss.—New three-year contracts covering 8,800 members of 11 unions at Ingalls Shipbuilding were ratified two days before existing contracts expired. The agreements improve medical and pension benefits and provide lump-sum payments.

The largest Ingalls' agreements cover 6,800 production workers represented by the nine unions in the Metal Trades Council and 1,500 members of the Electrical Workers. The Machinists represent a small unit of technicians and the Office & Professional Employees contract covers about 500 clerical workers.

Lump-sum "productivity incentive payments" are included in each year of the contract. A $1,000-payment was made to all workers on the payroll as of Feb. 1. In 1988, payments will range from $500 down to $250, depending on the number of hours worked. The final lump-sum payment will be made in February 1988. Wages were frozen at $11.28 an hour and the scale for new hires, currently a dollar an hour below journey rates will move to $3 below journeymen rates on Feb. 1, 1988.

Medical coverage

Sickness and accident benefits will be improved by $5 a week each year, rising to $145 in the third year. Surgical benefits, out-patient coverage and hospital room rates were improved, and major medical benefit limits were raised from $250,000 to $300,000.

The pension benefit formula was sweetened for future retirees by improving annual payments from 50 percent to 60 percent of the total deposits of pensioners who retire at age 65.

Unions in the Metal Trades Council are the Boilermakers, Carpenters, Laborers, Machinists, Operating Engineers, Painters, Plumbers & Pipefitters, Sheet Metal Workers and the unaffiliated Teamsters.

Four get degrees in labor studies at Meany Center

Silver Spring, Md.—Four more trade unionists have graduated from the George Meany Center for Labor Studies, bringing to 103 the number of union graduates who have received degrees through a program run in cooperation with Antioch College.

At commencement ceremonies, President Susan Bianchi Sand of the Flight Attendants told the graduates, "the knowledge you have absorbed, the resources you have developed . . . will make a difference in the decisions you make."

The graduates are Michael R. Sherman of Plumbers & Pipefitters Local 42 in Norwalk, Ohio, and Jody Hinton Vick, assistant business representative of Electrical Workers Local 1547 in Juneau, Alaska.

Also graduating from Juneau was the recently named Commissioner of Labor for Alaska, James A. Sampson, formerly secretary-treasurer of the Laborers' Alaska District Council. The fourth graduate was Charles F. Traynor, a retired member of the unaffiliated United Transportation Union.

Meany Center bachelor degree graduates from left: James Sampson, Charles Traynor, Jody Vick and Michael Sherman.

Family affair

Young union supporter in Peoria, Ariz., joins a campaign by city workers to win a pay raise after an independent survey showed that Peoria workers were paid at least 15 percent less than employees in comparable jobs in nearby municipalities. The city council at first rejected recommendations for wage increases of 4 to 25 percent for workers in all job classifications. But just a week after State, County & Municipal Employees Local 3282 set up informational picket lines, the council reversed its vote and approved a pay hike. More than 200 city employees in job classifications ranging from librarians to truck drivers received wage increases.

Congress resolute in veto override of clean water bill

Continued from Page 1

the legislation enjoy such strong bipartisan support that the White House would be clearly tilting at windmills if it sought to force a cutback.

During the debate on the bill, Sen. Phil Gramm (R-Tex.) sought unsuccessfully to attach an anti-union amendment to curtail the worker protection provisions of Section 13(c) of the Urban Mass Transportation Act.

In a letter to senators urging its rejection, AFL-CIO Legislative Director Robert M. McGlotten said the Gramm amendment would take away the right of transit unions to negotiate "vital job protections and other work guarantees" when public transit agencies subcontract existing services to private operators.

The Democratic and Republican floor managers of the bill, Senators Alan J. Dixon (D-Ill.) and Alfonse M. D'Amato (R-N.Y.) opposed the Gramm maneuver and the amendment was defeated by a 70-30 vote.

The labor movement had also girded for an anticipated battle over an attempt to use the highway bill as a vehicle for reducing coverage of the Davis-Bacon prevailing wage law.

Last time

That's what happened last year, when the Senate adopted by a 49-46 vote an amendment by Sen. Steve Symms (R-Idaho) that would have raised the threshold for Davis-Bacon coverage from construction contracts greater than $2,000 to contracts exceeding $250,000. That amendment was dropped in a House-Senate conference, but other differences prevented final agreement on the legislation before Congress adjourned.

In the aftermath of the election that transformed a 53-47 Republican majority in the Senate to 55-45 Democratic control, Symms did not offer his anti-worker amendment this time around.

Both bodies adopted an emergency $50 million reshuffle of federal funds to provide assistance to America's homeless—another measure opposed by the Reagan Administration.

Radiation guidelines scored for 'too high' exposure limit

New federal guidelines on worker radiation exposures are "totally inadequate" and "merely a rubberstamp" of a questionable international standard, the AFL-CIO declared.

Federation safety specialist Margaret Seminario said that the proposed guidelines recommend an annual limit for workers exposed to ionizing radiation that is "just too high." The 5-rem yearly limit urged by the guidelines and the methodology used in arriving at whole-body exposure values will result in substantially higher dosage for some internal organs, she said. One rem is equal to about 20 chest X-rays.

Seminario noted that it has taken the 10 federal agencies a dozen years to develop the guidelines. They mainly mirror recommendations made in 1977 by the International Commission on Radiological Protection, she said, which raised serious concerns among scientists, occupational hygienists and the medical community.

The Environmental Protection Agency, which spearheaded the development of the guidelines, persisted toward "rubberstamping an international standard," Seminario stressed. As a result, the guidelines do not respond in any way to the serious concerns that have been raised.

The guidelines, formally approved by President Reagan, note that radiation exposure can cause cancer or abnormally effect fetuses of pregnant women. Once a cancer or a hereditary effect has been induced, "its severity is independent" of the exposures and thus "there is no completely risk-free level of exposure" in those cases.

Worker exposure to ionized substances can also cause radiation sickness syndrome, or death at high exposures. Lesser doses can affect the eyes, skin and fertility. It can also cause mental retardation in children who were exposed to radiation while in the womb.

Level of risk

A 1980 assessment of the 1.3-million American workers exposed to radiation found the average dose was two-tenths of 1 rem. At that level, the guidelines state, the increased risk of death from radiation-induced cancer is about 2 to 5 cases in 100,000—comparable to the risk of accidental death in the wholesale-retail industries.

Seminario stressed that if the majority of workers are exposed at level below 1 rem and only a few are exposed at 5 rems annually, demonstrating that exposures can be reduced for most workers, that should serve as the basis for reducing the exposure limit substantially.

She also questioned the use of a whole-body limit that averages internal and external exposures. Such a method will allow significant increases in the exposure limit for certain internal organs, she said.

Secretary-treasurers explore pressing issues at seminar

White Sulphur Springs, W.Va.—An annual seminar for secretary-treasurers of AFL-CIO affiliates brought 23 key officers here for four days of debate and discussion. The union leaders spent time in group sessions and one-on-one meetings, sharing problems, experiences and solutions.

In welcoming the participants, Executive Director Robert Pleasure of the George Meany Center for Labor Studies, explained that the program was intended as a forum to explore a wide range of practical and academic issues. The seminar, sponsored by the George Meany Center and developed by a committee of top union officers, continues the center's series of leadership and training programs for labor executives.

James Kennedy, executive assistant to AFL-CIO Sec.-Treas. Thomas R. Donahue, reported on some of the federation's newest initiatives. Under the procedure designed to delineate organizing responsibilities, 11 disputes have been resolved, all at the mediation stage, he said.

The expanding credit card service launched by the federation's Union Privilege Benefit Programs has won high praise from consumer financial experts, Kennedy noted. He said the cards are considered "easily the best buy in the nation" and unions representing 9 million members have already signed up for the program.

Other benefits soon to be available through the union privilege plan include a legal services plan and individual savings and investment accounts, Kennedy said.

The secretary-treasurers exchanged experiences with teleconferences that have been held by several unions. Presentations exploring TV conferencing were made by Larry Kirkman, executive director of the AFL-CIO Labor Institute of Public Affairs, and Phil Sparks, director of public affairs for the State, County & Municipal Employees.

In other presentations, AFL-CIO Legislative Director Robert McGlotten outlined labor's congressional agenda and COPE Director John Perkins discussed the nation's political outlook. Adam Klein of the Harvard Business School and the Trade Union Program led a session on financial and budget planning. Sam Zagoria, former member of the National Labor Relations Board, discussed the role of a neutral official in corporate and public organizations.

IBEW's McAlwee retires, Van Meter new PR chief

Mary Ann Van Meter has been named public relations director of the Electrical Workers and head of the IBEW Journal department. She assumed the posts on Feb. 1 when Robert W. McAlwee retired.

Van Meter, 54, an IBEW member since 1956, joined the headquarters staff in 1983 as an international representative.

McAlwee, 66, has served the IBEW since 1969 as managing editor of the Journal and public relations director. He also headed the union's library, archives and audio-visual department.

Which Side Is OSHA On?

IS THE Occupational Safety & Health Administration carrying out the mission assigned by Congress to assure by regulations and enforcement that employers provide a safe and healthful workplace?

That's a life-or-death question that Congress should be asking in the wake of the ideological assault on the entire concept of job safety standards by the President's Council of Economic Advisers.

The safety chapter of the report, spotlighted by the AFL-CIO News in last week's issue but largely ignored elsewhere, presented a chilling argument that job safety and health could be left to the natural workings of the marketplace.

Its incredible reasoning was that government regulations aren't really needed since employers already have a marketplace incentive to promote safety. Their incentive, according to this Administration's chief economists, is that firms would have to pay higher wages to get workers to take dangerous jobs.

It honors the argument more than it deserves to point out that low-paid, exploited workers have been the most common victims of unsafe and disease-breeding working conditions. In what world, one wonders, do President Reagan's advisers live?

Such ideological garbage could be discounted if OSHA's performance provided reassurance that the agency charged with enforcement of the law was carrying out its mission conscientiously and effectively.

On the record to date, that assurance is sadly lacking.

DURING MOST of this Administration, OSHA has been headed by persons openly resistant to enforcement of the law and determined to roll back standards and enforcement wherever they could get away with it. But a new team has been in place long enough so that workers should be seeing evidence, not just assurances, of a renewed commitment to OSHA's mission.

How many more deaths from grain elevator explosions will be needed to develop safety standards?

Is OSHA relying on the powers of the marketplace to compel use of fail-safe lockout devices to prevent the accidental restart of dangerous machinery?

How long does it take to complete a long-overdue expansion of "right-to-know" hazard communications standards?

What about more effective protection from all those deadly chemicals with long names that you might someday learn to spell—if you lived long enough?

Does OSHA's inability to justly penalize employers who had fatalities in their workplaces, reported in a Page 1 story in this issue, inspire confidence? Or does it raise still more questions?

We would like to believe that OSHA does not share the ideological idiocy of President Reagan's economic advisers. But on its record to date, it will take more than words to convince American workers that OSHA is back on their side.

We're still looking for the deeds.

More than Tinkering

CHANGES IN trade law and policy to provide timely and predictable relief to workers and industries injured by imports are long overdue.

America's trade laws must be strengthened to address new discriminatory trade practices. The denial of worker rights by our trading partners can no longer be ignored. The international debt crisis must be addressed, insuring that lenders accept their proper share of the burden.

Worldwide economic expansion, falling dollar exchange rates or successful negotiations are by themselves unlikely to achieve reduction of America's trade deficit.

The dollar has fallen for two years, negotiations don't deal with the real problems in manufacturing, and even if worldwide economic expansion took place, it doesn't follow that other nations would import more U.S. goods.

Congress must exercise its responsibility to defend the national interest. Tinkering with changes in trade law is not enough.

—From testimony by AFL-CIO President Lane Kirkland before the House Ways & Means Committee, Feb. 5, 1987.

Pollution

Washington Window

'Smoke and mirrors' trick stops working for Reagan

By Press Associates

It was sad, in a way. President Reagan, the political Wizard of Oz, used his State of the Union speech to try to spin the old magic. He tried the smoke and the mirrors and the thunder to show the American people he was still the wizard.

But reality had pulled back the curtain, exposing a once-popular President who had nothing left but worn-out platitudes.

It was as if he didn't know the voters rebuffed him last November and put Democrats firmly in charge of the Senate and the Congress as a whole.

It was as if no one told him that 53 percent of the American people believed he was lying when he claimed he knew nothing about the Iran-contra arms scandal, and only 33 percent said he was telling the truth. The New York Times-CBS News Poll said two-thirds of those who thought he lied about Iran thought he was lying about other matters as well.

It was as if, when he declared "the federal deficit outrageous," he did not realize he has been President for six years. In 1980, he attacked Carter's $60-billion deficit and now was attacking a $173-billion deficit of his own.

Dangerous situation

It is a dangerous situation for America to be in. A sitting President, in apparent good health despite his advanced years, and yet one who stubbornly refuses to face reality.

Recent public opinion polls may provide some explanation of why the voters chose Democrats for the leadership they now want.

On Reagan's handling of the economy, the Times-CBS poll in mid-January showed that only 49 percent approved and 41 percent disapproved. But the trend shows people are increasingly worried. Only 19 percent thought the economy would be better by the end of Reagan's term. A year ago, 30 percent thought it would be better. Two years ago, 42 percent thought that. Confidence is sinking.

People are most worried about unemployment. Of the Times-CBS national sample of 1,590 adults, 38 percent cited an economic issue as the nation's most important problem, up from 28 percent in December. Asked to specify the issue which most concerned them, 41 percent said unemployment; 27 percent, the federal budget deficit; 14 percent, inflation; 13 percent, foreign trade, and 4 percent, didn't know.

Economy worsening

A Washington Post-ABC News poll, also taken in mid-January before Reagan's State of the Union address, showed that 38 percent of those surveyed believe the economy is getting worse; only 23 percent see it getting better. The Post called it the most pessimistic reading since January 1983, when the nation was climbing out of the deep recession.

The Post-ABC poll showed a 56-39 percent majority saying that things "have gotten pretty seriously off on the wrong track."

The Post-ABC polls for February 1981, February 1986 and January 1987 showed rising support for increased spending on programs which help families. On loans and grants to college students, those calling for more spending rose from 22 percent to 34 percent to 46 percent. Day care for children of working parents who can't afford to pay rose from 38 percent to 44 percent to 57 percent. Medicare to help pay health care costs rose from 57 percent to 63 percent to 74 percent. Support to improve social security rose from 49 percent to 51 percent to 63 percent.

The people have moved far ahead of Reagan, who calls for excellence in education and cuts education aid; who calls for redoubled efforts against drug abuse and would cut the anti-drug program in half; who pledges never to negotiate with terrorists and then sells them arms.

MEMO FROM COPE

'New Right'—Gone Are its Glory Days

Recently, public television—which the right wing reviles as "too liberal"—devoted 1½ hours to a documentary called "The Conservatives." It traced the rise of today's rightist movement and leaders.

The program was a few years late. It was a prime time show about a movement whose "prime time" is behind it.

The right wing—the so-called "new right"—is weaker today than it was six, four or even two years ago. It is a movement that bulled into the political arena a dozen years back, scored quickly and heavily in electoral politics, peaked swiftly and is now plummeting almost with equal speed.

To say it is washed up is to overstate its problems. Many of its organizations and leaders will remain around. New groups and new leaders will emerge. It has people in important government positions. For now, it has plenty of sound and fury, but packs little punch. Evidence of this is abundant:

► In last November's elections, one of the safest places for a candidate to be was on the hit-lists of "new right" political committees, one of the riskiest on their "urgent re-elect" lists. The Republican Class of 1980 in the Senate, elected largely on the strength of right-wing PAC funding and organization, took heavy losses in 1986. Down the drain went Hawkins (Fla.), Mattingly (Ga.), the North Carolina seat won in 1980 by the late John East, Denton (Ala.), Abdnor (S. Dak.), Gorton (Wash.) and Nevada seat vacated by Bill Laxalt.

In House elections, major efforts by right-wing PACs to unseat up to 35 targeted Democrats failed utterly. In two open-seat Senate contests—Louisiana and Maryland—they drew a blank.

Thus, the wheel came almost full circle. A Senate controlled by a large margin by Democrats going into 1976, the first "new right" campaign, after 1980 elections shifted to GOP control, thanks to "new right" PACs. Six years later, the Senate is solidly back in Democratic hands, 55-45.

► Money, the mother's milk of the "new right" movement, no longer arrives in torrents at right-wing organizations and PAC offices. It has become—for now, at least—a relative trickle. This is evident from a late October 1986 comment by Kenneth Boehm, head of the Fund for a Conservative Majority. "It's been," he said, "a very bad year."

How bad?

The National Conservative Political Action Committee (NCPAC), the movement's pace-setting PAC in the early years, was able to pour $3.3 million into its effort to elect ultra-conservatives to the Senate in 1980. As of last fall, it was loaded down with $3.9 million debt. Christian Voice's PAC pulled contributions of little more than $10,000 in 1986 and is in hock for $197,000.

Senate Losses, Fading 'Star,' Disunity, Fund Drop Plague Movement

Conservative Caucus raised $220,000 of political money for 1984 elections, only $20,000 for 1986. The Free Congress PAC was down to $470,000 last year from its $2.2 million acme in 1982. Boehm's group, Fund for a Conservative Majority, still collected a substantial $2.5 million-plus. But that's less than half the $5.8 million of 1984.

It's worth mentioning, too, that even the lower sums in most cases are not clear money. For many of the "new right" PACs, collecting one dollar of political money often costs 90 cents-plus. Over-all their money remains impressive, but no longer overwhelming.

"There is no one to take Reagan's place in the right-wing pantheon. He has been the one public figure who could make the right-wing anti-government line sound not only plausible, but palatable, to a lot of the public. No one else they've got comes close."

► Coinciding with the decrease in political funds was a loss of political unity within the "new right." A couple of its major PACs tried and failed to defeat Sen. James Abdnor in a GOP primary, while others supported him. At the start of 1986, "new right" PACs were unified in the goal to defeat Democratic Sen. Alan Cranston in California. He was their Number One target. But some right-wing groups inaccurately viewed eventual GOP nominee Ed Zschau as too liberal and sat it out or supported a third-party candidate.

► Their 1970s unity is in a shambles, too, over the diminishing pie available to be cut up. Multi-million-dollar suits and counter-suits abound between right-wing Founding Father Richard Viguerie, who first developed the mailing lists that were so golden for a while, and other rightist groups. Some of them complain about the effectiveness and quality of Viguerie mailings. He complains they owe him a bundle for services rendered. As of early 1986, Viguerie was embroiled in eight lawsuits filed by creditors, had been forced to lay off much of his staff and was selling off his headquarters.

► Their "star" is fading and they are fading with him. President Reagan and the "new right" rose and are declining together. They needed one another. Their political fortunes were linked.

As evangelist Jerry Falwell said recently, "Conservatives owe everything we are and have achieved in the 1980s to one man—Ronald Reagan." If Reagan thought about it, he could respond: "It's been a two-way street, Jerry."

It was the "new right," then truly new, that made Reagan a major national political figure when it almost won the 1976 GOP presidential nomination for him over incumbent President Gerald Ford. It was the "new right" that helped keep Reagan and his issues out front—and he theirs—until he could be nominated and elected in 1980.

It was the "new right" and officials it helped elect, working with Reagan, who put through much of the President's program in the early years of his administration.

Now, Reagan is on the downhill side of his Presidency, both in time and effectiveness. His programs have never approached the popularity of his person. Today, with Who's-in-Charge-Gate, Reagan's personal standing is way down. (Even some of his right wing-friends have grown critical.)

There is no one to take Reagan's place in the right-wing pantheon. He has been the one public figure who could make the right-wing anti-government line sound not only plausible, but palatable, to a lot of the public. No one else they've got comes close.

An indication that they recognize this themselves is a recent effort by "new right" leaders, acting in concert, to get the President's soon-to-retire communications director, Pat Buchanan, to seek the GOP nomination in 1988. He declined. None of the present candidates unites them.

Thus, they'll go into 1988 split and fighting one another—some for George Bush for the GOP nomination, some for Jack Kemp, some for Pat Robertson, and with an agenda no longer reasonably contained but all over the map.

There will always be a right wing to contend with. There has always been. This latest incarnation—the "new right"—has been the most successful, and surely the best financed, best organized and most intelligently led and coordinated. But its glory days are behind it.

Still Enough Around To Perform Mischief

Although right-wing Senate ranks were riddled last November, they were not eliminated. There are still enough around to perform mischief.

The only truly marginal incumbent to survive was Steve Symms in Idaho. Winning with greater ease were Don Nickles (Okla.), Charles Grassley (Iowa), Jake Garn (Utah) and Robert Kasten (Wis.).

With them in the Senate remain a cluster of others. These are Malcolm Wallop (Wyo.), Phil Gramm (Tex.), Jim McClure (Idaho), Gordon Humphrey (N.H.), Jesse Helms (N.C.), Orrin Hatch (Utah), Bill Armstrong (Colo.) and Chic Hecht (Nev.).

That makes a baker's dozen. . . thirteen. Of these, only Hecht and Hatch face the voters in 1988. The 13 listed are those who have directly served—through lending their names to mailings and other activities—"new right" organizations and leaders, or been directly served by them with funding and organizational effort in campaigns.

There are, of course, other conservatives in the Senate with lesser, or no, real ties to the "new right" and who don't join the right-wingers' crusades with any gusto.

As Jesse Helms has shown repeatedly, he—as the out-front member of the hard-core right—with his colleagues can create aggravation beyond their numbers. They can, and do, filibuster. They can, and do, repeatedly tie up legislation with a stream of amendments unrelated to the proposals at hand.

The difference now, as a result of 1986 elections, is the Helms forces constitute a nuisance rather than a threat. It ain't perfect, but it's a big improvement.

What a Difference a Year Makes

A year ago, at the January 1986 meeting of the Republican National Committee, GOP leaders were riding high. They were confident they'd hold the Senate, confident realignment was imminent, confident voter support was shifting heavily their way, confident their President would retain his high popularity.

When they met again in January 1987, everything was bummed out. They'd lost the Senate, realignment never got here, their President had run out of teflon.

Worse still, latest polls showed Democratic resurgence among voters. In a mid-January Washington Post/ABC survey, voters', party allegiance split 37-26 percent for the Democrats, a sharp change from the 33-32 of last September.

When independents who lean toward one party or another were factored in, Democrats were up 52-44.

What a difference a year makes (something the Democrats might keep in mind, just in case they think they're home free).

Meanwhile—looking back on 1986 and ahead to 1988—GOP leaders have decided to abandon the anti-big government rhetoric and market-test "compassion" as the basis of their appeal to voters. At their meeting this month, they took note of strong public support, showing up in the polls, for the major federal people-helping programs—Social Security, Medicare and Medicaid, education, aid to the unemployed.

Responding to this public sentiment, talk of "compassion" by GOP leaders replaced the attacks against these programs that have been their staple in the Reagan years. "We are a sensitive, compassionate party," said Senate Minority Leader Bob Dole. Added GOP Chairman Frank Fahrenkopf, "Compassion is a word we should never be afraid to use."

Unfortunately, their own President's budget proposals pulled the rug right out from under them. Reagan sought further cuts in people-serving programs already deeply wounded during his presidency. He even proposed slashing nearly $1 billion from the "war on drugs" measure he signed less than three months ago with his pledge of a "total commitment. . .to fight the evils of drugs."

That's "compassion?"

Recount: 47-Vote Edge

Does one vote count?

Ask Rep. John Hiler (R-Ind.) and his challenger, Thomas Ward. Following a recount, Hiler was declared the winner by 75,979 to 75,932, a mere 47 votes out of 151,911 votes cast. The original tally had given Hiler a 66-vote margin.

Yeah, one vote counts.

AFL-CIO LEGISLATIVE ALERT!
PAGE 12

Somber welcome back

Steelworkers at USX Corp.'s Geneva Works in Orem, Utah, returned to work following a six-month lockout only to learn their plant is shutting down. Shortly after USWA ratified a back-to-work agreement, USX announced it would close four mills and lay off 3,700 workers. (Story on Page 3.)

Court condemns holdup of field sanitation rule

Brock ordered to act within 30 days

By Arlee C. Green

A federal appellate court branded the Labor Dept.'s 14-year stall on spelling out field sanitation rules for agricultural workers a "disgraceful chapter of legal neglect." It gave Labor Sec. William E. Brock 30 days to issue a final standard requiring farm employers to provide toilets, drinking water and other sanitation facilities for their workers.

The department's Occupational Safety & Health Administration has pussyfooted around the field sanitation mess since 1973, under both Republican and Democratic administrations.

Over the years, the U.S. Court of Appeals for the District of Columbia Circuit has ruled on several farm worker cases aimed at extracting an OSHA standard.

Its 2-1 decision is a vital step toward long overdue protections for more than a half-million farm workers who are exposed to communicable diseases and heat stress.

OSHA's own rulemaking record "demonstrates beyond dispute that lack of drinking water and toilets causes the spread of contagion, bladder diseases and heat prostration among farm workers," the court said, adding the agency's "resistance to issuing the standard has been intractable."

The court action was begun in 1973 by El Progreso, a now defunct farm worker group, and later carried on by the Farmworker Justice Fund.

Margaret Seminario, the AFL-CIO's chief industrial hygienist, said organized labor welcomes the decision. Although not directly involved in the legal action, the federation has supported the effort in legislative and regulatory activities.

"For years," she noted, "the public, Congress and the courts have felt that the field sanitation issue deserved action. Only the Labor Secretary and OSHA haven't felt it important enough to act."

There is nothing to be gained by further delay, Seminario stressed. "We hope that the Labor Dept. will finally bite the bullet and issue a standard," she said. "We would be outraged and appalled if the department appealed this decision or pressed for a re-

White House wants Congress to delay action on trade bill

By David L. Perlman

The Reagan Administration prescribed patience and delay in dealing with the nation's trade deficit crisis and offered to "cooperate" with Congress toward that end.

House leaders were notably unimpressed, however, and suggested that Congress is running out of patience with the Administration's job-destroying free trade policy.

The setting for the confrontation was the House Ways & Means Committee, which is trying to meet an April target date for bringing a comprehensive trade bill to a vote on the House floor.

Treasury Sec. James A. Baker III assured the committee that the Administration is pursuing a "different strategy" than last year, when it balked at any trade legislation and successfully pressured the Senate not to take up a House-passed trade bill.

This year, Baker testified, "we want to work with you." But Baker and U.S. Trade Representative Clayton Yeutter quickly made clear that the Administration's definition of cooperation has a few strings attached to it.

They explained that the President wasn't prepared to accept "protectionist" measures such as import surcharges, a mandatory requirement that foreign countries reduce trade surpluses with the United States, or any limitations on presidential "discretion" in whether to levy penalties authorized by law to remedy unfair trade practices.

Yeutter suggested that the House leadership abandon its "unrealistic" intent to bring a trade bill to an early vote. Its timetable, he complained, wouldn't allow time for through consideration of the trade bill the Administration will send to Congress within a few days.

Reagan proposal

Sources who have seen the Administration measure say the draft bill is nearly 2,000 pages long. Reportedly, it would tighten some anti-dumping provisions of the Trade Act, seek stronger safeguards against pirating of compact disc digital recordings, give the President still more discretionary powers and set the stage for a new round of worldwide trade and tariff negotiations.

According to published reports, it also proposes lifting a ban on importation of fur skins from the Soviet Union as a step toward improvement of East-West trade.

The House hearings, at which AFL-CIO President Lane Kirkland testified the previous week, came in the wake of another year of record-smashing trade deficits. Dur-

Jobless rolls above 8 million as U.S. economy marks time

By Candice Johnson

The government's official unemployment count climbed back over the 8-million mark in January, although the jobless rate held at 6.7 percent, the Bureau of Labor Statistics reported.

December was the only month since 1981 that the number of unemployed workers fell below 8 million, edging down to 7.9 million. Under the six years of the Reagan Administration, the nation's unemployment count has averaged more than 9 million, the President's Economic Report indicates.

AFL-CIO economist Richard Krashevski stressed that with unemployment at recession-levels throughout the six years of Reagan policies, the economy has been "marking time." The new jobs created in recent years pay just two-thirds or even less than the wages of manufacturing jobs that have been lost, he said, further weakening a sluggish economic picture.

Legal plan offers newest union benefit

By Gene Zack

The second phase of the AFL-CIO's Union Privilege Benefit Programs—low-cost legal services—is now in operation, joining the popular credit-card program available to workers whose unions subscribe to this service.

The plan provides a form of "preventive law"—making it easier for trade unionists to seek a lawyer's advice and get answers before situations turn into legal problems.

Although some organizations provide group legal assistance, these programs usually involve a membership charge or annual fees. But there are no such up-front costs under the federation's program. Instead, some of the legal services are free and others are available at reduced rates.

Moreover, members, their spouses and dependents are guaranteed that the services will be rendered on a strictly confidential basis. Although the lawyers will provide generalized information to participating unions, neither their names nor the details of their cases will be divulged.

Agreements in place

The Union Privilege Legal Service has already reached agreement with 325 lawyers across the country to assist trade unionists, and other law firms will be added in the coming months. Participating unions will provide members with the names of lawyers in their area.

Among the free services available under the program are a 30-minute consultation on any matter, a review of such personal transactions as leases, insurance policies and installment sales contracts. A follow-up letter or telephone call will be provided in those instances where a lawyer believes such a step will resolve a particular problem.

In more complex matters, union members will be charged only 70 percent of the participating attorney's normal fees, and the entire cost arrangement—including contingency fees in those cases where the client pays only if the lawyer wins a cash settlement—will be spelled out in writing.

2/14/87

Sen. Edward M. Kennedy assures Capitol Hill conference of support for IUE drive to save General Electric jobs. At podium is District 2 Vice President Peter diCicco. Seated next to Kennedy are IUE Sec.-Treas. Ed Fire and District 2 Sec.-Treas. Robert Scott.

Electronic Workers campaign to curb New England job drain

The Electronic Workers rallied support on Capitol Hill in a drive to stem the drain of jobs in New England caused by General Electric Co.'s systematic cutbacks and plant closures.

Meeting with congressional delegations and governors' representatives from Massachusetts, Connecticut, Rhode Island and Vermont, the IUE warned of a "declining employment pattern" being pursued by one of New England's primary employers.

In the last seven years, the union pointed out, GE has slashed employment in the region 25 percent. And new layoffs lie ahead. In the next two years, the company plans to eliminate the jobs of 3,500 more workers as it cuts back production at plants in Pittsfield, Lynn and Everett, Mass., and closes its Medford, Mass., facility.

All this has occurred during a period in which GE has piled up profits of nearly $10 billion a year, according to a study by the University of Massachusetts. Yet the giant electrical manufacturer has paid no federal income tax and has reaped tax refunds of $100 million, the study showed.

GE is now one of the five largest defense contractors, according to Dr. Frank Annunziato, author of the university study. Its share of government work doubled from $3 billion to $6 billion between 1981 and 1985.

"Clearly, GE is quite healthy financially," Annunziato emphasized, but it has not used either its large share of government contracts or its huge tax breaks "to help its workers or their communities. Corporate philosophies like the one being operated by GE's management are largely responsible for a decline in the American standard of living."

The IUE called for an end to GE's pattern of exporting jobs overseas. The corporation has moved a large share of its assembly work to the low-wage "maquiladoras" in Mexico and has built new plants in Greece and other European nations.

"It's not fair and it's not right for the company to move work away from our organized locations and older communities that today need help more than ever before," in order to set up shop in "unorganized locations and overseas," IUE Sec.-Treas. Edward Fire told the Capitol Hill session.

Layoff aid needed

Although the union's long-range goal is to restore jobs to the area, its immediate concern is to provide aid to members "who will be impacted by the first wave of layoffs," IUE District 2 President Peter diCicco told congressional leaders. This should include re-employment assistance centers and job training programs, he emphasized.

Pledges of support came from Senators Edward M. Kennedy (D-Mass.), John M. Kerry (D-Mass.), John Chaffee (R-R.I.) and Claiborne Pell (D-R.I.), and Representatives Silvio Conte (R-Mass.), John Mavroules (D-Mass.) and Bruce Morrison (D-Conn.).

Joining in making the Capitol Hill presentation of the job crisis caused by GE's policies were President Arthur Osborn and Sec.-Treas. George Carpenter of the Massachusetts AFL-CIO, Rhode Island AFL-CIO President Edward McElroy, Vermont AFL-CIO President Robert Clark and Connecticut AFL-CIO Sec.-Treas. Barry Williams.

Not pay cuts

Upgrading skills key to competitive trade

Better education and job training programs, not pay cuts, can help make American-made goods more competitive, the AFL-CIO stressed at House hearings.

Research Director Rudy Oswald welcomed a bill introduced by Rep. Augustus F. Hawkins (D-Calif.), noting that "it builds upon existing proven programs, and expands them to more effectively deal with today's problems in literacy training, vocational education, and mathematics, science and foreign language training."

The Education & Labor Committee, which Hawkins heads, is holding hearings on the broad area of "creating a competitive economy."

An earlier version of the Hawkins bill was included in the comprehensive trade bill that the House passed in the last Congress, but which died in the Senate. It's needed more than ever, Oswald said, whether as part of a trade package or as a free-standing bill.

Oswald praised a provision for a new trade-impact assistance program that would provide income for workers undergoing retraining who are not receiving either unemployment insurance or trade adjustment assistance.

Reagan's posturing

He endorsed the concept of an array of complementary measures to bring down the trade deficit and contrasted the Hawkins bill to the posturing of the Reagan Administration.

President Reagan's State of the Union address called for "increasing investment in human and intellectual capital" to improve competitiveness, Oswald noted. But the President's budget, he stressed, "does just the reverse" and "substantially cuts funds for education."

Federal grants for vocational education would be completely eliminated under the President's budget.

Oswald urged the need for legislation to require advance notice of plant closings and for expanded assistance to displaced workers and their communities.

Such a program, he said, should be an add-on to the existing displaced worker program funded under Title III of the Job Training Partnership Act and "not a substitute for an effective trade adjustment program."

It should involve "more active participation by labor and management" than the present program, Oswald urged.

Labor's role

Unions are already working in partnership with industry and local governments to address education and retraining problems, Oswald told the panel.

Many of the training initiatives were shaped at the bargaining table, Oswald noted, such as the telephone industry career development program negotiated by the Communications Workers and the Electrical Workers.

The high level of unemployment resulting from the trade deficit is just part of the damage report, Oswald told the committee.

He cited a recent study done for the congressional Joint Economic Committee showing that the new jobs added to the economy have been largely at the low end of the wage scale. Of the job losers who found jobs, most took pay cuts.

The need for better education and training of America's workers is aggravated by the trade crisis, Oswald said, and would exist even if international trade problems "were to be solved overnight."

Productivity and competitiveness are directly linked to the quality of the workforce, Oswald testified. It is America's people "who are the foundation and the source of economic achievement," he declared.

Research Director Rudy Oswald testifies for education-oriented competitiveness bill. Witnesses included General Electric Vice President Frank Doyle, center, and Boston Federal Reserve Bank Vice President William Spring.

Steelworkers hit benefit cutoff to Kaiser retirees

Los Angeles—Steelworkers' attorneys have asked a federal district court here to compel the Kaiser Steel Corp. to live up to its contract obligations and resume payment of health insurance premiums for some 4,300 retirees.

The company, which is no longer in the basic steel industry, sent letters to pensioners and about 1,000 active employees located in at least four states saying that it doesn't have the cash to pay the medical insurance premiums.

"Tragically, the once mighty Kaiser Steel does not have the financial ability to continue funding your medical benefits," company chairman Bruce Hendry wrote.

The letter told retirees and workers that they had 30 days to convert their insurance to self-paid policies being offered by the company's insurance carriers.

Steelworkers' officials, representing their retired members, charged in court that this is both a breach of contract and a violation of the ERISA pension protection law. The company owns real estate property, conducts some steel fabricating operations, and owns coal mines in New Mexico and Utah.

The many-faceted Kaiser operations, once an industrial giant, were separated some years ago and Kaiser Steel has no corporate ties to Kaiser Aluminum or other enterprises bearing the Kaiser name—including the Kaiser Permanente Medical Care plan which provides health care coverage for many union retirees and workers in California.

U.S., Japan unions stress joint values

Tokyo—Economic policies that will promote jobs, purchasing power and economic growth were urged by trade union federations of the United States and Japan as the basis for a healthier two-way trade relationship.

That was the thrust of a joint statement signed by officers of the AFL-CIO and the Japanese Confederation of Labor (Domei) following a two-day meeting that has become an annual tradition, alternating between the United States and Japan.

Both labor movements share a commitment to an industrial policy keyed to a balanced international economy, stable currency and curbs on "the irresponsible behavior of multinational corporations," the joint statement noted.

The exchange of views came in the wake of a $59 billion U.S. trade deficit with Japan last year, up 18 percent from the previous year and four times the 1980 level.

"Japan must further open its market to foreign goods and services," the statement declared. It said wage increases and shorter hours for Japanese workers would both strengthen Japan's society and increase domestic demand for goods and products.

The AFL-CIO was represented at the 18th annual meeting of the two labor federations by Sec.-Treas. Thomas R. Donahue, International Affairs Director Tom Kahn and Charles Gray, executive director of the Asian-American Free Trade Union Institute. Domei President Tadanobu Usami headed the Japanese federation's delegation.

Job creation goal

Their statement criticized the reliance of both the U.S. and Japanese governments on "purely market policies." It noted with concern the weakening of manufacturing industries and unproductive use of money. Labor's goal, it said, should be job creation "through sustained economic growth in both developed and developing countries."

Both federations reaffirmed their support of international trade union cooperation through such bodies as the International Confederation of Free Trade Unions, the International Labor Organization and the Trade Union Advisory Council (TUAC) of the Organization for Economic Cooperation & Development.

They stressed a commitment to democratic values and human rights everywhere in the world—including the developing nations, the battle against apartheid in South Africa, and continued support for Poland's outlawed Solidarnosc movement.

The meeting followed the regular Domei convention, which Donahue addressed. A highlight of the convention was approval of a major step toward unification of the Japanese trade union movement.

Domei will join with various unaffiliated private-sector unions next November in forming a new labor confederation, known as Rengo. The joint statement concluded with anticipation of "continued cooperation and the maintenance of close fraternal relations in the future."

After leaving Japan, the AFL-CIO delegation met with union and government officials in South Korea and the Philippines, where their visit coincided with the referendum that approved the nation's new constitution. Kahn and Gray also met with union representatives in Thailand.

USX 'callous' in post-lockout plant closures

Pittsburgh—Steelworkers President Lynn Williams assailed USX Corp. as "callous and insensitive" for its decision to lay off 3,700 workers just days after USWA members ratified a new contract.

The USWA is protesting the steelmaker's move to place four plants on "indefinite idled status" and has rejected USX's claim that the union knew the closings would occur.

Williams called the closings "a play to speculators and Wall Street," and said union negotiators were shocked by the announcement that came four days after USWA members overwhelmingly ratified a four-year agreement. That vote ended a six-month lockout by USX of more than 22,000 active USWA members. Another 23,000 workers had been laid off by the steelmaker prior to the lockout last Aug. 1.

"During the talks, the company told the union that all facilities operating before the lockout would resume operations on an orderly basis as work became available," Williams said. "Maybe we wouldn't even have been considering contract ratification" if the union had suspected the company's plans, he added.

Betrayed by USX

Williams called the plant closings a "betrayal," pointing out that he had spoken with USX Chairman David Roderick two days before the USX surprise announcement and received similar assurances that production would resume as work became available. "What an insensitive and callous attitude to exhibit toward 3,700 people who had been good and diligent employees," he charged.

At a news conference, Roderick claimed that union negotiators were informed during bargaining last summer that some mills might be closed if a lengthy work stoppage took place. But Williams said the union considered the comments—made before the Aug. 1 lockout—a bargaining tactic frequently used in negotiations.

Williams said the USWA is seeking to meet with USX to debate its decision to close the mills. He acknowledged that the union could not stop the plant closings but added "it's never fruitless to try."

The shutdown affects 250 workers at two Pittsburgh-area plants, 750 workers at Baytown, Tex., and 2,700 at the Geneva Works in Orem, Utah.

Trickle down—drip, dri. . . , dr. . . d. . .

Executives of General Motors Corp. will collect $169 million in bonuses this year despite a drop in corporate profits, but the company said it didn't make enough to give its workers a share.

GM's profits dipped to $2.9 billion in 1986, down 26 percent from the year before. But GM Chairman Roger Smith said the bosses deserved the bonuses because otherwise the firm would have trouble keeping "good people." Profits last year were the sixth highest in history, he said, "and if you can't get rewarded for that, I don't know what you do."

The company said its earnings from U.S. operations weren't enough to trigger profit-sharing payments to workers. Executive bonuses will be down 23 percent from last year, when Smith collected $465,010 as his share of a total compensation package of about $1.6 million.

Auto Workers President Owen Bieber sharply criticized GM's "two-class compensation system" and said a major union goal will be to improve the profit-sharing formula when the union's contract is renegotiated in September.

Since the UAW negotiated the profit-sharing plan, union members at GM collected payments averaging $606 in 1984, $515 in 1985 and $329 last year.

"In view of GM's serious problems reflected in its earnings statement, it is not acceptable for corporation executives to continue to receive rich bonuses at the same time the workers are denied any payout from profit sharing," the UAW said.

Part of the dip in company earnings came from a writeoff of costs to be incurred in closing 16 older GM plants over the next two years, wiping out some 29,000 UAW jobs. The company also wasted $700 million to buy out the stock of industrialist H. Ross Perot in an internal power battle.

Jobless rolls above 8 million as U.S. economy marks time

Continued from Page 1

The federation noted that when the 1.1-million discouraged workers and the 5.5-million persons working part time but seeking full-time work are included in the January jobless survey, a total of 14.6-million workers have suffered the effects of unemployment.

In mid-January, only 3.1 million persons were drawing unemployment benefits, the Labor Dept. reported, but the remaining 5 million "official" jobless and many more discouraged workers didn't get a penny.

AFL-CIO compensation specialist James Ellenberger pointed out that only two states—Washington and Massachusetts—provide jobless benefits for workers unemployed more than 26 weeks. Those states allow compensation for up to 30 weeks.

Of the 8-million "officially" unemployed, 1.2 million have been out of work for 27 weeks or longer, Ellenberger said, and just 2.4 percent of these long-term jobless workers were receiving benefits in January.

The government's survey of businesses showed a seasonally adjusted increase of 450,000 jobs last month, as mild weather and an end-of-year rush for building permits fueled a jump of 142,000 construction jobs in January, BLS Commissioner Janet Norwood said.

Before seasonal adjustment, total employment fell 1.1 million to 99.3 million.

Testifying before the Joint Economic Committee of Congress, Norwood warned that the establishment survey data "show weakness in manufacturing," with employment in that sector netting a meager 3,000-job gain. Employment in mining continued to decline, posting a January loss of 11,000 jobs.

Factory jobs lost

Norwood noted that the number of factory jobs created following the 1973-75 recession was more than double the number of similar jobs created after the height of the Reagan Recession in 1982.

The establishment survey also indicated that for 1986, manufacturing employment fell by 117,000 and mining jobs declined by 168,000. Local government employment rose by 220,000, retail trades by 630,000 and services by 1.1 million.

The January unemployment rate for black workers rose to 14.3 percent from 13.7 a month earlier, while the jobless rate among white workers edged up one-tenth of 1 percent to 5.9 percent.

While the number of working teenagers —ages 16 to 19—grew by 46,000 last month, their jobless rate also increased, to 17.7 percent from 17.3 percent. Black teen unemployment surged 3 percent last month to 38.5 percent.

Public employees narrow wage gap in 1986 contracts

Major collective bargaining agreements negotiated in 1986 for state and local government employees provided catchup wage increases averaging 5.7 percent a year, the Bureau of Labor Statistics reported.

That contrasts with an average wage gain over the life of the contract of 5.4 percent in 1985 and 5.1 percent in 1984, the BLS survey found.

The settlements cover 873,000 workers in state and local bargaining units with 1,000 or more employees. Of the 14 million government workers, 4.5 million are represented by labor unions.

State government workers won an average 6.3-percent increase for the first contract year and 6 percent per year overall. Local government workers will receive wage increases averaging 5.3 percent during the first year and 5.6 percent a year over the life of the contract.

Private sector contrast

Earlier BLS reports indicated that contract settlements covering private sector workers brought average wage gains of 3.2 percent last year, with first-year wage increases averaging 1.2 percent. But those results cannot accurately be compared with the public sector report, the bureau said.

President Gerald McEntee of the State, County & Municipal Employees said the wage gains are helping to narrow the pay gap suffered by public workers because few contracts with state and local governments included cost-of-living adjustments. "During the years of high inflation, private sector settlements and cost-of-living adjustments ran significantly higher than public sector collective bargaining gains," he said.

Al Bilik, executive director of the AFL-CIO Public Employee Dept.'s state/local division, stressed that the wage gains reflect activity in the 27 states that adopted collective bargaining rights for public employees. In the nonbargaining states, 260,000 public workers earning less than the federal minimum wage won an increase in 1985 only when the Supreme Court extended minimum wage and overtime pay requirements to state and local government workers.

Cost of living

Only 2 percent of the local government employees covered by the survey have COLAs, compared with 40 percent in the private sector, BLS said.

BLS indicated that 45 percent of the public workers covered by the survey were employed in education as teachers, administrators and service workers. One-third of the public employees worked in general government and administration and the remainder were employed in health care, protective services and transportation.

In key contracts covering bargaining units of 5,000 or more public workers, total compensation averaged 6.2 percent in the first contract year and 6 percent over the life of the agreements.

This year, about 957,000 workers are covered by 256 agreements due to expire or reopen for wage negotiations during the first six months of the year. Two-thirds of these workers are employed by local governments.

Campus rallies spur Rutgers settlement

New Brunswick, N.J.—Two local unions of the State, County & Municipal Employees capped a nine-day strike at Rutgers University by ratifying new three-year agreements that provide pay raises totaling 16 percent.

The strike by 2,800 clerical and maintenance workers drew strong support from the 2,600 members of the American Association of University Professors and thousands of students as classes were suspended on campuses at Newark, Camden and New Brunswick.

The agreements between Rutgers and AFSCME Locals 1761 and 888 provided a 6-percent weekly pay increase retroactive to last Oct. 5, and raises of 5 percent each in October 1987 and 1988. Wages under the old contracts averaged $16,500 a year.

State Superior Court Judge John Bachman denied the university's request that the strike be declared illegal and the unionists ordered back to work. Instead, Bachman ordered the university to resume negotiations and settlement was reached quickly.

Scheme derailed

State law covering public workers provides for fact finding and nonbinding arbitration if the two sides in bargaining reach an impasse. Then the public employer is free to impose its final offer. Rutgers, a state university, was trying to railroad the locals into fact finding.

Key issues were the university's proposals to make annual step increases, which are automatic for all other state workers, negotiable and to allow supervisors, rather than the workers, to determine whether employees get comp time or cash for overtime.

Meanwhile in Cambridge, Mass., the Harvard Union of Clerical & Technical Workers affiliated with AFSCME Council 93 to strengthen an organizing drive aimed at Harvard's support staff of 3,500 workers.

AFSCME President Gerald W. McEntee called the campaign the union's "premier organizing effort for 1987." The unit has more than 350 active members on its organizing committee. It grew out of an earlier organizing effort by Auto Workers District 65.

AFSCME strikers at Rutgers University welcome student and faculty support that led to three-year accord.

Buying power of minimum wage skids

Real pay of working poor at lowest lovel since mid-1950s

The purchasing power of the minimum wage has fallen 27 percent since the pay floor was set at $3.35 an hour and is at its lowest level since 1955.

A new study issued by the George Washington University Center for Social Policy Studies documents the deterioration of the federal wage floor since 1981, when it reached the $3.35 level.

The study, by the center's director, Sar Levitan, and Isaac Shapiro, notes that some 7.5 million workers, full time as well as part time, were paid the minimum wage in 1985. Seventy percent of them were adults and nearly 30 percent were heads of households.

Levitan and Shapiro point to the slippage of the minimum wage from its traditional target of half the average wage for nonsupervisory workers, to where it is now only 38 percent of that average. When adjusted for inflation, the minimum wage is now more than 20 percent less than it averaged in the 1970s and one-third less than its 1968 level.

"The minimum wage is a statement by society that work conditions below a given standard are unacceptable," their study stressed. It pointed out that the standard "applies to low-wage labor markets where unions are absent, where workers lack skills and political clout, and where employers are unlikely to adopt beneficent labor practices."

Encourages work

The federal wage floor, the report noted, "helps some escape poverty and lessens its impact for others. It encourages individuals to work rather than rely on welfare."

While many who are paid at the minimum wage are not themselves poor, the study pointed out that a teenager's wage is often needed for school and the extra income of an adult worker may help a family have "more than the bare necessities."

Both the Levitan-Shapiro report and a letter to the New York Times from Clothing & Textile Workers Sec.-Treas. Jack Sheinkman rejected the argument that a minimum wage rise should be avoided because it would price some jobs out of the marketplace and add to joblessness.

Sheinkman, responding to a Times editorial, said the experience of past minimum wage increases show that there is no such pattern, that adult workers have generally gained and that any reduction in teenage employment has been barely measurable.

The university study suggested that "the extent of employment dislocation is often overstated" by opponents of minimum wage increases.

The value of the minimum wage needs to be restored, Levitan said in a statement accompanying the report, "if the government hopes that the poor will work their way out of poverty rather than depend on welfare."

No replay

Boston—Because of a typographical error on the ballot, the National Labor Relations Board aborted a Plumbers & Pipefitters victory in a certification election at Mechanical Management Inc.

Local 537 conducted the successful organizing campaign at MMI, but the NLRB regional office mistakenly certified the international as the bargaining representative.

When management refused to bargain with anyone but the international, Local 537 sought to amend the certification. But the labor board ruled the whole election invalid, freeing the company from the responsibilty of negotiating with either the international or the local.

The union is appealing the decision, calling it "outrageous," because it "denies the employees the right to be represented and the right to even a rerun election."

Reagan slowdown uncovered to curb trade legislation

Continued from Page 1

ing 1986, the United States imported a mind-boggling $170 billion more in foreign goods than it exported to other countries.

Baker insisted that the trade deficit has already peaked and "we could not pick a worse time than now to unfurl the banner of protectionism."

House Speaker Jim Wright, who also appeared before the committee, was cool to the Administration's call for delay. Wright noted that he had consulted with Republican Leader Robert Michel and chairmen of committees with jurisdiction over segments of the trade bill before setting the target date for House action.

On the other side of the Capitol, meanwhile, Senate Republicans used parliamentary delaying tactics to put off a vote on a consumer bill setting energy-efficiency standards for household appliances.

President Reagan had pocket-vetoed a similar bill after the previous Congress adjourned, reflecting his Administration's ideological opposition to almost any form of government regulation.

As with the clean water bill that the new Congress enacted over Reagan's veto, Reagan was on the unpopular side of the issue and appeared doomed to another losing battle with a Democratic Congress.

Republican maneuver

Sen. Phil Gramm (R-Tex.), whose wife is one of the Administration officials who reportedly had urged Reagan to veto the earlier bill, enlisted Senate Republican Leader Robert Dole in his maneuvering to keep the bill off the Senate floor.

The GOP strategists called in Vice President Bush to perform his seldom-observed constitutional duty of presiding officer of the Senate to get some favorable parliamentary rulings.

While Gramm and his allies managed to block Senate action, parliamentary maneuvering, charges and counter-charges left tempers frayed on both sides of the aisle.

The Senate finally agreed by unanimous consent—the normal way it deals with procedural issues—to take up the bill again on Feb. 17, after Congress returns from a short President's Day recess.

1987 conventions

The following are additions and corrections to the list of conventions scheduled for 1987 by AFL-CIO affiliates, state federations and fraternal organizations.

Idaho AFL-CIO convention will be June 15-17 in Pocatello.

British Trades Union Congress will convene Sept. 7-11 in Blackpool, England.

Flight Engineers convention is slated for Nov. 2-5 in San Francisco.

Dedication of the Meany Archives will be Aug. 16, not Aug. 15 as previously listed.

Michigan AFL-CIO convention will be held May 13-15, instead of May 11-13.

Industrial Union Dept. convention will be held in 1988, not Nov. 16-18, 1987.

The full list of conventions appeared in the Jan. 10 issue of the News.

American Ship Building Co. workers and their families greet stockholders with a strong message denouncing sharp wage and benefit cuts in Tampa.

Metal Trades pickets protest deep cutbacks by Steinbrenner

Tampa, Fla.—Picketing in pouring rain outside the annual stockholders' meeting of the American Ship Building Co., members of nine Metal Trades Council unions protested severe cuts in wages and benefits.

Some 900 union workers are embroiled in a dispute with Tampa Shipyards, the company's principal facility. Their contract expired last May and in October, management unilaterally instituted wage cuts of 40 percent for unskilled workers and 7 percent for skilled workers. Laborers' pay dropped from $10.23 to $6.25 an hour, while craft workers saw their scale fall from an average of $11.21 an hour to $10.50.

As the pickets got drenched, inside stockholders were told by Chairman George M. Steinbrenner that the shipyard workers "should have learned a lesson from Lorain," a reference to the once-prospering shipyard in Lorain, Ohio, that Steinbrenner closed in 1983.

Steinbrenner balks

Steinbrenner shut down the yard even after workers agreed to sharp pay concessions and worked with their congressional representatives to win a major federal contract for the company. Steinbrenner then shifted the project to a nonunion yard he operates.

He complained that the company lost money in the final quarter of 1986 and said he was going to help out the company's "cash crunch" by turning down his $100,000 salary for 1987. In trying to paint a mental picture for the stockholders that he is as poor as the workers whose pay he cut to just $13,000 a year, Steinbrenner declared:

"I don't have an awful lot. I want you to know how tough it is for me when I don't increase my salary." He didn't mention that as majority owner of the New York Yankees baseball team he might get a few extra dollars to help him make it through the year.

The demonstrators, including spouses and children of the shipyard workers, stood under a banner that read, FYFO. That stands for "forget your final offer," said Robert Bengter, president of the Metal Trades Council. The picketing, he said, was to "alert the public about our situation."

The Tampa yard's last big job ended last April when a tanker project for the U.S. Navy was finished. Since then, about two-thirds of the workforce has been laid off. The remaining employees have been working under an unsigned "final offer." Besides the wage cuts, the workers now have to pay a third of their medical insurance costs. They also lost three vacation days and requirements for vacation and overtime pay were stiffened. The workers can now be assigned across craft lines.

Harold Salinas of the Metal Trades Council called Steinbrenner's comments about the Lorain shutdown "unconscionable," adding, "that was certainly a threat and the employees will take it as a threat."

Steinbrenner told stockholders that the company is looking to diversify by building and operating two cruise ships in the Hawaiian Islands and by constructing floating seafood processing barges. He dangled the shipbuilding work over the union workers' heads by refusing to say whether those projects would be built in Tampa.

Labor "has got to understand that we've got to get competitive. They didn't believe me on the Great Lakes," Steinbrenner said, in reference to the Lorain shipyard.

Hatch Act penalty scored as move to harass unions

Three public sector union presidents penalized for violating the Hatch Act ban on political participation by federal employees will contest the action in court while pressing labor's campaign to change a law that is no longer useful.

Presidents Moe Biller of the Postal Workers, Kenneth T. Blaylock of the Government Employees and Vincent R. Sombrotto of the Letter Carriers called the punitive action an attempt to intimidate public workers.

"We do not intend to allow this Administration to muzzle us or to prevent us from fulfilling our responsibilities," they declared in a joint statement.

The union presidents, who have been on leave-without-pay status from their civil service jobs since becoming full-time union officers, were charged with violating the Hatch Act because of their active support of the Democratic presidential ticket in the 1984 elections.

Their "punishment," imposed by the federal Merit Systems Protection Board, was a 60-day suspension from their unpaid employment status with the federal government. Their on-leave status merely preserves their retirement rights and allows them to reclaim their civil service jobs when they leave their union posts.

Not personal

Biller, Blaylock and Sombrotto said they didn't consider the action against them as a personal attack.

Rather, they charged, it represents "a carefully orchestrated political attack upon all postal and federal employees and the unions that represent these workers." They termed the suspension order "another example of this Administration's hostility to free speech protections."

A resolution adopted at the 1985 AFL-CIO convention in response to the Hatch Act charges brought against the union leaders said the 1939 law should be amended so that government workers would be protected against political intimidation by their bosses without losing their rights as citizens.

During the discussion of the resolution, AFL-CIO President Lane Kirkland noted the "irony" that "a good government move to protect the integrity of the civil service from the corruption of politicians" is now being used "to protect rotten politicians from the workers."

Legal services plan new benefit for members

Continued from Page 1

Established a year ago to extend the benefits of trade unionism from the workplace to the marketplace, the Union Privilege Benefit Programs has a number of other projects in the planning stage. They include:

- A travel and vacation program that will provide the best arrangements possible for the union family at the most advantageous rates in a hassle-free environment.
- A full-range of financial services to help unionists and their families plan an investment program and to put money aside for every purpose from their children's education and home ownership to retirement.
- Life, health, automobile and home ownership insurance that will utilize the combined purchasing strength of the 13-million-member federation to assure that trade unionists get the best buy possible.
- An associate membership program being developed by the federation and various unions to reach out to unorganized supporters, former members and retirees by offering them a chance to participate in labor-sponsored activities like those available through the Union Privilege Benefit Programs.

UNION PRIVILEGE BENEFIT PROGRAMS

NEW HORIZONS

Goal of New Benefit Program:

EXTEND UNIONISM FROM WORKPLACE TO MARKETPLACE

by Lane Kirkland

February 21, 1987 marks the first anniversary of an historic step by the American labor movement. On that date Union Privilege Benefit Programs was launched to bring union members programs of high quality at reduced costs so that their earnings could buy better services and higher quality benefits at the lowest possible price. This expansion of American trade unionism from the workplace to the marketplace has, in its first year, proved to be an unquestioned success — and will achieve even greater success as it fully unfolds.

The benefits which are now accruing to all American trade union members can form the basis of a new associate membership program to enlarge the ranks of U.S. labor movement and enhance its economic and political effectiveness.

Throughout history, organized labor's agenda has been forged by an extremely powerful force — the needs of our individual members and their families. In fact, our progress has impacted on every working American. The many issues we continue to address are dictated by this collective voice of the workplace.

The creation of this new program came from a major self-evaluation, the landmark Evolution of Work Committee report "The Changing Situation of Workers and Their Unions." Many areas were researched, recommendations made and a future course of action designed. While much hard work remains, the successful launch of Union Privilege Benefit Programs represents one of the initial major steps in pursuit of revitalization course.

Our primary focus will remain with issues affecting the individual in the workplace, but the valuable products and services developed and coordinated through UPBP will continue to extend our collective purchasing power in the marketplace. All benefits will produce cost-savings and value for our families — which will stretch their hard-earned dollars and provide greater buying ability. Further, these additional services will be made available to a new group of supporters — the associate members — as this membership program is developed and expanded.

The task of designing and coordinating a full menu of voluntary member programs is not as easy as one might imagine. Union sponsorship is an extremely valuable asset; one that carries an awesome responsibility both to the organization as well as to the members. Suggested products and services must be carefully reviewed with an eye toward filling true member needs. Expertise is required to evaluate the technical aspects, and a knowledgeable and experienced staff must be in place to ensure that the total program is carried out properly.

Union Privilege Benefit Programs was created by the AFL-CIO as a not-for-profit entity to carry out this role. Monitored by a governing board comprised of affiliate union leaders, UPBP's staff has been working on product development and introduction, and the setting of future program specifications and member servicing standards. The successful introduction of the Union Privilege MasterCard program and the heartening response within subscribing unions, points to a high degree of member acceptance of the program.

Our credit card program's initial success strengthens the need for our close management of the sponsorship process. The gratifying response was the result of pre-promotion, communication and leadership training, an ongoing communication system, the availability of program experts and the existence of a specially trained supplier member servicing operation. The actual member mailing is an important element, but one that would be weakened without total organizational support. This involves meetings with leadership, and an across-the-board education program before and after any mailing to the membership. UPBP will ensure that these sponsorship principles extend to all future offerings.

Development is currently progressing in product and service areas where the members' greatest needs exist. Under consideration are programs in the area of insurance, investment opportunities, travel and discounts. Each offering will allow for a choice based on individual needs, truth-in-promotion, educational assistance for decision making and a full after-purchase servicing facility. UPBP will conduct periodic evaluations to guarantee that these high standards are being met.

Lane Kirkland

Membership participation in these valuable programs, both at the active and associate levels, is based on member trust and loyalty. Our job is to provide the best available value backed by a commitment to ongoing member service. This requires the choice of supplier organizations with long-term financial strength as well as an understanding of our sponsorship goals. Whether members participate in one or many of the available products and services, the union's sponsorship acts as another ongoing reminder of the value of membership.

With Union Privilege Benefit Programs, member service and value take on a new meaning. While every member will carefully choose which programs are best for them, or simply use union produced consumer information to make more informed decisions in a product area, an appreciation will develop that says — "My union is interested and involved in providing a better life for me." As the program evolves and participation increases, a stronger organizational bond will emerge. Labor's collective strength will work to revitalize our movement and provide an added membership dimension.

THE HISTORIC FIRST

...Signing to become the first participants in the Union Privilege credit card program are John Sweeney, President of the Service Employees International Union, and, at left, Thomas R. Donahue, AFL-CIO Secretary-Treasurer. Looking on is Richard Cordtz, SEIU Secretary-Treasurer. Since this signing, unions representing more than nine million AFL-CIO members are subscribed.

Union Members Choose New Credit Card's Value — *Record Numbers Apply!*

AFL-CIO union members have responded to the Union Privilege credit card benefit offer in record numbers. With only a fraction of the union-by-union mailings complete, more than one-half million union members have already applied for the card, pointing to an acceptance rate greater than to any other known credit card offering. More than 300,000 members have already received these cards and are utilizing its cost saving features.

Success of the new card has proved the underlying thesis of the new Union Privilege Benefit Programs:

- The purchasing clout of 13½ million union members can be focused to achieve savings and getting better quality goods and services;
- The labor movement's know-how in negotiating can achieve the best possible terms for members' benefit;
- The lack of a profit motive and trust in their leadership makes a recommendation by a union president likely to be taken seriously by members;
- The value of union membership is increased as the labor movement's influence is extended from the workplace to the marketplace.

The credit card — the first of a series of benefit programs — came as the result of negotiations with major U.S. banks. In its short life it has already become the national leader of low cost cards and exerts constant pressure on the other banks and department stores to bring down rates for all consumers.

The national media has been uniform in praise of the program. Typical was the comment of nationally syndicated financial columnist Jane Bryant Quinn who wrote: "Perhaps the best (credit card) is the new program now being offered to labor unions through the AFL-CIO and The Bank of New York."

In addition to super-low finance charges, currently 12.5% or 14.75%, depending on the union's choice, the card has other advantages to unionists. The skip payment privilege can be used during union-sanctioned strikes and in months when the union believes members' bills are most likely to be greatest.

The card also offers a means to immediate savings on outstanding obligations. By using checks that are provided by the bank, the cardholder can pay off the balance on other credit cards by transferring those balances to the Union privilege card. Thus, by a stroke of a pen, finance charges can be cut by 30 to 50 percent ... an important fact, since the credit card program fully endorses the concept of using credit wisely.

Other features include: no liability for lost or stolen cards: $250,000 travel accident insurance when tickets are charged to the card account; free additional cards for family members.

A further enhancement of the card is rapidly becoming evident in communities all over America. As union members use the unique MasterCard, personalized for their union, it shows the strength of organized labor in the community. Merchants are reminded again of union members' buying power and how important union wages and salaries are to keeping their community economically healthy.

Working with the Union Privilege Benefit Programs to make the program successful are The Bank of New York (DE) and Affinity Group Marketing, Inc. Their attention to quality and detail has resulted in all aspects of the program being clearly stated with full disclosure of how the program works.

Even the credit denial process has been handled smoothly ... a particularly sensitive area on which UPBP has concentrated much effort. Obviously credit cannot be granted to everyone since prudence in lending is important to every financial institution. But our goal has been to ensure that this process is handled in a thorough and proper manner and that all decisions are fair. UPBP constantly monitors this area and is now preparing a brochure to show members how they can correct credit difficulties. UPBP has also worked with the Bank to establish a re-review process for all members who feel their denial of credit should be re-considered.

Details of the credit card program and a rundown as to which unions are in the program and when the members will receive their invitations are on page four.

Unions Choose

Each AFL-CIO union chooses which of the Union Privilege Benefit Programs best suits its membership. The programs created by Union Privilege Benefit Programs are available to all international unions, but each union makes the choice as to what will be offered. Thus, one must check with his or her union as to the specific programs available.

Free and Low Cost Legal Benefits Available Nationwide to Members

A nationwide legal service program is now in operation, which offers AFL-CIO members free and low cost services and takes the fear of the unknown from the process of engaging a lawyer.

Members of participating unions will now receive free initial consultation for their legal needs and 30% discount on more complex matters, all at no annual enrollment cost.

The Union Privilege Legal Service has created a national panel of labor-friendly attorneys pledged to help the 13½ million members of AFL-CIO unions when they need personal legal assistance. Now, whether it is a complicated document to be signed or a legal question for which advice is needed, a lawyer is available.

The new benefit is for the exclusive use of members of participating AFL-CIO unions, their spouses and dependents, all on a strictly confidential basis.

Each participating union has a catalog with the names and addresses of participating lawyers and their specialties. Members may obtain the names of lawyers in their area from their union or by contacting Union Privilege Legal Services.

Each lawyer has contracted with the program to provide his or her services and each union member/client has the opportunity to evaluate the lawyer's services. The attorney's performance is overseen by the program administrator.

Similar programs offered by commercial firms charge up to $150 per year for this service which is being administered for the Union Privilege Benefit Programs by the National Resource Center for Consumers of Legal Services. The program's benefits are:

Free 30 minute consultation. The unionist or a member of his or her family meets with a participating attorney at the attorney's office or by phone on any matter. There is no limit on the number of consultations, provided each is about a separate matter.

Free Document review. Costly mistakes can be avoided by understanding what one signs. Personal, non-business transactions, such as leases, insurance policies installment sales contracts, can be carefully reviewed.

Free follow-up services. Sometimes a problem can be solved by having your lawyer write a letter or make a phone call on your behalf. Again, at no cost to you.

30% Discount on additional services. If you are faced with a more complex legal matter, your participating lawyer will charge you only 70% of the lawyer's normal fee.

Written fee agreement. Your attorney will provide you with an agreement on fees. This protects you and prevents any surprises.

Quality control. Each time you use the service, you will be asked to evaluate your lawyer. Your lawyer will provide a simple short form to be returned to the program administrator. You choose whether or not to identify yourself.

"When You Need a Lawyer." A brochure outlining in more detail the program is available through participating unions or from the Union Privilege Benefit Programs office.

Life, Health, Auto Insurance Programs To Fit Members' Needs

Protection of a family against financial ruin is a need as old as mankind. The underlying principle of insurance — sharing life's unpredictable risks — is modern society's method of meeting this need.

Union Privilege Benefit Programs identified these member protection needs early on and immediately embarked on the long, involved process of investigating and developing affordable, valuable, voluntary group insurance programs that would meet the unique needs of union members. These include life, health, auto, homeowners, and others.

Insurance, in its many shapes and forms, can be a highly complicated purchase decision, fraught with options, riders, unreadable policy language, and ever-changing rates. The questions of what type is best, how much does one need and who are the best sources oftentimes go unanswered — and an incorrect decision is made. If an insurance agent is involved, the gamble is always present that his advice and product are what's best for the agent's pocketbook and not necessarily the best for the individual.

The 13½ million union members and their families represent a major market for the insurance suppliers in the country. They recognize the massive purchasing strength — and the power of union sponsorship. But, coupled with this endorsement process is the AFL-CIO's and each union's responsibility to its members to provide the correct insurance product mix at the best available value. In every instance, there is no profit to the union nor is union dues money involved.

Once the best product has been created, the problem becomes: how to make members aware of its benefits so they can make a decision. Insurance agents, telephone solicitation, TV and print advertising all undesirable and expensive. Direct access to members via the mail is the most cost effective means of providing this information. Members servicing standards have been established to ensure that the optimum member attention and understanding can be achieved by this method. The right product in an easy-to-understand format is the goal in this program area. A support mechanism is further being developed which will provide local leadership awareness and training, understandable consumer information and toll-free telephone access to specially trained, knowledgeable representatives.

In designing products, several key areas of protection emerged as priorities. In each, the UPBP insists that workers in all occupational groups and in all regions of the country be eligible for coverage.

Life Insurance

Life insurance is the cornerstone of any family's financial plan. Nearing the final stages of development is a term life insurance product. "Term" is pure protection — an amount of coverage purchased for a specific time period. An easy-to-understand product, this insurance will provide the member with an affordable method to supplement life insurance already in place. In a world where far too many members are underinsured, the Union Privilege Term Life Insurance will provide an important alternative to fully protect one's lifestyle.

Health Insurance

The concern surrounding the adequacy and availability of health insurance can be found almost daily in our newspapers. Recent federal legislation has addressed this growing problem somewhat in the form of group health insurance continuation from employer and trust plans after leaving employment. And additional measures will be addressed that may see the establishment of health insurance "assigned risk pools" in the states. The problems are major for union families who suffer layoffs or are on strike and lose coverage. Also in need are those workers who have signed up with unions but have not yet achieved health coverage under a union contract.

Union Privilege Benefit Programs has kept a careful eye on these developments while addressing the supplemental health insurance needs of members. Under review are programs which provide an additional high maximum ($1 million) of coverage after a large deductible (usually covered by basic health plans) is met. This affordable product will help alleviate the protection concern of catastrophic health care costs. Also being investigated are hospital cash programs, limited term emergency health plans, and disability products — both short and long term.

Casualty — Auto and Home

A far greater challenge rests in the provision of group-advantages auto and homeowners insurance protection. Highly regulated by individual state authorities, and subject to cyclical swings in rates, a search is underway to find an insurance supplier with the financial and organizational commitment to a long term, nationwide member program. UPBP is hopeful of a breakthrough in this area in the near future.

A constant eye on the marketplace will dictate new areas of program growth, probably in the areas of MediCare supplement, dental, vision and nursing facility insurance.

What is the UPBP?

What is the Union Privilege Benefit Programs:

This new AFL-CIO-created program was initiated in May, 1986, when it was incorporated as a non-profit corporation to establish a program of benefits for union members. As such, it has been in active pursuit of that goal since then.

The UPBP is headed by Lane Kirkland as Chairman and Thomas R. Donahue as Vice Chairman. The Board of Directors is Albert Shanker, Gerald McEntee, John Sweeney, Larry Dugan, Linda Puchala and John Kelly. President of UPBP is Ray Denison, Vice President is Robert Tahler and Secretary-Treasury is William Collins.

The concept of the new program is reinforced by the survey findings of Peter D. Hart Research Associates, which reported that members and potential members would support a new program because of:

- The collective buying power of 13½ million union members and their families;
- The ability of unions to protect their members;
- The ability of unions to negotiate benefits;
- The caring that unions have for their members.

Do you want more information on the Union Privilege Benefits Program? For further information and materials on the programs, write to:

New Programs Help Members and Union To Keep In Touch on Ideas and Issues

One of the bonuses of the new benefits programs is the opening of new means of communicating with members, both to publicize benefits and to spread the word of other union issues.

The mailing to more than 10 million union members of the credit card offer and the special materials prepared for union publications and newsletters broadens the knowledge of the new benefit. Both members and leaders become more knowledgeable about union happenings and key issues.

In the credit card program, for example, special mailings to union leaders give advance information and provide posters and other materials for acquainting members about the forthcoming offering. A special press kit for union editors — tailored to each international union — provides ready-for-camera advertisements, articles describing the program and sample press releases for union leaders to distribute to local media.

In programs being developed where direct mail solicitations will be used, similar educational material will be distributed to leaders and union editors.

The new programs also offer opportunities for unions to communicate directly with the membership on other issues. Under the terms of the credit card contract, each union has the opportunity to mail to its members twice a year material on union issues. These materials are enclosed with the members' monthly credit card statement. Also, twice a year a computer-type message is available to each union, being written directly on the members' statements on a subject of the union's choosing.

Under this provision alone, unions will be able to speak to tens of thousands of members, with all costs, except the printed material itself, borne by the credit card program.

Additional materials for communicating with members are now available in the legal services program and others will come on stream later.

Associate Membership Can Build Unions' Strength, Retain Ties

One of the major goals of Union Privilege Benefit Programs lies beyond the creation of additional benefits to the 13½ million Americans now in AFL-CIO unions. A new concept — the associate membership — is being developed by the AFL-CIO, the international unions and the Union Privilege Benefit Programs staff.

For several years, many AFL-CIO unions have sought to develop programs to expand the scope of their membership and to increase their economic and political influence. Associate membership is seen as an innovative way to organize new members and to retain former members among millions of working and retired Americans in all occupations. These are the men and women who would be willing to join a union or who have enjoyed the affinity of union membership in the past but are not now union members. The associate membership program would provide a new, innovative way to bring trade union philosophy and programs to workers and families who otherwise may never have the opportunity.

The Union Privilege Benefit Program, with its roster of benefits and services, is in the position to offer AFL-CIO affiliated unions benefits and services that can form the basis for programs of associate membership.

Unions of every size, serving members in every sector of the work force, are finding Union Privilege Benefit Programs of considerable value in communicating with and reinforcing union loyalty among existing, former and prospective members.

- The programs expand membership services at little or no cost to participating unions.
- Retirees, allowed to carry program benefits with them into retirement, remain loyal and become more active carriers of the union message within their communities.
- Participating unions have a valuable internal organizing tool that helps them in drives to organize non-union members in collective bargaining units.
- Unions offering the programs have a means of continued contact and communication with members who leave collective bargaining units.
- The programs provide new, tangible benefits to offer associate members, helping to both recruit and keep them.

Survey results showing considerable approval of the trade union movement's aims and abilities among non-union members reinforce a growing awareness in the trade union movement that new approaches should be developed to reach and enlist the unorganized.

The Evolution of Work Committee has pointed out that 27 million non-union workers are former union members, most of whom left their union because they left union jobs. This pool of workers — twice the size of the active membership of AFL-CIO affiliates — indicates the potential for expansion of union attractiveness to individuals who are not presently part of the trade union movement.

Adding to this potential are workers who become involved in organizing drives and workers who approve of unions but have not had the opportunity to join one.

Because the associate members concept is new, and because unions recognize the necessity to develop new issues and techniques, the program is highly experimental. Structures of pioneer associate member organizations are as varied as the unions that created them, offering interested unions a wide range of ideas from which to draw.

The Evolution of Work Committee has pointed out that unions have significant opportunities for success in these endeavors, if they identify and address new worker issues and bolster the attraction of this concern by providing associate members with worthwhile benefits.

Items to be considered in formulating plans for an associate membership organization, as recommended by the Evolution of Work Committee and developed by individual unions, include identification of a membership group, forethought in setting out financial and staffing requirements, delineation of the rights of associate members and establishment of a package of benefits.

POTENTIAL MEMBERS... The new program will reach out for associate members in organizing campaigns, in failed campaigns and where workers with an affinity to the workplace show a desire to align themselves with a union.

FORMER MEMBERS... The program will reach out for associate members among former union members who have lost their jobs, their plant has moved or shut down and their ties through collective bargaining have been severed.

RETIRED MEMBERS... The program will reach out for associate members among men and women who have retired and left the collective bargaining coverage of a union contract but wish to retain their union ties and participate in legislative and social programs.

Members Will Save On Fares, Lodgings, Rentals Under New Union Privilege Travel Program

For all of us the world of travel has become synonymous with mass confusion. Wading through deregulation, mergers and the like, the airline industry presents fare structures resembling a tangled maze loaded with restrictions, changes and conditions. The price you are quoted today may very well change by tomorrow ... if not sooner. Hotel and motel costs and car rental companies are not much better. Corporate rates and discounts abound causing the rate you pay to usually be higher than that paid by the person ahead of you in line.

In the long run, the non-business travelers, including most union member families, are potentially the losers. And it is widely predicted that fares will increase along with the confusion. In this environment, union members and their families deserve quality service and the same "best deal" arrangements available.

THE UNION PRIVILEGE TRAVEL PROGRAM

Union Privilege Benefit Programs has held discussions with travel vendors regarding the feasibility of providing a travel benefit for the union family. The goal was to establish a facility which could provide the most advantageous travel arrangements while minimizing the hassles involved.

Additional criteria included the requirement of superior service, the availability of valuable, cost-saving leisure travel opportunities and a travel plan that could act in accord with other AFL-CIO objectives. The program design was structured to allow access by all members, no matter what their frequency of travel. The result of this effort is a member benefit that serves the broad-based and diverse travel needs of our members. Currently, the program as described here is in its market test phase to ascertain that the most desired features are included. In order to serve the many different arrangements that can be generated by such a large membership base two levels of program participation were designed:

I. *Union Privilege Travel Service — Free Service*

All members of a subscribing union may take advantage of the basic benefits provided at this level without any participation fee. These include:

- *Lowest Guaranteed Airfare* — Members will be provided the lowest fares available at time of booking on unionized airlines. If a lower fare is found, a member may receive a refund for the difference.
- *Toll Free Information and Service* — A dedicated 800 toll-free number provides no-cost use of the service during convenient hours.
- *Hotel/Motel Discounts* — Special member rates and discounts on lodging — as much as 20% — targeted at union facilities.
- *Car Rentals* — special member discounted rates.
- *$250,000 Travel Insurance* — At no additional charge, each family member using a scheduled air ticket obtained through the service will be covered.
- *Customized Member Profile* — The service will maintain a profile for each member/traveler to insure all travel preferences are met with each purchase.
- *Free Ticket Delivery* — After all travel plans are booked and paid for in advance, confirmations and tickets will be forwarded without any additional handling or mail charge.
- *Leisure Travel Opportunities* — Members will be provided quality vacation package programs to worldwide destinations.
- *Short Notice Vacation Hotline* — Substantial savings — up to 65% — can be obtained by those able to travel on short notice. A special hotline number describes the current offers; bookings are made through the service's toll-free number.

II. *Union Privilege Travel Club — Low Annual Fee*

For those who travel more frequently, an upgraded service is offered providing the following additional cost savings benefits:

- *3% Cash Rebate on Travel* — Participants receive a 3% cash rebate on all scheduled air, lodgings and car rentals ticketed through the service by submitting receipts after their trips. (Due to regulations, international air bookings receive a 3% credit toward future travel.)
- *Travel Club Coupon Book* — Especially designed for the club, an array of hotels provide room nights at half price. Other money saving coupons may be included for film developing, theme parks and attractions, etc.
- *Quarterly Newsletter* — Contains invaluable information for the travel-minded. News of special events and a host of travel tips.
- *"Last Minute Traveler" Membership* — In addition to the provided access to the Hotline number, Club members receive 12 monthly bulletins depicting "first-look" information and last minute travel bargains. Normally sold for $9 a year.
- *One Fee Family Membership* — Unlike other clubs, the low $29 annual fee covers all adult family members and children under 21 in a household.
- *Club Package* — Participants receive a deluxe passport case and membership kit. Included is a directory providing information on how to best use the services and a membership card identifying the union affiliation.
- *No-Fee Traveler's Checks* — Scheduled for inclusion are these worry-free traveler's aids without the normal 1% fee generally charged. The only cost will be a nominal charge to send checks via registered mail.

Security and Better Return Is Goal of Investment and Retirement Program Under Study

Building an estate. Planning carefully for one's retirement. Making your money work toward a maximum return. Funding a child's college education.

Not too long ago financial planning activities were the sole province of the wealthy. Spurred by tax advantages such as IRA's and mutual fund products, the general public has been made increasingly aware that there are rewarding alternatives to the friendly old savings account.

However, movement to an investor role requires a better understanding of the workings of the financial marketplace and the higher risks involved. Newspapers and magazines carry numerous articles and advice columns reflecting this increased public awareness. Also, a whole new vocation has taken shape in the form of the "Financial Planner." Awareness does not equate with understanding in all cases. And becoming an investor is no guarantee of accelerated wealth. The opportunity does exist though, to increase one's return given an understanding of the risk level of the specific investment.

For the average union member, there are choices present for prudently investing their extra funds. As more of us become interested we become bombarded with promotions resulting in little more than confusion . . . and that generally leads to inaction and lost opportunity.

Union Privilege did what we as individuals can't afford to do — we hired experts to demystify the vast array of choices and to separate out the gimmicks and the hustlers. UPBP has no profit motive and no goal other than to find the best — and safest — places members may want to put their hard-earned money.

Financial Choices for Union Families

An important part of Union Privilege Benefit Program's activity is to seek programs that fill the real consumer needs of union members and their families. In recent years the availability and benefit of placing funds in an IRA account grabbed the headlines. Even with the passage of the recent tax revision, IRA's will still be an investment alternative for many members. But most of all, there are still ways for individuals to increase the return received on their investment dollars. This will help our members realize their financial objectives.

Recognizing the unique needs of union members, the financial community has been invited to work closely with us in investigating programs. The goal is to develop a financial program, backed by superior service and guidance, that provides for the investment needs of all union members — from the novice to the more sophisticated investor. The initial group of program bidders read like a a "Who's Who" of the financial world. What is encouraging is the interest displayed by the financial community in serving our members in this important area, and the proposing of unique elements geared to their special needs.

Wall Street Comes to Labor's House . . . Representatives of major U.S. financial investment institutions meet in a bidders conference at AFL-CIO Headquarters, each seeking the opportunity to offer investment-retirement programs tailored to the needs of union members and their families. Union Privilege Benefit Programs President Ray Denison outlined the union program's goals.

In an effort to further define the program, a bidders' conference was held with interested firms. Representatives were present from the brokerage, banking, and insurance industries (see accompanying photo). Individual consultations and revised proposals remain to be studied as we seek the best possible program.

Education is the Key

A vital element of the program will be the availability of educational materials. Presentations will be made available to interested members in an easy-to-understand format. Additionally, access to specially trained, non-commissioned representatives via toll free telephone lines will facilitate the understanding of these programs and investment choices.

The commitment is to a program which will provide a variety of product options while stressing educational aspects.

Potential Product

Envisioned is a program which makes available a full spectrum of financial products at differing risk levels. Promotion would be geared to the concept of learning about investment alternatives, and purchase *only* after a good understanding of potential risk is achieved. The product offering may range from bank type short term investment products to mutual funds providing a host of risk levels to discount stock brokerage. Also specified is the creation of a social responsibility fund which would limit its investments to organizations and corporations in accord with labor's agenda.

The Financial Future is Now

As with all Union Privilege programs, a great deal of time and expertise is required to ensure that the correct program is in place. Toward this end the Union Privilege staff with the assistance of Segal Advisors, Inc., a financial consulting group, is continuing the investigation of this program area. Watch for updates and program announcements in the near future.

WE'RE THE BEST, SAYS CONSUMER GROUP

"The union MasterCard is easily the best buy in the nation of any widely available credit card," says Ken McEldowney, executive director of San Francisco-based Consumer Action, one of a consumer group coalition that has launched a nationwide campaign to fight high interest rates on credit cards.

McEldowney is particularly delighted, stated the *Los Angeles Times* that Union MasterCard holders are urged to use their union cards to pay off debts they've accumulated on other cards that carry much higher rates. The consumer groups believe that if the union card continues to spread, it could ultimately force the big banks and other financial institutions to lower their own rates.

The Union Privilege MasterCard Fits Every Union's Needs & Provides Low Rates to Members

Two options are available to AFL-CIO unions in choosing the Union Privilege MasterCard. Each offers benefits, services and rates far better than other nationally offered cards, such as Citicorp and Bank of America — and better than Sears, Penneys or other major department stores.

These are the terms:

Program #1 — True Credit

Annual Fee: $0

Free Interest Period: None

Interest Method: Variable Rate — Prime + 5%. The ANNUAL PERCENTAGE RATE (APR) applied to accounts will be 5% above the Prime Rate published in the Wall Street Journal the last business day of the previous quarter. *Finance charges apply on all purchases and cash advances from date of transaction,* even if the monthly balance is paid off in full.

CURRENT RATE: (as of 1/15/87) 12.5%

Program #2 — Grace Period

Annual Fee: 1st year free; possible $15 annual fee thereafter. Fee Rebate offers a continual no fee opportunity.

Free Interest Period: At least 25 days on purchases if $0 balance is maintained.

Interest Method: Variable Rate — Prime + 7.25%. The ANNUAL PERCENTAGE RATE (APR) applied to accounts will be 7.25% above the Prime Rate published in the Wall Street Journal the last business day of the previous quarter.

CURRENT RATE: (as of 1/15/87) 14.75%

Fee Rebate Schedule:

If Total Annual Charges & Cash Advances Are:	Annual Fee is
Over $3,600	$0
Over $2,400	$7.50
Less than $2,400	$15.00

AFL-CIO Unions Now Participating In Credit Card Program

The following unions have subscribed to the Union Privilege Mastercard program. Accordingly, their members have received or will receive a letter from their international union spelling out the terms and benefits of the card. The month indicates when the mailing is approximately scheduled (TBA indicates To Be Announced); subject to change.

Unions in Credit Card Program

Union	*Mailing Status*
AFL-CIO	Mailed
AIRLINE PILOTS	February
ALUMINIUM, BRICK & GLASS	March
ASBESTOS	March
BAKERY-TOBACCO	TBA

Medical care costs soar despite containment drive

Rise seven times faster than inflation rate

Medical costs far outpaced the rest of the consumer price index last year, continuing a long-term trend, despite union-supported efforts to hold down costs.

The 7.7-percent rise in health care prices compared with the 1.1-percent increase in the CPI. Its ingredients included a 9-percent increase in prescription drug prices, a 7.8-percent rise in doctor fees and a 7.7-percent increase in hospital room charges.

All of these elements rose substantially more than hospital wage costs, which were in the 4- to 4.5-percent range, according to a Service Employees estimate.

Karen Ignagni, the AFL-CIO's health care specialist, said the escalation of health care prices points up the need for a coordinated national cost containment effort.

She stressed the need for an across-the-board program to limit increases in what health care providers are allowed to charge and to monitor the number of medical procedures ordered. Without such limitations, Ignagni warned, "trade unionists and other purchasers of health services will be forced to absorb unjustified increases or face cutbacks in benefits."

The 7.7-percent rise in health care costs was the highest since 1982, when it rose 11 percent. The rise was 6.4 percent in 1983, 6.1 percent in 1984 and 6.7 percent in 1985.

A spokesman for the American Hospital Association said room rates rose more than the cost of goods and services because, while "patients are more acutely ill" and require more services, they are also "staying in the hospital fewer days" and hospitals found that room rates weren't covering the cost.

Princeton University Prof. Uwe E. Reinhardt had a succinct explanation of the rise in physician fees despite a supposed surplus of doctors.

The number of physician visits per capita has declined substantially in recent years, he explained. "When their volume fell, the doctors behaved like many American businessmen. They jacked up their prices."

Panel faults Reagan policy on South African sanctions

A Reagan Administration-appointed commission sharply condemned the White House for its failed policy of "constructive engagement" toward South Africa and called on the President to exert substantial influence to end the racism in that strife-torn nation.

But despite the harsh criticism leveled by the Secretary of State's Advisory Committee on South Africa, it did not go far enough in recommending needed economic measures aimed at changing the policies of the white-minority government in Pretoria, declared Auto Workers President Owen Bieber.

One of the dozen members of the panel appointed by Sec. of State George P. Shultz, Bieber urged that sanctions enacted by Congress last year be "escalated" if South Africa refuses to make "substantial progress" toward ending apartheid and establishing a non-racial democracy.

The UAW president also recommended enactment of new legislation that would limit the ability of foreign multinational corporations "to fill the vacuum created by the withdrawal of U.S. companies from South Africa."

Economic sanctions

Such steps, he said, should include denying the multinationals the right to bid on federal, state and local government contracts in this country and limiting market access to countries whose firms provide economic and moral support to the Pretoria regime.

The committee criticized the Administration for clinging to the discredited policy of "constructive engagement"—a term used by the White House to justify the use of diplomacy instead of economic leverage to end South Africa's racist policies.

Instead, the panel urged a "concerted international effort" in conjunction with the governments of Britain, Canada, West Germany, France, Japan and Israel to impose "a multilateral program of sanctions."

Reagan obstinate

The prospects for such action appeared remote. The Administration stubbornly opposed sanctions last year, and put them into effect reluctantly only after Congress overrode Reagan's veto of the legislation. After the committee issued its report, the State Dept. expressed "skepticism about the efficacy of broad punitive sanctions."

Moreover, when Congress enacted the sanction legislation, members of the European Community backed away from any tough action, settling for only mild penalties at that time.

Bieber endorsed the panel's recommendation that the government "develop a good working relationship" with South Africa's black majority. "Inevitably, U.S. relations with a government supported by the majority of South Africans will be strongly influenced by the links that are established during the period of struggle," he declared.

The UAW president called on the U.S. government to open lines of communication with the opposition movements in South Africa, including the Congress of South African Trade Unions and the African National Congress.

At the same time, Bieber urged the Administration and Congress to support increased development assistance to the "front-line" states in Southern Africa "given the high human and economic toll being exacted by the South African government against those countries."

AFM Local 802 members in the swing at New York council hearings.

Legislation treasuring jazz sounds sweet to Musicians

New York—City council members caught the rhythm and the riffs during committee hearings on legislation to declare jazz music a civic treasure.

Testifying before the council's Committee on International Intergroup Relations & Special Events were union musicians, producers and club owners supporting a proposal to encourage the growth of jazz clubs and improve opportunities for performers.

The testimony was backed up by several jazz ensembles, including a jazz delegation from the Musicians.

AFM Local 802 President John Glasel called the resolution a significant step that will "nurture and promote the prospects for jazz music and musicians."

But Glasel also stressed that the true musical treasures are "the thousands of musicians who create this evanescent art form as well as the presenters, producers, educators, journalists, audiences and others who provide its support."

Glasel scored the "bottomline-oriented school of managers" at major recording companies that has restricted opportunities for newer artists and urged the city law-makers to "search for ways to encourage" the growth of jazz music.

The committee adopted the measure unanimously. It now awaits action by the full council and the mayor.

A similar resolution to be introduced in Congress by Rep. John Conyers (D-Mich.) declares jazz to be an "indigenous American music and art form" that has been "underdeveloped and underfunded by both the public and private sectors."

Labor teleconference targets right to know toxic hazards

Union members and labor educators will participate in an AFL-CIO teleconference on a worker's right to know the chemicals used in the workplace. The conference will be broadcast to 17 universities across the nation.

The Apr. 23-24 teleconference will tutor local union members, especially local officers and safety committee members, on workers' rights under state and federal right-to-know laws.

The "Right to Know—Making it Work" conference will be opened by AFL-CIO President Lane Kirkland. Safety and health specialists from the federation and affiliated unions will lead segments of the program.

It will cover the history of right-to-know laws, requirements of the federal hazard communication rule, coverage under state right-to-know laws and strategies for getting and using chemical hazard data.

The Labor Institute of Public Affairs, the federation's television arm, will handle the production with support of the Dept. of Occupational Safety, Health & Social Security and the George Meany Center for Labor Studies.

Registration forms and further information for the two-day conference are available from participating universities.

The program will be broadcast via satellite from Washington to the University of Arkansas at Little Rock, University of California at Berkeley and at Los Angeles, University of Connecticut at Storrs, University of the District of Columbia, University of Illinois at Chicago, Indiana University at Bloomington, Dundalk (Md.) Community College, Michigan State University at East Lansing, University of Minnesota at Minneapolis, University of Missouri at Columbia, University of Nebraska at Omaha, Cornell University at Ithaca, N.Y., Ohio State University at Columbus, Indiana University of Pennsylvania at Indiana, Pa., West Virginia University at Morgantown, and the University of Wisconsin at Madison.

Day care need mounts as employers drag feet

The demand for child care programs is escalating as women flood into the workforce in record numbers. But employers continue to drag their feet on establishing such vital services, the Population Reference Bureau reported.

The need is spread across the entire economic spectrum, but it is concentrated most heavily among divorced and unmarried mothers who have to support families on their own, the private nonprofit research center emphasized.

These and other conclusions were contained in a study titled "Juggling Jobs and Babies: America's Child Care Challenge." It was prepared by Martin O'Connell of the Census Bureau and David E. Bloom of Harvard University.

Its recommendations for a broad range of actions to ease the child care crisis parallel those made by the AFL-CIO, the Coalition of Labor Union Women, the State, County & Municipal Employees and other unions.

They include day care centers operated at the workplace, flexible work schedules to make it easier for parents to manage family and job responsibilities, and allowing employees to work fewer, but longer, days. Also recommended were steps permitting workers to parcel out the dollars that go into benefit programs so they can channel some of these resources into private day care assistance, increased maternity and paternity leave, government tax benefits, and public and private school programs.

Governmental coaxing

But "most employers will need coaxing by federal, state and local governments to adopt progressive child care policies," the study emphasized.

That echoed the call issued by the 1985 AFL-CIO convention and repeated last year by the Executive Council for congressional action to make day care "available to all who need it and to provide financial incentives to states" to encourage them to put similar services in place.

The federation pointed out that not only are single-parent families—usually those headed by women—growing, but so are the number of families that require two incomes. The result, it said, is that "both the availability and the affordability of child care have reached crisis proportions."

The research center's study made the same point. "The growing number of women working raises a number of very difficult issues for them and their families," the report said. "Indeed, most working women face a tremendous personal struggle in trying to balance their personal and professional lives."

Moreover, the center emphasized, the "lack of affordable child care is probably preventing many poorly educated and low-income mothers from working at all, when they are the women who need jobs the most."

The federation recognized long ago that collective bargaining is a key route to solving the day care problem, and AFSCME has been concentrating on this issue in negotiations.

State efforts

In New York state, some 25 state workplaces now offer child care on a daily basis; Hawaii has just opened its first government-sponsored child care center with priority registration for public employees, and the union convinced the Denver city government to begin a program that now serves as a model for area businesses.

More such action is needed, the study stressed, declaring: "Many women find it extremely difficult to decide whether they are mothers who happen to work, or workers who happen to be mothers. Their simultaneous involvement in career and mothering entangles many women in exhausting life styles."

Change of address

Open house festivities marked the dedication of Postal Workers new headquarters building in Washington as APWU President Moe Biller welcomed Postmaster Gen. Preston R. Tiche, seated right, to a meeting of the union's executive board. Union and management representatives previewed postal service contract negotiations, set to begin in April. The contract covering 575,000 workers—members of the APWU and the Letter Carriers—expires July 20.

Health care workers ask for AIDS rule

Health care workers affiliated with the Teachers petitioned the federal job safety agency for a emergency standard to protect workers against infectious blood-borne diseases, including hepatitis B and the acquired immune deficiency syndrome.

The AFT's Federation of Nurses & Health Professionals urged the Occupational Safety & Health Administration to take action. It said the growing problem of infectious diseases in health care facilities "has called attention to OSHA's serious failure on this issue."

AFT President Albert Shanker said that effective, enforceable control procedures should be developed in a standard now. "Without enforceable OSHA standards, health care professionals currently have no legal recourse against employers who fail to comply with the guidelines." Further, a standard would require safe, hygienic job sites with staff training and monitoring, and adequate prevention, handling and disposal procedures.

Third try

The nurses' petition is the third labor request for a standard. Last September, the Service Employees, Hospital & Health Care Employees and the Retail, Wholesale & Dept. Store Union's District 1199 petitioned for an emergency rule on hepatitis B and the State, County & Municipal Employees asked for a broader measure on infectious, blood-borne diseases. An OSHA spokesman said the agency is still considering those petitions.

OSHA has twice issued guidelines developed by the Centers for Disease Control concerning blood-borne, infectious diseases, but the union petitions have stressed that voluntary guidelines don't protect workers as well as standards do. Health care workers are at risk of disease from exposures in nursing homes, hospitals, doctors' offices and in home care.

Court blasts holdup on field sanitation

Brock ordered to issue rule on drinking water and toilets

Continued from Page 1

hearing. Such a move would be a clear misuse of taxpayers' money."

The Farm Workers also welcomed the court decision, but expressed deep reservations about how well OSHA would enforce such a standard. Armando Garcia of the UFW noted that California's field sanitation law has been on the books many years, but "we know for sure that the only way to enforce these rights is with a union contract."

Indeed, when OSHA refused in April 1985 to set a field sanitation standard, it admitted that enforcement of such a rule would have a very low priority. "Wait six months from now," Garcia said. "Then we'll see that farm workers must have a union contract in order to insure they have clean water and clean toilets."

The health need for such a standard has long been in evidence. Studies show the nation's 550,000 migrant farm workers are 59 times more likely to get parasitic infections that the general public, at 11 times greater risk of gastrointestinal infections and three-and-a-half more times likely to have urinary tract problems. Further, they are nearly 25 times more likely to have pesticide-related illnesses.

The Labor Dept. has 45 days in which to request a rehearing by the full appellate court or 30 days in which to appeal the decision to the Supreme Court. If it neither appeals nor asks for a rehearing, then OSHA will have 30 days in which to issue a final standard.

Legal foot-dragging

The Reagan Administration caused half of the 14-year delay by legally dragging out its period of indecision. After years in court, it agreed in July 1982 to a an out-of-court settlement with the farm worker groups under which a standard would be set within 31 months. At the end of that period, it sought and won a court extension. Finally in April 1985, then OSHA Administrator Robert Rowland said there would be no standard.

But public and congressional outcry exceeded the Administration's expectation, forcing incoming Labor Sec. Brock to agree to "review" the decision. In October 1985, Brock said the states should act to require adequate sanitation facilities for farm workers. He said he would take no federal action if an unspecified number of states would set standards within 18 months.

It was Brock's October 1985 decision that the court reviewed, determining that the Labor Secretary exceeded the scope of his authority by and acted contrary to federal law in "unreasonably" delaying agency action, by relying on "an unsupported and unrealistic hope that state governments would suddenly move, en masse, to fill the need." Indeed, 37 states had no regulations concerning field sanitation for farm workers then, and only six states have added such laws since.

In pointing out that OSHA was first petitioned for a field sanitation standard in 1972 and that since 1976 the agency has held that a rule is needed, the court said that "under any yardstick, the state governments had already had ample opportunity to develop their own field sanitation standards by October 1985. In the absence of any extraordinary developments, another two-year delay was unreasonable."

Rollcall on labor protections

The Senate rejected an anti-labor amendment to the highway and mass transit bill by a 70-30 vote on Feb. 4. The amendment, by Sen. Phil Gramm (R-Tex.), sought to restrict the right of unions to negotiate job protections when public transit agencies contract out services to private operators.

Younger workers mobilized for role at grass-roots level

A new program for workers aged 30 and under has been launched by Frontlash, the AFL-CIO youth organization. Through the Young Workers Program, union members can join in COPE campaigns, organizing drives and other activities sponsored by state and local central bodies and affiliated unions.

Executive Director Joel Klaverkamp said the new program will extend Frontlash's activities aimed at high school and college students to workers who may have little experience with unions.

Each participating central body will appoint a director to develop the chapter's program and coordinate participation in COPE and national activities. The director will contact local unions, seeking volunteers for the projects ranging from voter registration and get-out-the-vote activities to "buy American" campaigns. Local unions can develop a similar program by establishing young worker committees.

National program director Chuck Hodell said the project will stress "action and education," with young workers involved in grass roots lobbying, community services and a wide range of labor concerns.

The program will also serve as a clearing house for information on the issues that young workers rank most important.

Jack Flynn, political director for the Operating Engineers, said the project was an opportuntity for young union members "to get involved in labor's agenda by working with state and central body leadership."

"It meets labor's need to concentrate on young working people," Flynn said, and "hopefully, young members will get involved and stay involved."

Pilot projects are already underway in Las Vegas, Nev., where the under-30 unionists updated the COPE member lists and ran phone bank operations and in Boston, where union members took their voter registration campaign to work sites. In Missouri, the young workers' chapter formed a "buy American" coalition while in Lake County, Ind., young trade unionists turned out to support the Steelworkers locked out by USX Corp.

Frontlash's Chuck Hodell, left, and Jack Flynn of the Operating Engineers discuss plans for the young worker program.

EDITORIALS

Come to Judgment

THERE IS BLAME to share in the disgraceful failure of the Occupational Safety & Health Administration to require farm employers to provide clean drinking water and toilet facilities to field workers.

Richard Nixon was President when the original court case to compel OSHA to issue a field sanitation standard was filed. The first court order directing the Labor Dept. to issue a field sanitation standard was during the Ford Administration. The Carter Administration conceded the need, then waffled and delayed.

The Reagan Administration's second Secretary of Labor overruled his predecessor and acknowledged the "clear evidence" that farmworkers are subjected to "unacceptable" health risks. Nevertheless, Labor Sec. William E. Brock said, OSHA wouldn't do anything about it for another two years in the hope that the states would deal with the problem and make federal action unnecessary.

THIS LATEST delay was just too much for the federal appellate court that has been struggling with OSHA's intransigence for more than a decade.

Enough of excuses, it decreed in the judicial equivalent of a lion's roar.

The record "demonstrates beyond dispute" that lack of drinking water and toilets makes workers sick and spreads disease. And while the Secretary of Labor might prefer state regulation, the court said, he "may not abdicate the responsibility which Congress entrusted to him."

That obligation, Chief Judge Patricia M. Wald noted sternly, is "to assure as far as possible every working man and woman in the nation safe and healthful working conditions."

Now, 14 years after the first court case was filed, the time has surely come to end "this disgraceful chapter of legal neglect," Judge Wald concluded.

To which we say, "right on."

Poverty and Politics

WELFARE REFORM, if defined as a more effective and more humane means of helping those in need, is a goal worth pursuing. But we have learned from experience that when this Administration embraces the cause of "reform," it's a good idea to check the dictionary the White House is using.

Poverty in America has increased during President Reagan's watch, at least in part because of savage budget cutbacks in programs that had kept the working poor and the elderly from destitution.

One of the President's persistent themes has been the "inflexibility" of the federal welfare system, that supposedly stifles innovation and good ideas. Thus he dropped in on a White House briefing to hear first-hand reports on the type of self-help programs the Administration says it wants to promote.

Maybe the President was directed to the wrong room. The people in the front lines of community services looked a bit puzzled when the President expressed regret that so many of their good ideas couldn't be tried out within the parameters of the federal welfare system.

SISTER MONICA THOMANN is from unemployment-ridden East Liverpool, Ohio, which incidentally was one of the first industrial cities to feel the brunt of unrestricted imports. She described the efforts of the Ceramic City Senior Citizens Center to deliver social services to some 1,700 elderly Americans living below the poverty line.

"Without the federal dollars giving us that base of operation," she said, "there is no way we could have done it."

She spoke of the importance of Labor Dept. community service funding and of the Urban Mass Transit Administration as the source of other funds. As reporters were quick to note, both programs have been targeted for sharp budget cuts by the Administration.

If President Reagan wasn't embarrassed, he should have been.

Struggle for tax justice shifts to states and cities

By Press Associates

The 1986 overhaul of the federal tax code was a big step toward fairness. Now the battle for tax justice for middle- and low-income Americans has shifted to the states.

The federal tax reform offers a "golden opportunity" to reform the tax system at the state and local levels, according to the Citizens for Tax Justice, a labor-backed coalition, whose revelations about tax avoidance by corporations and the rich that helped pave the way for reform.

"If you thought the old federal tax system was bad, take a look at what's going on in the states," CTJ tax expert Robert S. McIntyre noted in releasing a 50-page study titled, "The Sorry State of State Taxes."

Among the study's findings was that the richest seven-tenths of 1 percent of the population with incomes of more than $500,000 pay an average 25 percent less of their total income in sales, property and state income taxes than the bottom 20 percent who earn $7,564.

However, the issue is not only how that tax burden is distributed, but also what is to be done with the additional revenue which most states will receive as a result of the federal tax changes. The so-called "windfall" for state revenues occurs because most states link their systems to the federal definition of taxable income.

Undoing the damage

What is now called a "windfall" to the states should be called a "restoration, a return to the states of the ability to undo the damage to fiscal stability and fairness" caused by the 1981 Reagan tax and budget cuts, concluded a 95-page report, "Windfall or Pitfall," by the State, County & Municipal Employees.

The Reagan tax cuts shrank state and federal revenues. Between 1981 and 1986, federal aid to state and local governments was cut 15 percent —a loss of $76 billion for education, employment and training, health services, nutrition and other programs, said the AFSCME report.

During the first six months of fiscal 1987, 21 states—many in depressed farm and energy regions —have cut their budgets, "a sympton of a fiscal system in deep trouble," the report noted.

For many cities, counties and towns, the fiscal crunch worsened with the end of the federal revenue sharing program last September. Since it began in 1972, revenue sharing distributed $85 billion to 39,000 municipalities based on a formula related to need. "In many places, the effects of lost aid are heightened because of rising bills for housing the homeless, feeding the hungry, training the unemployed, helping the aged, and rebuilding roads and bridges," said a recent New York Times report.

Impact on localities

The lost aid has forced many localities to cut services or hike taxes, the Times reported. Los Angeles County reduced sheriff's patrols, cut fire engine crews and slashed cultural and recreational programs, and Philadelphia imposed a hiring freeze even after cutting its force of police and fire fighters. Limestone, Ill., cut free bus service for the elderly from twice a week to once a week, and Moonachie, N.J., is about to raise taxes to maintain police salaries.

The AFSCME report urged states to use part of their windfall to aid hard-pressed localities. It said states also should inventory their "backlog of unmet needs" and budget for such contingencies as a recession.

If states decide to return "windfall" revenues to taxpayers, tax relief should be geared to low- and middle-income residents, not to corporations and the wealthy as the U.S. Chamber of Commerce is urging. States that bow to business pressure to restore loopholes closed at the federal level will lose a truly "golden opportunity" for tax fairness and for using extra revenues to address urgent problems and needs.

AFL-CIO LEGISLATIVE
ALERT!

Congress Works To Reconstruct Unresolved Legislation

Status Report: Continued Activity On Labor Issues

During the last two months, there has been renewed Congressional activity on several important pieces of legislation which were unresolved during the 99th Congress.

By writing to your members of Congress on one or more of the following issues, you can help in the fight to protect your rights, benefits or your health and safety.

Airline Protective Provisions

Last year, the Senate failed to adopt House-passed legislation, which would have required the Department of Transportation to impose labor protective provisions (LPPs) in cases where employees are harmed by airline merger cases. H.R. 1101, a similar measure has now been introduced by Rep. Mineta (D-CA) in the House.

Ask your representative to cosponsor and support this bill to protect the thousands of airline employees threatened by deregulation mergers.

Asbestos Removal

On October 22, 1986, President Reagan signed the labor-supported Asbestos Hazard Emergency Response Act into law. The legislation was passed to protect the health of 1.5 million workers and over 15 million children who work or attend school in public buildings with dangerous levels of asbestos contamination. In January, however, the Administration moved to deny future funding for asbestos removal.

Your representative and both of your senators should be asked to retain funding for clean-up projects. In anticipation of Congressional support, letters should also be sent to the EPA, 401 M Street, S.W., Washington, D.C. 20460, urging that the agency adhere to its publicized schedule for the distribution of funds.

Banking Check-Hold

Last year, the House passed legislation that would limit the time that a bank can restrict the availability of funds after a check has been deposited by a customer. The Senate failed to act. This year, H.R. 28, the Expedited Fund Availability Act, a bill which is virtually identical to last Congress' legislation was re-introduced in the House by Rep. St Germain (D-RI).

Write to your representative and urge him/her to act against this practice which allows banks to reap profits from monies the depositor is denied access to, by supporting H.R. 28 when it reaches the House floor.

Double-Breasting

Last year, workers' scored a victory when the House-passed legislation to end the construction industry practice of shifting work away from union companies to non-union operations, which they also own. But the companion bill never made it to the Senate floor.

New bills have been introduced in both chambers. They are H.R. 281, introduced by Rep. Bill Clay (D-MO), and S. 492, introduced by Senators Kennedy (D-MA), D'Amato (R-NY), Bradley (D-NJ) and Weicker (R-CT).

Urge your representative and both of your senators to co-sponsor these important efforts to prevent the undermining of union jobs in the construction industry.

Family Leave

The country's first attempt to address the difficulties of obtaining unpaid leave from work due to family medical emergencies or the arrival of a new child, did not reach the floor of either chamber last year.

On February 3, the Family and Medical Leave Act, H.R. 925, was re-introduced by Reps. Clay (D-MO) and Schroeder (D-CO). A somewhat different bill, S. 249, was also introduced in the Senate by Senators Dodd (D-CT) and Specter (R-PA).

Write to your representative and both of your senators; urge them to support the provisions of H.R. 925 when the issue comes to the floor.

High-Risk Notification

Last year, neither the House nor the Senate completed work on proposed legislation to provide notification, information and medical monitoring to workers who are at high risk of developing diseases after on-the-job exposure to toxic substances. The new bills are H.R. 162, introduced by Rep. Gaydos (D-PA) in the House and S. 79, introduced by Senators Metzenbaum (D-OH) and Stafford (R-VT) in the Senate.

Urge your legislators to cosponsor this measure to protect the health of workers.

Pay Equity

A bill authorizing an 18 month study of federal pay and job classification systems and levels of employment discrimination has been re-introduced by Rep. Oakar (D-OH) as H.R. 387 in the House and S. 5 by Senator Cranston (D-CA) in the Senate. Tell lawmakers you support this examination of the fairness of federal pay practices.

Polygraphs

In 1986, a labor-supported bill, restricting the use of polygraph tests on employees passed the House by a wide margin, but did not reach the Senate floor. A similar bill will shortly be introduced in the House.

Write to your representative and ask him/her to support this vital measure to protect your right to privacy.

Surface Transportation Act

The 99th Congress adjourned last year without authorizing funding for transportation and highway programs, after House and Senate conferees failed to reach agreement. This year, both bodies quickly completed work on new bills, and another conference will begin soon.

Ask your lawmakers to push for a quick resolution to differences between the House and Senate versions, as any further delay will mean that many high priority construction projects could be canceled for this year. Also urge them to override a possible presidential veto.

Trade

Last year, Congress was unable to enact legislation to combat the nations' trade crisis. With 1986's trade deficit at a staggering $170 billion, one of the first bills introduced in the House was H.R. 3 by Rep. Gephardt (D-MO), a measure identical to last year's omnibus trade bill.

Ask your representative to support this legislation which would bring our trade laws up to date, institute deficit reduction procedures and protect worker rights abroad.

Random Drug Testing Contained In Two New Senate Bills

Last fall, with voters' opinion polls in mind, the 99th Congress passed an $1.8 billion drug bill. The legislation included tougher drug penalties, stepped up enforcement and increased drug prevention and education efforts. Despite the Administration's support of periodic drug testing of public employees, the provisions which authorized testing were not included in either the House or the Senate bills.

However, on January 21, two new bills which would require mandatory random drug testing in the railroad and airline industries were introduced in the Senate. Senators Danforth (R-MO), Dole (R-KS) and Gramm (R-TX) cosponsored S. 356, a bill which is virtually identical to the drug testing measures which were introduced last fall. The new chairman of the Commerce, Science and Transportation Committee, which has jurisdiction over this legislation, Senator Hollings (D-SC) introduced S. 362, which would also make random testing mandatory.

In 1986, the AFL-CIO Executive Council pointed out that drug tests have a high rate of inaccuracy and, "are too often used to discharge competent employees." In addition, the use "of these tests on a random or across-the-board basis is degrading to, and invades the privacy and physical integrity of those tested, the vast majority of whom use no illegal drugs at all."

The courts apparently agree with this conclusion. Several public employee unions have filed suit to halt Reagan Administration ordered testing. In the few cases which have been acted on so far, the courts have ruled that the practice was an invasion of privacy and a violation of the Fourth Amendment to the Constitution which prohibits unreasonable searches and seizures.

What You Can Do: Write to your senators, and members of the Commerce, Science and Transportation Committee. Tell them that random drug testing is a violation of workers' rights, and urge them to oppose passage of any authorizing measures.

Union members to rate '88 contenders

Bal Harbour, Fla.—The AFL-CIO Executive Council approved basic procedures to help union members evaluate candidates for 1988 party presidential nominations with the goal of reaching a consensus on pre-primary endorsements by the federation.

The council's action follows through on a 1985 AFL-CIO convention resolution calling for continuation of the political process that evolved in advance of the 1984 primaries. In announcing the plan, Federation President Lane Kirkland told reporters:

"The AFL-CIO again intends to undertake a major political participation campaign this year, as our members—like all citizens—begin to consider who can provide the quality of presidential leadership we must have if we're going to build a future for our children. The process will be among the most extensive undertaken by any institution in America.

"Our members want to play a role in helping to find the candidate who can focus this nation's resolve—in short, who can lead."

"Our goal is to help union members and their families get involved in deciding which candidate or candidates offer the standard of leadership that this nation deserves."

Because of the unusually large field of prospective candidates, the basics of the council's plan contain a number of refinements of the procedures followed in 1983 and 1984. Kirkland stressed that the process will be "filled out" after further consultation with federation affiliates.

It continues to rely on the voluntary agreement of AFL-CIO unions to refrain from separate endorsements while the candidates are sounded out on their views and members polled to determine if there is a consensus for a formal labor endorsement.

The plan this year is for each candidate to speak directly on videotape and in print to members of AFL-CIO unions. Kirkland said invitations to do so will be extended to every candidate of both the Democratic and Republican parties.

For the video presentation, a single broad question will be presented to the candidates, and each will have the same technical facilities and the same amount of time for a response. The videotaped responses will be assembled by party and distributed throughout the labor movement.

Council sounds trade alarm

Congressional leaders discuss priority issues on labor's legislative agenda with council members. From left, Vice President Murray H. Finley, Sec.-Treas. Thomas R. Donahue, House Majority Leader Thomas S. Foley, Senate Majority Leader Robert C. Byrd and Federation President Lane Kirkland.

Slump in real earnings undercuts U.S. economy

Bal Harbour, Fla.—Warning that the American economy is in "a risky and fragile" state, the Executive Council urged Congress to take the lead in fostering growth and boosting workers' real income.

The trauma of deindustrialization is destroying jobs that have been the bedrock of the nation's "solid, middle-income, middle-class society," the council noted. It placed the blame on a deluge of imports, a surging trade deficit and an unregulated wave of corporate takeovers and mergers.

"These are good times for a few, bad times for many," the council said.

While the stock market soars "amid shady deals and insider trading," corporate executives treat themselves to huge salary increases, lavish bonuses, stock options and "golden parachutes."

Workers and their families pay the price for the greed in corporate suites, the AFL-CIO said. They suffered a sharp 10-percent plunge in real earnings in the last seven years. And 11 million workers have been displaced from their jobs since the Reagan Administration came to power.

The statement was laced with criticism of Administration policies for "doing nothing to strengthen the economy and protect the general welfare."

Continued on Page 4

Strong action to save jobs tops labor's legislative goals

By John M. Barry

Bal Harbour, Fla.—Strong and effective measures to reduce the nation's trade deficit must be enacted by Congress "for the good of the country and for the good of the international trading community," the AFL-CIO Executive Council declared.

This package of remedies, the council said, should include enforcing the reduction of export surpluses enjoyed by any major trading partner that is found to engage in unfair trade practices.

Concern over the trade crisis was a grim theme that pervaded the deliberations on economic policy, the discussions with Senate Majority Leader Robert C. Byrd (W.Va.) and House Majority Leader Thomas S. Foley (Wash.) on the opening day of the council's weeklong winter meeting, and the addresses of prospective presidential candidates to AFL-CIO departments.

Byrd and Foley reviewed broad-ranging legislation of concern to workers currently being shaped in Congress, including prospects for a minimum wage increase and a measure to deal with plant closings, both the subject of council statements.

Focus on trade

But the trade situation was the central topic of the discussions, and the congressional leaders welcomed labor's insistence on a strong bill, despite President Reagan's veto threats.

The council pointed out that a four-fold increase since 1980 brought the U.S. merchandise trade deficit to $170 billion in 1986. Millions of jobs have been lost as a result of the dramatic rise in imports that has been accompanied by massive inflows of foreign capital, the statement said, adding:

"No sector of the economy is untouched. Mines and factories are closing, communities are devastated, and more and more farm families are being driven off their land. . . . America's future is mortgaged to the hilt."

The statement called on Congress to send to the President "a trade bill that will reduce the trade deficit and help American workers and industry regain lost production, jobs and income." It stressed that the AFL-CIO "will not support, and will oppose, purely cosmetic trade legislation."

The council approved its trade policy statement the day before President Reagan described his "competitiveness initiative," the highlights of which Labor Sec. William E. Brock had outlined for the council earlier in the day. Commenting on the Reagan program in response to reporters' questions, AFL-CIO President Lane Kirkland said, "We believe in competitiveness; only a damn fool would believe in

Plant closing bill gets promise of fast-track action

A plant closing and worker adjustment assistance bill that closely parallels many of labor's proposals was unveiled at a crowded Capitol Hill news conference by its principal Senate and House sponsors.

It's been promised a fast legislative track by committee chairmen, with the goal of congressional passage this spring.

The labor-backed bill would require employers to give workers and communities from 90 to 180 days' notice of plant closings or major layoffs. The longer period would be for shutdowns affecting more than 500 jobs.

An early alert would set in motion efforts to avoid a shutdown and would put in place an arsenal of programs to retrain and assist workers who lose their jobs.

That's what the AFL-CIO Executive Council urged in a statement which noted that most blue-collar workers get less than two weeks' notice of a plant closing or major layoff. One-third of those workers receive no notice at all.

The council cited last month's report of a plant closing task force appointed by Labor Sec. William E. Brock. The task force agreed on the desirability of early notice and called for "a rapid response mechanism" to help displaced workers obtain training, assistance and new jobs.

Urging mandatory notification, an issue on which Brock's task force was divided, the AFL-CIO pointed to the success of Canada's plant closing law. In Canada,

Congressional leaders back 'overdue' minimum pay hike

Bal Harbour, Fla.—House and Senate leaders assured the AFL-CIO Executive Council that Congress would approve legislation this year to provide a long overdue increase in the federal minimum wage rate for the working poor.

Calling an increase "sound economic policy," the federation pointed out that there has been no action on the wage floor since 1977, when it was raised in four stages from $2.65 an hour effective Jan. 1, 1978, to $3.35 on Jan. 1, 1981.

While the minimum has remained stuck at that level for six years, the council said, inflation has so eroded its purchasing power that it will take at least $4.61 an hour to bring it back to the 1978 level.

And to avoid further erosion, AFL-CIO President Lane Kirkland told a press conference, labor will support indexing the wage floor to future rises in the consumer price index.

Senate Majority Leader Robert C. Byrd (D-W.Va.) and House Majority Leader Thomas S. Foley (D-Wash.) told council members the outlook was good for action in the current session of the 100th Congress.

Their optimistic assessment stood in

Election reform sought to curb big-money impact

Bal Harbour, Fla.—The AFL-CIO called on Congress to pass a campaign reform law that will lessen "the corrupting influence of big money on the political process."

A key ingredient, the Executive Council said, should be a voluntary system of partial public financing of House and Senate campaigns, comparable to the tax checkoff system used in presidential campaigns.

The council said candidates who accept public funds should be required to comply with a realistic limit on total campaign spending. It urged a ceiling on total contributions from political action committees that would be applicable to all candidates, including those who reject public funds.

It expressed special concern at an increasingly common evasion of PAC contribution limits, known as "bundling." That's the practice of corporate or trade association executives, or professional fundraisers, of collecting individual contributions from a number of company executives so as to present candidates with a contribution that often vastly exceeds the legal limit that a corporation's political action committee could donate.

Reform measure

Many of the AFL-CIO's concerns are addressed in the campaign reform bill, S.2, which was introduced on the opening day of Congress by Senators David L. Boren (D-Okla.), Robert C. Byrd (D-W.Va.) and 30 co-sponsors.

While it does not match labor's position in all details, the council said the AFL-CIO will work with Congress "to perfect, and then to pass, such legislation."

The existing mechanism for public funding of most presidential campaign spending is the voluntary checkoff of $1 of each individual's tax payment. Congressional financing could be achieved by allowing a $2 tax checkoff, the council suggested.

It urged a lower ceiling on individual contributions by wealthy individuals and expressed concern that large contributions from any source "pose a threat to the integrity of the political process."

The AFL-CIO opposed, however, any reduction in the present $5,000 limit that a PAC may contribute to a candidate in any election. It noted that rules intended to prevent multiple PACs by a single organization limit the number of labor political action committees but have not prevented a big rise in the number of corporate PACs giving money to candidates.

In calling for tightened controls on bundling of individual contributions by political fundraisers, the council stressed that such large handovers of political funds "have the same potential for corruption" as a single direct contribution of that amount.

Rising influence

The statement expressed concern over the continuing escalation of congressional campaign costs and the rising influence of well-connected fundraisers and "independent" groups that spend money to help a candidate outside of official campaign channels.

"The time has come to restore the public's faith in the integrity of congressional elections," the council said. It noted that limited campaign spending reforms adopted in the wake of the Watergate scandals obviously haven't been adequate.

New AFL-CIO Vice President Lenore Miller is welcomed to Executive Council by President Lane Kirkland and Sec.-Treas. Thomas R. Donahue.

Lenore Miller elected to fill vacancy on Executive Council

Bal Harbour, Fla.—Lenore Miller, president of the Retail, Wholesale & Dept. Store Union, was elected an AFL-CIO vice president and took her seat on the federation's Executive Council at its midwinter meeting.

Miller fills the vacancy left by the death last Sept. 5 of Alvin E. Heaps, her predecessor as president of the RWDSU. Miller had been the union's secretary-treasurer from 1979 until she succeeded Heaps as president.

Her election puts three women on the 35-member council, which consists of the federation vice presidents and the two AFL-CIO general officers.

The first was Joyce D. Miller, no relation, who was elected in 1980. She is a vice president of the Clothing & Textile Workers and president of the Coalition of Labor Union Women. At the AFL-CIO's 1981 convention, she was joined by Barbara Hutchinson, who holds the elective post of women's director of the Government Employees. With Lenore Miller's election, the council now has its first woman member who is also president of her union.

The new council member has been on the RWDSU staff since 1958. She has served as a local union secretary-treasurer, assistant to the international president, a trustee of the industry-union pension fund, and a board member of numerous labor-related organizations.

She is a former chairperson of the AFL-CIO Secretary-Treasurers' Conference and serves on the executive boards of two international labor secretariats—the International Union of Food & Allied Workers and the International Federation of Commercial, Clerical & Technical Workers.

Human rights groups

Miller has been active in Histadrut support groups and a range of human rights organizations, including the Workers Defense League. She is a trustee of the AFL-CIO's Human Resources Development Institute, on the advisory committee of Frontlash, and a board member of several AFL-CIO Departments.

Miller, who will be 55 on Mar. 10, is married and has a daughter who is a student at Brandeis University. After graduating from Rutgers University in 1952, she was associated with the Purdue University Sociology Dept. and later with the Panel of Americans, a multiracial, interreligious campus-based organization.

Labor's endorsement process keyed to membership review

Continued from Page 1

"We hope for widespread use of these videos at local union meetings, councils, boards and other leadership groups, and by those activists who are the most involved in the political process," Kirkland said.

"Americans want to know whether the candidates have the capacity to lead, to grasp the essential problems we face in the future, and the solutions they propose."

Questions and answers

In addition to the videotaped responses, the candidates will be asked to respond in writing to a set of more specific questions "that all Americans need to know about before supporting a candidate," Kirkland added.

These written responses will be collected, printed and given the widest possible distribution among union members.

In addition, all AFL-CIO affiliates are being encouraged to provide the candidates with maximum access to their members, a policy that was evident here in the appearance of several candidates at a number of union receptions and departmental meetings.

"The goal of this massive effort is participation," Kirkland stressed. "The result may or may not be a formal endorsement by the AFL-CIO of a candidate from either or both major political parties."

He noted that any decision about endorsement of a particular candidate will require a two-thirds majority of the votes cast at a meeting of the AFL-CIO General Board. That board is made up of members of the Executive Council plus a principal officer of each union and constitutional department.

Before that occurs, however, unions will take soundings of their members' views by various means—local and regional meetings, straw polls, surveys, and other ways.

Continuing process

Kirkland told reporters that he expected to be asked repeatedly whether labor will endorse, and his answer is quite simple: "I don't know."

"We'll wait to hear from our brothers and sisters," he said. "We will bring millions of voters the chance to read the candidates' own words and to watch the candidates as they articulate their own bid for leadership of the country.

"Our goal is the most open and thorough process of candidate communication with union members and their families that is within our power."

UFCW organizing victories boost union's rolls by 82,000

Major organizing successes in the United States and Canada added nearly 82,000 new members to the ranks of the Food & Commercial Workers in 1986.

The figure topped the previous record of a membership gain of more than 71,000 set in 1985. It marked the fifth consecutive year that the UFCW's organizing efforts set new records.

"Organizing is the UFCW's lifeblood," said William H. Wynn, president of the 1.3-million-member union. He hailed last year's addition of more than 61,000 new members in the United States and nearly 21,000 in Canada as evidence of a "period of steady growth."

The organizing success "clearly demonstrates that workers see unions as vital and responsive in addressing their concerns on the job," Wynn said. "They recognize that the UFCW is maintaining job security, especially during today's climate of merger mania, where workers are often the first ones to be jettisoned when the bank debts come due."

The gains included nearly 16,000 workers who became members through affiliations of independent unions. And the largest union victory in any election conducted by the National Labor Relations Board last year added 1,150 members at the Delta Pride Catfish processing plant in Indianola, Miss.

Wynn said he was "especially proud" of the union's success in organizing low-wage workers, especially women and minorities, in such diverse areas as nursing homes and catfish and poultry processing plants. These workers, he said, see unions as "a powerful vehicle for combatting the discrimination and economic second-class citizenship they've endured for decades."

Council mourns 4 former members

Bal Harbour, Fla.—The deaths of four former AFL-CIO vice presidents—John H. Lyons, S. Frank Raftery, Alvin E. Heaps and Alexander J. Rohan—were mourned by the Executive Council, which praised their contributions to the trade union movement.

Lyons, president emeritus of the Iron Workers, died Oct. 26, 1986, from a stroke. He served on the council from 1967 until his retirement in 1985 and was the senior vice president. He also headed his union from 1961 to 1985. The council noted that he presented labor's views as a member on a number of national commissions.

Raftery, president of the Painters from 1964 to 1984, died Nov. 20, of kidney failure. Besides serving on the Executive Council from 1970 to 1984, he held many key posts in federation-affiliated departments. The council pointed out his success in building solidarity with other trades in the labor movement.

Heaps, who was president of the Retail, Wholesale & Dept. Store Union since 1977, died last Sept. 5, after a heart attack. He had served on the council since 1977. The council credited him with "extraordinary contributions" to labor's cause.

Rohan, who died Dec. 30 at age 74, served on the council from 1970 to 1975. Rohan, active in the Printing Pressmen for more than a half-century, served as the IPPGC president from 1970 to 1974 and was elected president emeritus on his retirement. His qualities of leadership and integrity were of "inestimable value," the council said.

Labor Sec. William E. Brock discusses trade issue with Executive Council.

Minimum pay rise pressed as 'overdue'

Continued from Page 1

sharp contrast to the Reagan Administration's continued opposition to increasing the minimum wage. The only time the White House has addressed the issue has been to call for a sub-minimum wage for young workers and to protest that a higher wage floor would destroy jobs.

Kirkland called the argument "an old chestnut that has been bandied about for many years." He told reporters that when a TV anchorman is raised from $1 million to $2 million a year, no one suggests that it will "reduce the market for people in that line of work."

Or, he went on, when a company president gives himself "an enormous bonus," there is no claim that such action will lead to "a declining market for corporate executives."

The charge, Kirkland said, is "leveled only against workers." And if the theory does have any validity, then the reverse should be true and the six-year decline in the purchasing power of the minimum wage "should have resulted in full employment." But, he stressed, "the contrary has happened," because unemployment has not abated.

Kirkland was asked at the press conference whether there was any "validity" to Administration claims that increasing the minimum wage would cut job opportunities for teenagers. The federation has addressed that issue repeatedly, Kirkland pointed out, and the answer is "no."

Army of underpaid

In its statement, the council pointed out that 15 million workers today are employed at, or near, the minimum wage.

"More than two-thirds of these workers are adults, and they are disproportionately minorities and women," the federation emphasized. Although the poverty level for a family of four is $11,000 a year, a minimum wage worker employed fulltime has annual earnings of only $7,000.

But, the council stressed, many people draw the minimum and still only get part-time employment. "These workers are the have-nots of America," the statement declared.

Raising the wage floor will cut federal, state and local public assistance costs and provide the economy with "a much-needed stimulus without adding to the deficit or to government spending," the council said.

To restore the real value of the minimum wage, the council urged that it be raised "in appropriate steps" and then adjusted annually to preserve its purchasing power.

Rep. Richard A. Gephardt

Sen. Joseph R. Biden

Gary Hart

Jesse Jackson

Presidential contenders test waters

Democrats and Republicans make the rounds of union sessions

Bal Harbour, Fla.—A preview of the 1988 presidential election campaign emerged with the appearance of several potential candidates at union gatherings here.

In advance of the Executive Council sessions, the Maritime Trades Dept. executive board heard from three aspirants for the Democratic nomination for the presidency—former Sen. Gary Hart of Colorado, Sen. Joseph Biden of Delaware and Rep. Richard Gephardt of Missouri. A day later, Biden and Gephardt, along with the Rev. Jesse Jackson, spoke to the annual meeting of the Public Employee Dept.'s executive committee.

A fourth Democratic contender, former Gov. Bruce Babbitt of Arizona, was the guest at a reception sponsored by the Operating Engineers.

On the Republican side, the OEIU and its Little Falls, N.J., local were to cohost at a luncheon for New Jersey Gov. Thomas H. Kean, while Illinois unions gave a luncheon for their governor, James Thompson. Both Kean and Thompson, endorsed by labor in their last re-election campaigns, have been mentioned as prospects for the GOP nomination.

Part of process

The candidates' appearances fit in with the process the AFL-CIO is using to determine whether to make a pre-primary presidential endorsement in the next election. Key elements in that process are opportunities for candidates to present their positions on current issues to trade union groups and procedures to elicit the views of union members about the candidates.

In addressing the MTD, Hart expressed support of the department's call for measures to build up the U.S. merchant marine and to assure a strong shipbuilding capacity for the nation. On trade policy, he urged a five-year program to make U.S. industry competitive and said the imposition of sanctions against unfair trade practices should be automatic, not discretionary.

Crackdown on unfair trade

Gephardt also told the MTD board that the United States must insist on foreign trade rules that are fair and invoke "reciprocity" against countries that engage in unfair trade practices. He is the principal sponsor of the House bill the AFL-CIO has endorsed as a "constructive beginning" in the effort to wipe out the nation's international trade deficit, which grew to $170 billion last year.

Biden declared that "the Japanese and the Europeans are trying to beat our brains out" on the trade front. "I don't want to compete," he said. "I want to win—just flat-out win." He denounced the Reagan Administration's anti-union policies, charging that it has been waging "outright war" against organized labor for the past six years. At the PED session, Biden assailed Reagan's anti-government stance as denigrating the work of public employees.

Gephardt, too, addressed that theme, observing that "the highest people in this Administration have a contempt for government and a contempt for the people who work in government." He charged that the Administration's efforts to slash federal jobs, trim benefits and "privatize" the work of federal employees has corrupted the value of the work.

Jackson also attacked the Administration's privatization efforts, declaring that the notion that private employers can do government jobs more efficiently is a "myth." He cited a number of studies showing that this is simply "not true."

Gov. Thomas H. Kean

Gov. James R. Thompson

Bruce A. Babbitt

Trade job losses major council concern

Continued from Page 1

noncompetitiveness," and the program set forth by the Executive Council "will enhance this country's competitiveness."

On the other hand, Kirkland called the President's talk of competitiveness "an attempt to paper over the basic trade crisis facing the nation." Reagan's proposals, Kirkland said, "will not make any substantial dent in the nation's critical trade deficit."

They "fail to address the massive trade surpluses that major countries have with the United States," he said, and don't "provide for the fair treatment of worker rights as a basic ingredient of fair trade."

Besides Brock and the congressional leaders, the council also met with Simon Crean, president of the Australian Council of Trade Unions, who reviewed the history and growth of that organization, relating its concerns to those of the AFL-CIO.

Among other actions during its opening sessions, the council unanimously elected Lenore Miller, president of the Retail, Wholesale & Dept. Store Union, to fill the council vacancy created by the death of Alvin E. Heaps, her predecessor as head of the RWDSU. The council adopted memorial tributes to Heaps and to three former AFL-CIO vice presidents who died since the last council meeting, John H. Lyons of the Iron Workers, Alexander J. Rohan of the Printing Pressmen, now part of the Graphic Communications International Union, and S. Frank Raftery of the Painters.

The council also approved the procedure recommended by its Committee on Political Works to evaluate the presidential aspirants in both parties with a view toward achieving a consensus for pre-primary endorsements. Other statements endorsed proposals for reform of congressional campaign financing and, in deference to the wishes of Solidarnosc, the free Polish trade union movement, withdrew the federation's objections to the lifting of U.S. sanctions against Poland.

Economic centerpiece

The statement on trade was the centerpiece of a package of policy statements dealing with economic concerns, including a critical analysis of the current fragile state of the national economy, a call for legislation to cushion the impact of plant closings on workers and communities, and support for an increase in the federal minimum wage to restore its buying power.

Details of these statements and actions appear elsewhere in this issue of the AFL-CIO News.

The trade statement pointed out that some of the countries with the largest surpluses in their trade with the United States have refused to open their own markets to U.S. goods and abolish their unfair trading practices as a step toward reducing their huge surpluses.

"Where their focus has been on mercantilistic policies that depend upon export-led growth, that focus must be changed to policies that increase the purchasing power of their own people," the AFL-CIO said.

It expressed support for House legislation, sponsored principally by Rep. Richard Gephardt (D-Mo.), as a "constructive beginning" to overcome the trade crisis. But proposals put forth by Sen. Lloyd Bentsen (D-Tex.), chairman of the Senate Finance Committee, "fail to meet that test," the council said.

In addition to deficit reduction steps, it called specifically for:

- The outright prohibition of imported goods produced in countries that refuse to respect basic worker rights and defining the denial of such rights as an actionable practice under U.S. trade law.
- Expansion of the trade adjustment assistance program both in coverage and scope, financed by a surcharge on imports, to help workers harmed by trade.
- Tightening and streamlining U.S. trade law to make relief from injury timely, effective, and predictable and to counteract unfair trading practices.
- Eliminating tax and tariff incentives for U.S. companies to shift production overseas, a major source of the trade deficit.
- Measures to deal with the problems of specific industries, such as textiles and apparel, shoes, telecommunications, printing, maritime and steel.
- Steps to begin addressing the problem of less-developed country debt by requiring the lending banks to reduce interest rates and forgive part of the principal owed.

At a news conference, Kirkland described this program as "in fact, an anti-protectionist approach" because it would counter some of "the most dominant forms of protectionism that are rampant in the world today." He described one of these as the practice of mercantalism, "a studied national policy of relying on exports and discouraging imports," originally defined by Adam Smith as the basic form of protectionism.

Denial of rights

Another "retrograde form of protectionism" that would be targeted by the AFL-CIO program, Kirkland said, is "the search for competitive advantage on the backs of plain people through the denial of basic human and trade union rights. That is the worst and most inhuman form of protectionism that's at large in much of the world today."

Kirkland said nations that pursue these policies "injure economically constructive competitiveness by exploiting the markets built on other people's standards and wage levels." At the same time, he said, they "deprive the world of a contribution to the broadening of the marketplace" that would occur if their own people's well-being and purchasing power were improved.

AFL-CIO Executive Council explores prime labor issues at its winter session in Bal Harbour, Fla.

On lifting of sanctions

Poland pressed to restore rights

Bal Harbour, Fla.—Acting at the behest of Solidarnosc, which it hailed as "the authentic voice of Poland's workers," the AFL-CIO Executive Council withdrew its objections to the lifting of U.S. sanctions against that Soviet-bloc nation.

The request to lift the sanctions came from the Polish labor movement, outlawed by the Jaruzelski regime more than five years ago, "in the hope that this action will encourage the Polish government to enter on the road of positive change and social dialogue," the council declared.

White House sources indicated that President Reagan was on the verge of lifting the last remaining restrictions imposed in 1981.

The federation urged the Administration to insist that removal of sanctions be followed by "concrete steps by the Polish authorities toward the goals expressed by Solidarnosc." The first step should be the "unconditional release of all remaining prisoners of conscience," the council said. And it insisted that granting most-favored-nation status and other economic benefits to Poland "be conditioned on progress toward trade union pluralism."

If such progress isn't made, or repression is renewed, the U.S. should be prepared to reimpose sanctions, the statement continued. Poland must be "held to, and judged by," the conventions and standards of the International Labor Organization and other international agreements.

Democratic yardstick

"In the final analysis," the council said, "it is not the application or removal of the sanctions—which, in any case, are far weaker than those proposed by the AFL-CIO—that will bring about a more democratic evolution in Poland. That can be achieved only by the democratic movement within that country—as preeminently represented by Solidarnosc. Any lifting of sanctions must therefore be coupled with increased political, moral and material support for the democratic movement of Poland."

Since the inception of Solidarnosc, the statement noted, the federation has sought to reflect its policies and defend its interests "as defined by its democratically chosen leaders."

It was for that reason, the council stressed, that President Lane Kirkland and other AFL-CIO leaders refused to meet representatives of the official, state-sponsored "unions" the Jaruzelski regime put into place after banning Solidarnosc. Such meetings were set as the condition for obtaining visas to discuss the sanctions issue with Solidarnosc President Lech Walesa.

"The AFL-CIO will not be coerced by any government into meeting with any 'trade unions' that it does not recognize as legitimate representatives of working people," the statement pointed out.

"In insisting that we do so, the Polish authorities were playing their part in a global Soviet campaign to force recognition of Communist labor fronts by the free trade union movement and to foster contacts and exchanges between them."

That action by the Jaruzelski dictatorship, the council said, "belies its claim to be pursuing national reconciliation and dialogue, just as its refusal to cooperate with the ILO's commission of inquiry displays contempt for international public opinion at the very time it seeks economic assistance from the West."

Court rejects NLRB order in strike firing

Denver—A federal court ordered the National Labor Relations Board to reconsider its dismissal of unfair labor practice charges brought by two unionists denied reinstatement by their employer for honoring a picket line during a hotel strike.

The 10th Circuit U.S. Court of Appeals said the NLRB erred in deferring to an arbitrator's award in favor of the employer, emphasizing that the issues addressed during arbitration were distinct from those raised by the union in the unfair labor practice charge.

The case involved two members of the Electrical Workers who refused to cross a picket line set up by the Operating Engineers during a 1982 strike against Hilton Hotels Corp.

When the Operating Engineers ended their strike after a 12-day walkout, the settlement permitted all striking employees to return to work immediately. But when the two IBEW members attempted to return to their jobs, they were told they had been "permanently replaced during the strike."

The IBEW filed a grievance on behalf of the two members, charging Hilton violated its collective bargaining agreement which provides that employees would not be "disciplined or discharged for refusing to cross a legally approved picket line."

At the same time, the union filed unfair labor practice charges with the NLRB, claiming that the hotel chain violated federal law by refusing to reinstate the workers after they had unconditionally agreed to return to work.

Arbiter's ruling

A three-member arbitration panel ruled in the hotel's favor, finding that there was no contract violation because the IBEW members were not fired for participating in the strike.

But an administrative law judge ruled that Hilton violated federal law by refusing to reinstate the two men. He ruled that management had not replaced the two workers until after they attempted to return to their jobs.

In overruling this finding, the labor board insisted that the ALJ should have deferred to the arbitrator's decision. But the court said the NLRB's action was improper because the issue of whether the IBEW members were permanently replaced during the strike was not raised during the arbitration hearing.

In sending the case back to the board for re-examination, the court emphasized that the NLRB could not simply apply its standard of deferring to an arbitrator's decision when the issues raised in arbitration and in the unfair labor practice hearing were not "factually parallel."

Simply citing the deferral doctrine "without indicating how the standard applies in a particular case is not sufficient, especially where the ALJ has applied the standard and reached a contrary result," the court emphasized.

Low earnings strain 'fragile' economy

Continued from Page 1

The fiscal 1988 budget drafted in the White House calls for expanded defense spending "while starving and crippling the social and economic side," the council said. And an increasing proportion of the nation's social and economic development would be "abandoned or placed on the shoulders of state and local governments."

The AFL-CIO called on Congress to:

- Reject Reagan's approach of hiking defense spending at the expense of domestic programs.
- Rid itself of the Gramm-Rudman-Hollings "strait-jacket" that arbitrarily mandates huge spending cuts and sets "a balanced-budget above every other consideration affecting the country."
- Freeze the tax rate for the wealthiest Americans at the 1987 level of 38.5 percent, rather than dropping it to 28 percent in 1988.
- Encourage modernization and revitalization of basic industries, improve training and education for workers and upgrade the nation's infrastructure.
- Place a priority on American-made goods and services in government procurement, particularly in the national defense field.

Soaring joblessness

The extent of the nation's economic misery was spelled out in a background paper accompanying the council statement. It showed that unemployment has soared from a monthly average of 3 million in the 1950s to 8.2 million in the 1980s, pushing the average jobless rate up from 4.5 percent to 8 percent in the same period.

What's more, the relentless shift from goods production to service and sales jobs translates into few middle-income jobs and more low-wage jobs. Average manufacturing earnings are over $400 a week, it pointed out. But in the service sector where most of the new jobs are being created, wages average only $177 a week in retail trade and $269 a week in the service industry.

"The country is moving toward a split-level economy with more high-pay, high-skill jobs for a few executives, scientists, engineers, professionals and managers at the top—with more low-pay, low-skill, part-time, temporary, high-turnover jobs at the bottom—but a smaller share of middle-level, good-pay, permanent, full-time jobs," the economic analysis emphasized.

Reagan targets

Against this backdrop, the Administration has targeted the Trade Adjustment Assistance program for termination, proposed eliminating the Work Incentive program that helps provide job training for welfare recipients, and recommended abandonment of federal responsibility to the unemployed by turning the Employment Service and State Unemployment Service programs over to the states.

In addition, Reagan has called for major reductions in funds for elementary and secondary education, termination of vocational education and major reductions in higher education programs. The background paper called these proposals "astonishing since an educated and adaptable workforce is a key element in achieving a competitive position in the world."

The Administration also came under fire for proposing cuts in Medicare, Medicaid, veterans' health care and low- and middle-income housing. It is also advocating "new and unreasonable cuts" in federal support for such deteriorating public facilities as bridges, highways, public transportation, and water and sewage systems.

"The budget is the one overall approach that the government uses to determine priorities and approaches to governance," the analysis said. "This process should reflect the overall concerns of the American people. It is time to reappraise the budget priorities as well as the process."

GNP lag widens Reagan budget deficit

In a sharp downward revision of earlier estimates, the government conceded that the gross national product grew at only 1.3 percent in the fourth quarter of 1986.

The new GNP figure—which measures the total value of the nation's output of goods and services—was considerably lower than the 1.7-percent growth rate previously reported by the Commerce Dept.

The revision spelled more bad news for the Reagan Administration.

It means that economic growth in all of 1986 was a lackluster 2.5 percent—the worst showing since the depths of the Reagan Recession in 1982. But in submitting its fiscal 1988 budget to Congress, the White House assumed a 2.7-percent growth last year.

As a result, government revenues will fall several billion dollars shorter than previously expected, further feeding the federal budget deficit.

A $12.1-billion swing in business inventories was the factor forcing the government to cut back its fourth-quarter growth estimate. That change turned what had first been reported as a $4.2-billion rise in inventories into a $7.9-billion decline. The inventory falloff was centered in manufactured goods, particularly machinery and electrical products.

In addition, the Commerce Dept. reported that consumer spending, which has been the mainstay of growth in the past four years, showed signs of weakening. It fell one-tenth of 1 percent in the October-December period after two consecutive quarters of increases above 6 percent.

Overly optimistic

The Administration pinned much of its rosy economic forecast on the theory that the economy would grow 3.1 percent in 1987. But the signs are already in that the White House is being overly optimistic.

Consumer spending, which accounts for two-thirds of all economic activity, plummeted in January as retail sales took a 5.8-percent nosedive. It was the largest one-month decline since at least 1967, when the government began keeping these statistics. The previous record drop was 5.2 percent last October.

Virtually all of the January change was in car sales, which plunged a record-shattering 22.4 percent last month. That drop was widely anticipated by economists. They had warned that year-end price and financing incentives, and the rush to beat the Jan. 1 end to the deduction of sales taxes on federal income tax returns, would depress 1987 car sales.

Aside from autos, sales were virtually unchanged in January, the government said, declining one-tenth of 1 percent.

In other economic developments:

- Building permits, considered a good sign of future activity, plunged 11.6 percent in January to an annual total of 1.69 million units. It was the largest monthly decline since March 1984.
- Construction of new homes and apartments edged down one-tenth of 1 percent in January. Housing starts were at a seasonally adjusted annual rate of 1.806 million units last month.

For all of last year, construction activity rose 3.7 percent to the highest level in eight years, thanks to the largest decline in home mortgage rates in this decade. But analysts predict a slight decline for 1987.

Maritime policy overhaul essential to defense effort

MTD hits erosion of U.S. merchant fleet

Bal Harbour, Fla.—A sharp shift in the government's maritime policy is essential to restore the U.S. merchant marine as a vital arm of the nation's defense system, the AFL-CIO Maritime Trades Dept. declared.

The MTD executive board, at a two-day meeting here, charged that the Reagan Administration, "which has been adamant in its support of national defense, has allowed sealift and shipyard capacity to erode beyond the point of safety."

The decline actually extends back through many administrations, the board said. It pointed out that the Soviet Union's merchant marine, starting in 1945 with a tiny fleet of mostly U.S. lend-lease Liberty ships, has grown to more than 2,500 vessels totaling over 22 million deadweight tons.

"In that same time frame, the United States has moved from having the largest merchant marine fleet in the history of mankind to a seventh-place ranking in the world," the MTD statement said. "It is imperative that our fourth arm of defense, the U.S.-flag merchant marine, be injected with new life and vigor."

Highlighting the second day of the board's meeting were addresses by three prospective presidential candidates introduced by MTD President Frank Drozak—former U.S. Sen. Gary Hart (D-Colo.), Rep. Richard Gephardt (D-Mo.) and Sen. Joseph Biden (D-Del.). Each outlined his positions on issues of concern to workers, focusing particularly on the needs of the maritime industry. (Story on Page 3.)

Another statement by the MTD board pointed out that workers in the industry have suffered along with other American workers from the record deficit in the U.S. balance of trade.

"The marine transportation sector has confronted a virtually impenetrable wall of foreign promotional policies and restrictive measures which have severely limited opportunities for U.S.-flag vessels engaged in foreign trade," the board said. It called on the Administration to take steps to correct these practices.

Diminishing fleet

The department contrasted American and Soviet attitudes toward the integration of merchant marine policy with national defense. Compared with the Soviet fleet of more than 2,500 merchant ships with global capability, the United States has fewer than 400 active merchant vessels and is unable to sustain any prolonged involvement overseas, the MTD said.

"It is tragic that the Administration is forgetting the lessons in history for which we have paid so dear a price. Over the last half-century, all America's major overseas military engagements—World War II, Korea and Vietnam—have required coordination of military and merchant marine capabilities.

"We spend billions on defense, but we have ignored the crucial investment in our U.S.-flag fleet that is required to deploy our forces where needed. The cost, in terms of cargo preference laws, bilateral trade agreements, tax incentives to shippers or even outright subsidies, is meager when compared to defense outlays and would be, therefore, highly leveraged dollars because they would ensure the executability of the nation's forward defense strategy."

The ultimate solution, the MTD said, lies in assuring enough cargo to support the required number and types of merchant ships that would meet economic and defense needs in time of war or national emergency.

Related positions

Supporting the department's positions on national defense and trade policies was a series of related statements. These called, among other things, for action by Congress to close loopholes in the Jones Act, which requires the use of American-built and crewed vessels in U.S. coastal trade; domestic-content and construction requirements for off-shore oil rigs and vessels, and steps to restore the domestic shipbuilding capacity "consistent with the demands of national security."

The board also heard reports from MTD Executive Sec.-Treas. Jean Ingrao; Legislative Director Frank Pecquex; Vice President Jack Otero of the Railway & Airline Clerks on deregulation and Sec.-Treas. William Lucy of the State, County & Municipal Employees on the situation in South Africa.

Speakers from the AFL-CIO staff included COPE Director John Perkins, Legislative Director Robert McGlotten, Economic Research Director Rudy Oswald and Director Bert Seidman of the Dept. of Occupational Safety, Health & Social Security.

Kirkland briefs reporters on Executive Council actions.

New York unions spur Coors boycott

Albany, N.Y.—The New York State AFL-CIO has uncapped an intensified regional boycott campaign against Coors beer, which is attempting to tap the New York area market.

"This corporate bully is not welcome here," State Federation President Edward J. Cleary declared. He said organized labor intends to "inform our membership and all other consumers about Coors' anti-worker reputation."

Coors has been on the AFL-CIO national boycott list since 1977 when it forced a strike by Brewery Workers Local 377 over human rights issues, including company policies of forced searches and seizures.

Cleary noted that Coors, one of 40 major U.S. corporations that paid no federal taxes in 1984, has broken 19 union locals that represented its workers over the past two decades. "Given Coors' anti-union, far right tradition," he said, "it is obvious that we will do everything we can to stop this incursion and to encourage the consumption of union-made beers."

Beers made by the Adolph Coors Co. include Coors Light, Herman Joseph 1868, Golden Lager and Killians Irish Red. All are on the AFL-CIO boycott list.

Pregnant women transferred to avoid high-tech health risks

The possibility of significant health hazards for pregnant workers in the nation's microchip manufacturing industry, revealed in a recent study, has prompted a number of companies to transfer or offer the opportunity of transfer to their pregnant workers.

The American Telephone & Telegraph Co. banned pregnant women from its semiconductor production lines in January and later agreed to check medical records of all workers in its five manufacturing plants. One is represented by the Communications Workers and the rest by the Electrical Workers.

At a recent joint CWA-AT&T safety committee meeting, the company said it would begin a study shortly of the medical records of all its semiconductor manufacturing employees, including the spouses of male workers, to determine reproductive outcomes.

The company also agreed to give CWA health and safety officials the list of chemicals used in the workplace and air-monitoring data, according to CWA safety director David LeGrande.

AT&T's transfer policy came in reaction to a University of Massachusetts study of Digitial Equipment Corp. workers which found an abnormally high rate of miscarriages. While the general population's miscarriage rate is 20 percent, females working in an area of the so-called "clean room" that uses nitric and sulfuric acids to etch microchips experienced a 39-percent miscarriage rate.

Industry concern

Although the study was small and only a dozen miscarriages were reported in the study group, other semiconductor manufacturers were concerned enough to advise their pregnant employees of the study and to offer voluntary transfers. Only AT&T has banned pregnant workers from these possibly hazardous jobs.

CWA welcomed the action by AT&T. LeGrande said, but noted that "it's unusual for AT&T to take this type of action. There must be a good reason." He said that the manufacturing "clean rooms" are just that—very clean with filtered air. "It's hard for me to imagine there's any significant exposures involved," LeGrande said, based on his visits to AT&T clean rooms.

Tom Hickman, manufacturing division director for the Electrical Workers, said that IBEW members at the four AT&T plants are regularly reassigned to different jobs. "This is just an extension of that," he said.

"The company has had the flexibility to transfer workers," Hickman said. "This means pregnant workers won't be transferred into the clean rooms." Thus far, only 15 pregnant women have been transferred.

Economic penalty

Hickman indicated that at the RCA plants represented by IBEW, the company has told women employees of the study and "told them they could transfer." But there is an economic penalty for doing so. The clean-room production employees work four 12-hour days a week with time-and-a-half after 8 hours—the equivalent of 54 hours' pay. If transferred, the women would work a five-day, 40-hour week.

A large portion of the nation's semiconductor industry is located in California's Silicon Valley, where women make up a large majority of the clean-room workforce.

The implications of the DEC study could go far, according to Dr. Joseph LaDou, a medical professor at the University of California in San Francisco. LaDou has studied semiconductor workers for several years.

Noting the concern centers on pregnant women, LaDou stressed that there is also concern about all women of child-bearing age in these plants. Further, he said, "It's not inconceivable that there could be damage to the reproductive cells of men as well."

Hispanic voters helped turn tide in key elections

Bal Harbour, Fla.—A get-out-the-vote campaign in districts with large numbers of union members of Hispanic origin was a significant factor in the 1986 congressional elections.

That's the conclusion of a vote analysis released here by the Labor Council for Latin American Advancement, based on returns from key precincts and various election-day exit polls.

LCLAA President Jack F. Otero said labor-endorsed candidates had a 69-percent success rate in congressional districts with large numbers of Hispanic workers. The COPE success record in Senate contests in states with concentrations of Hispanic voters was 66 percent, he reported.

Florida remains the one state where Hispanic voters have regularly supported Republican candidates, the report notes, especially in the Miami area where Cuban-Americans are the principal group.

The large Hispanic vote was the key to the close Senate victories of Democrats Alan Cranston in California and Timothy Wirth in Colorado, LCLAA noted.

Cranston, who won by 118,000 votes, received an estimated 77 percent of some 500,000 Hispanic votes. Wirth carried 82 percent of the 68,000 Hispanic votes cast in Colorado in his 16,000-vote victory, exit polls indicated.

Reagan Administration's snubbing of merchant marine is assailed by Maritime Trades President Frank Drozak.

Administration's immigration proposal scored

A coalition of unions, civil rights, religious, social welfare and legal groups criticized the "serious weaknesses" in proposed federal regulations to carry out the new immigration reform law.

The Ad Hoc Task Force on Employer Sanctions said that employment verification requirements laid down by the Immigration & Naturalization Service are "overly burdensome," and that documentation requirements imposed on illegal aliens seeking amnesty are "rigid and inflexible."

The comments came from the AFL-CIO, Clothing & Textile Workers, Ladies' Garment Workers, Service Employees and Electronic Workers. They were joined by such organizations as the American Civil Liberties Union, American Jewish Committee, Lutheran Immigration & Refugee Service, National Council of La Raza, Episcopal Bishops Fund for World Relief and the U.S. Catholic Conference.

The coalition urged that the final regulations simplify employment verification forms, give the INS or the Labor Dept. subpoena power to inspect business records, and create a special INS unit to prosecute employer sanctions cases.

In a separate submission, the AFL-CIO also protested the proposal to give employers 24 hours after hiring in which to complete verification requirements. Such a delay, the federation said, is "in patent conflict with the statute," which specifically provided that verification be completed at the time of hiring.

Clarification needed

The coalition also urged that provisions regarding permanent employment make clear that temporary absences resulting from paid or unpaid leave, layoff, strike or other conditions not be used to bar undocumented aliens from the amnesty provisions.

At the same time, the ad hoc committee insisted that an employee's transfer within an organization, or even to a different company covered by a multi-employer bargaining agreement, not be used to "trigger a new verification requirement." The Act requires verification "when an employee is first hired, not recurrent repetition of this process," the group pointed out, and the regulations should make this clear.

The coalition also told the INS:

- Provision should be made to permit submission of duplicate originals and certified copies of key documents, instead of requiring that the original versions be furnished.
- Such documents as birth certificates and alien or voter registration cards should be admissible, and employees under 16 should be permitted to submit school identification cards with photographs. "Not to accept such documents would make it unnecessarily difficult, or in some cases impossible, for citizens and authorized aliens to establish employment eligibility."
- The requirement that job applicants provide biographical information to an employer is "an intrusion on individual privacy" and should be eliminated. Failure to do so "could lead to just the kind of invidious discrimination" Congress sought to avoid.

The coalition urged—and the AFL-CIO Building & Construction Trades Dept. agreed in a separate filing—that the regulations clearly spell out that union hiring halls are exempt from verification requirements. Congress made it clear, they said, that the provision was supposed to be extended only to for-profit employment agencies which provide a pre-screening role for employers.

Federal fee protested

The AFL-CIO, ACTWU, ILGWU and many of the coalition members joined in an additional submission protesting rigid residency requirements and the reported fee of as much as $250 each applicant would have to pay the government for legalization.

Such a cost, they said, is beyond the economic limits of most undocumented workers who have historically worked at or below the minimum wage.

Setting political goals

Auto Workers President Owen Bieber, addressing the union's annual legislative conference in Washington, details the results of the nation's trade crisis. He pointed out that its impact goes beyond jobs as it undercuts the standard of living and the level of technology and national defense. Addressing competitiveness, he said the issue should focus on worker training, long-term commitment to capital investment and job security. The more than 1,000 political action delegates from UAW locals across the nation voiced their views in visits to their congressional representatives and senators on Capitol Hill.

Import burden crushing U.S. economy

Samuel warns extraneous amendments could sink trade bill

The crushing trade deficit is not the only domestic problem facing America, "but it is clearly the first problem and should be tackled first" by the 100th Congress, AFL-CIO Industrial Union Dept. President Howard D. Samuel asserted.

Addressing a trade and politics conference at Georgetown University, Samuel warned that efforts to bring other issues under the "competitiveness umbrella"—the phrase used in political circles to describe the approach to the trade crisis—could end up "collapsing the whole effort."

Neither product liability nor health or environmental safeguards nor regulatory activities belong in this discussion, the IUD president told business, labor, academic and government leaders. They should be addressed on their own merits, but only after trade legislation has been put on the statute books.

Samuel had high praise for the trade bill that sailed through the House by a 295-115 vote last year, with the support of 59 Republicans. That measure died in the Senate, then under Republican domination.

The measure's chief provisions, he pointed out, included:

- Establishing a single trade policy to replace the "diffused" approach that now marks the Executive Branch attitude toward the problem.
- Improving enforcement of laws against unfair trade "regardless of whose ox is being gored."
- Requiring corporate management to "meet the challenge of trade disruption by modernizing domestic facilities," instead of providing relief to companies which "promptly go into other businesses or ship their jobs out of the country."
- Assuring that other countries seeking a share of America's domestic market "observe the letter and spirit of international trade laws."
- Using "the power of our marketplace to force foreign employers to live up to internationally recognized labor standards."

Mounting concerns

Although organized labor in the past has been blasted as "protectionist" for pushing such views, unions are "no longer a voice in the wilderness," Samuel said. Presidential commissions and congressional caucuses have now recognized the pervasiveness of the problem. "Even the President mentions it in his State of the Union address," he pointed out.

Samuel said one of the major "myths" raised against trade legislation is the claim that the declining value of the dollar will turn the tide. The fact is, he said, that the trade deficit began to affect major sectors of American industry during a period when either the currency was regulated or the dollar was under-valued.

There is no validity to the argument that America can "flourish as a service society," the IUD president insisted. Many services are tied to goods production and if the nation no longer produces computer hardware, "the chances are that we won't be producing the software, either." Further, such major services areas as health, education and government "are not exportable," Samuel pointed out.

As to the "variation on this myth, that we should give up all manufacturing except high tech," Samuel said this accounts for only 5 percent of all manufacturing. In addition, he explained, high tech is "just as vulnerable as smokestack industries to the pressures" of foreign competition. "If Japan ends up making all our autos, they will surely also make the computers which go into them."

Samuel also dismissed as "silly" the argument that America has lost the ability to compete because of high wages and that if we "get down to the level of our competitors, we'll conquer the world." Unfortunately, he said, "we are indeed headed in that direction" because real wages have been declining steadily for more than a decade.

Catastrophic care plan called lacking by Senior Citizens

The National Council of Senior Citizens blasted the catastrophic illness insurance plan proposed by the Reagan Administration as "a poor excuse for what is really needed." It charged that the plan would boost Medicare premiums in exchange for "very limited" coverage.

Executive Director William R. Hutton commended the Administration for including catastrophic illness care under Medicare coverage but stressed that the proposal was "limited and altogether unsatisfactory."

The catastrophic care initiative was developed by Health & Human Services Sec. Otis Bowen, despite strong opposition from many Administration advisers who protested any expansion of Medicare, instead favoring private industry insurance.

The Administration proposal would increase Medicare premiums by $4.92 a month. It would provide coverage for only in-hospital and other limited expenses resulting from a catastrophic illness.

Limited help

"The President says that this coverage will alleviate many of the worries older Americans have about serious illness," Hutton said. "But as his proposal stands right now, it would only help about 3 percent of the elderly who need it," because the plan requires individuals to pay the first $2,000 in expenses, he pointed out.

"If the President was really interested in helping the majority of the people who need it, he would devise a plan that includes coverage for prescription drugs, nursing home care and other vital services not currently covered under Medicare," Hutton charged, adding, "is it not catastrophic when an elderly person is forced to choose between eating dinner or buying essential prescription drugs?"

Better benefits

Hutton suggested that the Reagan plan be altered by lowering the $2,000 cap to $500, increasing coverage for prescription drugs and other health care essentials and easing burdensome co-payments.

Rep. Claude Pepper (D-Fla.) scored the Reagan plan as "timid" because it will not cover long-term nursing home care nor home care for those suffering from Alzheimer's disease.

Pepper expressed shock that the Administration would "knowingly or unknowingly deceive the American people" by indicating that the plan would cover all catastrophic illnesses.

Grants set to improve industrial relations

Continuing a six-year-old effort to improve the labor-management relations climate, the Federal Mediation & Conciliation Service will give out $1 million in grants in the current fiscal year.

The funds can be used to create or expand labor-management committees that deal with issues facing a plant or worksite. They can also be utilized in resolving problems plaguing an entire community or particular industries.

FMCS has given out some $5 million in grants to more than 70 labor-management committees since 1981. The goal is to help improve industrial relations, increase productivity, enhance the quality of worklife and expand local economic potential and opportunities.

Part of this year's funding will be used to sponsor the fourth national labor-management conference in Washington June 1-3. The balance will be available to non-profit groups, local and state governments, and third-party organizations that can document that their major focus is improving labor relations.

EDITORIALS

Morning in America?

AS IN PAST YEARS, the AFL-CIO Executive Council has sought to spotlight the issues that most concern America's workers, and to propose solutions.

For some years now, trade and job concerns have led the list. The problems persist. The remedies the labor movement and many in Congress have advocated, unfortunately, have never been tried.

This Administration continues to insist that the economy is prospering and the trade deficit will largely cure itself. Paper profits of the stock boom are supposedly evidence of the new prosperity.

The stock market may be booming but the job market is not. The unemployment rate for January 1987 was unchanged from January 1986. Most working families, dependent on paychecks, are worse off despite the rise in two-earner households.

A complacent Administration once gave assurances that a decline in the exchange value of the dollar would spur exports and curb imports. It didn't happen.

Now the White House buzzword is "competitiveness." President Reagan proclaims a new "Quest for Excellence" as "not just another government program" but "a great national undertaking that will challenge all Americans to be all they can be."

THE PRESIDENT'S rhetoric is as effusive as the substance is skimpy. If it is seriously meant as an alternative to a comprehensive trade bill, even a vegetarian would go hungry.

Fortunately, the new Congress gives some encouraging signs of a genuine concern over the issues American unions have been raising.

No one should jump to assumptions based solely on the introduction of legislation and the promise of quick hearings. But it is a welcome change to have the promises of action given by committee chairmen and majority leaders in the Senate as well as the House. And there should be enough bipartisan support to compel a rethinking of some White House positions.

Republican as well as Democratic members of Congress represent districts where closed plants, bankrupt farmers and boarded-up stores require stronger nourishment than a rhetorical quest for excellence.

These are the realities that the statements adopted by the AFL-CIO Executive Council seek to address.

Congress at least shows signs of recognizing that the problems exist. Regrettably, that's more than can be said for most of the people at the Reagan White House.

A Floor Under Wages

THE FAIR LABOR STANDARDS Act was passed in 1938 in response to President Franklin D. Roosevelt's call for "a floor under wages, a ceiling over hours, and a break for children."

Until this Administration, Congress accepted and carried out its responsibility to keep the minimum wage reasonably current through increases that were roughly in line with inflation and the rise in average wages.

Quite early in his Administration, President Reagan made clear that he would prefer not to have any minimum wage requirement at all. "That would be the right thing to do," he suggested.

Repeal was not politically feasible, even in the heady early years of the Reagan presidency when Congress was doing the Administration's bidding.

But unless this Congress acts quickly and effectively, the President's desire to eliminate the minimum wage will be largely achieved through attrition.

Congress last adjusted the wage floor in 1977. Through scheduled step-ups, it reached the $3.35-an-hour level on Jan. 1, 1981. But it has been stuck there ever since.

"An increase in the minimum wage is long overdue," the Executive Council said. When its eroded value is restored, "the minimum should be adjusted annually to retain its traditional relationship to average hourly earnings."

The nation's wage floor is badly in need of repair.

Kirkland tells media:

Union voters have big stake in shaping political future

The following is excerpted from press conference statements by AFL-CIO President Lane Kirkland during the winter session of the Executive Council in Bal Harbour, Fla.

Last fall, America voted for a new Congress. Voters who belong to unions should be especially proud of the part they played in bringing about that change.

Union voters are concerned about the direction of the economy. This generation of Americans is the first who cannot reasonably expect to have the opportunity to do as well as their parents. We owe it to our country to help bring to office national leaders who are ready to help us find solutions to real problems.

This year, we—like all Americans—will be evaluating the competence and the promises of those who would be president.

The reason that union voters are so involved in politics is that they learned years ago that their vote at the workplace can achieve only so much. For our victories to become lasting social and economic achievements, we need political and legislative as well as collective bargaining action.

This year, we shall work to end the export of American jobs and the unfair import of goods that destroy America's ability to produce, just as we shall work to win plant-closing legislation.

Working parents

We shall work to help parents who cannot raise their families or maintain their income without child care and the right to parental leave, just as we shall work to raise the minimum wage.

We shall try to restore some accountability to a marketplace where insider trading, leveraged buy-outs and corporate raiding have replaced productive investment.

In 1987 and 1988, unions will be providing a voice for their voters, as the country faces perhaps its most important task in a generation: the selection of a leader who will take office in 1989.

Unions are here to enable working people to participate fully in the life of their country—both on and off the job. We expect the fullest exploration of how our unions can provide a stronger voice for their members in all aspects of American life.

America's great economic achievement has been the creation of a broad middle class that produced goods and services and could afford to buy them. We have seen in recent years the erosion of that middle class—an economy benefiting only a few, and providing less and less for the rest.

Retooling vital

We must face up to our society's need to retool the workforce. Adequate education and training, provided by government, companies and unions, are not just benefits for the affected worker. Education and training are investments in human capital that our country must make.

Many displaced workers who are the victims of inept economic policies have been forced to take jobs which pay less than $7,000. Millions of Americans are forced to work at a minimum wage, which is becoming more and more minimal each year.

A disproportionate share of those at the minimum wage are minorities and women. Unemployment insurance goes to only about one-third of the jobless and weekly benefits—when received—are far too low.

There are no golden parachutes for working people. Workers have no insider information that can help them support their families or prepare them for a new job. They have no stock options to cash in while they wait for better days.

But they do have a strong belief that this country can and should be a better and better place to live, to work and to raise a family.

They look to their unions and to their government—all levels—to provide the leadership that will respond to their needs, both on and off the job.

At Capitol news conference, Sen. Edward Kennedy and other cosponsors answer questions on plant closing and worker assistance legislation.

New plant closing measure put on fast-track timetable

Continued from Page 1

notice of a plant closing triggers quick intervention by the government's federal industrial adjustment service.

The new bill is an expanded version of the plant closing legislation the House narrowly defeated in 1985. The chief House sponsors—William D. Ford (D-Mich.) and William L. Clay (D-Mo.)—are optimistic that the verdict will be different this year.

One of the arguments of opponents then was that action should be delayed to get the views of the task force Brock had promised to set up. Now, they stressed, the task force report has bolstered the case for congressional action and there is no excuse for further delay.

Sen. Howard M. Metzenbaum (D-Ohio), a principal author of the new bill, termed it "must" legislation.

He noted that its $980-million price tag, which includes funds from existing programs, is the same amount the Reagan Administration has proposed to increase U.S. "competitiveness" by upgrading skills of displaced workers.

A big difference is that the Administration plan is being advanced as a substitute for trade legislation. The labor-backed bill is a free-standing measure, in addition to the comprehensive legislation labor has urged to bring U.S. exports and imports into closer balance.

Passage predicted

Senate Labor & Human Resources Committee Chairman Edward M. Kennedy (D-Mass.) and Sen. Paul Simon (D-Ill.), whose subcommittee shares jurisdiction over the measure, predicted committee approval of the legislation by May. A majority of the full committee and Senate Majority Leader Robert W. Byrd (W.Va.) are among the sponsors.

Besides Ford and Clay, Rep. Silvio O. Conte (R-Mass.) has been a principal House sponsor of plant closing legislation. He promised to work towards a bipartisan consensus and said the chances of enactment are greater than ever before.

The bill would fund federally approved state programs that could include training, job-search assistance, basic and vocational education, and income support.

Workers would be eligible for services if they had been laid-off, experienced long-term unemployment or lost a self-employment job because of general economic conditions. Homemakers trying to enter the labor force because they are no longer supported by a spouse would also be eligible.

A portion of the funds would be reserved for three demonstration programs to be tried in a sampling of states. One would provide low-interest loans to workers to pursue their own training programs. Another would allow persons drawing unemployment compensation to continue to receive payments while they were trying to start up their own small business.

A third would establish public works employment programs for the long-term unemployed in from five to 10 communities with high joblessness.

The plant-closing notification segment of the bill would require notice by any employer intending to lay off 50 or more workers in any 30-day period. If 50 to 100 workers are affected, a 90-day notice would be required. The notice would be 120 days for layoffs and 101 to 499 and 180 days for 500 or more.

Consultation required

During the notice period, the employer would be required to consult with representatives of the workers or local government on alternatives to the closing or layoff, and to provide relevant information.

The bill also includes penalties urged by the AFL-CIO that would require employers who violate the notice and consultation requirement to pay an extra day's wages for each day of the violation.

In urging action by Congress, the Executive Council pointed to the heavy toll of plant closings, with dislocated workers averaging six months of unemployment and one-fifth still jobless after two years.

Less than 10 percent of plant closings result from bankruptcy or financial insolvency, the council noted. In many instances, timely notice could avoid a shutdown or at least minimize its consequences.

Heavy construction pact

Building trades plan to bolster union jobs

Bal Harbour, Fla.—In a move aimed at providing more union jobs, the AFL-CIO Building & Construction Trades Dept. negotiated a "milestone" agreement with 20 of the nation's largest heavy construction companies.

The accord, reached with the National Constructors Association, is designed to bolster employment opportunities for unionized construction workers and end the shift of jobs to nonunion crews.

It provides flexible work standards, contains a no-strike clause and establishes a joint labor-management committee to make sure the terms are applied in a uniform manner on all heavy construction jobs.

BCTD President Robert A. Georgine predicted it would "improve the competitiveness of organized labor in the current market and increase job security for many thousands of union members."

The accord, called the National Construction Stabilization Agreement, standardizes new contract language to be used by building firms when negotiating labor contracts for particular projects.

The new language is not binding on construction firms. Instead, it's intended to provide a common frame of reference in individual negotiations.

However, both Georgine and NCA Chairman William G. Bell expressed the belief that it will bring job stability, improve efficiency and enhance the quality of large construction projects nationwide.

"The agreement will be a major step in restoring and improving confidence in the labor-management process," they said in a joint statement. They emphasized that it will eliminate the expensive and time-consuming process of negotiating each project agreement from scratch.

Flextime and arbitration

Key ingredients include flexible work hours and workweeks, seven standard unpaid holidays, elimination of night or weekend shift premiums and dropping of travel and subsistence payments. It also provides for an expedited arbitration procedure.

The compact marked the second major settlement for the BCTD in recent months. Last November, the department won agreement to unionize construction at Toyota's huge new auto assembly plant in Georgetown, Ky.

That settlement, reached after a nationwide campaign protesting open-shop hiring practices at the Toyota construction site, committed Ohbayashi Corp., the Japanese construction firm, to give jobs to workers referred through union hiring halls and to pay union wages and benefits.

BCTD opposes random drug testing

Hollywood, Fla.—The 15 unions of the AFL-CIO Building & Construction Trades Dept. adopted a substance impairment policy that bars random physical searches and compulsory chemical testing of workers, urging instead that "reasonable cause" of impairment on the job be established before a worker can be tested.

The policy, adopted at the BCTD's midwinter meeting here, contains testing guidelines and is part of the model safety and health agreement that can be the basis of collective bargaining when testing is proposed by an employer.

The BCTD noted that violations of federal and state job safety standards, rather than substance impairment, cause most serious workplace accidents, and that incompetent supervision, inadequate planning, lack of worker training, unsafe equipment and working conditions, and impairment caused by use of toxic materials in construction can contribute to such accidents.

The BCTD suggested that employers "implement an effective safety and health and quality assurance program" rather than insisting on separate plans dealing with alcohol and drug use. It noted that a policy is needed because "contractors voluntarily or as a result of owner coercion have imposed conditions of employment purportedly for safety reasons that violate the human rights and collective bargained protections of employees."

The department, which defined substance impairment as chemically induced functional impairment while on the job, stressed that rehabilitation of substance abusers should be the major emphasis of a safety and health program. It further stated that rules forbidding impairment from alcohol and controlled substances should apply equally to all, including management.

Searches or testing should not be done unless actual observations of a worker's behavior "give rise to a reasonable basis for probable cause of the existence of impairment or possession," the BCTD said. Further, chemical testing should be supervised by a physician with worker confidentially protected in accordance with the American Occupational Medical Association's code of ethics and its drug screening guidelines.

GE bringing TV tube production home

IBEW competitiveness accord targets runaway job drain

In the first reversal of its policy of relying on foreign sources for color television picture tubes, General Electric Co. is bringing a significant amount of that production back to America.

The move back to domestic production was bolstered by a "special joint effort" in which the Electrical Workers will play a key role, said IBEW President John J. Barry. The new approach protects existing pay scales and keeps American workers employed while consolidating job descriptions in pursuit of efficient operations, he explained.

Concerned about the continued job drain caused by runaway operations, the IBEW helped galvanize a plan to "produce sets more efficiently in this country," Barry said. The essential ingredient, he said, is "a good-faith understanding that both sides must work together to establish a cost-competitive manufacturing environment in the U.S."

As a result of the labor-management agreement, GE will move production of some 500,000 large-screen sets to the Bloomington, Ind., plant it acquired in its merger with RCA Corp. The sets were previously manufactured for GE by Matsushita Electrical Industrial Co. of Osaka, Japan.

Barry expressed hope that the agreement with GE will serve as a prototype for other manufacturers to bring production home from abroad and help rebuild America's industrial base. "If we show American companies that we can compete," he said, "this should serve as an incentive for them to follow suit" and break their ties with foreign suppliers.

Investment in new plants and equipment will be essential if American industry is to regain the competitive footing it once held with foreign supplies, the IBEW president said. And GE seems prepared to make that kind of commitment.

The company said it will spend $20 million to modernize the Bloomington facility to increase output there by about 30 percent. The plant now employs 2,200 workers and GE indicated that the additional volume "will mean more jobs."

GE's movement to the Pacific Rim began in 1985 with the announcement that it would gradually end production of its own sets in Portsmouth, Va., and buy components from Matsushita. This was followed by the decision to use the Japanese consumer electronics giant to supply GE's Fairfield, Conn., operation.

Acquisition of the RCA operations, which currently produce about 1.5 million television sets annually, helped change GE's mind about continuing to rely on foreign suppliers, Barry indicated.

Equally important, the IBEW president said, was the fact that RCA brought to the merger a "more enlightened" labor relations policy than the one GE has pursued for decades.

Goss named to head Colorado Labor Dept.

Denver—Robert F. Goss, former president of the Oil, Chemical & Atomic Workers, has been named director of Colorado's labor department by Democratic Gov. Roy Romer.

Goss, 65, was elected OCAW president in 1979 and served until his retirement in 1983. He also was a member of the AFL-CIO Executive Council, serving from 1979 to 1985.

Goss's appointment to head the state labor department must be confirmed by the state legislature.

Organizing push set for Carolinas

Charlotte, N.C.—Plans for a stepped up coordinated organizing drive in North and South Carolina were hammered out here at a meeting of representatives from 15 AFL-CIO affiliates.

Despite major industrial development in recent years, the two states remain plagued by unremitting opposition to unions from management and some community leaders, according to the AFL-CIO Industrial Union Dept., which is coordinating the organizing effort.

Spearheading the planning session were Communications Workers President Morton H. Bahr, IUD President Howard Samuel, President Christopher Scott of the North Carolina AFL-CIO and President Randall Kiser of the South Carolina AFL-CIO.

Also participating in the discussions were IUD Organizing Director Harold McIver, Area Coordinator Michael Black, and Kenneth Johnson, director of the Southern Labor Institute.

AFL-CIO LEGISLATIVE ALERT!
PAGE 8

Prayer vigil

Dozens of pregnant workers, locked out along with 2,800 employees of IBP Inc. meat processing plant in Dakota City, Neb., protest the company's cutoff of medical coverage. Rev. Monica Bower of United Church of Christ leads members of the Food & Commercial Workers and their families in a prayer vigil at the state capitol in Lincoln. The AFL-CIO Executive Council condemned IBP's "callous treatment of its employees." (Story on Page 5.)

Council shapes plan to bolster affiliation with state federations

By John M. Barry

Bal Harbour, Fla.—A new, voluntary approach to expanding the membership of state AFL-CIO central bodies was approved by the Executive Council and will be proposed to the federation's next convention.

The plan would permit national and international unions to affiliate their entire memberships with state central bodies at a special rate through national action. This would require payment of an affiliation fee equal to 75 percent of the per capita payments that would otherwise be due the state federations.

The council said it will recommend changes in the AFL-CIO Constitution to the federation's 1987 convention next October to implement the plan.

It expressed the belief that such an option "will serve as an inducement to those unions to make the affiliation program work."

Funds collected under the plan would be distributed to the state bodies on the basis of membership, per capita rates and needs.

The plan was drafted by the council's Committee on State & Local Central Bodies, which has grappled for several years with the problems created by the failure of many local unions to affiliate with state federations.

Central body affiliation

Only 52.3 percent of the national AFL-CIO membership is currently affiliated with state central bodies, the committee pointed out.

Policy statements on more than a score of other topics were approved by the council in the second half of the week-long meeting.

Other highlights included reviews by Federation President Lane Kirkland of organized labor's legislative priorities in the current session of Congress and the related agenda for the four regional conferences slated by the federation this spring.

Sec.-Treas. Thomas R. Donahue presented detailed reports on the federation's finances, on labor's role under the new immigration law, and on the progress of the AFL-CIO Committee on the Evolution of Work, which he chairs.

The council chose Harvard Prof. John Dunlop, a former Secretary of Labor and a renowned labor-management mediator, as this year's recipient of the Murray-Green-Meany Award. And it approved the recent merger of the Typographical Union into the Communications Workers.

Global concerns

On international concerns, the council adopted statements supporting free trade union movements in South Korea, the Philippines, Latin America, the Caribbean and South Africa. It also welcomed the release of Andrei Sakharov from forced exile in the Soviet Union, but noted that "millions remain trapped in forced labor" in that country.

Other statements covered such domestic policy areas as unemployment compensation, health care coverage, health care protection during catastrophic illnesses, nursing home care, housing, the federation's Housing Investment Trust, civil rights, electronic monitoring in the workplace, and the employment-at-will doctrine.

The council denounced the lockout by IBP Inc. of some 2,800 members of the Food & Commercial Workers at the company's Dakota City, Neb., packinghouse and called on IBP to return to the bargaining table and negotiate a fair settlement with the union.

In other actions it endorsed boycotts by the Newspaper Guild against Consumers Union, by the Auto Workers against Colt Firearms, by the Rubber Workers against Plymouth Rubber Co., and by the Elec-

Emergency action needed on gaping health coverage

Bal Harbour, Fla.—Major legislative action is needed to assure health care safeguards for 37 million uninsured Americans and another 50 million who have inadequate medical coverage, the AFL-CIO Executive Council declared.

"Workers and their families constitute three-quarters of those without coverage" and make up "a substantial number of the underinsured," the federation pointed out. And many employers compound the problem by slashing benefits, offering inadequate protection or providing no health benefits at all.

The solution, the council said, is for Congress to mandate a minimum package of specified health care benefits that employers must provide to workers and their dependents, including part-time and laid-off workers.

Elderly paying more

At the same time, the AFL-CIO called for action to help the elderly cope with rising medical costs. Deductibles and co-insurance have increased and there are gaps in covered services and changes in medical practices. The result is that senior citizens now pay a higher percentage of their income for health care than they did prior to enactment of Medicare in 1965.

The problem is more acute for the elderly who suffer catastrophic illness. They face "financial ruin," the Executive Council emphasized, because present Medicare benefits are quickly exhausted.

The federation endorsed congressional efforts to improve Medicare by providing catastrophic coverage coupled with such other essential services as preventive care and prescription drugs. It rejected the Reagan Administration's approach that would be limited only to catastrophic insurance.

While congressional initiatives constitute an "important first step," the statement emphasized, further action is needed to include long-term care provided at home, in community-based treatment centers and nursing homes.

On the broader issue of health care for all Americans, the council sharply criticized employers who refuse to offer health care protection to workers. Denial of any coverage "forces many workers and their families to postpone seeking care until their long-term health or even their lives are in jeopardy," it pointed out.

The federation's prescription for dealing with the crisis in health care coverage includes:

- Requiring employer-provided health plans "as a condition of doing business."
- Providing financial assistance to low-wage employees to assure them health care protection.

Kirkland recuperating after kidney operation

Baltimore—AFL-CIO President Lane Kirkland is recovering in Johns Hopkins Hospital from successful surgery to remove a tumor from his kidney.

His surgeon, Dr. Patrick Walsh, said the surgery "went exceedingly well" and that his kidney was "functioning perfectly."

Kirkland is expected to be hospitalized about one week and spend another few weeks at home on his way to a full and complete recovery. He was operated on Feb. 24.

Kirkland told the Executive Council at the close of its mid-winter meeting about the pre-scheduled surgery. He told council members that the doctor assured him that after the recovery period he would be able to carry out all his federation activities.

Kirkland told the council: "Let me assure you that I like my job and that I will be a candidate for re-election in October." Kirkland was first elected AFL-CIO President in December 1979 and is completing his fourth two-year term in 1987.

Union pay advantage grows sweeter

BLS survey finds nonunion workers fall farther behind

Wage increases for unionized workers in 1986 were more than double those of nonunion workers, the Labor Dept. reported, widening the average weekly union pay advantage to $119.

Data compiled by the Bureau of Labor Statistics showed that last year, the average wage of union members rose to $444 a week, up $21 from the 1985 level.

By contrast, the average weekly wage of unorganized workers went up only $10 last year to $325.

The AFL-CIO emphasized that, even with the gains, workers still are paying the price for flawed Administration policies that have left the country awash in imports and help joblessness among American workers at recession levels.

"For the last six years," said federation economist John Zalusky, "all workers have failed to receive a fair share of the economic wealth they helped to produce."

Sweeter paychecks

However, Zalusky added, "it is once again clear that union-represented workers fare better in their paychecks than those who do not have collective bargaining on their side."

Across the board, the benefits of trade union membership were evident in the BLS data:

- Male union members averaged $88 a week more last year than those not protected by labor agreements.
- Unionized women in the workforce earned an average of $112 more a week than their nonunion counterparts.
- Among white workers, the average weekly wage for union members was $120 higher than for nonunion workers.
- For blacks, union membership meant an average weekly wage $132 higher than for those in the nonunion sector.

2/21/87

Report from down under

Simon Crean, president of the Australian Council of Trade Unions, briefs the AFL-CIO Executive Council on problems and issues confronting workers in his country and in other South Pacific nations, many of which parallel the concerns of American workers.

Philippine unions commended on ratification of constitution

Bal Harbour, Fla.—The key role played by the Trade Union Congress of the Philippines in guiding that nation's voters to overwhelming approval of a new democratic constitution won high praise from the AFL-CIO Executive Council.

Ratification of the constitution was "another landmark step" in bringing an "emergent and vibrant democracy" to that nation, the federation said. Victory was achieved despite opposition from deposed dictator Ferdinand Marcos's supporters on the right and the Communists on the left.

The federation conceded that the new constitution "is not a perfect document," and doesn't provide "all the answers to the difficult social and economic problems facing the Philippines."

But the Filipino people used the ballot box to repudiate the violence of the far left and far right, demonstrating "their determination to move ahead in the struggle for justice and freedom," the AFL-CIO said.

It was the third time in recent years, the council said, that the TUCP made "an important contribution toward the building of democracy in the Philippines."

The council singled out, in particular, the work of TUCP General Sec. Ernesto Herrera, recipient of the 1985 George Meany Humanitarian Award. The TUCP official is on President Corazon Aquino's slate of candidates for election to the Senate this spring.

"Ignoring threats against his life," the AFL-CIO said, Herrera was a key figure in the investigation of the 1984 murder of former Sen. Benigno Aquino, late husband of the Filipino president. Herrera "persuaded the majority of commission members to issue a report condemning military complicity in the crime," the statement noted.

In last year's election, the council continued, the TUCP was a major element in the "people power" alliance that forced Marcos to flee the country. While the "old-line oligarchs and segments of the military" mobilized their power behind Marcos, and the Communists advocated an election boycott, the TUCP mobilized a mass voter turnout and helped monitor the voting to guarantee a fair count.

The council noted the aid given the TUCP by AFL-CIO unions, through the federation's Asian-American Free Labor Institute, reaffirmed support for the Filipino trade union movement, and called on the U.S. government to provide significant economic aid to that emerging democracy.

Rights of elderly

Quality care urged for nursing homes

Bal Harbour, Fla.—Alarmed by the declining quality of nursing home care, the AFL-CIO Executive Council called for prompt congressional action to reverse the situation and assure residents "the dignity and respect they deserve."

The federation pointed to a number of investigations showing that "large numbers of marginal or substandard nursing homes continue to be certified" by federal and state governments.

It cited a recent report by the Institute of Medicine—an arm of the National Academy of Sciences—indicating that care in many of these facilities is "shockingly deficient" and is "likely to hasten the deterioration of physical, mental and emotional health" of patients.

Noting that organized labor, senior citizens and consumer advocates have fought for more than three decades to improve the quality of nursing home care, the council said Congress must enact uniform federal standards to assess the level of care, improve enforcement and protect the rights of the elderly.

The institute's study was made at the request of Congress in the wake of a 1982 proposal by the Reagan Administration to dismantle all protection for nursing home residents, the federation pointed out.

Its report made specific suggestions aimed at guaranteeing residents' rights and assessing the quality and appropriateness of the care provided. The institute recommended sanctions against facilities with poor records, an end to discrimination against Medicaid patients, and improvements in staff training.

The AFL-CIO pointed out that most public and some private nursing homes care for a disproportionate number of Medicaid and other low-income patients. But, it noted, public programs don't adequately compensate the facilities for such care.

The result is that "nursing home operators are reducing staff and services to dangerously low levels," while others are refusing to admit Medicaid patients altogether, the council said.

Adjustments needed

There is need for an adjustment in payments to facilities serving "a disproportionate share of low-income payments," the council said, in the same way hospitals receive incentives under Medicare. Such a move, the federation stressed, "is an essential step towards maintaining the delivery of quality services."

The AFL-CIO said Congress should:

- Make residents' rights a basic condition for nursing home participation in Medicaid.
- Prohibit discriminatory practices against Medicaid beneficiaries.
- Improve nursing home staffing and training.
- Step up surveys and inspections of nursing homes.
- Provide a range of enforcement tools, including interim sanctions, civil penalties and strict time limits for compliance, plus more severe penalties for repeat offenders.
- Require the Health & Human Services Dept. to develop a uniform system for assessing the performance of nursing homes and checking on patient well-being.

Benefit floor sought on health coverage

Continued from Page 1

- Limiting the maximum out-of-pocket employee costs for the basic package.
- Requiring states to set up insurance pools so employers can purchase the federally mandated benefits at an affordable cost.
- Mandating separate state pools so those who have been denied insurance protection because of existing medical conditions or prior health care histories can obtain coverage at a price within reach of the family pocketbook.
- Allowing unions to improve on the minimum federal requirements through collective bargaining.

"The AFL-CIO continues to believe that the most effective way of reducing health care costs, improving access and assuring quality would be for Congress to enact a national health care system," the council declared. "In the meantime, we will work for legislation that will assure access to basic health care services for working Americans and their families."

Under the federation's plan, employers would assure health care coverage for full-time and part-time workers and their dependents. Employer options would include providing coverage through a health maintenance organization or insurer, or through the state insurance pools.

Council outlines proposal to spur state affiliations

Continued from Page 1

tronic Workers against the Advertising Corp. of America.

These actions and statements are covered in greater detail elsewhere in this issue of the News.

The council approved increases in the minimum dues and per capita payments of directly affiliated local unions. It also adopted changes in the rules governing central bodies to spell out the responsibility to maintain lists of affiliates and their officers and voting strength. Another change would help small local central bodies consolidate into stronger units by permitting them to create chapters covering specified geographic jurisdictions.

In its report to the council on the new plan to spur state federation affiliations, the Committee on State & Local Central Bodies, headed by Vice President Wayne E. Glenn, cited a directive from the council in August 1985 to aggressively promote voluntary affiliations. In addition, the 1985 AFL-CIO convention termed effective central bodies of "critical importance" to the labor movement and called on the council to "monitor the progress of the new voluntary affiliation program." The convention authorized the council to develop "a new approach" if the rate of voluntary affiliations proved to be unsatisfactory.

The statement cited "modest progress" over the past 18 months as a result of vigorous efforts by the council committee in league with the central bodies, affiliated unions and the federation's Dept. of Organization & Field Services. Since the convention, for example, 898 previously unaffiliated local unions with a total membership of 153,300 have affiliated with state central bodies.

"Much still remains to be done, however, to achieve the ultimate goal of full affiliation," the council stressed.

It had earlier considered a proposal to require national and international unions to affiliate their entire memberships with state federations by paying into a special fund an affiliation fee calculated on the basis of the union's total membership. Substantial drawbacks were found in this proposal, however, and the voluntary approach was renewed with the added incentive of what amounts to a per capita payment discount for full affiliation.

Reduced fees

Under the amendment proposed by the council, a union electing the national affiliation option would submit an annual state-by-state breakdown, by local unions, of its average membership in the preceding year.

It would then pay the AFL-CIO monthly a state body affiliation fee equal to 75 percent of the average per capita charged by the various state bodies, weighted to reflect the geographic distribution of the union's membership.

Each of the union's locals would then be entitled to membership in the appropriate state central body with a vote in that body based on the local's membership as reported by the national union.

The monies collected by the AFL-CIO through the state body affiliation fee would be allocated to the state federations on the basis of their membership, per capita rates and needs.

The council would continue to monitor the progress of the affiliations program and make further recommendations, if appropriate, to the 1989 convention.

Members of the Committee on State & Local Central Bodies, besides Glenn, are Vice Presidents Kenneth T. Blaylock, John DeConcini, Charles H. Pillard, Lynn R. Williams and Milan Stone.

Status reports of other committees were presented by Vice Presidents Williams on strategic approaches and on occupational safety and health; Pillard on housing; Gerald W. McEntee, the balanced budget amendment and the Harvard Trade Union Program; Frederick O'Neal, the A. Philip Randolph memorial; Owen Bieber, South Africa and the Shell Oil boycott; Joyce D. Miller, social security; John J. Sweeney, organizing and health care; William W. Winpisinger, older and retired workers; William H. Wynn, restrictive legislation; Albert Shanker, education; and Vincent R. Sombrotto, community services.

Bieber described the Auto Workers' new television advertising campaign and gave the council a preview of the TV spots. Vice President Robert A. Georgine presented a film chronicling the building trades' dispute and settlement with the Japanese construction firm Obiyashi over the use of union labor in constructing the new Toyota auto plant in Georgetown, Ky.

Donahue presented the annual report on cases filed under the Article XX Internal Disputes plan, along with a report on the first year of the Organizing Responsibilities Procedure.

The council members also heard from Alan Kistler, who along with John N. Gentry mediates disputes under the ORP, and from the umpires, former AFL-CIO Vice Presidents Douglas Fraser and Glenn E. Watts.

Organizations aided

Contributions to the following organizations were approved: Health Security Action Council, National Housing Conference, Leadership Conference on Civil Rights, Joint Council on Economic Education, The New Leader, Full Employment Action Council, National Urban League, Conference on Economic Progress, Friends of Group Research, Center for National Policy, National Leadership Commission on Health Care, Labor Heritage Foundation, Carter Presidential Center, National Urban Coalition, Samuel Gompers Papers, National Council of Negro Women, Consumer Federation of America, Consumer Energy Council of America, National Committee Against Discrimination in Housing, USO, Project Literacy U.S., Southern Regional Council, National Low Income Housing Coalition, Fund for an Open Society, United Negro College Fund, and the SOS Coalition to Protect Social Security.

The next meeting of the Executive Council will be in Washington, May 5-7.

Panel proposes permanent strike support center

Bal Harbour, Fla.—A permanent structure within the AFL-CIO is essential to mobilizing union and public support for striking and locked-out workers, the Executive Council was told.

Vice President Lynn R. Williams said that the Subcommittee on Strategic Approaches which he chairs is exploring methods for providing more effective assistance to affiliates in critical collective bargaining and organizing disputes.

The subcommittee urged the federation to "formalize" this kind of support by creating a Strategic Assistance Center in the Dept. of Organization & Field Services that will be responsible for coordinating support for affiliates in critical disputes.

The goal, Williams said, is to "prevent the avoidable strikes and win the winnable strikes."

A vital component of waging a successful strike or resisting a lockout, said the subcommittee of the federation's Committee on the Evolution of Work, is to provide a mechanism for maintaining health coverage for affected workers.

Establishment of a federation-wide base for providing this coverage would reduce the costs of such insurance protection, Williams said. He told the council that a request for bids will be submitted soon to interested insurers.

The subcommittee emphasized that strike approval procedures employed by affiliates should allow sufficient time and opportunity to explore such strike alternatives as in-plant and non-workplace tactics to help resolve critical disputes.

The report to the council noted that a number of unions, constitutional departments and the AFL-CIO Comprehensive Organizing Strategies & Tactics Division have developed corporate strategy programs.

Although such alternatives "are not a panacea" in labor disputes, the subcommittee emphasized, "more can be done to raise the level of awareness and usage of these strategies." Unions that don't have the resources to carry out such campaigns should avail themselves of the expertise already developed, the report said.

Williams, president of the Steelworkers, pointed to the success of the AFL-CIO Steelworkers Support Committee created last August in a "massive mobilization of union resources" to aid more than 21,000 USWA members who were locked out by USX Corp., formerly U.S. Steel.

The committee's prime mission, he pointed out, was to "bring the dispute to the public's attention and provide moral support" for the locked-out workers. It succeeded in raising nearly $250,000 to help the USWA "overcome a barrage of anti-union media coverage and USX propaganda," Williams said.

This concerted effort by the AFL-CIO and its affiliates succeeded in "strengthening the resolve of the Steelworkers" and eventually helped convince USX to "negotiate reasonably" with the union.

Housing crunch shuts out homeless

Reagan budget policies stunt federal construction projects

Bal Harbour, Fla.—Congressional action is needed to ease the housing crunch for millions of low- and moderate-income families and to give nationwide priority to the plight of the homeless, the AFL-CIO said.

The Executive Council warned that the housing crisis will worsen unless there is a reversal of Reagan Administration policies that have halted construction under federally assisted housing programs, seek to end subsidies for privately owned low-income housing and ignore the homeless.

A survey of 25 cities by the U.S. Conference of Mayors found the demand for emergency shelter rose an average 20 percent during 1986, the council noted, with facilities in nearly three-fourths of the cities forced to turn away people in need.

But the "increasingly visible plight of the homeless . . . is only the tip of the iceberg of America's low-income housing shortage," the council warned.

"As multi-year project subsidy contracts run out under various urban and rural federal housing programs, lower-income residents in roughly 2 million units will be dumped out on the streets," the council said.

Owners will then be free to increase rents, convert projects to condominiums or sell the projects to investors, with poorer tenants likely to be displaced by those able to pay higher rents.

"Meanwhile, new public housing construction subsidies have virtually been stopped, and the Administration is seeking no funds for new housing for the elderly and handicapped," the council pointed out.

The Administration's solution to the housing crunch—short-term vouchers that cover some of the cost of housing—cannot meet the needs of the growing numbers of low- and moderate-income families, the council said.

Higher fees assailed

The AFL-CIO also scored Reagan budget proposals that would increase fees for mortgages insured by the Federal Housing Administration and the Veterans Administration, making it more difficult for moderate-income families and first-time home buyers to obtain a loan.

The federation also recommended that Congress:

- Provide $500 million for urgent relief to the homeless.
- Authorize new construction funds to meet the nation's housing needs, especially through low-rent public housing.
- Encourage homeownership efforts of nonprofit enterprises working to increase available housing for low- and moderate-income families.

The council urged Congress to "put teeth into the enforcement" of national fair housing laws by speeding up the handling of racial discrimination complaints. The statement also recommended that discrimination against the handicapped and families with children be included under existing fair housing legislation.

HIT union construction plan backed

Bal Harbour, Fla.—The AFL-CIO proposed a new investment program to promote union-built commercial and industrial buildings. The plan would be similar to the Housing Investment Trust, established in 1982.

HIT was launched as a vehicle for union and pension funds to provide housing and jobs for union members while assuring sound money management and market-level-or-better returns.

The effort has been very successful, the council noted, with 170 labor organizations and pension funds participating in the investment plan as of the end of 1986 and current assets exceeding $156 million. Since October 1984, when HIT merged with the federation's earlier effort, the Mortgage Investment Trust, total annualized return on investment has been 15.4 percent.

Since the HIT charter limits investments to housing, the AFL-CIO approved the formation of a parallel trust to invest in and promote union-constructed commercial and industrial properties.

After winning bank and Internal Revenue Service approval, HIT expects the new investment plan to be operational by the summer.

John T. Dunlop

Dunlop selected '87 recipient of labor's top honor

Bal Harbour, Fla.—John T. Dunlop, labor economist, mediator and Harvard University professor, has been chosen to receive the 1987 Murray-Green-Meany award, the AFL-CIO's highest honor.

His selection was recommended by the Community Services Committee and approved by the Executive Council.

Dunlop's role in national labor relations spans five decades, from his early years as chairman of the joint board for the settlement of jurisdictional disputes in the construction industry to his appointment as Labor Secretary under President Gerald Ford.

Quality health care

In 1973 Dunlop organized the Labor-Management Group, whose members include the AFL-CIO president and secretary-treasurer, six Executive Council members and eight chief executive officers of Business Round Table companies. That group has issued reports on the need to rebuild the nation's infrastructure, industrial policy, trade and other issues.

Dunlop's mediation approach also brought together leading labor, health care industry and insurance company representatives in 1980 to discuss health care concerns. The Dunlop Group has encouraged the development of local coalitions to improve the quality of health care while keeping prices down.

He also serves on the board of the George Meany Center for Labor Studies.

The Murray-Green-Meany award is a memorial to former federation leaders Phillip Murray, William Green and George Meany and consists of a medal and $5,000. It was established by the AFL-CIO in 1956 to honor outstanding contributions and service to working men and women. The award will be presented in June at the federation's national community services conference in St. Louis.

Council renews its invitation to Andrei Sakharov

Bal Harbour, Fla.—American labor renewed its invitation to Soviet freedom fighter Andrei Sakharov to come to the United States to receive the federation's George Meany Human Rights Award conferred on him last year.

Welcoming the release from forced exile of the Nobel Peace Prize winner and human rights advocate, the Executive Council called on Soviet authorities to respect Sakharov's "right to travel and to speak freely, in accordance with the Helsinki Accords." A similar request was denied by the Kremlin a year ago.

The federation expressed the hope that "this valiant fighter for human rights" would enjoy "good health and strength in his struggle for justice and dignity."

But it noted that, despite Sakharov's release after five years of house arrest in Gorky and the amnesty granted other prominent dissidents, thousands of prisoners of conscience still "languish inside Soviet prisons, forced labor camps and psychiatric hospitals."

Despite a "publicity campaign" by Soviet General Sec. Mikhail Gorbachev to project "an image of openness," the council said, Soviet society "remains closed, its citizens highly controlled and its fundamental totalitarian structure unaltered."

"Any relaxation of repression in the Soviet Union is to be welcomed," the AFL-CIO declared. But with trade unions, religious organizations and the press still under total state control, "there is still no evidence of structural change in the Soviet totalitarian system"—a situation "incompatible with free trade unionism."

Support for basic rights vital to progress in Latin America

Bal Harbour, Fla.—Latin America shows hopeful sights of moving toward "honest elections and greater respect for human and trade union rights," the AFL-CIO declared. But this process must be reinforced through United States support for the forces of democracy.

In a wide-ranging statement on Latin America and the Caribbean, the Executive Council said that democracy in that region hinges on resolving the "critical debt problem" of these countries without forcing governments into "harsh austerity programs" that heap new economic hardship on the backs of workers.

"Workers and their unions are not the cause of the debt crisis," the federation emphasized, "and it is unjust to expect them to resolve it through a drastic decline in living standards." This would jeopardize "the new and fragile democracies of the area," the council warned.

Dictators left-or-right

The AFL-CIO restated its historic opposition to dictatorships, pointing out there is no essential difference between the reactionary right-wing governments in Chile and Paraguay or the left-wing regimes in Cuba, Suriname and Nicaragua.

The federation insisted that trade relations between the United States and other Western Hemisphere nations "be conditioned upon the observance of human and trade union rights." Such conditions are already built into the Generalized System of Preferences and the Caribbean Basin Initiative, but they should be made an integral part of all trade legislation and then "vigorously enforced" by the Administration.

Addressing the ongoing conflicts in both Nicaragua and El Salvador, the federation called for a peaceful settlement "through dialogue and negotiations between the governments" and the rebel movements of their respective countries.

The council supported the stand of the Confederacion de Unidad Sindical, the Nicaraguan labor organization affiliated with the International Confederation of Free Trade Unions. It has called for withdrawal of U.S. military assistance to the Contras "linked to the simultaneous withdrawal" of Soviet and Cuban military support for the Sandinistas.

And it gave its backing to the position taken by the ICFTU-affiliated Confederacion de Trabajadores Democraticos in El Salvador, which has called for a negotiated end to the fighting based on respect for democratic rights. The federation stressed that U.S. economic and military aid to El Salvador be conditioned on improvements in human and trade union rights, and condemned extremists for attempting to "destabilize the democratic process."

Dues increased for directly affiliated unions

Bal Harbour, Fla.—The Executive Council voted to increase the per capita payment of local unions directly affiliated with the AFL-CIO, known as DALUs, from the current $5 a month to $6 effective July 1. At that time the minimum dues requirement for DALUs will also go up—from $10 a month to $12.

In taking the action, the council noted that it has been almost five years since the current minimum dues and per capita rates for DALUs were set, a period in which the costs of representing organized workers have risen rapidly. Nearly 90 percent of national and international unions have increased the per capita payments of their local unions in that span.

The council said the federation's overall policy to provide for the voluntary transfer of DALUs to affiliated national and international unions would be undermined if the DALU per capita remained stagnant.

Sharing the sacrifice

New York—The Clothing & Textile Workers, in an unprecedented jobs-saving bargaining proposal to Health-Tex Corp., offered to "share the work" available among the firm's 1,200 employees to prevent a planned shutdown of three plants in Maine and one in Virginia.

ACTWU said the proposal would mean that all Health-Tex workers would share in the layoffs and equalize the sacrifices to keep the Maine plants working. The company manufactures children's apparel.

"The fact that thousands of union members from Rhode Island, Virginia, Alabama and Georgia have volunteered to help the Maine union members is unprecedented and far-reaching," the union said. The plants slated for closing are situated in Portland, Brunswick and Gardiner, Me., and Petersburg, Va.

By making the proposal, ACTWU said, the union has shown it is willing to explore a variety of long-term solutions, including an independent study aimed at improving the efficiency of the Maine plants. A further proposal discussed recently with the company included the "possibility of searching for a buyer to take over the Maine plants," ACTWU said.

The union called the proposals a "serious effort to fully explore alternatives" to closing the four plants in order to avoid the severe impact such shutdowns would have on the laid-off workers and their communities.

The union said that it is willing to work with the state governments, the company and federal officials, if necessary, to explore ways in which all parties can cooperate in making the plants slated for closing successful and secure.

Jobless insurance system in shambles

Two-thirds of unemployed denied benefits as crisis deepens

Bal Harbour, Fla.—The nation's unemployment insurance system isn't working and major repairs are needed to get it back on track, the AFL-CIO said.

An Executive Council statement on the unemployment insurance crisis called on Congress to expand eligibility for both regular and extended benefits, strengthen the system's funding and establish minimum federal benefit standards.

"Only one-third of America's jobless receive benefits, compared to 76 percent in 1975," the council noted. "The long-term jobless are virtually unprotected by the extended benefit program that was supposed to help them."

State triggers for extended benefits are based on an insured unemployment rate that usually is only reached at the onset of a severe recession.

This method should be eliminated, the council said, and eligibility for extended benefits should be based on such factors as length of attachment to the labor force and credit for periods of covered employment.

A fact sheet accompanying the council statement noted that "98 percent of those out of work for six months or longer, regardless of the length of their attachment to the labor force, fail to qualify for this assistance due to changes brought about by the Reagan Administration in 1981."

Unemployment benefits on the average replace only 35 percent of lost wages, the council statement noted. It reiterated labor's support for federal benefit standards to lift the weekly payment to at least 50 percent of lost wages, up to a maximum benefit of two-thirds of the state's average weekly wage.

The council expressed concern at the depletion of state unemployment insurance funds and the increasingly common recourse of tightening eligibility restrictions and cutting payments.

Instead, it said, the wage base for the federal unemployment insurance payroll tax should be indexed to at least 65 percent of the average annual wage. This was one of the recommendations of the National Commission on Unemployment Compensation back in 1980.

In a related area, the council expressed concern at cutbacks by Congress in administrative funds for state employment security agencies.

Worsening situation

"As a result, payments have been delayed and programs to help the unemployed find new jobs have been decimated," the council noted. It warned that the situation will get worse and many local unemployment offices will have to close unless Congress quickly restores the $144-million shortfall through a supplemental appropriation.

The council expressed concern at proposals to divert unemployment insurance taxes or the payroll tax mechanism to finance job training for displaced workers. Such programs are essential but should be funded separately, the council said.

It also opposed the Administration effort to defederalize the funding for administration of unemployment insurance and job service programs. "Placing this burden on the states will result in additional cutbacks in services," the council warned.

Council raps repression of Korean labor

Bal Harbour, Fla.—The continued repression of workers and unions in South Korea drew strong condemnation from the AFL-CIO Executive Council.

Despite less restrictive labor laws recently passed by the Korean National Assembly, the council warned, the legislation will be "merely a charade" unless the government enforces the measures by cracking down on "bureaucrats and employers accustomed to ignoring the rights and needs of workers."

South Korea has been enjoying a "spectacular rate of economic growth and extraordinary success in the international marketplace," the AFL-CIO pointed out. But for the most part, "its workers, the creators of this growth, have been left behind—economically, politically and socially."

The new laws establish a minimum wage procedure, revise trade union regulations and restrict the government's "arbitrary power to abolish unions," the federation noted. If properly implemented, they would remove "some of the worst impediments" to trade unionism and increase the ability of free trade unions to advance their members' interest.

Reasons for skepticism

But, the council said pointedly, "we have grounds for skepticism." Past Korean governments have broken promises to provide a more liberal labor environment. And even under the new legislation, "freedom of association and the right of unions to determine their own structure remain severely restricted."

Moreover, there seems to be no break in South Korea's pattern of "intimidation, discrimination, discharges, arrests and even torture of union activists" merely because they're fighting for better wages and working conditions, the statement emphasized.

Precise information on the extent of these abuses by the police and military is difficult to obtain because of the secrecy imposed by so-called security laws, the council said.

The AFL-CIO praised the "responsible democratic opposition movement" in South Korea and stressed the need for "sympathetic encouragement" of this movement by the American government.

The federation supported the call of the International Confederation of Free Trade Unions to admit Korea to the International Labor Organization. This would put that country in a position where its "compliance with the ILO's conventions and labor standards could be monitored."

Pretoria censured for havoc in neighboring black nations

Bal Harbour, Fla.—South Africa's white-minority government was assailed by the Executive Council for its concerted campaign to create havoc in neighboring black nations that oppose the racist policies of President Botha's regime.

In response to sanctions passed by Congress over the Reagan Administration's opposition, the Executive Council said, Pretoria has attempted to undermine the economies of these "frontline" countries. The efforts have included cutting vital transportation links, choking off trade routes and taking other actions aimed at economic and political destabilization.

Aid to front line states

The federation called on the American government to help "thwart this cruel policy" by providing economic aid to the "frontline" states. This should include highway construction, preparation of deep-water ports and completion of railroad lines that avoid South African territory, the council stressed. It also called for a cooperative food distribution system to help share food surpluses in those nations "where people face starvation because of South African retaliation."

In the same spirit that led the AFL-CIO to support the strong, mandatory sanctions imposed on Pretoria, the council pledged its backing for legislation to give "priority consideration" to South Africa's neighbors who "respect internationally recognized trade union and human rights standards."

The federation pointed out that its opposition to apartheid is deeply rooted in labor history. "More than 30 years ago," the council said, "we condemned this system of racism and economic exploitation" in South Africa.

More recently, American labor has focused on South Africa's emerging black democratic trade union movement "as the principal and most promising force for the peaceful dismantling of apartheid and its replacement by a multi-racial democracy," the council continued.

These efforts are being carried out through the African-American Labor Center in cooperation with the International Confederation of Free Trade Unions and the South Africa Trade Union Coordinating Council.

They have included leadership training programs and assistance in developing industrial relations and collective bargaining procedures to help South African unions defend the interests of their members.

Although the success of these efforts has "provoked attacks" on the federation and the ICFTU, the council said, the AFL-CIO "will not be deterred by those who seek to divide the free trade union movement and to undermine the coordination of support for the democratic South African labor movement."

Reagan's disregard of civil rights draws fire

Bal Harbour, Fla.—The AFL-CIO called for an end to the Reagan Administration's "disregard for civil rights" and reaffirmed its commitment to fair housing, equal employment opportunity and affirmative action.

The Executive Council scored recent episodes of racial violence as "a national tragedy and a national disgrace," reminding Americans that "the goal of racial justice and equality has not been achieved."

With House and Senate Democratic leaders promising to move quickly on two key civil rights measures, AFL-CIO Legislative Director Robert McGlotten urged senators in a letter to cosponsor the Civil Rights Restoration Act to ensure that federal funds could not be used to discriminate against minorities, women, disabled persons and older Americans.

The scope of the anti-discrimination laws was narrowed by a 1984 Supreme Court decision which limited the cutoff of federal funds, countrary to the intent of Congress, McGlotten wrote.

In another measure supported by the AFL-CIO, Democratic leaders are seeking to strengthen the enforcement of fair housing laws by allowing administrative law judges to hear discrimination complaints instead of requiring victims of discrimination to file suit in court.

4 firms added to boycott list for unfair contract demands

Bal Harbour, Fla.—The AFL-CIO Executive Council endorsed boycotts against Consumers Union, Advertising Corp. of America, Colt Firearms Co. and Plymouth Rubber Co. in response to their insistence on severe and unjustified contract concessions.

New York Newspaper Guild members employed by Consumers Union are battling company demands for takeaways in shift differential, holidays, sick leave, severance pay, and disability protections and thwarting company proposals for a two-tier wage scale and a "merit pay pool" plan that would give management the exclusive right to determine who will get a raise.

Consumers Union publishes Consumer Reports magazine, Consumer Reports Annual Buying Guide and other books, as well as Penny Alert, a children's magazine and Advance Alert, a newsletter. Further, CU-produced films are shown on Home Box Office cable television. It also provides legal aid and car price reporting services.

At Advertising Corp. of America, 110 members of Electronic Workers Local 276 in Holyoke, Mass., have been on strike since last July 21, fighting the firm's concession demands that include elimination of all family health-care benefits and introduction of demeaning disciplinary rules. The company, which makes pocket calendars and desk diaries, has hired scabs to replace the strikers.

In Hartford, Conn., members of Auto Workers Local 376 went on strike against Colt Firearms on Jan. 24, 1986, after the company demanded a wage freeze and reductions in health benefits. Last September, the UAW local's unconditional offer to return to work was spurned and strikebreakers now fill those jobs. The Connecticut Labor Dept. has ruled the situation a lockout. Colt makes rifles and handguns.

Company takebacks

Rubber Workers Local 573 in Canton, Mass., struck Plymouth Rubber Co. in September 1985 because of the firm's insistence on contract provisions that would divert union work to nonunion employees, eliminate union representation in grievance procedures, leaving the rehiring of strikers up to the company, and require the local to drop all unfair labor practice charges it filed with the National Labor Relations Board.

Plymouth Rubber manufactures insulating materials under the brand names Plymouth, Slipknot, Plyvolt, Plysafe, Bishop, Plyflex and Plytuff; rubber bands labeled Plymouth, Revere, Patriot and Cambridge, and vinyl products labeled Plyhide and Plytron.

The Executive Council asked all affiliates and union members not to purchase the products made by these four companies and called on the federation's Union Label & Service Trades Dept. and the labor press to publicize the boycotts.

NLRB revamps policy to bar employer reneging on pre-hire agreements

Overturning a 16-year-old precedent, the National Labor Relations Board ruled unanimously that employers can't unilaterally repudiate union-negotiated pre-hire agreements.

The decision will have a significant impact on the construction industry where employers generally agree to hire union workers before beginning a building project.

Such pacts were authorized by Congress in 1959 to accommodate the industry's unique employment patterns of hiring on a project-by-project basis.

But since 1971, the Labor Board has taken the position that an employer had the right to abrogate such collectively bargained provisions without violating the National Labor Relations Act.

The board said it has now decided that continuing to sanction contract repudiation "and the inevitable disruptions that result is not conducive to labor relations stability."

For that reason, the NLRB said, it was overruling the earlier decision. From this point forward, it declared, a pre-hire agreement cannot be terminated until the existing contract expires or until employees covered by such a pact vote to reject their bargaining representative.

Iron Workers upheld

The ruling upheld Iron Workers Local 3, which brought unfair labor practice charges against John Deklewa & Sons Inc., a Bridgeville, Pa., construction firm, after management announced in 1983 that it was reneging on the pre-hire agreement.

The first such agreement was reached in 1960, and the employer continued to sign successor contracts over the next two decades. During that period, the company acted as a separate entity in negotiations with the union.

In 1980, the company joined the Iron Workers Employer Association of Western Pennsylvania Inc., and in that capacity became a signatory to the three-year agreement the association negotiated with the union in May 1982. That contract contained the same general hiring-hall and union-security provisions that had been part of Deklewa's earlier agreements with the Iron Workers.

Pact abrogated

The firm withdrew from the management association in September 1983 and simultaneously informed the union it was repudiating the contract and withdrawing recognition.

But, the Labor Board ruled, the company didn't have the right to take such action. "This contract was binding, enforceable and not subject to unilateral repudiation," it asserted. The company therefore was directed to compensate employees for any loss of wages that occurred between the September 1983 repudiation and the May 1985 termination date of the contract.

Because that agreement has now expired, the board noted, the employer is not compelled to negotiate a successor contract containing the pre-hire language, and the union cannot strike or picket in an effort to win renewal of the provision guaranteeing pre-hire rights.

The NLRB said the policy decision reached in the Iron Workers case would be applied to all pending cases challenging construction industry employers' unilateral repudiation of pre-hire provisions in their contracts.

The AFL-CIO and its Building & Construction Trades Dept. filed briefs with the NLRB in support of the Iron Workers' charges of unfair labor practices. Employer associations and the National Right to Work Defense Foundation tried to persuade the board to retain the 1971 policy.

Getting acquainted

During series of labor meetings in Bal Harbour, Fla., the Industrial Union Dept. was host to this reception for Rep. Richard A. Gephardt (D-Mo.), who has since become the first Democrat to formally announce his candidacy for the presidential nomination. Gephardt, left, confers with IUD President Howard D. Samuel and James E. Hatfield, right, president of the Glass, Pottery & Plastics Workers. Several other potential presidential candidates met with union groups at meetings or receptions. All candidates will be able to take part in an AFL-CIO video presentation to union audiences.

Strong legislation endorsed to outlaw unjust discharges

Bal Harbour, Fla.—Legislative proposals to modify the so-called employment-at-will doctrine so as to safeguard workers against unjust discharges have the support of the AFL-CIO, the Executive Council declared in a statement.

But the council observed that most of the proposals put forward thus far "reflect a lowest common denominator approach which disserves the interests of workers" while mollifying employers. "These proposals are not worthy of organized labor's support," it said.

To provide real safeguards, the council said, legislation to outlaw unjust discharges must contain at least the following elements:

- A prohibition on discharges without cause.
- Financing to assure that discharged employees will be able to enforce their statutory rights.
- Prompt review of discharge decisions by an independent tribunal.
- Mandatory reinstatement for any employee who is found to have been discharged wrongfully.
- Full compensation for losses sustained as a result of a wrongful discharge.

The council said the federation is committed to supporting legislation containing these elements at the national level, and it urged state central bodies to press for similar legislation at the state level.

At the same time, the council stressed that such legislation is no substitute for a union contract.

"Experience demonstrates that the surest way for workers to protect their jobs is through self-organization and collective bargaining," the statement said.

"Assisting unorganized employeees to organize and and to secure contractual protections from unjust discharges remains the labor movement's first priority.

Basic standards

"At the same time, the AFL-CIO remains committed to its long-term program of providing a base of support for the collective bargaining process through legislation that seeks to assure every working American the basic labor standards that are the hallmark of a decent society."

The council statement was adopted as a substitute after hearings were held on a resolution referred by the 1985 convention.

After considering five other referred resolutions, the council found that a proposal related to employee leasing had been made moot by the new tax law. It noted that the substance of a referred resolution on economic democracy was covered by a statement adopted earlier on plant closings.

Nonconcurrence was voted on a proposal that voters be given a $30 tax credit as an incentive to vote, on a measure calling for creation within the AFL-CIO of an office of state legislation, and on proposals dealing with part-time workers.

Council assails electronic snooping

Bal Harbour, Fla.—The collective bargaining process offers the "best means of preventing punitive or oppressive uses of electronic surveillance or monitoring" of workers, the AFL-CIO Executive Council declared, adding that it will supplement the bargaining process by pressing for legislative measures aimed at curbing such abuses.

The council stressed that with increasing frequency, employers are using electronic technology to engage in worker surveillance and monitoring.

Such action, the council maintained, "invades workers' privacy, erodes their sense of dignity and frustrates their efforts to do high-quality work" by placing "a single-minded emphasis on speed and other purely quantitative measurements."

The council pointed out that some employers regularly eavesdrop on telephone calls, film workers' every action—even during break periods—and electronically count keystrokes or other work functions, all in secret.

It called for a ban on secret audio monitoring or the workplace and an end to punitive or oppressive uses of electronic surveillance.

The federation further noted that certain computer software programs even reach beyond monitoring to the flashing on an operators's screen subliminal messages that urge faster production.

Locked-out IBP workers denied pregnancy care

Lincoln, Neb.—Nearly 50 pregnant workers, protesting the harsh tactics being used by the nation's largest meat processor to bludgeon their union, marched on the state capitol here to air their plight and urged Gov. Kay Orr to intervene. Orr is the mother of two children.

IBP Inc., formerly Iowa Beef Processors, cut off medical benefits, including those for prenatal care, hospitalization and newborn medical treatment, when it locked out 2,800 members of Food & Commercial Workers Local 222 at its Dakota City plant shortly before Christmas.

The AFL-CIO Executive Council, at its winter meeting, condemned the "callous treatment" being dished out by IBP at its flagship plant in Dakota City.

The tragic and possibly long-range impact of IBP's anti-family approach to labor relations was etched on the faces of the expectant protesters who worried about getting adequate treatment for their unborn children. Local 222 Business Agent Bill Schmidt declared, "It's totally wrong for them to risk the lives of unborn children in an effort to beat us into submission."

The company's cutoff of medical care jeopardized the life of one couple's baby, who was born before the lockout. That child, who has stopped breathing on three occasions, requires a special monitor that helps prevent crib death. IBP stopped paying the $180 monthly fee for the equipment after the Dec. 14, 1986, lockout.

In a letter to Orr, a Republican, the pregnant IBP employees declared that "punishing our unborn children for this lockout is unfair and unjust." It urged her to intercede on the workers' behalf and stressed that IBP President Robert L. Peterson has the power to "reverse his callous and unethical decision to terminate the medical benefits of pregnant women."

Council action

The Executive Council called on IBP, a wholly owned subsidiary of Occidental Petroleum Corp., to "return to the bargaining table and negotiate a fair settlement" with its workers. The workers were locked out after they rejected the company's concession-filled final offer that would have extended the current five-year wage freeze another four years.

At the union's request, the federation will conduct a public investigation of the dispute and plant working conditions through the Food & Allied Service Trades Dept.

Workers' pay at the Dakota City plant has fallen so low under the existing two-tier pay system that some full-time employees are eligible for welfare and food stamps. There has been no general wage increase at the plant since 1981, even though IBP is economically healthy. It pocketed $144 million in profits on sales of $6.5 billion in 1985.

The members rejected the company's demand to freeze wage scales for another four years—stretching the clampdown to nearly a decade. IBP pressured for even lower rates in the two-tier pay scale, elimination of time-and-a-half for overtime, and increased employee contributions to the monthly health insurance premiums.

The UFCW local has insisted on job safety improvements at the plant where the injury and illness rate is running 23 percent ahead of the national average in an industry already ranked by the Labor Dept. as one of the most dangerous. In January, the local filed a complaint with the Occupational Safety & Health Administration, charging that IBP "sanitized" its injury records by maintaining two logs. The one OSHA inspectors recorded had only 18 percent of the injuries that actually occurred.

A demonstration aimed at obtaining employee medical records for the union's study of safety and health conditions at the plant drew hundreds of workers dressed in identical red T-shirts with white first aid crosses. Leading the procession was an ambulance, and a delegation of union members used the ambulance's stretcher to cart more than 2,000 signed medical record release forms to company officials.

Company response

At the end of the legal response period, IBP said the union's release form was "defective" because it didn't say what the records would be used for. IBP drew up its own form for workers to fill out giving them the option of not releasing the records.

On Feb. 25, the union again presented signed release forms to the company, which now has 15 days to respond.

To protect members from bank foreclosures and repossessions, Local 222 and FAST officials met with nearby banks to get written affirmation that such actions would not be taken against the locked-out workers. When the area's largest lender, Security National Bank, refused to cooperate, Local 222 members picketed the bank.

Remembering Randolph

AFL-CIO President Lane Kirkland receives new paperback edition on the life of A. Philip Randolph, founder of the Sleeping Car Porters and a pioneer in the struggle of black workers for economic justice and civil rights. Presenting the volume are Norman Hill, left, president of the Randolph Institute, and Frederick O'Neal, president of the Actors & Artistes and vice president of the AFL-CIO as well as the APRI.

Pace of job creation tumbles despite Administration boasts

Despite the Reagan Administration's claim that millions of new jobs have been created over the last six years, the rate of job expansion actually has been less than during any of the four previous Administrations and is only 80 percent of the pace under the Carter presidency.

That's the finding of the National Committee for Full Employment in its report, "Jobs '87: The Moral and Ethical Challenge of Joblessness and Underemployment." The coalition of labor, religious and civil rights groups outlined its conclusions during hearings held by the congressional Joint Economic Committee.

The report acknowledged that while some of the shortfall in new jobs could be explained by a slower population growth, "every indicator of labor market health shows that the American worker's situation has deteriorated since 1979, the last full non-recession year before the 1981-82 recession."

"Real unemployment," which includes persons working part time but seeking full-time work and those who want work but are too discouraged to continue their search, was 12.6 percent last year, 30 percent above the 1979 level of 9.7 percent, the report noted.

Compounding those gloomy statistics is the Reagan Administration's job creation record, the full employment committee charged. Job growth has become "increasingly unbalanced," the report found, with the lowest paying service sector industries accounting for the most growth.

Between 1979 and 1985, 75 percent of the 9.5 million jobs created in the expanding sectors were in retail trade and service industries—both the lowest paying industries and those with the highest proportion of part-time work, the survey found.

Today, the nation is experiencing the "contraction of the highest paid sectors of the economy," with transportation, communications, utilities and government—all higher wage service jobs—at below average growth. These job shortfalls are in addition to the 3 million manufacturing jobs lost since 1980, the report noted.

Low wage surplus

"This unbalanced growth is creating a surplus of part-time work and lower wages," the report stated, with 5.1 percent of the labor force—5.6 million workers—involuntarily trapped in part-time work last year.

Wages have fallen as well, with the shifts in employment causing a 3.5 percent drop in average weekly pay and a staggering 8 percent drop in real earnings from 1979 to 1986.

The full employment committee also discounted Administration claims that total compensation has been rising faster than wages alone. It pointed out that real hourly compensation is still below its 1978 peak and is related to increases in payroll taxes and other factors that do not contribute to an improved standard of living.

The coalition's proposal includes:

- Creation of training programs and lay-off assistance for workers, including mandatory notice of plant closings.
- An increased minimum wage indexed to inflation.
- Development of an effective welfare-to-work program.
- Increased education and training programs for young workers.

Washington wins renomination as Chicago's mayor

Chicago—Mayor Harold Washington, carrying labor's endorsement for a second term, won a hard-fought Democratic primary in a rematch with Jane Byrne, his predecessor as mayor.

Washington, who won the Chicago AFL-CIO's support by a two-to-one margin at an endorsement meeting, faces a multiple challenge in the Apr. 7 general election. Two Democrats who chose not to run in the primary will be on the ballot as candidates of newly created "parties." And the Republican candidate is a longtime Democrat who won the GOP primary.

Washington won the Democratic nomination four years ago with a plurality but not a majority of the votes and went on to become Chicago's first black mayor. This time, he won a clear majority in the primary, polling some 559,000 votes to 500,000 for Byrne in nearly complete returns.

The also-ran in the Democratic primary was Shelia Jones, a follower of the Lyndon LaRouche cult of political extremism.

LaRouche candidates won surprise victories last year in two statewide Democratic primaries in Illinois, when relatively few voters knew what they stood for. But this time around, the cult's mayoralty candidate was held to some 2,500 votes out of more than a million cast.

Reagan rebuked

Asbestos removal bill wins House approval

Congress prepared to deal a stinging bipartisan rebuke to the Reagan Administration for blocking distribution of federal funds that would enable thousands of schools to get rid of potentially deadly asbestos insulation this summer—before children, teachers and service workers return for the new school year.

The House passed by an apparently unanimous voice vote a labor-supported resolution directing the Environmental Protection Agency to start processing applications for federal grants and loans from school districts applying for funds that Congress appropriated last year.

Instead of distributing the $50 million appropriated, the Reagan Administration has asked Congress to rescind the appropriation—claiming the money isn't needed because the problem of asbestos in the schools has already been "greatly reduced."

That isn't what members of Congress have been hearing from their home districts.

Using the pending request for rescission as an excuse for delay, EPA has held up even the start of the application procedure for federal grants. Unless it unblocks the pipeline soon, it will be too late to let out contracts and get the work done by qualified contractors during the summer vacation.

A quickly-formed coalition that included the Service Employees, Teachers, School Administrators, State, County & Municipal Employees, and Laborers, along with other education and parent groups, helped prod Congress to speedy action.

Real problem

At hearings called by a House Energy subcommittee headed by Rep. Thomas A. Luken (D-Ohio), the SEIU branded the Administration's claim of "no problem" with asbestos contamination a clear fiction.

"The fact is that asbestos in our nation's schools remains a grave hazard to the health of school children and employees," the union said. "Over 15 million school children and thousands of school workers remain in school buildings contaminated with dangerous asbestos."

The House took up the resolution under a no-amendment shortcut procedure requiring a two-thirds vote, and everyone who spoke on the issue urged the bill's passage. The Senate was preparing to act on the measure.

The resolution, which may be vetoed by the President, directs EPA to ensure that funding awards are made promptly so that work can be completed this summer. The funding includes both grants and no-interest loans to school districts.

Last year, in a related area, Congress passed a labor-urged bill to compel EPA to set standards for safe removal of asbestos from school buildings—after evidence that haphazard removal operations conducted by untrained persons often spread the danger of deadly asbestos fibers. Maintenance workers in school boiler rooms were especially at risk.

Campaign assists asbestos victims

New York—Unions are bolstering the White Lung Association's campaign to notify the state's more than 3,000 victims of asbestos-related diseases that time is running out to file legal action.

Operation Justice, the group's information campaign, is using radio and television public service announcements, subway posters and brochures in union halls, hospital waiting rooms and public libraries to reach those asbestos victims who had been barred from legal action in the past by the state's statute of limitations.

The campaign is an outgrowth of the six-year, labor-backed effort to change the statute of limitations to reflect the long latency period of several occupational diseases including those related to asbestos.

Last July, Gov. Mario Cuomo signed a measure tying the statute of limitations to the date of discovery of an asbestos-related disease, rather than to the date of exposure to the carcinogenic substance. The change opened the door for many victims previously barred from taking legal action.

Those victims, estimated at more than 3,000, have only until Aug. 1, 1987, to take legal action, or they will once again be locked out, no matter how high their medical costs rise.

Union pay gap widens to $119 a week

Continued from Page 1

- Among Hispanics, the average union member made $132 more each week than the unorganized worker.

The industry figures compiled by the BLS showed the same pattern of a widening gap between those whose wages resulted from collective bargaining and those workers without the benefits of trade unionism.

There was a $163-a-week differential in the construction industry, a $141 weekly spread in transportation, a $128 difference in retail trade, $74 among government workers, $58 in manufacturing, $48 in wholesale trade and $43 in the service sector.

In only one area—finance, insurance and real estate—did nonunion workers have the edge. Their average weekly wage of $352 was a mere $4 higher than that of unionized employees.

Veteran N.Y. unionist Chris Plunkett dies

New York—Christopher J. Plunkett, assistant to the president of the New York City AFL-CIO since 1962, died at his home Feb. 22 after a stroke. He was 81.

At the time of his death, Plunkett also was president of the New York Metal Trades Council and served on the executive board of Electrical Workers Local 3. He joined the local in 1935 as an apprentice.

Survivors include three daughters. Memorial services were held at St. Bridget's Roman Catholic Church, with burial at Holy Rood Cemetery.

Schedule of Labor Studies Center courses

The George Meany Center for Labor Studies will offer eight workshops during March and April. The schedule:

Union Administrator & Business Agent, Mar. 8-13—An institute for full-time officers or business agents on identifying and solving problems, time management, monitoring finances and budgeting.

Organizing Techniques, Mar. 15-20—An introduction to basic organizing skills for new organizers and a refresher course for veterans.

Evolution of Work & the Labor Movement, Mar. 15-20—A course that examines union strategies for dealing with new technology and the changing workplace and workforce.

Effective Union Action for Civil Rights, Apr. 5-9—A workshop especially for civil rights/women's staff on legal issues and civil rights activities.

TV: The Cool Medium, Apr. 12-15—Three days of coaching union officers on how to face TV cameras and work with TV reporters.

Advanced Arbitration, Apr. 12-17—A program for experienced union representatives on examination and cross-examination of witnesses, preparation of briefs and research.

Organizing in the Construction Industry II, Apr. 20-24—A course covering media techniques, Davis-Bacon enforcement, legal issues and bidding strategies.

Organizing Techniques for Public Employees, Apr. 26-May 1—A workshop on successful methods of attracting and signing up public employees in bargaining units.

AFL-CIO affiliates using the campus for their own staff training programs are: Amalgamated Transit Union, Mar. 1-6, Mar. 8-11, Mar. 15-18 and Mar. 29-Apr. 4; AFL-CIO Dept. of Organization & Field Services, Mar. 1-4; Asbestos Workers, Mar. 2-3; AFL-CIO staff retreat, Mar. 6-7; AIFLD, Mar. 8-Apr. 10; AFL-CIO Dept. of Community Services, Mar. 11-13; Service Employees, Mar. 22-27, and Bricklayers, Mar. 22-27.

More information about labor studies programs is available from the Registrar, George Meany Center, 10000 New Hampshire Ave., Silver Spring, Md. 20903. Telephone 301/431-6400.

EDITORIALS

America's Homeless

NOT SINCE the Great Depression have there been so many homeless people in America.

During this decade, homelessness has been growing at a staggering average rate of 25 percent a year. No section of the nation has escaped the problem. It has afflicted cities, suburbs and rural areas. The tragedy is that so many people are willing to close their eyes.

A background paper prepared by the Democratic Study Group when Congress was considering emergency relief for the homeless punctures some of the myths this Administration has used to avoid doing anything to increase the supply of housing that the poor and near-poor can afford.

Derelicts sleeping on grates—some mentally deranged, some victims of alcohol—are a real problem, and their plight cannot be ignored by a civilized society. But they are not a majority of the homeless.

Families with children make up almost one-third of the homeless and are the fastest-growing component. So much for that myth.

GRIM EXPERIENCE has tought us that reliance on an expanding economy is merely an excuse for inaction. The biggest rise in homelessness came after the nation climbed part way back from the depths of the last recession.

The statement on housing adopted by the AFL-CIO Executive Council noted that the supply of low-income housing is shrinking even as the need for such housing rises. It expressed justified outrage that in the face of this national crisis, the Reagan Administration has halted all new construction of publicly assisted housing.

As subsidy programs run out, landlords will be able to increase rents, convert projects to condominiums or sell the project to investors. Lower-income residents will be dumped on the streets, replaced by those able to pay market rents.

This Administration, and some in Congress as well, can come up with endless excuses for doing nothing. But the price of such stupidity is too high.

Labor's Endorsement

IN THE months to come, serious candidates for the Democratic and Republican Party nominations for President will have an opportunity to seek the support of union members as part of the AFL-CIO's endorsement process.

At a news conference during the Executive Council meeting, Lane Kirkland was asked what union members should expect of presidential candidates seeking labor's endorsement.

This is the gist of his reply:

"I think they have to be concerned about the problems of people who have lost their jobs, been stripped of their role in life and reduced to seeking employment at poverty wages.

"That's a basic problem. I think that's a concern not only of the trade union movement, but of everyone.

"Deficits flow to a very major extent from the chronic level of unemployment that's being excused and accepted in this country.

"For every 1 percent of unemployment, the impact upon the government budget in costs of social services and the losses of tax revenue is a swing in the $40-to-$60-billion range.

"Virtually everyone, at all points in the political spectrum, will say the budget deficit is a crucial problem.

"How can you effectively address that without ruinous cuts in the minimum budget that has to be sustained for the government to meet its constitutional obligations?

"The healthiest and most constructive way to bring the budget closer to balance is to reduce unemployment. That will both raise revenue and cut expenses related to unemployment.

"If a candidate can't deal with that question, it's hard to see how he can be very persuasive."

Does such a focus set the labor movement's concerns apart from other elements of the electorate?

Kirkland's reply: "I don't think that makes us any different from anyone else in this country who is thoughtful and interested in the welfare of fellow human beings."

Washington Window

Employers need nudge to end child care crisis

By Press Associates

Working parents know how exhausting it can be to get infants to a home-based child care provider, toddlers to day care centers and older children off to school.

Then there's the anxiety when children get sick and must stay home, and the heavy bite on hard-earned paychecks to pay for child care.

But economic necessity has made working mothers one of the fastest growing segments of the labor force. In 1950, only one out of every eight married women with a child under the age of six was working. That has skyrocketed so that today's ratio is one out of two.

The task of finding affordable, quality child care can be formidable for two-earner families and especially for the 25 percent of all working mothers with dependent children who are single, divorced or widowed.

The child care dilemma for the American workforce, which is now 44 percent women, is the focus of a new report, "Juggling Jobs & Babies: America's Child Care Challenge." The study was prepared for the Population Reference Bureau by Martin O'Connell of the Census Bureau and David E. Bloom of Harvard University.

Unmet needs

The report found that the child care industry, both for-profit and nonprofit, is growing in response to need, but demand has outpaced growth and the cost of child care is high.

Estimates for weekly home care costs range from a low of $165 in St. Louis, Dallas and San Francisco to a high of $340 in Boston. For child care centers, weekly costs range from $50 to $160 in the four metropolitan areas. For minimum-wage and low-income workers, such child care costs can price them out of the job market.

The number of employers providing child care facilities increased from under 50 in 1970 to about 2,000 in 1986, with a large percentage of these firms in California and within the health care industry.

But compared with the nation's 6 million employers or 44,000 companies with 100 or more workers, this is a drop in the bucket. Only 1 percent of employees in medium and large firms were eligible for even a partial defrayal of child care costs in 1985.

The United States has failed to respond to the problem on a national policy level. Child care tax credits, enacted in 1976, allowed $720 maximum for one dependent child in 1986, but that was far below real estimated costs, and the credit does little for low-income parents.

Funding cut

Acting on a Reagan Administration request, Congress in 1981 folded the Title XX program, which provided child care money to low- and moderate-income families, into a block grant and cut the funding by $200 million. This action reduced the number of children served by the program in 32 states.

Legislation to provide unpaid family and medical leave died in the last few sessions of Congress due to strong opposition from business.

At the state level, only New York and California have begun labor-urged child care programs for state workers, and Hawaii just opened its first government-sponsored day care center. Arizona, California, Connecticut and Florida provide tax benefits to employers that offer child care assistance, and in Massachusetts an experimental program provides low-interest loans to companies to establish child care centers.

For Congress to wait for employers to adopt policies to ease workers' child care burdens, such as on-site day care centers or child care payments, flexible work arrangements and leave to care for ill children, would be a great mistake.

As the study's authors conclude, "Most employers will need coaxing by federal, state and local governments to adopt progressive child care policies, even though such actions might actually serve their own interests by improving employee loyalty and job satisfaction."

AFL-CIO LEGISLATIVE ALERT!

New Senate Bill Misses The Boat

Federation President Declares Bensten Trade Bill 'Inadequate' To Address Trade Crisis

When congressional leaders met with the AFL-CIO Executive Council in Florida this February, they were told again that a strong and effective trade bill was at the top of labor's legislative agenda for this congressional session. It was a message that bore repeating.

With the 1986 trade deficit at $170 billion (a four-fold increase since 1980) and millions of jobs already lost, the Senate has not yet made an adequate response to the worsening trade situation.

In a February 25th letter to all senators, AFL-CIO President Lane Kirkland stated that as presently drafted, S. 490, a new trade bill introduced by Senate Finance Committee Chairman Lloyd Bentsen (D-TX), is "totally inadequate to the task of addressing the nation's trade crisis."

"Years of negotiations without the will to take necessary action have proven to be an exercise in futility," he said. "The AFL-CIO strongly believes that the trade deficit issue must be faced head-on." For this reason, the AFL-CIO is urging senators to support S. 499, introduced by Senator Riegle (D-MI).

Like the Gephardt (D-MO) amendment to H.R. 3 in the House, the Riegle amendment would require the identification of major trading partners with excessive trade surpluses. It would then require that any of these countries which also engage in unfair trading practices begin an orderly reduction of their surpluses.

The letter goes on to add that, "any worthwhile trade bill must include the denial of labor rights as an unfair trade practice. S. 490 does not address this essential issue."

According to the Executive Council statement issued in Florida, the AFL-CIO "will not support, and will oppose, trade legislation that does not address these vital points."

What You Can Do: Write to both of your senators and members of the Finance Committee. Urge them to adopt trade legislation which contains both a strong deficit reduction provision, and provisions to protect workers' rights abroad. Tell them that a cosmetic, "veto-proof" bill, like S. 490, is unacceptable. Urge them to support H.R. 3 and S. 499.

House Fight Against Polygraphs Resumes

Last year, workers won a sizable victory when the House passed a labor-supported bill restricting the use of polygraphs by a 63 vote margin. On February 24, Reps. Williams (D-MT), Jeffords (R-VT), Hawkins (D-CA) Martinez (D-CA) and close to 120 other House members reintroduced the measure as H.R. 1212.

Over the last few years, more and more employers have decided they have the right to use polygraph devices to pry into the lives of employees and job applicants. Although proven unreliable, more than 2 million tests are being given each year. Many are being used to interrogate individuals about their union sympathies, political beliefs, lifestyles, health problems, personal habits and financial status -- all in the name of company security.

In his floor remarks, Rep. Williams pointed out that, "The courts in this country refuse to admit polygraph results as evidence in trials because of the documented inaccuracies of these gadgets. It is sadly ironic that criminals are protected from polygraphs while American workers are not!" This bill would put an end to this practice in the private sector.

An especially strong showing in the House this time around would send a message to the Senate that, they too, should act this year. Write to your representative and tell them you want them to support this bill.

"Things are a little up in the air around here. I'll call you when it's ready."

—UAW-LUPA

Round Two: New Textile and Apparel Trade Bills Introduced

Last year, Congress failed to override a presidential veto of the Textile and Apparel Trade Act, a labor-backed bill to control the flood of textile, clothing and shoe imports into this country.

This year, a new bill to help stop the job hemorrhage in these industries has been introduced. The Textile and Apparel Trade Act of 1987, sponsored by Senators Hollings (D-SC) and Thurmond (R-SC) as S. 549 and Reps. Derrick (D-SC) and Jenkins (D-GA) as H.R. 1154, differs from previous legislation by: establishing a uniform, global response, not targeted at specific countries; providing for compensation to exporting countries hurt by new quotas; and setting limits on the growth of imports, rather than imposing cut-backs.

Apparel imports have doubled since 1981, now control over 50% of our market, and are growing at an average annual rate of 19%. Over 250 plants have closed and 388,758 American workers have lost their jobs since 1980. Unless legislation is passed by Congress to regulate this massive flow of imports and bring order to our apparel market place, the destruction of the industry and its workers will soon be complete. Contact your lawmakers and urge them to take a stand on fair trade by supporting S. 549 and H.R. 1154 when they get to the floor.

What One Worker Can Do

Choose one topic from this Alert which is of interest to you. A card or letter to your elected representative could spell the difference between victory or defeat in a fight to protect your rights, benefits or your health and safety.

Asbestos Removal: Ask your senators to support S.J.R. 54, introduced by Senator Baucus (D-MT). This resolution, similar to one which has already passed the House, re-affirms Congress' intent to authorize funds for asbestos removal from public buildings.

Double-Breasting: Urge your representative and both of your senators to cosponsor H.R. 281 and S. 492, the new double-breasting bills which would prevent the undermining of union jobs in the construction industry.

Polygraphs: Write to your representative and ask them to support H.R. 1212, a measure to protect your right to privacy.

Retiree Benefits: Both of your senators and your representative should be contacted and asked to support S. 548 and H.R. 1186, legislation that protects the benefits of retirees during bankruptcy proceedings.

MEMO FROM COPE
PAGE 8

Trade fight pressed in Congress

New Mexico unionists fill House chamber as committee marks up right-to-work bill before sending it to defeat on the floor.

Open-shop bill rejected by New Mexico House

Santa Fe, N.M.—The New Mexico House of Representatives handed the National Right to Work Committee a stunning defeat as it overwhelmingly rejected a compulsory open-shop law.

Defeat of the RTW effort—into which the committee had poured cash and a corps of paid staff members from out of state, and utilized motion picture actor Charlton Heston in television commercials—marked the end of the first round in this year's legislative "right-to-work" battle.

New Mexico unions countered the anti-worker campaign with television and radio ads featuring House Speaker Ray Sanchez telling the public that "right-to-work is not right for New Mexico." He said the state didn't need "East Coast politicians or West Coast actors making decisions for us."

Action committee

More than 800 union members formed a Legislative Action Committee that carried labor's message to members of the legislature. AFL-CIO Regional Director Steve Beiringer credited J.E. Eddie Eyer of the Food & Commercial Workers and State COPE Director Mary Sue Guitterez, working under the direction of New Mexico AFL-CIO Executive Sec.-Treas. Neal Gonzalez, for the successful campaign.

AFL-CIO Field Rep. Ed Kisner worked on the grass-roots effort and Region IV COPE Director Chano Marino assisted on the legislative front.

Union leaders here warned the fight isn't over. The RTW forces and Gov. Garry Carruthers (R) are trying to map a strategy to force another compulsory open-shop vote before the legislature recesses in late March.

Rejection of the measure marked the third successive defeat for right-to-work proponents in a state that has been a perennial target of anti-union forces. The RTW drive here was intensified in the wake of last November's adoption of a compulsory open-shop law in Idaho.

In 1979 and again in 1981, then-Gov. Bruce King (D) vetoed legislation that would have outlawed union shop agreements, insisting that the proposal would not help the working men and women of New Mexico.

A House committee lined up 5-to-3 against the right-to-work measure. But instead of killing it in committee, it sent it to the floor with two amendments that were certain to seal its fate.

One amendment would have delayed the bill's effective date until the minimum wage reached the $6-an-hour level. The

'Tough, effective' bill sought to reduce deficit, regain jobs

By Gene Zack

Organized labor pressed its fight for trade reform on Capitol Hill as a mountain of imports twice as high as the nation's exports drove the January U.S. trade deficit to $14.8-billion—the third highest monthly level in history.

The "studied indifference" of the Reagan Administration is responsible for the deepening crisis, the AFL-CIO told a House Energy & Commerce subcommittee. And the only thing that can stave off economic disaster, Federation Research Director Rudy Oswald emphasized, is "a tough, effective trade bill that will help American workers and industry regain the production, jobs and income lost" in the past six years.

January's trade shortfall—nearly 17 percent higher than December's $12.7-billion level—threw cold water on Administration forecasts of a $30- to $40-billion decline in the deficit from 1986's record-shattering $170 billion. The January figures project a 1987 trade imbalance that could reach or exceed $177 billion.

The White House continued to push its scenario in which worldwide economic expansion, falling dollar exchange rates and bilateral trade negotiations would turn the situation around.

But that's not likely to happen, Oswald told the subcommittee. "The dollar has fallen for two years," he noted, "negotiations don't deal with the real problems in manufacturing, and even if worldwide economic expansion took place, it doesn't follow that other nations would import more U.S. goods."

Gap widens

The January trade figures underscored that point. The widening gap resulted mainly from a precipitate 11.5-percent decline in the export of U.S. goods. Imports, by comparison, fell back only three-tenths of 1 percent, even though the declining dollar was supposed to take away much of the price advantage they've enjoyed in recent years.

The urgent message that the solution lies in sweeping trade reform was repeated by Auto Workers President Owen Bieber and Communications Workers President Morton Bahr in appearances before a House Ways & Means subcommittee.

Bieber pointed out that last year's trade deficit was nearly five times larger than the $36-billion shortfall recorded in 1980. "This ballooning figure is responsible for the loss of millions of jobs," he declared, with the impact spreading outward from manufacturing to engulf nearly all sectors of the economy, including agriculture and the high-technology field.

Job losses

"Millions of unemployed and underemployed Americans and thousands of depressed communities can explain their plight by pointing to the employment cutbacks and plant closings resulting from trade problems," the UAW president emphasized.

Bahr dismissed as "a dream" Administration claims that the answer lies in pursuing a philosophy of "free trade." As an

El Paso protest targets transfer of jobs to Mexico

El Paso, Tex.—More than 1,000 union members demonstrated here to protest the export of American jobs to Mexico, as scores of company officials met to explore new ways to move assembly operations across the border.

Workers who marched outside the downtown convention center were joined by a mobile picket line as unionists manned 200 trucks that circled the site of the trade show. It was one of the largest labor turnouts here in recent years.

The demonstration was designed to register labor's opposition to the elaborate trade show, whose purpose was to show corporations how to maximize profits by exploiting Mexican workers whose daily wage is less than the hourly pay of workers in the United States.

More than 125 companies set up exhibits in the convention center, displaying products ranging from telephone systems and copiers to plastics and packaging. The trade show was arranged by the marketing company of Corral & Associates Inc.

El Paso AFL-CIO President Victor

Crafts ask halt to double-breasting

Labor law loophole lets contractors tear down standards

By David L. Perlman

Local union leaders with grim personal experience with double-breasted contractors told the House Labor-Management Relations Subcommittee why legislation sought by the AFL-CIO Building & Construction Trades Dept. is so important to the workers they represent.

To an Operating Engineer from Buffalo, double-breasted contractors are "a spreading cancer" that is destroying bargaining and destabilizing the industry.

A Carpenters organizer from Washington, D.C., spoke of the destruction of meaningful bargaining when contractors who have built their reputations on the skills of union craftsmen switch work to nonunion entities.

BCTD President Robert A. Georgine, the lead advocate for the union-sought legislation, said loopholes in federal labor law and interpretations by the NLRB have enabled construction employers to play "corporate shell games," in which agreements freely entered into are ignored at will.

The legislation introduced by Subcommittee Chairman William L. Clay (D-Mo.) would bind an employer to the terms of a union agreement he has signed unless his workers vote out the union that represents them.

Single employer

It would make clear through definition that two or more firms performing the same type of work in the same area are considered as a single employer if they are under common ownership, management or control.

A similar bill, also authored by Clay, passed the House in the last Congress by a 229-173 vote but didn't get to a vote in the Republican-controlled Senate.

Clay said at the start of hearings that he considers the legislation "a top priority" and with the change in control of the Senate he is "hopeful" that this year it will be enacted into law. Its goal, he said, is "to restore fairness, honesty and stability to labor-management relations in the construction industry."

Georgine said the problems that the BCTD documented in its testimony in the last Congress "are worse today." And he charged the National Right to Work Committee and anti-union employers with using "fraudulent" arguments in their attacks on the bill.

He cited as an example the assertion that workers would be permanently frozen into unions they don't want to represent them. In fact, Georgine noted, workers will continue to have the right to an NLRB election to decertify a union, without re-

Texas unions demonstrate against job shift to Mexico

Continued from Page 1

Munoz, who organized the demonstration, pointed out that there are now nearly 200 plants in neighboring Juarez, employing more than 85,000 workers at jobs once held by American workers.

These plants are part of a two-decade old program under which U.S. and Mexican customs regulations were revamped to permit American firms to move goods back and forth across the border freely, paying U.S. duty only on the value added in Mexico. This amounts to nothing more than the wages—which range between 30 and 75 cents an hour.

Although the program was supposed to involve "twin plants"—providing the same number of jobs on each side of the border—it hasn't worked out that way. The 85,000 workers in Mexico's maquiladoras, or "golden mills," in Juarez stand in sharp contrast to only 5,000 workers employed in the "twin" operations here in El Paso, Munoz pointed out.

"There are 26,600 people unemployed in El Paso right now," said Antonio Sanchez, manager of the Clothing & Textile Workers joint board. "Practically all of them are jobless because of the twin plants."

At least 8,000 El Paso garment workers alone have lost their jobs over the past six years as factories closed and moved across the border to Juarez, Sanchez emphasized.

The message for employers attending the trade show here was essentially the same as one given 700 business executives, bankers and consultants last December at an exposition in Acapulco. That show was originally sponsored by the U.S. Commerce Dept. until an angry Congress cut off the use of taxpayers' dollars to encourage the flight of American industry.

Wage enticement

At the Acapulco affair, Rex Maingot of American Industries Inc., a Texas consulting firm that assists U.S. companies that want to build in Mexico, told corporate officials:

"The bottom line is this. Your cost per Mexican worker is 69 cents an hour versus at least $9 an hour in the states. That's a savings of $15,000 a year per worker."

The dimensions of the problem are enormous. In the 15 Mexican cities that adjoin the United States along the 1,900-mile border, American corporations have built 865 factories—most of them since 1983.

The maquiladoras employ 320,000 Mexican workers who last year assembled $3 billion of duty-free parts that were then sold in this country. The trade show here, like the exposition in Acapulco, was designed to accelerate the migration of American assembly jobs to Mexico.

The El Paso demonstration was the labor movement's way of fighting back. It was the first activity of the Texas AFL-CIO's Twin-Plant Task Force, appointed in January by State Federation President Harry Hubbard.

Munoz is chairman of the task force and Richard Tarver, president of the Communications Workers local in the Rio Grande Valley, is vice chairman.

Other task force members include Delbert Adams of the national AFL-CIO, Manual Ysaguierre of the Texas federation, Juan Aranda of the Steelworkers, Bob Few of the Electronic Workers, President Rolando Herrera of the Webb County (Laredo) AFL-CIO, Eddie Long of the Plumbers, Mario Leal of the CWA and Tommy Blackman of the Auto Workers.

Auto Workers' TV spots focus on trade reform

Detroit—The Auto Workers kicked off a three-week national television advertising campaign to mobilize public support for strong Congressional action to ease America's trade crisis.

"The alarming growth in America's trade deficit is destroying good jobs and threatening living standards in communities across the country," said UAW President Owen Bieber. "Our campaign will highlight what a passive trade policy is doing to America. It will also stress that we can keep America strong if we adopt effective measures to combat the trade deficit."

The campaign features three 30-second spots that dramatically demonstrate the impact of foreign imports on jobs, industries and communities. They warn that continued dependence on cars, clothes, electronics and even food produced by low-paid, exploited workers abroad "could one day shut down America."

All three ads feature the same message: "There are solutions. We can keep America strong." Some of the spots close with the words, "But first, Congress must demand fair trade," while others say, "We can start with an effective trade policy."

Bieber said the campaign's emphasis on the threat posed by low-wage labor abroad "sends a message that it would be a tragic mistake for us as a nation to seek 'competitiveness' at the expense of our living standards. We cannot permit corporations to pit American workers against exploited foreign workers in a contest for scarce jobs."

The television campaign will be supplemented by newspaper and radio advertising as the congressional debate on trade unfolds. Bieber said the UAW has allocated more than $2 million for the project to educate American consumers about the dangerous drift in trade policy that has marked the Reagan presidency.

Import-export gap

Tough trade measure sought to curb deficit

Continued from Page 1

economic theory, he told the subcommittee, the concept of "a barrier-less world trading society is no more viable than the Marxist-Leninist vision of a classless economic society."

What's happened, the CWA president said, is that Administration inaction has encouraged other nations to train their sights on the American consumer. In the process, they've succeeded in penetrating the American market, while using "skillful protection of their own markets" to block the sale of American goods in their countries.

As a result, Bahr pointed out, imports now make up 63 percent of all radio and television sales, 58 percent of all shoes and 45 percent of machine tools. By contrast, he said, only 21 percent of U.S.-made construction machinery, 6 percent of this nation's home appliances, 3 percent of its shoes, 2 percent of its apparel and automobiles, and only 1 percent of its steel products and home furniture go overseas.

Rising imports and declining exports cost 2.5 million jobs last year alone, the CWA president said. Saving those jobs would have cut the official unemployment rate from its 7-percent recession level to 5 percent in 1986.

Economists were gloomy about the latest trade figures. They represent "a setback to improved trade for 1987," said Jerry Jasinowski, chief economist for the National Association of Manufacturers. "Exports are falling because of the deterioration in economic growth abroad."

Allen Sinai, chief economist for Shearson Lehman Bros., agreed. "Exports down means weakness in our trading partners" who are unable to purchase more U.S.-made products, he explained.

Exports in January amounted to a discouraging $16.4 billion. That's 9.4 percent less than last year's monthly average. Imports were $31.1 billion, 3.4 percent below the monthly average in 1986.

As usual, the largest U.S. monthly trade deficit was with Japan. It swelled from $3.8 billion in December to $5.2 billion last month. The gap with Western Europe widened to $2.4 billion from $2.2 billion. The deficit with Canada grew from $1.1 billion to more than $1.6 billion.

Support rising

On Capitol Hill, the sentiment appeared to be rising for labor-backed trade legislation. The goal is a measure to put the brakes on imports from countries that maintain excessive surpluses with the United States, that undercut living standards by exploiting workers and denying them basic rights, that engage in unfair trade practices in flooding the American market, or that erect barriers to U.S. goods going abroad.

The AFL-CIO emphasized that five countries—Japan, Canada, West Germany, Taiwan and South Korea—account for 70 percent of the nation's trade deficit. "Unless legislation addresses those major imbalances, it will be difficult to solve the nagging problem," Oswald told the subcommittee.

While the Administration dragged its feet, the situation has continued to deteriorate, he said. "There is now general agreement that America's massive trade deficit presents a clear and present danger to the domestic economy. Those who in the past denied the very existence of a problem, or counseled patience to the victims of trade, have been largely silenced by the enormity of the shift in U.S. trade patterns."

Mediation proves effective in resolving internal disputes

Bal Harbour, Fla.—AFL-CIO Sec.-Treas. Thomas R. Donahue said mediation continues to prove its effectiveness as a means of settling disputes between affiliates under Article XX of the AFL-CIO Constitution.

In his annual report on the operations of the Internal Disputes Plan set forth in Article XX, Donahue said 43 cases—62.3 percent of those processed during the year—were settled at the mediation level. Since 1962 when the plan was initiated, 1,398 of the 2,451 cases filed have been settled through discussions between the organizations involved and mediation.

All cases filed since February 1982 have been handled by Mediator John N. Gentry. In cases not settled at the mediation level, the impartial umpire, Howard Lesnick, conducts hearings and issues determinations.

During the council's winter meeting here, Federation President Lane Kirkland announced the appointment of Prof. Paul Weiler of Harvard Law School, a former chairman of the British Columbia Labor Relations Board, to serve as a second impartial umpire.

The Article XX report showed that 65 new cases were filed in 1986 and 18 remained pending at the end of the year. The umpire's determinations found violations in seven cases and no violations in five, with four cases pending at that level.

Nine appeals were pending at the start of the year and nine new appeals were filed. At the subcommittee level, determinations were sustained in five cases. One appeal was referred to the Executive Council Appeals Committee and 12 others were pending.

Seventeen non-compliance complaints were pending at the start of the period and two were filed during the year. Subcommittees achieved compliance in one case and found non-compliance in one. Eight cases remained actively pending while nine were non-active.

Non-compliance status

Three organizations were listed as in non-compliance at year's end and subject to Article XX sanctions: the National Association of Broadcast Employees & Technicians, the National Union of Hospital & Health Care Employees and the International Typographical Union. The ITU has since come into compliance, merged with the Communications Workers and is no longer under sanctions. The United Transportation Union disaffiliated in April 1986 after sanctions were imposed.

Donahue also reported to the council on the first year's success rate of the Organizing Responsibilities Procedure adopted by the council in February 1986.

As of the end of last year, three cases had been transferred to the Article XX system, eight were settled in mediation, five were decided by impartial umpires, three were pending in mediation and one was pending for decision by an umpire.

The over 40-percent success rate, Donahue said, shows that the procedure has proven itself as an effective means of averting wasteful organizing competition. In the procedure, he stressed, mediation is the most important ingredient since situations in which the parties work out their own approach are the ones most likely to lead to organizing successes.

Ford stalls at border

Hermosillo, Mexico—A strike by 850 unionized production workers, seeking to push their wages up to $48 a week, has closed a four-month-old Ford Motor Co. plant here.

The strike began Mar. 2 after contract talks between the company and the Ford Workers Union broke down.

The workers, whose weekly pay averages about $27, are typical of the hundreds of thousands of Mexican workers employed at American assembly plants that ran away from higher pay scales in the United States. The Ford operation is part of the drive by American companies—sometimes with the blessing of the Reagan Administration—to relocate in the mushrooming "maquiladora" complex on this side of the Rio Grande.

Ford began producing subcompact Mercury Tracers at the $500-million plant last November, mainly for export to the United States. The walkout idled the entire workforce of 1,600 low-paid Mexican employees.

HRDI projects offer hope to layoff victims

Bal Harbour, Fla.—Victims of plant closings and permanent layoffs are getting training, counseling and job search assistance through labor-run programs administered by the AFL-CIO's Human Resources Development Institute.

They are also getting jobs, HRDI President Alan Kistler reported to the organization's Board of Trustees. He said 85 percent of workers completing HRDI programs have been placed in jobs at an average starting rate of $7.85 an hour.

Kistler said programs in progress, mostly held in union halls in cooperation with central bodies or international unions, are serving some 3,400 laid-off workers at 14 locations.

HRDI's grant from the Labor Dept., the chief source of funds for its national activities, hasn't been increased since 1981. HRDI will seek additional funding this year, Kistler said.

AFL-CIO President Lane Kirkland, who serves as chairman of the Board of Trustees, commended HRDI for the "breadth of its services" despite limited resources that "are out of sync" with its needs.

Kistler and HRDI Executive Director Mike McMillan reported also on worker learning centers in Louisiana and Texas, which serve both displaced and currently employed workers who need remedial education.

The AFL-CIO Departments of Education and Community Services and the George Meany Center for Labor Studies have also been involved in various HRDI programs. In St. Louis, HRDI is a partner with Columbia University in a program to help disabled union members return to work.

McMillan reported that HRDI has helped trade union groups develop 162 labor-involved programs funded through the Job Training Partnership Act and serving tens of thousands of jobless workers. He said HRDI is planning a research project to identify the most effective labor-involved employment, training and education activities.

Coss succeeds Tucker at Rubber Workers

Akron, Ohio—Kenneth Coss has been appointed secretary-treasurer of the Rubber Workers to fill the unexpired term of Donald C. Tucker, who retired Jan. 31. His appointment by President Milan Stone was approved by the union's executive board.

Coss, 51, held various posts in URW Local 553 in Painesville, Ohio, before joining the international staff in 1974. He worked as a field representative, assistant to the secretary-treasurer and administrative assistant. He has been active over the years in the Uniroyal Inc. negotiations. Coss's term expires in September when elections will be held at the URW convention for all top officers of the union.

With smiles and celebration, HERE committee members flash "V" for victory sign following successful union organizing campaign among food service workers at cafeterias serving the House of Representatives.

Bayou Steel vote brings in union—and new contract

Laplace, La.—Workers at Bayou Steel, one of the largest mini-mills in the South, celebrated a double victory Feb. 25 with the recognition of the Steelworkers as their bargaining representative and the ratification of a first-time, concession-free contract—all in one vote.

The unusual circumstance that resulted in the linking of recognition and contract ratification began 32 months ago when the USWA began its organizing drive among the plant's 475 workers.

Bayou Steel management's unfair labor practices caused the USWA to narrowly lose a December 1984 representation election. Before appeals on the charges could be exhausted, the plant was sold to RSR Steel, a firm that owns other mills where the workers are represented by USWA. Through that relationship, a contract was worked out after RSR agreed to recognize the union based on ratification of the contract.

That six-year agreement, approved by a 318-to-117 vote, provides raises of 69 cents an hour over the life of the contract, cost-of-living protection in the final three years, establishment of a company pension plan with full credit for past service and a $12-a-month benefit per year of service, and strong contracting out restrictions.

The contract provides for nine holidays with Memorial Day to be added in 1988, reduces the deductible under the health insurance plan, provides seniority rights for promotions, demotions, layoffs and recalls, and contains strong health and safety language.

Capitol cafeteria employees win fight for representation

By Candice Johnson

Food service workers at the House of Representatives won a sweet victory as cafeteria workers voted to join the Hotel Employees & Restaurant Employees.

A National Labor Relations Board election was the endpoint of an 18-month organizing drive, as counter workers, waitresses, grill cooks and others made home visits and held committee meetings, strong in their determination to win union representation. More than 225 workers are employed at cafeterias in five House buildings.

An active organizing committee was key to the victory, the cafeteria workers agreed. "There was a lot of fear at first," said James Williams, who works at the Rayburn building carry-out, "but we just kept going back," focusing on the lack of respect, favoritism and low wages the food service workers encountered. A core group of 25 committee members kept the drive on track.

Grill cook Lillian Frazier noted that as the organizing campaign took off, management implied that a vote for the union might jeopardize workers' jobs. Some supervisers harassed union supporters, said Connie Winston, a short-line cook in the Rayburn cafeteria. The organizing committee found "different problems in different shops."

The House's decision to sub-contract its food service to Service America Corp. in January became a rallying point for the organizing drive, as the company threw out sick leave and life insurance benefits the workers had acculumated and recalculated years of service. Service America also reneged on promises to provide training, said Winston.

"They had asked us for a chance, but if they wanted fair treatment from us, they should have been willing to treat us fairly," said Winston.

She pointed out that the cafeteria workers had not received a raise during the past four years and were told by Service America that they would not receive any salary increase for at least two years.

Problems worsened

"There were problems on the job prior to Service America," said John Phillips, who works the main line counter, "but those problems were made worse by the food contractor."

HERE Organizing Director Vincent J. Sirabella credited cooperation and teamwork by the workers' organizing committee, the international's organizers and HERE Local 25 representatives for the victory.

Executive Sec.-Treas. Ron Richardson of Local 25 called the campaign "a historic event," marking the first time that Capitol Hill food service workers were able to organize a union to bargain for improvements in wages and benefits.

During the campaign, the cafeteria workers won support from many members of Congress, including Democratic Representatives Barney Frank (Mass.), William Clay (Mo.), Louis Stokes (Ohio), Ronald Dellums (Calif.) and Cardiss Collins (Ill.), and former Maryland representative Parren Mitchell.

Home work abuses underscore need to retain ban

The Labor Dept.'s reluctance to pursue wage chiseling violations committed by an Iowa sweatsuit manufacturer that hires home workers is strong proof of the need to maintain the ban on homework in the needle and jewelry trades, the Ladies' Garment Workers charged.

Last August, the Labor Dept. proposed to lift the 45-year ban on homework in six industries—women's apparel, jewelry, gloves and mittens, buttons and buckles, handkerchiefs and embrodiery—with employers who hired homeworkers stipulating they would meet minimum wage and overtime requirements.

But at the same time, Labor Dept. investigators uncovered minimum wage and overtime violations of $728,193 at Bordeaux Inc., a company that distributed applique work to women in Iowa to complete at home using their own equipment.

Action delayed

The Labor Dept. took no action against the garment manufacturer until last Dec. 3, just one day before the public comment period on the proposal to lift the homework restrictions closed, although the delay was costing the Bordeaux workers $1,000 a day in back wages, the ILGWU pointed out.

ILGWU President Jay Mazur called the Bordeaux case a "typical example of homework abuse."

"Bordeaux workers, fearful of losing their jobs, claimed that they were making $5 or $6 an hour, even though the Labor Dept. knew that every single homeworker was earning less than the minimum wage," he charged.

"Only former Bordeaux workers were willing to testify about the low wages and exploitative working conditions," Mazur said, noting that the typical homeworker is usually an immigrant or minority woman in an urban ghetto where the fear of speaking out is great. "If these conditions exist in rural Iowa, imagine how much worse the exploitation is in thousands of urban communities across this country," he noted.

After conducting time studies, the Labor Dept. concluded that for Bordeaux to meet minimum wage requirements, piece rates for sweatshirts should be $4.18 for experienced workers and $6.70 for those with less than one year on the job. But the garment manufacturer paid a flat piece rate of just $2.45, investigators found.

At House hearings last September, former Bordeaux workers testified that their hourly wages averaged just $1.85, with spouses and children often needed to finish the jobs on time. "Several times the owners brought me new pieces at 11 p.m. or midnight to be finished by 6 a.m.," Connie Jorgensen testified about her experience with Bordeaux, "but I received no overtime pay or extra benefits for my time; I was paid the straight piece rate pay per item."

The company had been touted as a model homework employer in a Reader's Digest article which prompted 1,861 letters supporting its homework proposal, nearly half of those in favor of lifting the ban, the Labor Dept. pointed out.

Labor Dept. rebuked

But a report issued by the majority members of the House Subcommittee on Labor Standards rebuked the Labor Dept. for postponing court action against Bordeaux. It called the maneuver "troubling," because the department's inaction reduced the amount of recoverable back wages by $1,000 a day.

"This is a critical indictment of the department's will to enforce the Fair Labor Standards Act," the report continued, adding, "it also does not speak well for the quality or timeliness of future homework enforcement if the ban is lifted."

Mazur agreed, stressing that minimum wage requirements "cannot be enforced in homework in these industries which have barely changed in the last century. The time and resources needed to investigate the Bordeaux operation will be multiplied thousands of times over if the Labor Dept. lifts the prohibition on industrial homework."

Hollywood new locale for AFTRA organizing

Hollywood, Calif.—The Television & Radio Artists opened a national office here to serve West Coast members and to coordinate the union's organizing efforts. While the organizing program has been shifted here, AFTRA will maintain its headquarters in New York.

The West Coast office address is 6922 Hollywood Blvd., Hollywood, Calif., 90028.

Call for jobs

Steelworkers from across Pennsylvania rally at state capitol in Harrisburg during the union's three-day legislative conference. More than 400 USWA members crowded the capitol steps as USWA District Director Andrew Palm outlines the union's job-saving economic and legislative program. They urged Democratic Gov. Robert Casey to keep his campaign pledge to create and retain jobs. From left, Lt. Gov. Mark Singel (D), USWA District Directors John Reck, Palm, Paul McHale and Anthony Rainaldi.

Amnesty International hailed for battle against repression

Amnesty International was honored by the AFL-CIO and affiliated unions for its quarter-century of labor aimed at winning freedom for the world's "prisoners of conscience."

The human rights organization monitors repression and brutality throughout the world, and through letter-writing and publicity campaigns, works to win freedom for persons imprisoned for their religious or political beliefs, or because of their sex, skin color or ethnic origin.

At a reception hosted by the Teachers, AFL-CIO Sec.-Treas. Thomas R. Donahue praised Amnesty International for "its single-minded focus on prisoners of conscience." Those prisoners include trade unionists "in too many nations who are jailed because they have asserted the rights of workers—assertions always found offensive by tyrants . . . or by revolutionaries who replace one tyranny with another."

Donahue spoke of the goals shared by the human rights group and an American labor movement with a century-old tradition "of speaking out and acting in support of the democratic rights of people everywhere and in unrelenting opposition to those who would deny those rights."

"For all of its work, Amnesty International deserves the thanks of people who value decency and respect human values," Donahue declared, adding that labor will continue its global support for freedom "so that one day the hope of democracy will become a worldwide reality."

Featured speakers included Victor Davydov, a Soviet activist who was labeled "socially dangerous" and was confined to a psychiatric hospital for three years, and Mary Ntseke, a black trade unionist from South Africa, as well as other former prisoners of conscience.

Persistence pays off

Davydov credited Amnesty International members for their persistence in pressing his case, finally forcing the Soviet Union to allow him to emigrate. He made a special plea for a letter-writing campaign on behalf of union organizer Yegor Volkov who has been confined to a psychiatric hospital for 20 years. Volkov was arrested in 1967 after organizing a protest among construction workers against wage cuts.

Ntseke, general secretary of the Brushes & Cleaners Workers, said the human rights group gives hope and strength to workers seeking justice in South Africa. Although she was never charged with a crime, in 1981 Ntseke was arrested and spent over a year in solitary confinement until her release in 1982.

Joining the tribute were the Auto Workers; Bakery, Confectionery & Tobacco Workers; Bricklayers; Clothing & Textile Workers; Communications Workers; Electronic Workers; Food & Commercial Workers; Glass, Pottery, Plastics & Allied Workers; Government Employees; Ladies' Garment Workers; Letter Carriers; Longshoremen; Machinists; Operating Engineers; Railway & Airline Clerks; Rubber Workers; Service Employees; State, County & Municipal Employees, and Steelworkers.

Former political prisoner Viktor Davydov meets with AFL-CIO Sec.-Treas. Thomas R. Donahue, center, and William C. Doherty, executive director of the American Institute for Free Labor Development, left, during tribute to Amnesty International marking 25 years of service.

Union insurance agents provide vital services

Although the AFL-CIO is exploring a low-cost group insurance plan through its Union Privilege Benefit Programs, the campaign is not intended to detract from the efforts of unionized insurance agents to make their livelihood, UPBP President Ray Denison emphasized.

He stressed that language contained in the UPBP's publication, "Horizons," reprinted in the Feb. 14 issue of the AFL-CIO News, was not intended to disparage unionized agents or to suggest that they are unethical.

"These organized insurance agents provide a professional service for fellow trade unionists," Denison explained, "and they have been an important part of the labor movement" for more than four decades.

"The AFL-CIO and the Union Label & Service Trades Dept. have consistently recommended that union members buy any form of insurance from a union agent, just as they pursue the 'buy-union' concept with any other service or product," he said.

He noted that the separate Insurance Workers of America and the Insurance Agents International Union were among the first internationals to unite following the AFL-CIO merger. The union they created—the Insurance Workers International Union—merged with the Food & Commercial Workers three years ago. The Office & Professional Employees also represents insurance agents.

Labor tells Congress:

Workers need details of past toxic exposure

Workers who have been exposed to health hazards in previous jobs should be located, alerted and given the opportunity for medical checkups, union witnesses urged at Senate hearings.

Industrial Union Dept. President Howard D. Samuel opened labor's case for the passage of the High Risk Occupational Disease Notification & Prevention bill. He was backed up with first-hand testimony of Steelworkers who have been exposed to health hazards that have already doomed some of their fellow workers.

The hearings by the Senate Subcommittee on Labor opened a push for legislation based on a bill that won House committee approval in the last Congress. It was sidetracked by adjournment time pressures compounded by strong industry and Administration opposition.

Sen. Howard M. Metzenbaum (D-Ohio) a principal sponsor of the legislation along with Sen. Robert T. Stafford (R-Vt.), is now chairman of the Senate Labor subcommittee considering it. The chief House sponsor, Rep. Joseph M. Gaydos (D-Pa.), is again the chairman of the House subcommittee with jurisdiction over the bill.

The legislation would establish a federal program to identify and provide medical counseling to workers whose health may have been endangered. It would help local health facilities set up programs for continuing health checkups.

'Fundamental right'

As Samuel noted, existing hazard notification requirements administered by the Occupational Safety & Health Administration may alert present employees but don't help former employees whose occupational ailments may surface years after they have left the job.

Workers have a "fundamental right to know that they are at high risk of disease because of previous exposure to toxic substances," Samuel said. He termed the labor-supported bill "a basic self-defense measure that will provide workers with the essential information to permit them to take the kinds of actions necessary to either prevent disease from occurring in the first place, or to detect it early enough for treatment."

Samuel's testimony included a point-by-point refutation of past Administration criticism of the bill. Instead of trying to kill it through misrepresentation, he said, the Administration should be working with Congress toward the goal of disease prevention and health care cost savings.

He contrasted the proposed $25-million authorization for the notification procedure with the estimated $3.5-billion cost of occupational disease payments from social security and disability benefits, Medicare and Medicaid.

Early action vital

Steelworkers Safety & Health Director Michael J. Wright supported the bill, not just for present USWA members but on behalf of some 500,000 former members who may have been exposed to toxic materials in the past.

"Since occupational disease may develop years after first exposure, many of them continue to face a high risk," Wright noted. Often, he said, they don't know the risk they're under. Yet "many of these diseases can be cured through early diagnosis and treatment."

Supporting testimony by two USWA members bore out labor's concerns.

Robert Watson, recording secretary of USWA Local 1066 in Gary, Ind., cited the many chemicals and acids that he and his co-workers were exposed to in the course of their work, which involved removing grease and mill scale formed on steel sheet during hot rolling—a process called "pickling." Workers are regularly exposed to an acid mist, and a recent study linked the process to a high rate of lung cancer.

Watson said he checked informally on a number of people he had worked with in the pickling operation. He found that at least 11 former workers had contracted lung, throat or respiratory cancer, which was fatal to eight of them.

George Cafasso, chairman of the Safety & Health Committee of Local 1557 in Clairton, Pa., told of working in a plant that made metallurgical coke, producing benzene as a byproduct.

Benzene has long been known to cause leukemia and other blood disorders. After years of litigation, OSHA is finally preparing to issue a new benzene standard.

But, Cafasso testified, it will come too late for many workers previously exposed. Some of them would be alive today if they had been notified of the risk and had regular medical follow-up tests, he said.

New Mexico House rejects move to outlaw union shop

Continued from Page 1

other would have required the governor, within 30 days after enactment of the bill, to offer jobs on the state payroll to all unemployed New Mexicans so that they would have a legitimate "right to work."

The key to the defeat of the anti-union measure was a grass-roots lobbying campaign kicked off at a two-day conference in late January. The more than 400 union members who attended approved plans to structure a statewide network of committees to lobby state legislatures.

This effort was backstopped by the New Mexico AFL-CIO which conducted a direct-mail campaign aimed at 33,000 union households in the state. It included a "uniongram" that warned members of the RTW forces' efforts to "bully the state legislature" into passing the measure.

The result was a flood of letters and postcards to New Mexico legislators calling for a resounding "no" vote on the bill.

Union members here were so well organized that when the Senate committee held a mark-up session, more than 800 workers turned out for the hearings. A few weeks later, 1,000 unionists showed up for the House committee's hearings. The turnout was so large that the committee moved its mark-up to the House chamber.

Illinois AFL-CIO elects Walsh secretary-treasurer

Springfield, Ill.—Richard Walsh was unanimously elected secretary-treasurer of the Illinois AFL-CIO by its executive board to fill the vacancy created by the retirement of Harl H. Ray.

Walsh, 43, is a member of Teachers Local 4438. He has served the state federation as legislative director since 1979 and political director since 1980.

Ray, 69, had been secretary-treasurer since 1979. Prior to that he was COPE director and a legislative assistant. A member of Operating Engineers Local 399, he served for six years as president of the Champaign-Urbana AFL-CIO.

Drive to save retiree benefits gathers steam

Labor-supported bills to protect retiree health and life insurance benefits through an amendment to the federal bankruptcy law will have bipartisan support in a race against the clock.

Congress is under time pressure because a stopgap measure it adopted last fall will expire on May 15. The temporary legislation was enacted to prevent the LTV Corp. from cutting off benefits to tens of thousands of retired Steelworkers and Auto Workers.

The new legislation was unveiled at a Capitol Hill news conference by its principal sponsors, Sen. Howard M. Metzenbaum (D-Ohio) and Rep. Louis Stokes (D-Ohio), and leading co-sponsors including Pennsylvania's two Republican senators, John Heinz and Arlen Specter.

Recent amendments to the bankruptcy law prevent employers from unilaterally slashing wages or making other changes in a union contract unless a bankruptcy court determines that contract modifications are essential to the company's survival and fairly applied. But there is no clearcut protection for benefits to retirees, apart from the federal pension insurance program.

That's what the proposed Retiree Benefits Security Act seeks to remedy.

Union role

It would establish the right of a union to represent retirees. As with union contracts, modifications not agreed to voluntarily could be made only when ordered by a bankruptcy court after hearings. Retirees would also be given an additional tool to protect benefits by being designated as a separate class of creditors. That means that their consent would be required for approval of a reorganization plan to bring the company out of bankruptcy.

Metzenbaum stressed that LTV is just one of a number of companies that have tried to cut costs by cutting benefits. He noted that the still-profitable A.H. Robbins Corp. had sought bankruptcy court approval to terminate its health coverage to retirees even though the company is solvent. It entered bankruptcy only to head off damage suits resulting from its Dalkon shield product.

Metzenbaum and Stokes said they will press to complete congressional action by May 15, but will seek a temporary extension of the existing ban if the deadline can't be met.

Case against double-breasted contractors is made by Building & Construction Trades President Robert Georgine, with Legislative Director Leo Zeferetti, left, and Gen. Counsel Laurence Cohen.

Inflation surge drives down workers' purchasing power

A surge of seven-tenths of 1 percent in consumer prices drove American workers and their families deeper into an economic hole, pushing real average earnings down three-tenths of 1 percent in January.

And the months ahead could bring more bad economic news. The government reported that January saw a steep 1-percent decline in the leading indicators that gauge future business activity. It was the biggest one-month drop in two and a half years.

The loss in workers' purchasing power in January would have been even worse had not the Bureau of Labor Statistics made wholesale revisions in the values it assigns to various components in the consumer price index.

The new method for calculating inflation places less emphasis on food, which makes up a significant share of monthly outlays for workers and the elderly, and downgrades transportation expenses and the cost of medical care. The latter has been rising at an alarming pace over the past several years despite efforts by labor and consumer groups to contain health care costs.

By contrast, more weight was given to such upscale items as cable television services and the purchase of home computers, video cassette recorders and video games.

Without the change, January's CPI would have grown eight-tenths of 1 percent over the previous month. Even with the downward revision, it was the worst showing since June 1982. The figures mean that inflation is running at an annual rate of 8.6 percent. During all of 1986, prices went up only 1.1 percent.

The sudden resurgence of inflation offset an increase of one-tenth of 1 percent in average hourly earnings and a rise of three-tenths of 1 percent in hours worked.

As the new year got under way, workers found themselves worse off than they were in January 1986. Real earnings were down one-tenth of 1 percent from a year ago.

Hardest hit was the mining and oil extraction industry, where real earnings fell 2.6 percent below the level of January 1986. The year-to-year decline was 2.3 percent in transportation and public utilities and 1.5 percent in retail trade.

Minor gains

Workers in the construction industry were a little better off, with real earnings up 1.3 percent in the year's period. In manufacturing, there was an advance of five-tenths of 1 percent, and workers in wholesale trade managed a scant one-tenth of 1 percent improvement.

By contrast, the salaries of highly paid professionals in the finance, insurance and real estate sector pushed their purchasing power up 4.6 percent, while real earnings in services advanced 1.8 percent.

The January CPI increase was paced by a 6.6-percent jump in gasoline prices and a 9.8-percent leap in home heating oil costs, both resulting from the ongoing efforts of OPEC—the Oil Producing & Exporting Countries—to curtail output and end the downward spiral in world oil prices.

Because of the adjustment in its calculations, BLS reported that medical care costs rose only four-tenths of 1 percent, compared with December's seven-tenths of 1 percent increase. But the cost of obtaining medical care was 7.5 percent higher than it was a year ago, making it still the fastest growing component in the CPI.

The January decline in the leading indicators was paced by a huge drop in contracts and orders for new plant and equipment and hefty declines in building permits and new orders for consumer goods.

Other components that pulled the index lower included prices of sensitive materials and the number of average weekly claims for state unemployment insurance.

Crafts assail double-cross by employers

Continued from Page 1

gard to the contract bar that applies in non-construction industries.

The only right anti-union groups want to preserve, Georgine suggested, is "the right of employers to walk away from their agreements at will."

Thomas Hopkins, representing 1,700 members of Operating Engineers Local 17 in the Buffalo area, and an employer who runs an all-union operation against double-breasted competition suggested a conspiracy to kill the unions with kindness at contract time.

John Gast Jr., who started as a union ironworker and operates a steel erection firm that has always been able to compete with lower-wage competition through quality and efficiency, said double-breasted contractors have come up with a new technique to give their non-union operations an extra advantage.

He expressed his dilemma in a letter to Clay, stressing the point that a bargaining relationship must be built on mutual trust. His letter asked:

"How can unions trust contractors if they know that, after an agreement has been reached at the bargaining table, the contractors will bid jobs using their non-union 'related entity' and be awarded the jobs because the 'related entities' don't have to pay the union wages and fringes just agreed to.

Employer suspicions

"How can I, as a union contractor, agree on proposals to present to the union when my fellow contractors are double-breasted and I am suspicious that they are trying to inflate the union rate in order to make it easier for their nonunion entity to get work."

Two Carpenters local and district representatives from Washington, D.C., Terry Milstead and Joseph Stanalonis, testified to a pattern of gradual and then accelerating shifting of work from the union operation to a newly-formed nonunion subsidiary.

Milstead spoke of the detective work he had to do to trace common ownership of union and nonunion companies, including following trucks to determine interchange of equipment and spending hours poring through courthouse records and documents. But despite massive evidence, he said, the NLRB backed off from issuing an unfair practices complaint against the company.

Stanalonis said contractors that have gone double-breasted suddenly become "too busy" to take on jobs through their mainstream union operation but steer potential customers to their nonunion entities.

Charles E. Key, business manager of the North Georgia Building Trades Council, testified that subcontractors have been told by double-breasted general contractors that "if you want to work for us, you'll need to set up a nonunion shop."

One result, Key said, is that the number of union contractors employed in his council's jurisdiction shrunk from more than 5,000 in 1982 to about 1,400 now.

And when the unions agree to roll back wages so that their employers can compete with nonunion operations, "the contractors just turn around and cut their nonunion wages by the same amount."

That's not bargaining, Key said. It's "a conspiracy to fix prices by controlling both sides working in the same market."

San Francisco to negotiate pay equity pact with SEIU

San Francisco—The city's civil service commission adopted the results of a pay equity survey, which concluded that women and minority workers are victims of wage discrimination.

In a unanimous vote, the five commissioners accepted the report in an agreement with the Service Employees, which represents about 90 percent of the city employees, and other unions representing public workers. The finding of pay discrimination affects 12,000 of the city's 23,000 workers.

"This civil service salary study confirms that city jobs dominated by women and minorities are significantly underpaid when compared to those jobs traditionally held by men," President Paul Varacalli of SEIU Joint Council 2 said.

SEIU will sit down with city officials to close the wage gap in negotiations on a separate track from the collective bargaining schedule, he said. Estimates show that $80 million would be needed to end all pay inequities, Varacalli noted, adding that the city reserved $30 million for pay equity increases two years ago.

Voter referendum

The two-month commission study was initiated after a voter referendum last November instructed the city to examine its pay system for wage inequities. The study found that jobs traditionally held by women and minorities paid 40 to 50 percent less than city jobs held mostly by men.

City health workers with an annual salary of just over $21,000 are paid 50 percent less than men in jobs requiring similar skills, while laborers and some clerks earn salaries averaging 16 percent above those of custodians, the report noted.

The survey compared city and county job classifications with those in other jurisdictions that had negotiated or implemented pay equity raises and took into account the concentration of women or minority workers in each classification. A job classification was considered "disproportionately occupied" if it included 70 percent or more women and minority workers. Workers in jobs not held by a disproportionate number of mionorities or women are not subject to pay equity adjustments, the report noted.

W.J. Cunningham joins AFL-CIO legislative staff

William J. Cunningham, a congressional staffer for the past 17 years, has been appointed an AFL-CIO legislative representative.

Legislative Director Robert M. McGlotten said Cunningham will specialize in taxes, trade, unemployment compensation and non-nuclear energy issues. He will fill the vacancy left by the resignation of Vince Trivelli, who has moved out of the Washington area.

Cunningham, 44, was most recently on the Oversight Subcommittee staff of the House Ways & Means Committee, and previously was an executive assistant to Committee Chairman Dan Rostenkowski (D-Ill.).

UAW restructuring aids organizing

New York—The Auto Workers announced plans to make its District 65 into a new union department, strengthening the working relationship between the international union and its affiliate.

In ceremonies at the affiliate's headquarters here, UAW President Owen Bieber and District 65 President David Livingston signed an agreement integrating the 40,000-member unit into the Auto Workers' constitutional structure while leaving the district free to continue to pursue its own organizing initiatives and its traditional jurisdictions.

Founded as an independent union in 1933, District 65 represents workers in such nonmanufacturing industries as publishing and at universities. It affiliated with the UAW in 1981.

"This agreement reflects the maturing of our relationship and lays the groundwork for continued progress," Bieber and Livingston said in a joint statement. "While we have operated well together for the past six years on the basis of a relatively unstructured affiliation, we will now operate even more effectively on the basis of organic unity."

At the same time, the UAW announced the restructuring of its Technical, Office & Professional Dept. to advance organizing and bargaining programs among new groups of workers. The new program calls for establishment within the department of a Public Employees Council, a Private Employees Council and a Health Care Council under the direction of Vice President Stephen P. Yokich.

Labor hits shotgun approach of random drug tests

Drug eradication efforts in both the private and public sectors can and should be carried out without subjecting workers with no indication of a drug problem to the indignity of random, employer-imposed urine tests, unions contended at Senate hearings and in federal courts.

The Senate Commerce Committee hearings focused on Administration-backed bills requiring random drug testing of railroad and airline workers. Similar bills have been introduced by Committee Chairman Ernest F. Hollings (D-S.C.) and Sen. John C. Danforth (R-Mo.), the senior minority member.

Unions in all branches of transportation criticized the shotgun approach of the legislation and expressed concern that the cost and emphasis of the mandatory testing would divert resources from needed safety improvements and rehabilitation help for persons trying to recover from drug or alcohol abuse.

In a related area, the Government Employees continued to challenge in federal courts programs of random testing of federal workers and new anti-cheating guidelines developed by the Dept. of Health & Human Services for collection of urine samples. Agencies have been directed to test employees in "sensitive" jobs for evidence of marijuana or cocaine use.

The tests, which government officials suggested could serve as a model for the private sector, require putting coloring in toilet tanks to prevent watering of urine samples and immediately testing the temperature of the specimens handed over by employees to detect any substitution.

AFGE President Kenneth T. Blaylock charged that the guidelines "will do nothing more than add humiliation and indignity to a process that we believe is already unconstitutional."

Better uses for funds

Taxpayer dollars, he suggested, "would be better spent on drug education, rehabilitation and to stop the flow of drugs into our nation and into the hands of its children."

The AFGE has brought a constitutional challenge to the guidelines as an infringement of due process and an invasion of the right to privacy. The suit, which also charges failure to comply with notice-and-comment requirements for federal regulations, asks the U.S. District Court in New Orleans to bar implementation of the guidelines.

In an earlier suit, the AFGE won a temporary injunction prohibiting an Army installation in Georgia from requiring urine tests of its civilian employees.

At the Senate hearings on drug testing of transportation workers, the Railway Labor Executives' Association said it welcomes efforts to overcome drug and alcohol abuse.

Rail unions oppose "indiscriminate testing" of workers not under any suspicion of drug use, RLEA Attorney Lawrence M. Mann testified. There should at least be preliminary screening for indications of drug or alcohol abuse before resorting to urine testing, he said.

Capt. Richard B. Stone, aeromedical resources chairman for the Air Line Pilots, said random drug testing "without even the slightest basis for suspicion" would be "repugnant to the U.S. Constitution." He noted that the ALPA participates in labor-management programs to deal with drug and alcohol problems.

While the Hollings-Danforth bills deal only with railroads and airlines, union and employer groups in the bus and trucking industries were also invited to testify.

Climate of distrust

Transit Union Legislative Director Robert A. Molofsky said the ATU "vigorously opposes" employer-determined random testing in the workplace. Apart from legal and constitutional implications, he said, such programs create "climates of distrust and intimidation."

Vernon McDougall, safety director of the unaffiliated Teamsters, said the tests the Administration wants to impose trample on individual and constitutional rights.

Employer groups were divided, with some expressing concern at the high cost of testing. Transportation Sec. Elizabeth Dole, who expressed the Administration's support for the legislation, estimated that the cost of a large-scale drug testing program would be in a range of $18-to-$25 for each employees tested.

Service Employees President John J. Sweeney testifies for parental leave bill.

Parental leave bill passed to safeguard family values

Workers shouldn't have to risk their jobs to care for newborn children or an ailing family member, Service Employees President John J. Sweeney asserted at House hearings on the parental leave bill.

Sweeney, who recently co-chaired a United Nations family policy panel, termed it "a national shame" that this country is so far behind other nations in recognizing the family obligations of its workers.

The minimal provisions of the parental leave bill amount to "a right, not a benefit," he said.

The labor-backed bill would require employers of 15 or more workers to grant requests for up to 18 weeks of unpaid leave over a 24-month period on the birth, adoption or serious illness of a child. It would also allow employees to take up to 26 weeks of unpaid leave when they are unable to work because of their own serious illness.

Employers with health insurance coverage for workers would be obligated to continue the coverage during the period of the unpaid leave.

Wide support

Sweeney and representatives of a wide range of groups supporting the legislation testified before a joint hearing by two subcommittees of the House Education & Labor Committee. A similar, but not identical bill, is pending in the Senate. In the last Congress, the parental leave bill won House committee approval but made no headway in the Senate.

Rep. William Clay (D-Mo.), chairman of the Subcommittee on Labor-Management Relations, likened the parental leave bill to provisions of the Fair Labor Standards Act, governing minimum wages, maximum hours and a ban on child labor.

Employer groups complained that parental leave would be too costly, but business cost estimates are greatly exaggerated, Sweeney said. In real life, he suggested, many employers won't even hire replacements.

As for the claimed burden on smaller businesses, Sweeney noted that SEIU contracts with a number of small jewelry manufacturing firms in New York allow up to one year of job-protected leave.

The legislation would be "good business and good for business," Sweeney testified. "Juggling work and babies takes a toll on productivity."

Both the National Organization of Women and the U.S. Catholic Conference testified for the legislation. The Catholic Conference testimony termed the bill "a good first step toward a pro-family policy for working people."

3-year recording pact ratified by Musicians

New York—The Musicians ratified a new three-year contract with the major recording companies that provides a 4 percent scale increase each year.

The contract, ratified by a 1,153-to-844 vote, will also improve health and welfare benefits for the 5,200 members it covers. Employer contributions to the Music Performance Trust Fund will be reduced 10 percent and no payments will be made for the first 25,000 sales of any recording.

The union fought back management's demands to an end to the Music Performance Trust Fund and severe reductions in contributions the Special Payments Funds.

The fund helps provide admission-free, public performances in the United States and Canada. It was created in 1940 to provide employment for musicians whose job opportunities had dropped through the use of recordings.

The Special Payments Fund will receive a similar reduction in employer payments. It provides annual royalties based on percentages of suggested retail prices, after specific deductions.

CWA appeal triggers probe of microchip industry safety

The Occupational Safety & Health Administration will investigate the health hazards faced by workers in the semiconductor industry. The action was ordered by Labor Sec. William Brock in apparent response to a personal appeal from Communications Workers President Morton Bahr.

The Labor Secretary and Bahr, an AFL-CIO vice president, discussed the "life threatening situations" faced by workers who manufacture microchips. Their talks occurred at the federation's Executive Council meeting in Bal Harbour, Fla.

An OSHA spokesman confirmed the agency has instructions to "look into this situation and get back to the Secretary." The Labor Dept. action comes amid growing pressure for semiconductor manufacturers to clean up their work processes.

At a press conference in Bal Harbour, a coalition of 36 labor, women's, environmental and community groups and individuals announced a nationwide drive aimed at forcing the chip-making firms to remove the hazardous chemicals from the workplace.

Concern about worker safety in that industry was heightened by the results of a recent study done for Digital Equipment Corp. which found nearly double the expected rate of miscarriages among female production workers. While the study did not link any of the chemicals used in chip-making to the higher miscarriage rate, several leading microchip manufacturers, including AT&T, opted to remove pregnant workers from production lines. CWA represents workers at AT&T.

The coalition pointed out that removing hazardous chemicals from the workplace is the proper solution, not the removal of pregnant workers.

At the press conference, Bahr stressed that exclusionary policies are "just a temporary stopgap that benefits no one." He said such policies ignore the fact that there may be reproductive hazards for men as well as women. And because many of the chemicals used in the industry are known or suspected cancer-causing agents, most workers remain at risk through exposure to these substances.

Recommended actions

The coalition recommended these actions by the semiconductor industry:

- Removal of substances known or suspected of causing reproductive damage and substituting safer chemicals.
- Use of engineering controls to prevent worker exposure to potentially harmful substances.
- As a temporary measure until chemicals are removed or engineering controls installed, offering medical removal to prospective parents, male and female. Temporary transfer should be without loss of wages, seniority or benefits.
- Financing independent industrywide studies to assess health effects of workplace exposures.
- Integrating the concept of occupational and environmental health and safety into all research into product or process design to ensure that new technologies are safe for workers and the community.

Plasterers & Cement Masons pick Holton to succeed Roots

The Plasterers & Cement Masons executive board elected Sec.-Treas. Robert J. Holton as president to succeed Melvin H. Roots, who retired Feb. 11.

Holton is the first cement mason in the union's 123-year history to hold the presidency. His term will run through the end of 1989.

Robert J. Holton

Holton, 64, had served as secretary-treasurer since 1978. He was elected an international vice president in 1970. Before that, he served in a variety of posts with Cement Masons Local 577 and with the Northern Colorado Building & Construction Trades Council.

He was a vice president of the Colorado AFL-CIO for six years and an executive board member of the Denver AFL-CIO. Holton was commissioner of the Denver Urban Renewal Authority for 16 years. He also served as chairman of the Plumbers Advisory Committee and a member of the Metro-Denver Building Code Committee.

Roots, 63, was elected president emeritus by the executive board. He was first elected president of the Plasterers & Cement Masons in May 1981 and re-elected in August 1984.

Before joining the international staff as deputy organizer in 1955, Roots served as president of Plasterers Local 112 in Oakland, Calif., the California State Conference and the Northern California District Council.

He was elected an international vice president in March 1957 and to the executive board in 1965.

EDITORIALS

The President's Quest

PRESIDENT REAGAN'S competitiveness initiative is a rhetorically elegant, substantively barren attempt to divert attention from the tidal wave of imports and the enormous, intractable trade deficit that has wiped out millions of jobs, devastated local communities and placed the economy in a risky and fragile condition.

The President's characterization of his goal as a "quest for excellence" is commendable and, like the President, we in the trade union movement would like to see more products bearing the Made in America label. (A union label would be nice, too.)

Unfortunately, the measures proposed by the President fall short of the actions needed to trim the $170 billion trade deficit, while other parts of his package—such as the budget cuts in elementary, secondary and higher education programs, and the promise of continued attempts to deregulate and decontrol—certainly won't help in the quest for excellence.

The fact of the matter is, this Administration's response to the nation's trade and trade-related problems has been, and obviously continues to be, a benign and passive one of watching the dollar fall, interminable multilateral negotiations, and exhorting other nations to stimulate their own economies in the hope the demand for U.S. products will increase.

A STRONG, effective trade deficit reduction measure that requires our major trading partners to reduce their excess trade surpluses with us if they are engaging in unfair trade practices must be enacted, and the United States should not permit unlimited entry of goods produced in countries which do not respect basic worker rights.

That legislation should also include adjustment assistance and injury relief, removal of existing tax and tariff incentives to U.S. industries to move abroad, and measures that deal with specific problems in particularly hard-hit industries.

We must also deal with debt problems of less-developed countries in a fashion which strengthens their economies and enhances rather than shrinks the living standards of their citizens.

Lastly, it would indeed be regrettable if this new focus on competitiveness degenerates into an attack on the qualitative aspects of life which, by some yardsticks, would not be deemed "cost effective" or "competitive."

These include a broad range of nationally determined standards and regulations affecting consumers, workplace health and safety, child labor protections, the right to bargain collectively, control of hazardous wastes, and the quality of our air and water.

—Guest column in USA Today by Arnold Cantor, assistant director of the AFL-CIO Dept. of Economic Research, Feb. 24, 1987.

Retiree Rights

IN CONTRACT NEGOTIATIONS, there is no free lunch. When a union negotiates a continuation of health and life insurance coverage for when workers retire, it is in effect earmarking part of the compensation package for the future protection of its members.

The federal pension insurance program was enacted to protect workers and retirees from loss of their earned pension rights, and it has largely done so.

When employers found a loophole in the bankruptcy law that allowed them to make unilateral changes in their union contracts, Congress stepped in with necessary safeguards. It amended the law to require negotiations over any contract changes. And it provided that, in the event of a deadlock, a bankruptcy judge would be bound by strict guidelines of necessity and fairness in imposing any contract changes.

As a minimum, retirees should have comparable protection for any health and life insurance coverage their former employers want to reduce or eliminate. Stopgap legislation enacted in the last Congress expires May 15. Permanent legislation has been introduced in both the House and Senate. It should be enacted, quickly. The need is urgent. The clock is running.

Amnesty 'adoptions' aid prisoners of conscience

By Press Associates

Every day on every continent, men, women and even children are arrested, kidnapped, imprisoned, tortured, executed or simply "disappear" because of their political beliefs, associations or activities for social change. Many of them are trade unionists.

For 25 years, Amnesty International has been doing something about it. Headquartered in London, Amnesty has more than a half-million members and supporters in 150 countries. Since its founding, it has worked on behalf of more than 25,000 "prisoners of conscience" around the world. Last year, 150 of these prisoners "adopted" by Amnesty groups in the United States were freed.

Amnesty works to apply pressure on governments to free prisoners of conscience—those jailed for their beliefs, race or ethnic origin who have neither used nor advocated violence. It also seeks fair and prompt trials for these prisoners and the universal abolition of torture and executions. Torture is regularly used against political prisoners by one-third of the governments in the world, says Amnesty, whose research staff of 200 is recruited from more than 30 nations.

Imprisoned unionists

Amnesty's methods include letters and cards to government officials, long-term adoption of individual prisoners of conscience, publicizing patterns of human rights abuse, meetings with government representatives and, where torture or death are feared, a network of volunteers who send urgent telegrams. Meetings and vigils may be held, petitions circulated. Sometimes money is raised to send medicine, food and clothing to prisoners and their families.

A released prisoner of conscience from the Dominican Republic wrote Amnesty a note of thanks: "When the first two hundred letters came, the guards gave me my clothes. Then the next two hundred letters came, and the prison director came to see me. When the next pile of letters arrived, the director got in touch with his superior. The letters kept coming and coming—3,000 of them. The President was informed. The letters still kept arriving, and the President called the prison and told them to let me go."

American trade unions and Amnesty have an important ongoing relationship based on the fact that in many parts of the world, people are jailed and mistreated simply because they are union members or activists.

Public campaigns

Amnesty's first list of imprisoned unionists was published in 1974 and documented 229 people jailed in 17 countries. Subsequent lists show that the situation for trade unionists around the world has not improved.

A sample of its cases:

- Jose Ramon Trejos, an activist with a taxi drivers' union, and his two sons, aged 21 and 17, were abducted from their home in Rancague, Chile, by eight hooded men in October 1985. The younger son was released the next day. Trejos was released after a few weeks, but his older son was charged and imprisoned.
- Wanda Dragon was arrested in Poland in July 1985 for possession of literature published by the banned Solidarnosc trade union. Her prison cell was cold, infested with cockroaches, and she had to sleep on the floor. Medicine and a special diet she requires were not provided in prison.
- Florentino Arcillo, an activist in the Central Luzon Farmers Alliance in the Philippines, was abducted from his family's home in Manila in April 1985. Two weeks later he was found in a military detention center, where he had been tortured.
- Gilberto Omar Lopez, a member of the Transport Workers Union, was arrested by members of the National Guard in El Salvador in March 1986 at his place of work. His clothes, soaked in blood, were given to his family.

MEMO FROM COPE

Odds 'n Ends

ONE OUT, ONE IN as "announcement season" commences for presidential aspirants or non-aspirants. New York Gov. Mario Cuomo says "forget it" and ends speculation that he would seek Democratic nomination in 1988. Balancing Cuomo's "no" is Rep. Richard Gephardt's "yes," making Missouri House member first one officially out of gate in long run for Democratic standard-bearer. Former Gov. Pete DuPont of Delaware remains GOP's only *announced* candidate. Whole batch more from each party will be making formal declarations soon.

MORE CELEBRITIES eye political careers. Sonny Bono (erstwhile of Sonny and Cher) runs for mayor of Palm Springs, Calif., a posh resort city in *southern* part of state. Another celebrity, Clint Eastwood, already is mayor of Carmel, Calif., a posh resort city in *northern* part of state. In addition, U.S. Army Gen. Pete Dawkins (Ret.)—now an investment banker—reportedly considers 1988 run for U.S. Senate in New Jersey as Republican against Sen. Frank Lautenberg (D). Sports fans will recall Dawkins as star football player at West Point a generation ago.

IT'S TRUE, elected officials spend a lot of time worrying about campaign financing—their own. Federal Election Commission issues report showing 33 incumbent senators who are up in 1988 already have $12.2 million in their campaign kitties, an average of $369,000 each. But that's not all. FEC figures show 33 senators not up until *1990* already have $6.9 million in hand, an average of about $210,000. And even *that's* not all. A lot of those who just got elected or re-elected in 1986, and don't run again until *1992,* have big bucks for next time out. Bob Dole (R-Kan.) has $2.2 million left over from '86 (he's expected, however, to use it for try at GOP presidential nomination). Other senators with impressive cash on hand for 1992: Glenn (D-Ohio) $837,000; Packwood (R-Ore.) $692,300; Inouye (D-Ha.) $598,400; Grassley (R-Iowa) $486,400; D'Amato (R-N.Y.) $456,300; Dixon (D-Ill.) $408,800.

POLITICAL HUMOR, of self-putdown kind, blossoms in early stages of presidential nomination chases. One of the best of this year's batch came from former Delaware Gov. Pete DuPont (R) only officially announced for President (until Gephardt killed his line) candidate. He told audiences: "This is a historic moment. You have before you 100 percent of the declared candidates for President of the United States. You may never see all of them in one place again." (One of best ever came from Mo Udall, Arizona U.S. House member. He would tell audiences when he tried for Democratic nomination in 1976 of some citizens he approached on street saying, "Hello, I'm Mo Udall and I'm running for President." Response: "Yeah, we know. We were just laughing about that this morning.")

NOT LAUGHING anymore are right-wingers, their leaders and political committees. Major annual meeting, Conservative Political Action Conference, up to now has been upbeat love-fest. This year's recent get-together a downer—sniping, finger-pointing, kvetching—all reflecting over-the-hill reality of once "new right." President Reagan, described at once as "the best and the worst thing that ever happened to the conservative movement," is criticized for paying only "lip service" to right wing's social issues. Two of his Cabinet members, Secretary of State Schultz and Health and Human Services Secretary Bowen are bitterly attacked. Schultz's resignation is demanded. Establishment Republicans are pelted for "letting the flames go out" on so-called Reagan revolution. GOP National Committee leaders are lambasted as "mental pygmies." Reflecting reality of this meeting, "new right" leader Paul Weyrich said movement "is divided 19 ways from Sunday."

TWO FURTHER NOTES from rightist gathering. (1) Rep. Jack Kemp way out front in presidential straw poll as first choice of 68 percent of those present. Far back in 4-5 percent range: Recently-resigned White House communications director Pat Buchanan, Sen. Bob Dole, Rev. Pat Robertson, VP George Bush. (2) Man they're all fighting to succeed, President Reagan—beset by Who's-in-Charge-Gate, slumping personal popularity, weak support on policy matters—trying to Boost spirits of right wing, perhaps his own as well, tells audience "the going may be a little rough at this moment (but) be of good cheer. We're coming back and coming back strong. . .We're saving the best stuff for the last act." Bravado not enough to hide his problems, or those of right-wing leaders and groups.

FUR FLIES in debate over debates. GOP and Democratic Party announced agreement in press conference recently on joint commission to sponsor presidential debates in 1988. League of Women Voters—which has sponsored debates since 1960—held own press conference one hour later to lay out its own plans for the '88 candidate debates. League insists sponsors should be totally independent of parties and candidates.

MORE ON MONEY and elected officials comes out of Congressional Quarterly report showing 51 House members have more than $250,000 each in funds left over from 1986 campaigns. Nine have more than $500,000 each. One, California Republican David Dreier, is sitting on $949,829.

AND STILL MORE on money. GOP Senate candidates in 1986 raised $28 million more than their Democratic opponents and outspent them in 23 of 34 races. Yet, Democrats won 20 of the 34. In eight of the 12 closest finishes, won by six or fewer percentage points, Democrats won despite less funding. Total contributions to GOP Senate candidates reached $107 million, to Democrats $79 million. The biggest bundle was raised for the California race, GOP loser Ed Zschau collecting $11.8 million to winner incumbent Alan Cranston's $10.8 million.

Municipal Officials Flunk Administration

City officials across the land have issued a report card on the Reagan Administration's performance in dealing with urban matters. It has told the Administration to write on the blackboard 500 times: "We have loused up. We have loused up. . . ." etc.

Three-fourths of the 516 officials who responded, representing 396 cities and towns, gave the administration "poor" or "failing" grades on urban issues; 50 percent "poor" or "failing" on unemployment and social policy.

Only on inflation and interest rates was the administration marked "good" or "excellent."

Grading Reagan's government from "A" for excellent to "F" for a failure—with "B" good, "C" fair and "D" poor—municipal officials handed out the following marks in specific categories:

- Social policy—"A" one percent, "B" 11 percent, "C" 37 percent, "D" 33 percent, "F" 18 percent.
- Unemployment—"A" two percent, "B" 10 percent, "C" 37 percent, "D" 39 percent, "F" 12 percent.
- Urban needs—"A" zero percent, "B" five percent, "C" 20 percent, "D" 40 percent, "F" 35 percent.
- Federal deficit—"A" zero percent, "B" five percent, "C" 17 percent, "D" 40 percent, "F" 38 percent.
- Environment—"A" 2 percent, "B" 20 percent, "C" 42 percent, "D" 25 percent, "F" 11 percent.

The city officials reported they have had to raise taxes and cut services as a consequence of severe cuts in federal urban programs, and more than third predicted further tax and user free hikes would be necessary this year.

Con-con still breathing

The screwball idea of calling a constitutional convention to bypass Congress and initiate a balanced budget amendment isn't dead.

A resolution to summon a constitutional convention squeezed through the New Mexico House and is a threat in the state Senate.

In Congress, responsible legislators from both parties agree that the rigid Gramm-Rudman-Hollings budget law was a big mistake. But a law can be rectified. A constitutional requirement could throw the economy into a tailspin. And a runaway constitutional convention could throw away the Bill of Rights.

Reagan and the People. . . .

Marching in Different Directions

The American people and the President they reelected overwhelmingly less than 2½ years ago, are marching in opposite directions.

The President—like a record stuck in one groove—keeps calling for more cuts in the government's basic human services programs. The people increasingly reject his position. In fact, more and more Americans demand greater—not lesser—federal resources be allocated for people-helping measures.

The trend began before, and is independent of, public disillusion with the President over Who's-in-Charge-Gate. It is more fundamental in that it repudiates the major premises of Reagan's entire political career—that government is, as Reagan charges, "the problem, not the solution," and that once he reduced its role everything would be hunky-dory.

A recent ABC/Washington Post poll compared public sentiment for increases in key people-aid programs at three stages of the Reagan presidency—the first month after he took office, one year ago and the beginning of this year. It shows substantial jumps in public support for *more* federal aid in each of the intervening periods.

% AMERICANS WHO WANT MORE RESOURCES FOR PEOPLE AID

Program	*2/81*	*2/86*	*1/87*
Social Security	49%	51%	63%
Medicare	53	63	74
Food stamps	15	18	27
College loans/aid	22	34	46
Child day care	38	44	57

Further erosion of public confidence in the President and his ability to lead evident in responses to a recent Gallup/Newsweek survey. It shows a majority of Americans now look to Congress rather than Reagan to deal effectively and fairly with these key issues: Unemployment, deficit reduction, trade, taxes, health care, welfare reform.

* * *

Poll results are as durable as love letters in the sand, and it is possible President Reagan's standing with the public will rebound. But right now the public view of his ability to lead is on a rapid downhill slide and for the first time in several years is as low as the popularity of his policies.

A March 1 New York Times/CBS survey shows 46 percent of Americans disapprove of his handling of the Presidency, only 42 percent approve. This is Reagan's lowest rating since January 1983 during the depths of recession.

As clear an understanding as any of the President's slumping status is public reaction to the Tower Commission Report treatment of him (it criticized his remote "management style" and suggested he had more and earlier knowledge of the Iran-Contra business than he's admitted.) Fifty-two percent of the public feel the report was fair in its assessment, and 22 percent felt it was too easy on him. That's 74 percent who either agree with the report's conclusions or suspect even greater Iran-Contra knowledge and complicity by the President. And 51 percent think he's lying about failing to remember when he approved sale of arms to Iran.

Sixty-six percent think he's not in charge of his own government.

Senate panels set quick action on plant closing notifications

By David L. Perlman

Two Senate subcommittees began fast-track consideration of a plant closing and displaced worker assistance bill that the AFL-CIO testified will save jobs and shorten the duration of unemployment.

"This bill will move, and it will move quickly," Sen. Howard M. Metzenbaum (D-Ohio) promised at the start of two scheduled days of hearings.

AFL-CIO Sec.-Treas. Thomas R. Donahue welcomed the assurances of prompt action. A lot of displaced workers might have been spared the tragedy of lost jobs and long-term unemployment if such a law had been in place, he noted.

Both Metzenbaum, who heads the Subcommittee on Labor, and Sen. Paul Simon (D-Ill.), chairman of the Subcommittee on Employment & Productivity, are co-sponsors of the bill. So is Sen. Edward M. Kennedy (D-Mass.), chairman of the full committee. Kennedy has set a timetable for reporting the legislation to the Senate floor by early May.

Human toll

Auto Workers President Owen Bieber and Communications Workers President Morton Bahr testified to the human wreckage left by wave after wave of plant closings and worker displacement. Every section of the nation has been affected, they noted, Sunbelt and Rustbelt alike.

The bill under consideration, and a similar measure scheduled for hearings in the House, would require employers to give advance notice of any layoff or closing affecting 50 or more workers. The larger the number of workers affected, the longer the notice period, to a maximum requirement of 180 days advance notice if 500 or more workers are affected.

It would require employers to explore with workers and communities alternatives to a plant closing or major layoff.

The legislation would fund a federal displaced worker unit in the Dept. of Labor to coordinate education, training and reemployment assistance.

It would obligate states to set up rapid response teams to go into action on notice of a scheduled shutdown to arrange counseling, testing, job search assistance, vocational and classroom training. Income support, beyond the normal 26 weeks of unemployment compensation, would be provided for persons in training programs.

Canadian plan

Donahue noted that Canada has such a rapid response mechanism, which has been able to substantially reduce the duration of unemployment. But he stressed that such a system can only work effectively "with a requirement for advance notice which triggers the adjustment efforts."

Responding to employer opposition to a mandatory notice period, Donahue pointed out that many American corporations operate abroad under foreign laws requiring advance notice of shutdowns and layoffs.

Some portions of the bill's worker assistance program parallel Administration proposals and have a common origin in recommendations made earlier this year by

Down the hatch

The owner of Googies bar in New York City sends Coors beer spilling down the sewer as Jim Shaw, Massachusetts Frontlash director, applauds to bolster labor's boycott against the anti-union beer maker. (Story on Page 5.)

Part-time jobs fail to reduce unemployment

By Gene Zack

Unemployment remained stalled at the 6.7-percent level in February, as the ranks of those forced to take part-time work because full-time jobs weren't available swelled by 300,000.

In addition to the 8 million unemployed, the AFL-CIO noted, there are 1.1 million discouraged workers who have quit the job market because they can't find jobs and another 5.8 million involuntarily working part time.

"That means that the 14.9-million workers who are totally or partially unemployed continue to pay the price for the Reagan Administration's failure to deal with either the trade deficit or the soaring federal deficit," said Federation Research Director Rudy Oswald.

Fewer get benefits

Compounding the woes of the jobless, the government reported that there were more than 140,000 fewer idled workers drawing unemployment insurance benefits than there were a year ago. In mid-February, the number on the jobless insurance rolls stood at slightly more than 3.1 million—a steep decline from the 3.2-million beneficiaries in the same month in 1986.

Although the Labor Dept. reported that civilian employment rose by 370,000 last month, Oswald pointed out that married women filled 290,000 of those new jobs. Some of this is the continuing shift to two-

Angered workers protest pension raid

Bank officials duck questions from ACTWU members

By Arlee C. Green

Richmond, Va.—The mismatch was as great as David versus Goliath when three dozen workers from a Reeves Brothers Inc. plant confronted officials of Sovran Bank here about their part in a $100-million loan scheme that requires Reeves to rip off funds from its workers' pension plans. David didn't slay the giant, but he did get his—and the public's—attention.

With the news media gathered around a second-floor elevator, Sovran's Senior Vice President William R. Craig stood inside, refusing to meet with more than just a few of the workers. Three Reeves workers got in the elevator with Craig to ask what he could do to help save their pensions. Craig had few answers, but did accept a copy of one retiree's pension benefit check which could be forever frozen at $44 a month.

The Reeves hourly workers, who manufacturer foam rubber in Cornelius, N.C., voted last April for the Clothing & Textile Workers to represent them. Now as members of ACTWU Local 2500, they are still bargaining for a first contract and Reeves officials have been charged by ACTWU with unfair labor practices for not telling the truth about the company's pension plans.

Plan termination

The workers are concerned their pension will be chopped out from under them soon. Reeves has already applied to end the pension plan for salaried employees.

While the pension pillaging may affect just two Reeves plans covering about 7,000 workers, the ramifications could touch nearly every pension plan in the country. Reeves Brothers became an attractive takeover target in January 1986 when actuaries reported that the company's pension plans were "overfunded" by more than $23 million.

In May 1986, Schick Inc. finalized a takeover bid, and the excess pension funds became part of the repayment scheme set up by Drexel Burnham Lambert, financial advisers, with National Westminster Bank in New York as the leading bank. Corporate finger-pointing has already begun as the company and the banks each disclaim authorship of the pension-raiding conditions.

Other banks involved are Sovran, Amer-

Oklahoma rejects open-shop law

Oklahoma City, Okla.—The House of Representatives resoundingly defeated a compulsory open-shop measure, voting 50 to 43 against tacking a "right-to-work" amendment onto a bill dealing with case law on commercial contracts.

It was the second successive trouncing of the National Right to Work Committee, which a week earlier saw a similar measure go down to defeat in the New Mexico legislature.

State AFL-CIO President Jim Freeman called the vote a "great victory" in a state where the anti-union issue has been on the front burner a number of times in the last quarter-century. Organized labor managed to dodge the "right-to-work" bullet twice in the past two years.

Three days after suffering their initial defeat, the anti-union sponsors sought to bring the amendment up for reconsideration. Their effort was thwarted when the House voted 51 to 43 to table the motion, with labor picking up an additional vote in the process.

Floor leadership

Leading the fight against "right-to-work" was Majority Floor Leader Guy Davis (D). House Speaker Jim Barker (D), hospitalized because of a mild heart attack, refused to be left out of the picture and was in constant contact with pro-labor members throughout the debate and vote.

"We have won the legislative battle," Freeman asserted. But he emphasized that "the war isn't over." Right-wing forces are mobilizing for a voter referendum on "right-to-work," the State AFL-CIO president warned, which will require another all-out labor effort to prevent Oklahoma from becoming the 22nd state in the nation with such a law on its statute books.

The RTW forces, flushed with victory after winning a compulsory open-shop referendum in Idaho last November, focused massive amounts of money, manpower and political armtwisting on the Oklahoma campaign.

But labor countered with a major effort of its own, establishing a network of local union leaders, shop stewards, political and legislative activists and other volunteers. To

ican Security Bank of Washington, D.C., Canadian Imperial Bank of Commerce in Toronto, Ont., Empire of America Federal Savings Bank in Buffalo, National Bank of Canada in Montreal, Que., Bank of Tokyo Trust Co., Bank of Scotland, and Nederlandsche Middenstandsbank, N.V.

The Reeves scheme is unique because the nine banks that lent Schick $100 million to aid its takeover required that Schick and Reeves "agree to use their best efforts to terminate (the pension plans) as soon as practicable." The loan document requires the companies to "prepay the outstanding principal amount of the term loan in an amount equal to the amount of such excess funding" up to $20 million.

AFL-CIO Sec.-Treas. Thomas R. Donahue, in a letter to the American Bankers Association, said that this "covenant-inspired raid on workers' pensions appears to be unprecedented." He stressed labor's concern that this "may signify a broader move by the banking community to directly usurp pension fund surplus assets which rightfully, as workers' 'deferred wages,' belong to plan participants."

Sovran Bank official William Craig holds his position in the elevator.

ABA President Mark Olson has not responded to Donahue's query as to whether the bankers' association supports such pension skimming activities.

Because of a legal loophole, companies can request, and often receive, permission from the Pension Benefit Guaranty Corp. to siphon off excess funding of pension plans after provisions are made to cover the anticipated liabilities for those vested in the plan.

On Jan. 29, 1987, Reeves Brothers notified the PBGC of its intent to terminate the pension plan covering its salaried employees. The PBGC has 60 days to decide on the legality of the proposed termination.

For a chance to question Sovran Bank representatives, the Reeves workers drove eight hours to Richmond. When they began leafletting outside the bank headquarters, they were invited inside along with about 30 Richmond-area trade unionists, including Virginia AFL-CIO President David Laws and Sec.-Treas. Daniel LeBlanc.

Bankers ducked

The group continued leafletting passers-by in the sub-freezing weather before going to a second-floor meeting room in the Sovran Center, where the bank provided coffee, pastries and chairs. The workers refused the "thanks for stopping by" hospitality and chose to stand and wait.

Bank officials never made it to the meeting room during the half-hour the workers waited. Twice the group headed for the 14th floor offices of the Sovran executives, but bank security guards turned off power to the elevators. The group was reassured that Sovran officials would meet with them.

On the second trip to the elevators, a small group met with Craig as television film crews recorded the moment. While the workers, all wearing stick-on badges that said, "It's our pension, not yours," didn't get the answers they sought, they did get the publicity they sought.

Fighting back

"Let me tell you," said Annette White, a leader of the group, "these folks didn't know who they were picking on when the decided to take our pensions. We're gonna fight them all the way."

Retired hourly workers from Reeves receive pension benefits that average less than $60 a month. Clifford Graham, who retired last year after 17 years with the company, receives a monthly check of just $44. "Without that little bit of money, I don't know how I'd make it," Graham told reporters.

"We demand that the excess funds be used to improve our pensions," said Sharon Van Auken, another Reeves worker. She explained that the company has repeatedly told local bargainers than the pension plan is "underfunded" and that it had "no plans to terminate the funds."

Reeves hourly workers put in three 12-hour shifts a week, with no time-and-a-half after eight hours daily. Salaried workers, who are on a five-day, 40-hour week, are paid time-and-a-half after eight hours, Van Auken said.

Reeves workers left the bank just as city police arrived in the bank's lobby. After boarding a bus back to their motel rooms, the workers sang "We shall overcome." They promised further demonstrations at other banks until their questions are answered.

INS revising rule to cover hiring halls

New York—Regulations to carry out the new immigration reform law will require union hiring halls to verify the legal resident status of workers they refer to employers, the Immigration & Naturalization Service said.

Although an ad hoc coalition of unions, civil rights, religious, social welfare and legal groups has insisted that Congress imposed this requirement only on employers and for-profit employment agencies, Assistant INS Commissioner William Slattery told a conference here that the provision is going to be extended to hiring halls, too.

At the same time, Slattery announced an application fee of $185 for every undocumented worker seeking legalized status under the new law. There would be a ceiling of $420 per family.

The stiff fee schedule was opposed earlier by the AFL-CIO, the Clothing & Textile Workers and the Ladies' Garment Workers, along with many social welfare agencies. Such costs, they told INS in a formal submission last month, are beyond the economic reach of most undocumented workers who have historically worked at or below the minimum wage.

Leniency rejected

Muzaffar Chisti, the ILGWU's immigration project director, accused the INS of taking actions "exactly contrary to congressional intent." He said the aim of the law was to be as lenient as possible in granting citizenship to those who entered this country illegally but who have since established links to their communities.

"It looks like legalization will not measure up to our expectations," Chisti told the conference.

Rep. Barney Frank (D-Mass.), the keynote speaker, pledged that Congress will provide more funds for the immigration service than the Reagan Administration has requested. "It won't be enough, but it won't be as little" as the figures put forward by Atty. Gen. Edwin M. Meese and the Office of Management & Budget, Frank said.

He accused "the higher levels" of the Justice Dept. of "making an effort to gut the antidiscrimination features" of the new law. The ad hoc coalition made the same point in an earlier submission to the INS.

Union contracts add King birthday holiday

A survey of collective bargaining agreements reports that 11.3 percent specify Martin Luther King's birthday as a paid holiday, up from 9 percent in 1986.

The "Collective Bargaining Negotiations & Contracts" survey, a product of the Bureau of National Affairs, found that the number of contracts that recognize the third Monday in January as a federal holiday has already surpassed the 10.5 percent that observe Columbus Day.

The survey found the King holiday observed as a paid holiday in 15.5 percent of nonmanufacturing contracts and 8.6 percent of manufacturing agreements.

Jobless rate stays high despite more part-timers

Continued from Page 1

earner families to provide adequate purchasing power, he said. The rest is an effort by married women to replace incomes lost because their spouses have lost jobs in the stagnating industrial sector.

Commissioner Janet L. Norwood of the Bureau of Labor Statistics told the congressional Joint Economic Committee that she was "concerned" about the rising number of people in the ranks of those involuntarily working part time.

And Calvin George, executive director of the National Committee for Full Employment, called the situation "particularly alarming." The real rate of joblessness and underemployment last month, he said, was 12.3 percent. That's an increase of one-tenth of 1 percent over the previous month, George emphasized, and underscores the "underlying weakness of the economy."

Oswald pointed out that most of last month's job growth was concentrated once again in services. Since February 1986, the number of jobs in this sector of the economy—where pay scales are at or near the minimum wage and where much of the part-time work can be found—has increased nearly 2.2 million.

Factory jobs lost

This contrasts starkly with the virtual lack of change in industrial employment over the month, due largely to the continued hemorrhaging in the nation's foreign trade deficit. There were 73,000 fewer manufacturing jobs in February than in the same month a year ago. And the mining sector, which includes the price-battered oil and gas industry, experienced a drop of 153,000 jobs in the 12-month period.

Since the Reagan Administration took office in 1981, the nation has experienced a net loss of 949,000 manufacturing jobs and 412,000 jobs in mining, oil and gas extraction.

In that same period, service sector employment has increased more than 10.1 million.

In other economic developments:

- Two of the nation's largest rubber makers—B.F. Goodrich Co. and Firestone Tire & Rubber Co.—disclosed plans to phase out operations at plants in four states.

The action, which was blamed on the continuing pressure of low-cost imports, will eliminate the jobs of nearly 4,000 workers, most of them members of the Rubber Workers.

Firestone will shut down tire plants in Des Moines, Iowa, Bloomington, Ill., and Oklahoma City, Okla. The closings will affect 3,000 workers—nearly one-third of the present workforce—leaving only 1,500 URW members at a Decatur, Ill., tire plant and 250 at an inner tube plant in Russellville, Ark. The company also has a non-union tire plant in Wilson, N.C.

Goodrich will phase out the manufacture of aircraft tires, missile and marine products and molded rubber products at its Akron, Ohio, plant, idling nearly 800 employees.

- General Motors Corp. announced it will close its Norwood, Ohio, plant at the end of August—almost a year earlier than originally announced.

The giant automaker said it would cease production of the Chevrolet Camaro and Pontiac Firebird at the end of the current model year. The decision will cost the jobs of nearly 4,000 Auto Workers. The company rejected UAW proposals for cost-cutting steps to avert the shutdown.

- New orders for durable goods nosedived 7.5 percent in January, the largest decline in nearly seven years. The last previous record was the 8.2-percent plunge in May 1980.

Economists were pessimistic about the figures, calling them an early signal of weak capital spending for the rest of the year. The decline followed a 1.5-percent increase in December and a 5.1-percent jump in November.

Testing for honesty: 'How much have you stolen?'

Polygraphs aren't the only form of "lie detector" tests that employers use to intimidate workers and screen job applicants.

Increasingly, employers are turning to written attitude tests that are supposed to measure "honesty." These depend on psychology to detect potential security risks, instead of measuring physiological responses such as sweating or blood pressure. They're at least as unreliable.

A labor movement that views the long campaign against polygraph testing by employers as finally winnable is closely watching the tilt to attitude testing. There are both differences and similarities.

Administering a polygraph test has a physical resemblance to an electric-chair execution and costs an employer upwards of $40 each.

It's cheaper—only about $10 a head—for an employer to buy a written attitude test that promises to screen out "high risk" workers who give the wrong answers to questions that are supposed to measure degrees of honesty.

According to a recent Wall Street Journal article, some 2.5 million such tests were administered to job applicants last year, with retailers the biggest customers. Testing firms expect to do about 30 percent more business this year.

One commonly used test disqualifies about 25 percent of job applicants, but few ever learn the real reason they weren't hired. The test is presented as just another bit of paperwork required in connection with a job application.

Not foolproof

Even the test makers concede that the screening isn't foolproof, that some honest people are disqualified and some crooks get by. But that doesn't keep the testing firms from making sweeping generalizations.

A vice president of the Chicago-based Reid Psychological Systems was quoted in the WSJ article as concluding that people applying for fire fighter and pharmacist jobs are more likely to steal from their employers than those in some more mundane occupations.

Fire Fighters President John A. Gannon is outraged at what he considers a "gross slander" of workers to whom "danger and death are constant companions."

He pledged a campaign to challenge the "spurious psychology" behind the tests being sold to employers and to protest the infringement on civil liberties.

Tests on which job hiring decisions are made are supposed to reveal when an applicant is fudging the truth by giving an answer that he thinks the employer wants to hear.

One test asks whether an applicant agrees that "stealing from an employer is different from stealing from friends." Another asks, "How much have you stolen from past employers?" Some people trip up on that by assuming that they wouldn't be believed if they denied any past misconduct.

Michael Tiner, government relations director of the Food & Commercial Workers, anticipates that some employers will insert test questions to probe into a job applicant's attitude toward unions.

But whether conducted by polygraph devices or through written questions, he said, "all of these tests are psychological rubber-hose treatments by employers to intimidate people."

Meanwhile, conventional polygraph devices came under sharp criticism at House hearings on legislation to ban their use by nearly all private employers.

Evidence not credible

Dr. John F. Beary of Georgetown University's School of Medicine said polygraphs are merely an "excitement detector" that in an employment setting does not provide credible evidence as to whether an individual is telling the truth.

Other academic experts testified along similar lines. But Assistant Atty. Gen. Steve Markman told the House Subcommittee on Employment Opportunities that the Justice Dept. opposes legislation to limit polygraph use and will urge President Reagan to veto any polygraph curb that passes Congress.

A somewhat amended bill to restrict polygraph use passed the House in the last Congress but did not come to a vote in the Senate. This year's bill, introduced by Rep. Pat Williams (D-Mont.), already has 140 co-sponsors.

Sandinistas jail two top officers of seamen's union

Nicaragua's Sandinista government has launched a new labor crackdown with the arrest of two officers of the Bluefield Seamen's Union, the AFL-CIO's American Institute for Free Labor Development reported.

Union President Dennis Britton and Sec. of Organization David Williams were taken into custody in Managua by state security police, according to a report from the Confederation of Trade Union Unity —CUS.

The whereabouts of the two union officials is unknown, and requests by a labor attorney to communicate with the prisoners were denied.

AIFLD Executive Director William C. Doherty indicated the arrests could be linked to a Sandinista takeover of the seamen's union two weeks earlier. At that time, an election meeting ordered by the Ministry of Labor was dominated by Sandinista officials who voted out the current officers and elected new ones.

Trumped up charges

Doherty expressed concern that the Sandinista regime would trump up "financial corruption" charges against the ousted union officials. The same technique was used several years ago in a government-inspired takeover of the Port Workers' union in Corinto.

CUS General Sec. Alvin Guthrie has notified the Inter-American Regional Organization of Workers—ORIT—the Western hemisphere arm of the International Confederation of Free Trade Unions, of the newest crisis in Nicaragua.

In the past, ORIT and the ICFTU have protested repeated Sandinista violations of trade union rights.

Air Line Pilots pick up Carolina-based carrier

Charlotte, N.C.—Pilots of CCAir, a regional carrier based in Charlotte, chose the Air Line Pilots as their bargaining representative in an election conducted by the National Mediation Board.

The new bargaining unit consists of 140 pilots. CCAir serves communities in Virginia, West Virginia, North Carolina, South Carolina, Georgia and Florida.

Not identical twins

A much-touted "maquiladora" program that was supposed to set up "twin plants" on either side of the U.S.-Mexican border to provide an equal number of jobs for workers in both countries is a failure, President Victor Munoz of the El Paso, Tex., AFL-CIO tells a protest rally. He pointed out to demonstrators at a trade show designed to lure American plants across the Rio Grande that the program has created 85,000 jobs in Juarez, Mexico, while the El Paso "twins" employ only 5,000 American workers.

Workfare plan misses reform goals

Recipients lacking opportunities for needed job training

Welfare recipients should be helped to gain the training and education they need to get decent-paying jobs, not pushed into a punitive "workfare" program, the AFL-CIO and the State, County & Municipal Employees insisted at Senate hearings.

Most people on welfare want to work for a living, AFSCME President Gerald W. McEntee told a Senate Finance subcommittee. But they often need skills they don't have and support services such as family health care, transportation subsidies and child care services in order to take advantage of training and job opportunities.

A strong federal commitment to such services is essential to effective welfare reform, McEntee stressed.

AFL-CIO Legislative Director Robert McGlotten said welfare reform should also include more adequate public assistance for those unable to work and supplemental benefits for the working poor, whose earnings aren't enough to lift them out of poverty.

A lack of jobs paying a living wage is a big part of the nation's poverty problem, he reminded the Senate panel. Even a small family can't make ends meet at the $3.35-an-hour federal minimum wage, McGlotten noted.

Any consideration of means by which families can achieve financial independence has to include a rise in the minimum wage, his statement insisted. It must also "address the sorry state of the unemployment insurance system, which provides payments to just a third of the unemployed workers."

Ingredients for success

A successful program needs trained career counselors who have a realistic knowledge of the labor market, and are given the resources to do their jobs, McGlotten said.

He emphasized that remedial basic education is a necessity in today's job market for persons who have not finished high school. And for those with a basic education, the goal should be "acquiring marketable job skills through training programs which lead to decent jobs."

Employment and training programs should be available to all who need them, McGlotten said, and not limited to long-term welfare recipients or restricted to arbitrary age groups.

McEntee told the Senate panel that AFSCME supports the concept of subsidized jobs "that give participants employee status with wages, benefits and rights equal to those of comparable nonsubsidized employees." But work should be an opportunity, not a punishment, he stressed.

Replacing regulars

He expressed concern also at the persistent problem of public employers using workfare as a source of cheap labor to replace regular employees.

McEntee cited as an example of such substitution the aftermath of the layoff last year of a group of city workers in Lackawanna, N.Y. He presented an affidavit from one of the laid-off workers who, after his unemployment insurance ended, was forced to apply for welfare.

Under the "workfare" requirements, he was assigned to a part-time job at City Hall where he worked for the same foreman and did the same janitorial and maintenance work as when he was a city employee.

That isn't welfare reform, McEntee stressed.

IAM wins gains in Rohr settlement

Riverside, Calif.—Ratification of a new three-year contract ended a nine-day strike of 4,600 Machinists at Rohr Industries here and in nearby Chula Vista.

The settlement with the airplane parts manufacturer provides lump-sum payments equal to 10 percent of pay in the first year and 6 percent in each of the remaining two years.

The IAM also won agreement to fold cost-of-living adjustments averaging 52 cents into base rates. In the future, workers will receive quarterly COLA payments of one cent for each rise of three-tenths of 1 percent in consumer prices.

Minimum rate ranges in lower job classifications will be raised as much as 40 cents an hour, and maximum pay rates in all job grades will go up by 71 cents.

The new contract also increases monthly pension benefits from $20 to $24 for each year of service, provides full employer payment for preferred provider option health care, increases the lifetime major medical maximum from $250,000 to $1 million, and raises life insurance coverage from $10,000 to $15,000.

The agreement, which runs to Feb. 11, 1990, also establishes a voluntary nonregular workweek, which will give employees some flexibility in the scheduling of their working hours.

As Oklahoma unionists fill the state capitol gallery, members of the House of Representatives vote down "right-to-work" amendment.

Oklahoma House kills move to make union shop illegal

Continued from Page 1

counter the RTW committee's lavish media expenditures, labor concentrated on letter writing and lobbying efforts that helped turn the tide.

Freeman said the victory was forged by the "determination of Oklahoma workers to win this battle," aided by "the strongest pro-labor legislators anywhere in the country."

He also credited the efforts of AFL-CIO COPE Director John Perkins and Director Robert M. McGlotten and Mike Gildea of the federation's Dept. of Legislation for help in mobilizing the grass-roots effort.

There were small signs, as early as last December, that the anti-labor forces were losing some of their clout. For the first time in more than two decades, the State AFL-CIO was invited to join political and civic leaders in a newly revived Oklahoma Academy for State Goals to deal with the state's urgent need for economic revival.

At that time, incoming Gov. Henry Bellmon (R) bluntly told the 400 leaders from around the state that "right-to-work" would not be "a cure" for Oklahoma's deepening economic crisis resulting from mounting unemployment, declining oil and gas revenues, tumbling farm prices and a rash of bank failures.

With organized labor now an active partner, the academy is focusing on development of a five-year plan to revitalize existing industry and attract new companies through public and private financing.

Although the "right-to-work" dispute remains a potentially divisive issue, Freeman warned, it can be overcome if Oklahoma makes "labor-management cooperation the key to economic development" in the state.

In New Mexico, meanwhile, the National Right to Work Committee launched a new effort to save face after losing its earlier compulsory open-shop fight in the House of Representatives.

RTW supporters introduced a "local option" bill in the state Senate, allowing counties to do what the legislature rejected —enact anti-union laws on their own by referendum.

Flight Attendants want job safety standards

The Flight Attendants called for national safety standards to reduce the risk of injury caused by moving heavy or malfunctioning food and beverage carts aboard commercial airliners.

In a petition to the Federal Aviation Administration, AFA cited a report by the National Transportation Safety Board that the 1981 death of a World Airways attendant resulted from a chronically malfunctioning cart.

The union also pointed to a study showing that flight attendants have the highest incidence of occupational sprains and strains of any type worker. AFA said the situation is so critical that there is a danger of at least one such injury occurring daily throughout the industry.

Fashion designer fined for pay gouging

New York—A prominent fashion designer and clothing manufacturer was fined $10,000 after the State Labor Dept. found her guilty on ten multiple counts of illegal homework.

The action against Norma Kamali climaxed a 30-month investigation triggered by a complaint filed by the Ladies' Garment Workers. The union hailed the decision as a major step toward halting the spread of garment sweatshops.

Said Samuel Byer, manager of ILGWU Local 89-22-1, which brought the original charges: "We are gratified that the department has acted against these flagrant violations of labor law. It is shocking that a designer as successful as Kamali employs illegal homeworkers for sub-minimum wages."

The department held that Kamali broke the law by producing her high-priced gowns, bathing suits, jewelry and other fashion lines on an extensive scale in the basements and living rooms of the homes of immigrant and minority women.

The fine was the largest ever imposed on a single employer for violating the state ban against industrial homework.

The action corroborated the ILGWU's charges that Kamali's homeworkers earned as little as $2 an hour and were required to work far into the night. In many instances, the department found, the women's underage children were pressed into service to produce Kamali's garments. The workers complained that they had no medical benefits and were denied such statutory protections as unemployment insurance and workers' compensation.

Illegal practice

Homework is illegal in the apparel industry under both federal and state regulations. It has been banned for nearly half a century because experience has shown that minimum wage, maximum hours, child labor and other worker standards can't be enforced when industrial piece work is done in the home.

The state's action comes at a time when the U.S. Labor Dept. is proposing to lift the 45-year ban on homework in six industries—women's apparel, jewelry, gloves and mittens, buttons and buckles, handkerchiefs and embroidery.

The Reagan Administration defends its plan on the ground that employers who hire homeworkers have pledged to meet minimum wage and overtime requirements. But organized labor has been fighting the move, insisting that these safeguards can't be enforced in an industry that hasn't changed its exploitative tactics in the last century.

The state's action in imposing a stiff fine on Kamali comes on the heels of the disclosure that abuses of the law aren't limited to urban ghettos. U.S. Labor Dept. investigators uncovered the cheating of Iowa farm women out of nearly three-quarters of a million dollars in minimum wage and overtime pay by Bordeaux Inc. The New York case is certain to add further weight to labor's campaign to retain the ban on homework.

Meanwhile, ILGWU Local 89-22-1 continues its picketing of Norma Kamali's 56th St. flagship store and her newly opened outlet in Soho.

The picket lines were set up last November, pressing Kamali to agree to produce her apparel in union contracting shops to ensure that the work is done under decent conditions.

Costs soar

Senior Citizens need expanded health care

Legislation pending in Congress to include catastrophic health insurance under Medicare must be enlarged to provide financial protection against the costs of community-based treatment and home health care as alternatives to nursing home care, the AFL-CIO told Congress.

Karen Ignagni, assistant director of the federation's Dept. of Occupational Safety, Health & Social Security, warned a House Ways & Means subcommittee that the elderly face "financial ruin" from long-term illness under the present Medicare system. And they can't qualify for Medicaid unless they "virtually pauperize themselves."

Catastrophic medical expenses affect only a small segment of the retiree population, Ignagni pointed out, but the threat of resulting economic devastation is "uppermost in the minds of elderly citizens."

Under the existing system, seniors requiring long hospital stays and repeated physician services incur out-of-pocket expenses greatly exceeding what either Medicare or private supplemental plans cover, she explained. That's because Medicare was patterned after basic insurance packages in existence in the early 1960s which covered only short-term acute care.

Since then, Ignagni said, rising health care costs, gaps in covered services and changes in medical practice have resulted in the elderly "now having to pay more out of pocket as a percent of income than they did prior to Medicare's enactment."

Financial drain

Elderly couples currently pay a $430 annual premium for physician services, and each spouse is hit with a $75 deductible and a 20-percent copayment for care beyond that point. In addition, they face steep copayments and an arbitrary cutoff of benefits after 120 days in the hospital.

The AFL-CIO endorsed pending legislation to eliminate the copayments and lift restrictions on the number of days of hospital care. The bill would also limit the out-of-pocket burden on Medicare beneficiaries to a single, annual deductible indexed to the social security cost-of-living adjustment. "This will protect beneficiaries from having to absorb any future increase in the deductible which far exceeds their ability to pay," Ignagni told the subcommittee.

The federation also supported the bill's provisions that would remove the present "arbitrary" cutoff of payment for hospice care after 210 days, ease copayment requirements for skilled nursing home care and set a cap of $1,000 on what the elderly must pay for doctors' services.

But Ignagni emphasized labor's opposition to the bill's provision that would impose income taxes on the value of Medicare benefits, the same way that some portions of social security benefits are subject to taxation.

Dangerous precedent

"Unlike social security, where individuals receive cash payments, beneficiaries may or may not incur health care costs," she explained. For that reason, the subcommittee was told, taxing the value of such benefits would be "a precedent for taxing fringe benefits provided to individuals in the workforce."

Organized labor "recently fought and won a tough battle to preserve the tax-free status of health care benefits," many of which result from collective bargaining, Ignagni reminded Congress, "and would strongly oppose introducing that concept" into Medicare.

As an alternative, the federation proposed a credit to low-income seniors, similar to the earned-income tax credit for low-income single parents. This would give a full credit to households with incomes below the poverty line and would phase out gradually as adjusted gross income increased.

Brazil's workers bear brunt of international debt burden

A Brazilian trade union leader told the Senate Subcommittee on International Debt that oppressive interest payments and austerity measures demanded by the International Monetary Fund will jeopardize his nation's fragile democracy and plunge millions more into poverty.

Roberto Santiago, president of the Sao Paulo state federation of Brazil's General Confederation of Workers, had been invited to testify by Subcommittee Chairman Bill Bradley (D-N.J.). Santiago was accompanied by AFL-CIO Associate Legislative Director Peggy Taylor as he explained how Brazil's debt burden is crushing the hopes for a better life of its workers.

The AFL-CIO Executive Council last month expressed concern that heavy debt repayment obligations are forcing "harsh austerity programs that impose more hardship on the working men and women of Latin America and the Caribbean."

Workers didn't cause the debt crisis, and "it is unjust to expect them to resolve it through a drastic decline in living standards," the council declared. It said the debt plan advanced by Bradley "comes closest to displaying the sensitivity and common sense that should characterize U.S.-Latin American relations."

Bradley's plan would cut the annual interest rate and forgive a portion of the outstanding debt.

Santiago told the Senate panel that "no democracy can survive hunger, misery, poor education, poor health and lack of housing."

Just paying the interest on its foreign debt has absorbed 40 percent of the value of Brazil's exports of goods and services, he noted.

Unacceptable cost

Santiago testified that the conditions demanded by the IMF for renegotiation of Brazil's debt would carry an unacceptable cost in "hunger and misery." It would render it "impossible to honor the obligations of the country's social debt," which he stressed is necessary for the preservation of democracy.

During the past four years, he noted, Brazil paid $48 billion in interest payments while receiving only $11 billion in new loans—incurred for projects in which workers had no say.

Santiago said Brazil's unions support that government's decision to declare a moratorium on repayment of the foreign debt until it can be done without adding to the poverty and misery of the people.

Bradley noted at the start of the hearing that U.S. exports to Latin America have plunged because the burden of debt repayment has made former customers unable to buy U.S. goods.

White House gets veto-proof asbestos bill

A labor-backed asbestos cleanup bill the Administration didn't want passed is on President Reagan's desk. And a highway and mass transit bill that has brought veto threats from the White House is near final approval by Congress.

The Administration wanted Congress to rescind funds it had voted for grants and loans to help school districts pay for removal of potentially deadly asbestos insulation.

It claimed the money wasn't needed because the amount of asbestos in schools has been "greatly reduced."

Instead, the House and Senate passed a labor-endorsed resolution directing the Environmental Protection Agency to start processing applications from school districts so that removal projects can be completed this summer, when most schools are unoccupied.

The resolution passed both bodies by voice votes, with no opposition expressed.

Meanwhile, the time for Congress to approve the recission request has expired. EPA had used it as an excuse to put off action on funding applications.

Last year, a union-led campaign brought passage of a bill to compel EPA to set standards for safe removal of asbestos from school buildings. Bungled removals by untrained persons constituted a major health threat, especially to maintenance workers in school boiler rooms.

The highway bill has been hung up by a dispute between the House and Senate over repeal of the 55-mile speed limit now required as a condition for states to receive federal funds. The Senate, but not the House, had voted to raise the limit to 65 miles an hour.

House conferees agreed to a separate vote on the issue, and the Senate side agreed to abide by the House vote. Other differences were expected to be quickly resolved, clearing the way for final passage. The bill includes labor-supported mass transit funding substantially above the amount sought by the Administration.

Bayard Rustin denounces anti-labor policies of Coors Brewery.

Frontlash members and supporters applaud after beer pitcher brigade moved boycotted product from New York bar to the city sewers.

Coors gushes down New York drains

Frontlash mobilizes labor's boycott on college campuses

New York—Chanting "out of the bars and into the sewers," scores of Frontlash volunteers, college students, union members and sympathizers poured Coors beer down the drain to support labor's boycott of the anti-union Adolph Coors Co.

The demonstration climaxed a statewide college conference at New York University sponsored by Frontlash, the youth support group of the AFL-CIO.

Robin Gold, New York Frontlash director, said the group plans to have "a coordinator on every college campus in New York State and we will fight Coors glass by glass until we win."

The action had the blessing of the management of Googie's, a Greenwich Village bar, which became the first drinking establishment in the city to discontinue sales of Coors beer.

The federation began the Coors boycott in 1977, after members of Brewery Workers Local 366 struck the Colorado firm over issues of human dignity.

The beermaker had subjected its workers to forced search and seizure, and mandated "lie detector" tests in which employees were questioned about sexual, political and religious preferences.

The state boycott was uncapped after Coors began distribution in New York. College student participation has been a major factor in a number of other states. In California alone, the boycott reduced Coors' share of the market from 50 percent to 14 percent.

Network established

Over 100 students, professors and union members from 18 colleges attended the conference, and boycott contacts have been made on over 30 campuses throughout the state.

Conference speakers included David Sickler, national AFL-CIO boycott coordinator; Bayard Rustin of the A. Philip Randolph Institute; Damaso Seda of the Labor Council for Latin American Advancement; Sec.-Treas. Ted Jacobsen of the New York City AFL-CIO; Harry Avrutin of the New York Union Label Trades Dept., and representatives of Frontlash and the Student Association of the State University of New York.

The federation's nationwide boycott has won support from numerous student, civil rights, religious, women's and environmental groups because of the Coors family's political beliefs and activities.

Joseph Coors is a major funder of such organizations as the Moral Majority, the John Birch Society and Phyllis Schlaffly's Eagle Forum and helped establish the right-wing Heritage Foundation.

The company has a long history of discrimination based on race and gender, and it took a 1965 suit filed by the Equal Employment Opportunity Commission to force the firm to change its hiring practices.

Besides Coors beer, the brewery makes Golden Lager, Killians Irish Red and Herman Joseph's 1868.

Unions expand community services as caseload jumps threefold in year

Labor's community services network aided thousands of families last year, providing food, shelter, job search assistance and counseling.

In its annual survey, the AFL-CIO Dept. of Community Services found that more than 750,000 people received help ranging from emergency shelter and health care to legal and financial counseling, up from 260,000 in 1985.

The community services activists—working in 188 cities and 37 states—are mostly employed by labor agencies or maintain liaison with the United Way and Red Cross. Services also are provided through programs established by state and local central bodies.

Some examples of labor's "good neighbor" policy cited by Community Services Director Frank Emig:

The Buffalo AFL-CIO organized a coalition of local unions, hospitals, health insurers and social agencies to meet the health care needs of area unemployed and uninsured families. The program provides emergency care, consultations, medication and inpatient hospital services free of charge to needy families through 300 doctors, 168 pharmacies and 11 hospitals.

In Atlanta, building trades workers installed window locks for elderly residents. Volunteers from five unions in Green Bay, Wis., built a playground at the local Boys & Girls Club.

A bit farther from home, Fire Fighters from Miami traveled to El Salvador after earthquakes leveled parts of the city, leading search teams and rescuing victims trapped under rubble.

Strike aid

Food banks and other emergency aid for members of the Service Employees during their nearly three-month-long strike against Kaiser Permanente in California were organized by community service workers in four cities and three counties. And Steelworkers who were locked out by USX Corp. for nearly six months and other jobless workers and their families turned to food bank operations in Mobile, Ala., Cleveland, Ohio, Johnstown, Pa., and other cities for help. Nearly 450,000 calls for food—the greatest number of requests—were met last year, the community services report noted.

Of those cities reporting, community services representatives counted more than 43,000 requests involving financial aid, 19,022 seeking housing, 15,197 on health care problems, 14,736 requesting education aid, 122,222 on employment-related problems and nearly 29,000 dealing with workers' compensation claims.

In addition, a network of union counselors, trained under labor agency programs, offered assistance and referrals to union members on drug and alcohol abuse, consumer credit and stress and provided counseling for Vietnam veterans. Union counselors attend an 8-to-12 week basic training course, followed by special instruction in specific areas including workers' compensation, disaster aid, energy assistance, public aid and other concerns.

The Red Cross Disaster Coastline Project was expanded last year, with a total of 138 local union halls participating in the emergency program. The local halls are specially equipped with telephone and electrical lines and are used as Red Cross command centers during floods, hurricanes and other disasters.

Blood drive

Another Red Cross-labor initiative is a nationwide blood drive aimed at increasing the number of union donors, especially during January and August when blood supplies fall dangerously low. Spearheaded by Service Employees President John Sweeney, the campaign is in full swing in 43 cities.

The Dept. of Community Services conducted a series of national and regional meetings and spearheaded sessions on employee assistance programs, pre-natal care with the March of Dimes, and drug and alcohol abuse. The department also continued its partnership with the Human Resources Development Institute—labor's employment and job training arm—and participated in an HRDI-sponsored conference on training last December.

GOP gains Zorinsky's Senate seat

The Senate seat left vacant by the death of Sen. Edward Zorinsky (D-Neb.) will go to a Republican businessman, but the shift of parties is likely to have a minimal legislative impact.

Nebraska Gov. Kay Orr, a Republican, chose David Karnes, 38, to serve the two years remaining in Zorinsky's term. She picked Karnes, who was active in her successful election campaign last fall, over several better-known contenders for the appointment.

Zorinsky, 58, was a Republican and the mayor of Omaha when he switched parties in 1976 after failing to get the Republican nomination for Senate. He then won nomination and election as a Democrat, but voted against labor's position on most issues.

By COPE's scoreboard, Zorinsky voted "right" on 62 key votes during his 10-year tenure and "wrong" in terms of labor's position on 124 votes.

The party switch changes the Senate lineup to 54 Democrats and 46 Republicans.

Yer out!

Boston—Coors beer has struck out at Fenway Park, and it won't be in the refreshment lineup when the Boston Red Sox open their 1987 season.

A group of heavy hitters—including State AFL-CIO President Arthur Osborn, Boston AFL-CIO Sec.-Treas. Joseph W. Joyce and President Dominic Bozzotto of Local 26 of the Hotel Employees & Restaurant Employees—teamed up to keep Adolph Coors Brewing Co.'s product out of the ballpark.

Backstopping their efforts was City Councilor David Scondras, who steered a resolution through the council last year supporting the AFL-CIO's ten-year-old boycott of the anti-union brewer based in Golden, Colo. Harry M. Stevens Inc., which runs the Fenway Park concessions, agreed to the ban.

Guild President Perlik to retire after 9 terms

Newspaper Guild President Charles A. Perlik announced that he will retire when his term expires next October and will not seek a 10th term as president.

Perlik, 63, has been an executive officer of the 34,000-member union for 32 years. His 18 years as president is the longest tenure in the Guild's 54-year history. Before his election to the presidency, he served 14 years as secretary-treasurer.

Perlik has been active in freedom of the press activities, in this country and around the world. He is a member of the executive board of the World Press Freedom Committee and he served as head of an AFL-CIO committee that raised funds to aid employees of Nicaragua's famed La Prensa newspaper after it was shut down by the Sandinista government.

Unions entitled to details about dual operation

Richmond, Va.—A paving contractor must hand over to the unions representing its workers pertinent corporate information regarding double-breasted operations, a federal appellate court ruled.

The 4th Circuit U.S. Court of Appeals upheld a National Labor Relations Board decision ordering Corson & Gruman Co. to give the Metropolitan D.C. Paving, Highway & Construction Materials Council information about its corporate structure, finances, personnel and operations.

The council, made up of Operating Engineers Local 77, Laborers Local 456, Cement Masons Local 891 and Local 693 of the unaffiliated Teamsters, filed unfair labor practice charges after the company, based in Jessup, Md., refused a request for the information.

Council officials were investigating members' reports in March 1984 that a nonunion firm—Prince George's Contractors—was doing Corson & Gruman work at some locations. In October 1984, they learned the company was going out of business and its plant would "be under" General Paving, a nonunion Virginia firm. Both Corson & Gruman and General Paving, the court found, were owned by CG Enterprises, a holding company.

The NLRB had upheld an administrative law judge's order that the company disclose the information to the unions. On appeal, the court held that the unions' burden of proof that they needed the information is relatively light. They must only show a probability that the requested information would be useful in helping meet their statutory obligations to represent members.

On the losing end

Off-the-wall claims that the nation's raging foreign trade deficit is the fault of American wage scales got dealt a crippling blow by Labor Dept. findings that labor costs in West Germany, Switzerland and Norway are higher than those in the United States.

The department released a study detailing the average hourly cost per worker—a figure that includes fringe benefits, social security contributions and actual wages.

The data showed that the cost for the average American industrial worker was $13.09, compared with $13.44 in West Germany, $13.37 in Switzerland, and $13.17 in Norway. And workers in Belgium, at $12.85 an hour, were rapidly closing the gap. Their cost was 98 percent of that for an American worker.

And the gap in favor of overseas workers has widened since the study was made because the international value of the dollar—the basis for the comparison—has continued to go down. In fact, it's dropped another 15 percent in recent weeks.

American workers, it would appear, are not only losing their jobs because of the trade imbalance, they're also losing the economic edge they once enjoyed over workers abroad. According to government economists, more than 22,500 U.S. jobs are wiped out by each $1 billion shortfall in the trade deficit. Last year, the nation's trade gap totaled $170 billion—the worst on record.

Lockout continues despite shipyard contract progress

Seattle—Unions representing workers locked out four months ago by Lockheed Shipbuilding Co. reported some progress was made on noneconomic items in bargaining sessions with the company, but Lockheed refused to allow the workers back.

Last month, Gov. Booth Gardner signed a lockout compensation bill granting the 685 locked-out workers the right to collect unemployment benefits. Most workers are receiving benefits of about $195 a week.

Nate Ford, president of the Seattle Metal Trades Council, said the company returned to the bargaining table because "they are aware we represent the most skilled craftsmen in the Northwest." Lockheed has hired about 450 scabs since the lockout.

Lockheed barred its union workers from the shipyard last Nov. 17 after they rejected a contract imposing severe wage and benefit cuts.

Meanwhile, in Portland, Ore., the National Labor Relations Board's regional office charged Dillingham Ship Repair with failing to bargain in good faith and with unfair labor practices by unilaterally instituting a wage-slashing final offer last Oct. 13.

The complaints were brought by the Portland Metal Trades Council, Boilermakers Local 72 and Plumber & Pipefitters Local 290.

Data withheld

The NLRB said Dillingham refused to supply the unions with information on its proposed new health and pension plans, a proposed skill-rating system and the anticipated savings from the proposals. Further, the NLRB said no impasse existed when the shipyard instituted its final offer and that Dillingham did not allow the unions "adequate opportunity to negotiate."

Mike Fahey, executive secretary of the Portland Metal Trades Council, called on Dillingham to begin "meaningful negotiations" with the unions, noting that the NLRB complaint gives the firm until Mar. 26 to "remove the cause of the charges." Otherwise, a hearing will be held May 27 before an administrative law judge.

San Francisco opens regional parleys

The first of four 1987 AFL-CIO regional conferences will be held in San Francisco Mar. 20-21 and features workshops and open discussion sessions.

Sec.-Treas. Thomas R. Donahue, who is the keynote speaker for the opening session, will lead a workshop on foreign trade. Other workshops cover the federation's political participation process for 1987-88, budget deficits and human needs.

The San Francisco regional conference is for union representatives in California, Alaska, Arizona, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. Regional conferences are also slated for New York, Apr. 10-11; Chicago, May 29-30 and New Orleans, June 5-6.

Action pledged for victims of plant closings

Continued from Page 1

a plant closing task force appointed by Labor Sec. William E. Brock.

"We are encouraged to see that the Administration proposals recognize the need for helping the victims of economic change," Donahue said.

But he reiterated labor's dissent from the Administration's desire to end the separate Trade Adjustment Assistance program that triggers additional job training opportunities when a cutback or closing is the result of increased imports. "We are opposed to that," Donahue declared.

Bahr, testifying for the CWA, noted that shutdowns and layoffs affect every type of worker, not just those in basic industries.

The economic, trade and tax policies that have undermined basic industries are "poised like a dagger" at workers in the high-tech "industries of the future," Bahr warned.

The telecommunications industry is now dominated by multinationals, Bahr said, with the ability to move capital and technology around the world.

"Today, not a single residential telephone is made in America," he testified.

Continuing cutbacks

Bieber pointed to the General Motors announcement of 11 plant closings affecting 29,000 workers as an example of what is still happening despite the heavy cutbacks of past years.

Displaced workers are jobless twice as long as other workers, he noted. Most are forced to take pay cuts when they get new jobs and often can only find part-time work. Yet "at a time when plant closings and economic dislocations have increased, the federal government has cut back on adjustment assistance," Bieber noted.

Metzenbaum's opening statement on the need for legislation termed the $980 million proposed for training and assistance programs "a wise investment in human capital."

"Whether these American workers are victims of employer flight to foreign countries, pawns in the financial maneuvering of greedy Wall Street takeover tycoons, or casualties of our growing inability to compete in the global economy, we must help them secure retraining and job placement assistance," he said.

CORRECTION

A resolution to bypass Congress and summon a constitutional convention to initiate a balanced budget amendment passed the Montana House—not the New Mexico House, as erroneously reported in the Mar. 7 AFL-CIO News. The Montana Senate has not yet acted on the labor-opposed resolution.

Rosina Tucker dies at 105, union, civil rights pioneer

Rosina Tucker, a pioneer in trade union and civil rights campaigns who helped organize the Sleeping Car Porters, died of respiratory arrest Mar. 3 at Washington Hospital Center. She was 105.

In the late 1920s and early 1930s, Tucker worked with A. Philip Randolph in a nationwide organizing drive to form a union for black sleeping car porters who worked for the Pullman Co. In 1937, the union and Pullman signed a contract—the first between a major American company and a union of black workers. The union merged with the Railway & Airline Clerks in 1978.

Tucker became international secretary of the union's ladies' auxiliary, which she also helped to organize.

In 1982, she narrated the film, "Miles of Smiles, Years of Struggle," a documentary about her work with the union. She explained how the hard-fought gains of the sleeping car porters bolstered America's civil rights movement.

Her late husband, Berthea Tucker, was fired for his wife's union activities, according to Tucker. On learning of her husband's firing, she went to Washington's Union Station and confronted the Pullman Co.'s regional director. The following day her husband was back on the trains.

Funeral services were held Mar. 9 at the Fifteenth Street Presbyterian Church with burial at Harmony Memorial Park.

Honorary pallbearers included BRAC President Richard I. Kilroy and Sec.-Treas. D. A. Bobo, President Norman Hill of the A. Philip Randolph Institute and William Pollard, retired director of the AFL-CIO Dept. of Civil Rights.

Vanishing Jobs

AMERICA'S FUTURE, we are told, lies in high-tech industries. Concern over the loss of decent-paying production jobs is dismissed as clinging to the past or, worse, as "protectionism."

An ever-optimistic President Reagan points to communications technology as an example of a growth industry where "Americans are light years ahead of everyone else."

The view from the trenches is different, as the unions representing workers in telecommunications and other advanced technology industries can well testify. In fact they have testified, at congressional hearings and in every public forum where there is an opportunity to sound an alarm.

IF THE PRESIDENT has not heard the message, it is because he has chosen not to listen.

On his watch, a $27-billion trade surplus in high technology products in 1980 has been transformed into a $4-billion deficit last year.

AT&T's first foreign manufacturing venture dates only from 1985, when it closed down its Shreveport, La., plant at a cost of 4,000 jobs and began making telephones in Singapore. Today, almost unbelievably, not a single residential telephone is still made in America.

The home-grown computer chip industry is struggling to maintain a foothold in its home soil.

The fact is that the supposed industries of the future are being battered by the same trade policies—or lack of policies—that have so seriously weakened older industries. How often must the same lesson be painfully repeated?

We cannot all make a living selling each other products that this country no longer produces.

A Budget for America

THE BUCK stops here on Capitol Hill. It is our hope that this Congress will look at the whole range of the nation's real needs and reassess what the federal government has been doing—and what it ought to be doing—to meet those needs.

It is not possible any more to concentrate exclusively on half of the government's constitutional responsibility—"to provide for the common defense"—while ignoring the other half—"to promote the general welfare."

For the seventh time, this Administration has submitted budget proposals that would expand defense spending while further weakening all other government functions, starving and crippling the social and economic side.

Whether Ronald Reagan believes it or not, this country needs a government that does the whole job of government, and does all of it well.

IT NEEDS government employees with the skills and the professionalism, morale and dedication that go with decent pay, decent respect and reasonable job security.

It needs coherent social and economic policies, as well as a military policy. It needs budget and revenue structures that permit Congress to make rational choices while reducing the national deficit.

There has to be an end to such phony solutions as the Gramm-Rudman-Hollings Act. That's an evasion, not a solution.

The AFL-CIO calls on Congress to develop and shape a budget that reflects a realistic appraisal of the nation's domestic needs, international security needs and its need for deficit reduction.

It's time to find ways to defend ourselves in this dangerous world without stripping ourselves of everything worth defending, and without passing the cost to our children and grandchildren.

We urge this Congress to shape a program that demonstrates that Congress knows what government is for, even if the President does not.

—From testimony by AFL-CIO Sec.-Treas. Thomas R. Donahue at House hearings, Mar. 11, 1987.

Jobless insurance system not working for millions

By Press Associates

The idea of unemployment insurance when it was passed 52 years ago was simple, humane and apparently economically sound. It would provide the unemployed with a modest income so the family could meet its basic needs until the breadwinner found work again. And it would infuse purchasing power into the economy.

Today, the unemployment insurance program is a disaster. It is true there were basic flaws in the system when it was passed as the most urgently needed part of the Social Security Act of 1935. But the current crisis in the system is man-made, with the cutbacks and disqualifications of the past half-dozen years driven by tightfisted budgetmakers and perhaps even a meanness out of the fear that somebody might be getting something for nothing.

Labor has been almost alone over the years in lobbying on Capitol Hill for an adequately funded unemployment insurance system, with federal standards. Now more and more academic and independent researchers are producing reports which could lead to action in the new Congress.

The independent Center on Budget & Policy Priorities issued a report with data which may not be new to experts, but which should shock all decent Americans.

Lowest level

"In 1986 the percentage of unemployed workers receiving unemployment benefits reached the lowest level recorded in the program's history," the center noted. "Fewer than one out of every three (32.9 percent) jobless workers collected benefits in an average month last year." Some 5.5 million unemployed people were without jobless assistance in an average month in 1986.

Without mentioning the alleged "Reagan recovery," the center's report said "there were nearly as many unemployed workers without benefits in 1986 as in 1982, during the most severe recession since World War II."

The major causes of record low coverage were the continued high levels of unemployment and long spells of joblessness, along with federal and state cutbacks in unemployment insurance, the center pointed out. Although unemployment climbed above 7 percent in only seven months between the end of World War II in 1945 and 1980—other than the 1973-75 recession—"it has been at or above 7 percent for seven consecutive years from 1980 to 1986."

Link to poverty

The center's report cited academic research showing that the low coverage in unemployment insurance has significantly increased poverty, especially among the long-term unemployed.

Researcher Wayne Vroman of the Urban Institute found that the poverty rate before receipt of any government benefits was 17 percent for those unemployed less than 13 weeks. But for those out of work 52 weeks, the poverty rate before receipt of benefits soared to 60 percent.

The center said research by Sheldon Danziger and Peter Gottschalk of the Institute for Research on Poverty at the University of Wisconsin found "a disturbing relationship" between the unemployment system and poverty. They found the cutbacks in jobless benefits affected low-paid workers "with particular severity." Moreover, they found that other government benefit programs did not fill the gap.

The center said one reason so many unemployed workers receive no other government benefits is that one-half of the states choose not to provide cash aid under the Aid to Families with Dependent Children program where both parents are present but jobless. Thus once a worker's jobless benefits are exhausted, there may be nothing else available.

Last month, the AFL-CIO Executive Council pointed out that "the crisis in the UI system is no accident. The deepest cuts have come in the last six years." The federation called on the 100th Congress to reform, restore and strengthen the unemployment insurance system.

Placards tell the story as Government Employees from across the country arrive for a Capitol Hill rally in support of their union's legislative goals. Top, AFGE President Kenneth Blaylock leads the first contingent.

Federal workers bring message

Capitol rally pushes 'bill of rights'

Government Employees from across the country brought a message of anger and determination to Congress, marched behind union banners to an exuberant rally on Capitol Hill, and lobbied their home state congressional delegations for the AFGE's legislative program.

The program, designated the Government Employee Bill of Rights, calls for pay rates comparable to private-sector jobs and the end to Hatch Act restrictions on political rights of federal workers.

It asks "the full exercise of union rights" in the federal service, opposes mandatory drug and polygraph testing, seeks curbs on contracting out of government jobs, and demands a safe workplace.

It was adopted with shouts of approval by several thousand AFGE delegates at the Capitol steps rally and it formed the basis for testimony by union leaders at House hearings that day.

"Unity is power" was the trade union message on the placards carried on the march from the AFGE's new headquarters to Capitol Hill.

"We are one," the delegates chanted as the lines of marchers entered the rally area. AFGE President Kenneth T. Blaylock, the union's full executive board and members of Congress waved in welcome.

Outrage shared

"Brothers and sisters, you are not alone," AFL-CIO Sec.-Treas. Thomas R. Donahue declared. The rest of the trade union movement, he said, shares the AFGE's outrage at an Administration that "has grabbed at every chance to downgrade and scapegoat the people who keep the government working."

Later that day, labor's concern at the policies and budget proposals of the Reagan Administration would be expressed at hearings called by the House Subcommittee on Compensation & Employee Benefits.

Blaylock said federal workers have been shortchanged by years of pay freezes or pay adjustments that left them further behind the comparability level supposedly established by law. He urged a three-year catchup period of 7 percent annual pay raises to close the gap.

His testimony, covering the range of federal worker concerns, included case histories in which the government in its role as an employer has copied the worst tactics of union-busting private employers.

John F. Leyden, executive director of the federal/postal division of the AFL-CIO Public Employee Dept., protested the Reagan Administration's use of budget deficits to justify cuts in federal programs and in federal employee benefits.

Blame for the budget deficit rests on Reagan's weapons buildup, tax cuts for the wealthy and "bankrupt trade policies," not federal workers, Leyden stressed.

Donahue, who also testified at the House hearings, joined Blaylock and Leyden in calling for revision of the Hatch Act.

That law, dating from the 1930s, "has long since lost its original purpose of protecting federal workers from being coerced by their bosses into financing and supporting candidates of the party in power," Donahue said. "It has been turned upside down and is being used as a tool for the suppression of civil rights."

Many of the AFGE delegates stayed over for an additional day of lobbying and legislative briefings. AFGE Executive Vice President John N. Sturdivant told them that their work on Capitol Hill was merely "a beginning" of the union's grassroots efforts.

He urged them to go back to their workplaces, get their local unions affiliated with state AFL-CIO central bodies if they have not already done so, make sure that all members are registered to vote, and organize so that "we can finish the job."

SEIU chalks up major gains on organizing front

Innovative organizing techniques and election successes in the service sector added nearly 50,000 members to the ranks of the Service Employees in 1986.

The gains bring SEIU's membership in the United States to more than 768,000, compared with 719,000 in 1985. The union has an additional 85,000 members in Canada.

SEIU President John Sweeney said the union's organizing efforts actually added more than the 50,000 membership gain would indicate, but that layoffs in the public sector and the health care industry offset some of those successes.

In many instances, Sweeney said, the union bypassed the traditional National Labor Relations Board process in its organizing efforts. "We got recognition and contracts through a combination of economic and community pressure techniques, and it certainly proved less costly and time consuming than the traditional process," he explained.

Sweeney noted that the union's District 925, formed five years ago as a vehicle for organizing clerical workers, had an 85-percent election win rate last year. It now has 7,000 members. In addition, a sister organization—9to5, National Organization of Working Women—has a membership of 12,000.

The SEIU's organizing targets in 1987, Sweeney said, will be among building service workers and nursing home employees. In addition, the union will concentrate on affiliation of independent employee associations in the public sector.

Record PCB level triggers union lawsuit

Philadelphia—Discovery of a major contamination of a known cancer-causing agent in amounts nearly 5,000 times greater than proposed government safety standards triggered a class-action damage suit by the Transport Workers.

The dangerous level of polychlorinated biphenyls (PCBs)—490,000 micrograms per square meter—was uncovered by the National Institute for Occupational Safety & Health at the Paoli railroad yard. Although the Environmental Protection Agency hasn't yet issued a safety standard, it is recommending a maximum no higher than 100 micrograms per square meter.

The data was sent to EPA as evidence for the agency's pending lawsuit to force the Southeastern Pennsylvania Transportation Authority, Conrail and Amtrak to clean up the 23-acre railroad yard just outside Philadelphia.

Damages sought

The suit filed by TWU Local 2013 in the U.S. District Court for Eastern Pennsylvania seeks compensatory and punitive damages on behalf of 58 members. Besides SEPTA, Amtrak and Conrail, defendants include General Electric Co., which manufactured rail car transformers, Monsanto Chemical Co., which formerly manufactured PCBs, and the City of Philadelphia.

The union charged that the workers have suffered health problems from the PCBs and face future risk of cancer and other diseases from their exposure to the toxic substance. EPA tests show PCBs can cause liver and skin cancers in animals.

Rail yard workers are "angry and scared" over the discovery of the major contamination, said Local 2013 President Charles Little. And, he added, "it's getting worse there." Blood tests of workers have shown PCB levels as high as 350 parts per billion, compared with an expected average of 5 ppb in the general population.

The level of contamination at the Paoli yards is "the highest encountered by NIOSH during a health hazard evaluation," said Richard W. Hartle, the institute's supervisory industrial hygienist.

Partial remedy

SEPTA, a state-chartered regional mass transit agency, carries nearly a million passengers a day. It agreed to follow Hartle's recommendation to clean rail cars with a special detergent. But it balked at adopting the NIOSH proposal to require all workers to wear protective clothing.

The EPA said the contamination resulted from spills and leakage of PCBs from rail car transformers since 1920, when the former Penn Central Railroad opened the yard. The contamination continued until PCBs were banned in 1977.

The Pennsylvania Environmental Resources Dept. first identified the contamination in 1979, but cleanup efforts were snarled in litigation until the EPA entered the case last year. The federal agency spent more than $1 million removing soil and building dikes to prevent further PCB migration to nearby residential properties.

Brock bends on field sanitation rule

A federal field sanitation standard requiring toilets and clean water for drinking and handwashing for farm workers will be issued by the Occupational Safety & Health Administration next month, Labor Sec. William Brock promised. But at the same time, he chose to petition for a rehearing of a recent appellate court case on the matter.

The AFL-CIO, which has been pressing for a standard for more than 14 years, welcomed Brock's decision, but questioned the motives behind the petition for a rehearing. OSHA's inaction has been "unconscionable," said Margaret Seminario, associate director of the federation's Dept. of Occupational Safety, Health & Social Security.

She charged that the Labor Dept. is "using taxpayers' money" to cleanse its record after acting irresponsibly. "The bottom line is that their action hasn't been acceptable and the court told them so," she said.

Rep. George Miller and 78 other members of Congress sent Brock a letter Feb. 26 urging him to accept the court's decision and to comply immediately with its order to issue a standard. It noted that no other group of American workers is forced to labor under "such oppressive indignities," and stressed that Brock would not tolerate "such abominable working conditions" for himself or members of his family.

Record reopened

Brock announced that the OSHA hearing record will be reopened for 20 days to "complete the Secretary's evaluation of the states' activities . . . as well as to comply with the Administrative Procedures Act which requires public input on regulatory proposals."

Seminario said it is "unclear what reopening the record will accomplish. The agency's hearings over the years have produced a tremendous record in favor of setting a standard. It's the Labor Dept.'s record of inaction that is an affront to human decency."

She said the Labor Dept. appears to be "trying to downplay" the appeals court action of last month by saying that it would act by Apr. 21, exactly 18 months after Brock's decision to delay setting a standard in favor of waiting for the states to act.

The 2-to-1 decision of the U.S. Court of Appeals for the District of Columbia Circuit last month found that Brock had exceeded his authority by delaying issuance of a standard.

Brock said that the rehearing petition is based on his strong conviction that the court's ruling is an intrusion on executive authority and establishes a dangerous precedent for court review of future departmental actions.

Only 14 states have met the minimum federal guidelines requiring toilets and water for drinking and handwashing. In announcing the decision to issue a standard, Brock said, "Basic human decency demands that farm workers have access to sanitation facilities available to other working Americans."

Unions protest cutting 'heart' out of trade bill

Unions protested the gutting of a labor-supported foreign trade bill by a House Ways & Means subcommittee and called on members of the full committee to repair the damage.

Unless it does so, AFL-CIO Legislative Director Robert M. McGlotten warned, the committee bill will be a pale shadow of the comprehensive trade legislation the House passed in the last Congress by a 295-115 vote.

The same bill was reintroduced in this Congress as H.R. 3, to form the starting point for committee consideration of trade legislation.

Its key provision, originally sponsored by Rep. Richard A. Gephardt (D-Mo.), would require nations that have used unfair tactics to build up big trade surpluses with the United States to phase out the imbalance. They could do so by increasing purchases of U.S. goods, reducing exports to the U.S. market, or a combination of the two.

McGlotten wrote Ways & Means Committee Chairman Dan Rostenkowski (D-Ill.) that union members consider reducing the U.S. trade deficit "the heart and soul" of any trade bill.

The subcommittee scrapped the Gephardt provision in what Rostenkowski termed an attempt to shape a compromise bill that President Reagan would sign.

It did retain a labor-urged provision, authored by Rep. Don J. Pease (D-Ohio), which declares violations of internationally recognized worker rights to be unfair trade practices subject to sanctions under U.S. trade law.

While welcoming the workers' rights language, McGlotten said elimination of any timetable for reducing the trade deficit would leave matters little different from what they are now.

He also urged tightening of a section of the subcommittee bill giving the Executive Branch multinational trade negotiating authority. As it now stands, it would allow U.S. negotiators to agree to tariff reductions in such import-sensitive industries as footwear, steel and textiles.

Fire Fighter tragedy

Three members of Detroit Fire Fighters Local 344 died in this raging five-alarm arson fire that destroyed an abandoned warehouse and two other buildings. Two of the men—David Lau and Larry McDonald—died of smoke inhalation after a roof collapsed on them. Paul Schimeck, a 26-year department veteran, died when he fell to the ground after an explosion rocked the three-story warehouse. Ten other IAFF members were injured.

Presidential hopefuls get open door on bid for labor's support

By David L. Perlman

The AFL-CIO has offered major party candidates for President an equal-access forum to seek the support of union members on the basis of their views on national issues and their concept of presidential leadership.

Fifteen announced or potential candidates—seven Democrats and eight Republicans—have been invited by AFL-CIO President Lane Kirkland to take part in the process. The number could change over the next few weeks if some potential candidates take themselves out of contention or other public figures declare their candidacies.

The goal is to provide union members with information that will help them make their own choices in the presidential primaries and the general election next year—and that will enable them to play an informed role in the AFL-CIO's political review process.

The process will be "scrupulously fair," Kirkland assured the candidates.

Each will each be given the same opportunity to respond in writing to the same set of four questions—dealing with foreign trade, the budget deficit, human needs and labor's role in the political process.

Broad exposure

Their replies will be printed and distributed by the AFL-CIO, its central bodies and affiliated unions. Candidates will also have the opportunity to respond to a question on presidential leadership in a video tape film that will be shown at union halls and union meetings.

AFL-CIO Sec.-Treas. Thomas R. Donahue told a news conference at federation headquarters that a labor endorsement of a presidential candidate is "up to the members of our affiliated unions."

Unions will be using a variety of techniques to seek the views of their members before the October meeting of the AFL-CIO General Board, when each union will cast the vote of its membership on the issue of endorsement.

An endorsement for either the Democratic or Republican nomination will require a two-thirds majority of votes cast.

The endorsement procedure is the same that was followed in the last presidential election, when the AFL-CIO supported Walter F. Mondale. Then, too, most unions used some form of poll or sampling procedure to seek the views of members.

What is new is the procedure for assuring that members have an opportunity to hear directly from the candidates as the starting point for the endorsement process.

The decision to again seek a trade union consensus on a presidential endorsement in advance of the political primaries was made by the 1985 AFL-CIO convention. The use of candidate questionnaires and

Economy in doldrums as growth rate falters

By Gene Zack

The nation's economy limped along in the final quarter of 1986, growing at a meager 1.1-percent annual rate—even weaker than the level government statisticians reported earlier.

The Commerce Dept. trimmed by six-tenths of 1 percent its original estimate of the gross national product—the sum of the nation's total output of goods and services.

But while the economy generally remained in the doldrums, corporate America was in "fat city," with after-tax profits surging 6.1 percent from the third to the fourth quarter of 1986. That's the best showing since July through September of 1983, when profits rocketed upward 11.4 percent.

For all of 1986, the GNP grew a mere 2.5 percent, far lower than the rosy White House forecasts of a 4-percent growth rate last year. It was the poorest year economically since the depths of the Reagan Recession in 1981-82.

The new GNP report represented the second downward revision in the growth

Trade loss drives U.S. deeper into debtor nation hole

The United States slipped deeper into hock with the rest of the world in 1986, amassing a global debt of $220 billion —more than double the $108 billion owed by Brazil, previously the world's leading debtor nation.

That means that foreigners now hold more U.S. investments than Americans hold overseas—and the chief culprit in this continued slide into debtor status is the rampaging foreign trade deficit.

Economists are in agreement that the country's net debtor status is going to get much worse before it begins to improve. They forecast a total U.S. debt to the rest of the world that will top the $1-trillion mark by the early 1990s.

It's been a painful downhill slide for the nation since it became a debtor nation in 1985 for the first time in 70 years, owing the rest of the world more than $107 billion. That amount more than doubled last year.

The government reported the gloomy news about the deepening deficit in the current account that measures trade in merchandise and services as well as investment earnings, tourism and foreign aid.

That broadest of all measures of foreign trade surged to an all-time high of $140.6 billion last year—19.5 percent above the previous year's record shortfall of nearly $117.7 billion.

Unionized states score best in study of business climate

By Candice Johnson

A new economic "report card" gives high marks for economic performance and business vitality to states with wide union membership.

Northeastern and Mid-Atlantic states were found to have the nation's best performing economies, the nonprofit Corp. for Enterprise Development said, while much of the Sunbelt "remains prey to slow growth, low business vitality and bad development policies."

Using a four-part weighted index that measured economic performance, business vitality, capacity for expansion and the existence of policies to aid business growth and economic opportunity, the council evaluated the states and posted the grades.

Five states—California, Connecticut, Massachusetts, Minnesota and New York —each received an A or B grade in each of the categories. On the other end of the scale, Alabama and Tennessee scored the worst, receiving Fs in all categories.

Council President Robert Friedman said the report card is an alternative to traditional "business climate" surveys that base their rankings on the lowest tax costs, low-

35 million lack health care protection

Workers and children make up largest segment of uninsured

Nearly one in every six Americans under age 65 had no health care coverage in 1985 and more than two-thirds of these were from families with a full-time wage earner.

That's the finding of a report issued by the Employee Benefit Research Institute titled "Uninsured in the United States: the Non-elderly Population Without Health Insurance."

More than 35 million Americans—17.4 percent of the civilian nonagricultural population under age 65—had no health care coverage in 1985, EBRI reported, with children ages 18 and under comprising one-third of the uninsured or 11 million persons. Most of these children—69 percent—lived in families where the household head had no health insurance.

But EBRI also found that workers were a large part of the pool of Americans without health insurance, totaling 55 percent—or 19 million persons—of the uninsured.

A full-time, full-year worker was defined as one who worked or sought work more than 35 hours per week and 35 weeks per year. More than two-thirds of the 35 million uninsured in 1985 lived in families of fully employed workers, the survey found.

For these families, however, full-time work hours did not bring comparable gains in wages and benefits. Among fully employed workers, more than two-thirds, or 69 percent, earned less than $10,000 and nearly all—92 percent—had earnings below the $20,000-mark.

Retail and service trades

EBRI noted that more than half of all uninsured workers were employed in two industries—retail trades and services.

Among the report's findings:

- In 17 states and the District of Columbia, the number of residents without health insurance exceeded 20 percent. In Oklahoma—the state with the greatest percentage of uninsured persons—25.3 percent of the population lacked coverage.
- Only in two states did the percentage of uninsured residents fall below 10 percent: Connecticut at 9.7 percent and Wisconsin at 9.8 percent.

AFL-CIO health specialist Karen Ignagni said the EBRI findings strongly supported the federation's proposal to require employers to provide health care benefits as a condition of doing business.

The AFL-CIO has called for a minimum package of health care benefits for workers and their dependents to be provided through employer plans or through state insurance pools.

"Workers and their families constitute three-quarters of those without coverage and a substantial number of the underinsured," the Executive Council stressed, adding that the failure of employers to provide health insurance "endangers the health of millions of workers and their families."

This lack of universal employer-provided health benefits has established "an economically inefficient system in which the last and only resort of the uninsured is to be treated in a hospital." In addition, "the burden of financing care for the working uninsured falls disproportionately on companies which provide protection" for their employees, the council noted.

Penny ante

Auto Workers are pitching in their pennies and dimes for General Motors Corp. Chairman Roger Smith and other big bosses whose bonuses were slashed 23 percent, while UAW members won't get a cent under the company's profit-sharing plan.

Despite the reductions, GM's top executives will share $169 million in bonuses this year. But the company said its 1986 profit of $2.9 billion wasn't enough to give the workers a share.

In Saginaw, Mich., President Dave Estrada of UAW Local 699 said signs and containers had been placed in factories, with workers asked to donate their spare change.

Downstate in Ypsilanti, workers at the Hydramatic Willow Run plant—members of UAW Local 735—also made the pitch for pennies for the chairman and so far have collected $1,000. At membership meetings, workers each donated up to 1 cent, along with some personal messages to Smith. The local plans to take the money to GM headquarters.

Montana AFL-CIO Executive Sec.-Treas. Jim Murry testifies against proposed constitutional convention move. Other opponents, seated from left, Betty Babcock, wife of Montana's former Republican governor; conservative war horse Phyllis Schlafly, and Sen. Daniel J. Evans (R-Wash.).

Montana Senate rejects bid on constitutional convention

Helena, Mont.—The Montana Senate, by a lopsided 45-4 vote, crushed a move to call a constitutional convention that would bypass Congress and impose a straitjacket on the federal government's budget process.

The resolution, which earlier squeezed through the House of Representatives on a 51-49 vote, was soundly defeated in the upper chamber after a Senate committee voted 9-1 to send it to the floor with a "do-not-pass" recommendation.

Earlier, the committee heard State AFL-CIO Executive Sec.-Treas. James W. Murry denounce the constitutional amendment as "the wrong route to follow" in bringing down the soaring federal budget deficit.

Workers, their families, retirees, the disabled, the poor, minorities and the jobless all feel "strongly about the spiralling national debt," Murry emphasized, because they are the ones "who carry the heaviest load of the mounting federal debt."

"It's almost incomprehensible to most Americans," Murry declared, that in the last six years, the Reagan Administration has accumulated a bigger national debt than "all of the preceding administrations combined"—from George Washington to Jimmy Carter.

"The problems of the national debt must be addressed," he told the committee, but a constitutional convention isn't the way to get that job done. It would be a "minefield" that could produce "unthinkably dangerous results," the federation official said to applause from the more than 300 people who crowded into the hearing room.

There would be no way to hold a convention to a restricted agenda, Murry pointed out, and there is a danger that zealots could seize control of such a convention and write wholesale changes into the Constitution.

Adoption of the bill would have made Montana the 33rd state to endorse the constitutional convention. But, Murry told the Senate committee before the vote, half of the states that have taken action did so "without public hearing or recorded vote."

Legality in doubt

It would take the action of 34 states to trigger a constitutional convention, assuming that all of the separate legislative actions—some of them dating back a number of years—were held legally valid.

Among those joining labor in opposition to the bill were Sen. Daniel J. Evans (R-Wash.), Rep. Andy Jacobs (D-Ind.) and conservative war horse Phyllis Schlafly.

Evans insisted that Congress has "finally begun to beat back the waves of debt that threatened to drown us all in a sea of red ink." That's the route that should be followed, he said, instead of "tinkering with the fundamental precepts of the Constitution."

Schlafly, president of the conservative women's group called the Eagle Forum, also warned about the dangers of a constitutional convention. Legal scholars have convinced her, she said, that it couldn't be limited to one issue and that "it's not worth the risk to play games with the U.S. Constitution."

Reagan's education fund cuts hit by labor and management

Accusing the Reagan Administration of being "long on rhetoric and short on money" in the education field, Teachers President Albert Shanker urged Congress to continue and expand funding to aid educationally deprived youngsters.

In addition to renewing Chapter I funding, scheduled to expire this year, Shanker recommended extension of the program from the pre-school and elementary school levels to reach high schoolers who are "educationally at risk."

Chapter I is the major federal block grant program to help school systems assist educationally and economically disadvantaged children. Those helped by Head Start or Chapter I have done "significantly better in school" than youngsters unable to participate in these programs, the AFT president told the House Education & Labor Committee.

But, he continued, these gains are often diluted as this support ends when these students go on to high school. "If we are to achieve true excellence in our public schools," Shanker said, "we must insure that we continue to reach the hard-to-educate once they enter secondary schools."

The program also drew support from a source not normally associated with promoting increased investment in education—big business. Headed by William Woodside, retired board chairman of American Can Co., five corporate executives told a joint hearing of the House and Senate education committees that funding should not only be continued but federal outlays should be increased to reach more youngsters.

Long-range impact

With one-third of the nation's children expected to be poor by the year 2000, the corporate officials said, failure to invest in their education could have serious consequences for national defense and international competitiveness. Woodside said funding could come from a variety of sources—including cuts in defense spending, higher taxes, deferred tax cuts, or a combination of all of them.

In a scathing attack on Administration education policies, Shanker noted that in 1983 the government issued a landmark report, "A Nation at Risk," that detailed the nation's unmet educational needs. Despite the enormity of the problem, he said, Reagan has not only failed to act, but has proposed a 28-percent slash in the education budget for fiscal 1988.

"This Administration has become expert at telling others what needs to be done while denying the federal resources needed to help solve our educational problems," he pointed out. Only bipartisan congressional action preserved the federal role in education, Shanker emphasized.

Reagan proposals rejected

He praised the bipartisan efforts of Reps. Augustus F. Hawkins (D-Calif.), the committee chairman, and Bill Goodling (R-Pa.) in drafting the measure to extend the Chapter I program. Shanker also expressed satisfaction that the bill rejects Administration proposals to replace block grants with vouchers that parents could use to shop around for either public or private education for disadvantaged children.

"Vouchers would undermine a program that works," he emphasized. "Vouchers are not a method of improving compensatory education."

At a time when the Reagan Administration is touting "competitiveness" as the answer to the nation's trade-related economic woes, the AFT president told the committee, "education is the key to global competitiveness, military strength and domestic prosperity." By continuing and enlarging the Chapter I program, he added, Congress can "reaffirm our nation's long tradition of commitment to education and thereby to our nation's future."

Another corporate executive, Regional Vice President Gerald D. Foster of Pacific Telesis Group from Los Angeles, pointed out that it's cheaper in the long run to spend money on education, rather than to pay the costs for the nation's corrections system.

"We're spending $18,000 a year to keep a (high school) dropout in jail," he told the committee, when the money could be better used preventively by enhancing educational opportunities for the disadvantaged.

Labor Board's caseload increases

Unions and employers filed 41,639 cases filed with the National Labor Relations Board in fiscal year 1986, 1.7 percent more than a year earlier and the first increase since 1983.

NLRB General Counsel Rosemary Collyer noted in her annual summary of operations that unfair labor practice cases increased 3.8-percent. The number of those cases climbed to 33,780 while the total of representation cases fell 7.5 percent to 7,228 in 1986.

Collyer's report said that while the case load was higher, the average number of professional staff in NLRB regional offices fell from 1,095 to 1,037—a decrease of 5.3 percent.

The agency settled 9,312 unfair labor practice cases in 1986, up from 8,988 settlements a year earlier, while issuing 3,135 complaints—an increase of 3.8 percent.

Collyer reported that $27.8 million in back pay was won for workers—a slightly higher amount than in 1984, but 55.4 percent below last year's record $62.2 million. The amount of fees, dues and fines paid to workers increased 300 percent over the previous year to a record $1.4 million, the report noted.

The General Counsel's office had 82.4 percent of contested NLRB or administrative law judge decisions upheld in whole or in part, Collyer reported. This was an increase of nearly 8 percent over 1985.

Worker rights concerns focus of trade hearings

Labor, Administration witnesses clash

Union and Administration witnesses clashed at Senate trade hearings over whether countries that exploit workers, deny trade union rights and flout internationally accepted labor standards should be given open accesss to U.S. markets.

The AFL-CIO urged the Senate Finance Committee to approve as part of its trade bill legislation a provision that would declare abuses of internationally recognized worker rights an unfair trade practice subject to sanctions under U.S. trade law.

But Deputy U.S. Trade Rep. Michael B. Smith testified that the Reagan Administration opposes such legislation. He argued that any unilateral attempt by the United States to make other countries comply with accepted labor standards would merely "reduce trade."

Howard Samuel, president of the Industrial Union Dept., testified on behalf of the AFL-CIO in strong support of the worker rights provisions that Rep. Don J. Pease (D-Ohio) introduced in the House and that Sen. Donald W. Riegle Jr. (D-Mich.) is pushing in the Senate.

Workers' rights requirements benefit both buyers and sellers in international trade, Samuel said. He noted that labor standards and workers' rights are already a requirement for special trade preferences in several U.S. trade laws.

Samuel told the committee that a workers' rights clause written into the 1983 law to expand trade with the Caribbean Basin nations demonstrates the potential of such provisions.

"As a result of that law," he testified, "the Dominican Republic took steps to end forced labor in its sugar plantations, the Guatemalan government was required to give legal status to its labor federation, and Haiti made major changes to allow the establishment of trade unions."

Sen. Tom Harkin (D-Iowa) challenged the Administration's reluctance to deal with worker exploitation in other countries. He noted that some of the nations that have piled up huge trade surpluses with the United States are the biggest offenders.

Steelworkers President Lynn R. Williams told the Senate panel that nations that have opposed writing worker rights into international trade agreements acknowledge frankly that they don't want to give up a trade advantage that enables them to undersell U.S. products.

A government's suppression of worker rights puts American workers at an economic disadvantage in a competitive marketplace, Williams noted.

Closing the gap

Williams and Samuel pointed out in their testimony that the labor-supported legislation would not require other countries to match U.S. wages and worker protections.

But "even the least industrialized nations" can allow workers to form unions and bargain collectively, Samuel said. They can adopt child labor restrictions and minimum wage laws appropriate to their stage of development, he noted, and provide some basic protections against occupational accidents and disease.

U.S. tariff law barred imports of goods made by convict labor as far back as 1890, Samuel noted. In 1930, imports made by all forms of forced labor were banned.

The International Labor Organization has adopted labor standards that are widely accepted, but the ILO lacks any enforcement power, he testified.

Samuel noted the irony that international agreements and federal law "have made it possible to protect endangered plants and animals from the destructive effects of international trade."

He urged Congress to "give the same consideration to another endangered species—the American worker."

Williams also testified in strong support of continuation and strengthening of the Trade Adjustment Assistance program, which the Reagan Administration is trying to end.

Special assistance to workers who lose their jobs in import-caused layoffs and plant shutdowns "should be a permanent feature of our trading policy just as unemployment compensation is a permanent feature of our domestic economic policy," Williams urged.

Deficit-reduction proviso seen key to trade measure

Continued from Page 1

The Senate Finance Committee hasn't started its markup of trade legislation yet. But it has been holding hearings on a largely toothless measure introduced by Committee Chairman Lloyd Bentsen (D-Tex.) and numerous cosponsors. In a letter to senators last month, AFL-CIO President Lane Kirkland termed the Bentsen bill "totally inadequate" and urged Congress to face the trade deficit issue "head-on."

On the House side, meanwhile, supporters of a stronger trade bill were seeking to rally support for reinstating the deficit-reduction requirements of the Gephardt Amendment.

Whatever the outcome in committee, the issue is likely to be refought on the House floor this spring. That's what happened in the last Congress, when a labor-opposed attempt to strip the trade bill of its most effective provisions was beaten on a 276-137 vote.

In early and still tentative action on the trade bill, the Ways & Means Committee approved modifications in the trade adjustment program made by the subcommittee.

The changes, which were not among the improvements the labor movement has sought, include a voucher system with which workers who lose their jobs can pay for training or relocation expenses, and a short-term wage subsidy for persons who take jobs paying substantially less than their previous employment.

The program would be funded from import duties, but the subcommittee summary said this would require an international agreement allowing the United States to levy such a charge.

Anthony Bellissimo retires as aide to IBEW president

Anthony P. Bellissimo, assistant to the Electrical Workers president, retired Mar. 1 after 30 years on the international staff.

Bellissimo helped organize IBEW Local 716 in Houston in 1949 and held many local posts before becoming an organizer and being named an international representative in 1957. He was appointed assistant to the president in 1969.

Working women

The television comedy series, "9 to 5," about office secretaries won a salute from a union representing women who earn their living in clerical jobs. Karen Nussbaum, second from right, president of the National Association of Working Women, 9to5, and District 925 of the Service Employees, presented honorary memberships and union coffee mugs to the stars of the syndicated television show. With Nussbaum are, from left, actresses Valerie Curtin, Sally Struthers and Rachel Dennison. The presentation was made on the set after an audience of 9to5 officers and members from the Los Angeles area watched the taping of an episode about sexual harassment.

Court told OSHA ignored evidence on asbestos risks

The Occupational Safety & Health Administration erred in setting the current permissible worker exposure level for asbestos and should move to cut that limit in half, the AFL-CIO and its Building & Construction Trades Dept. said in briefs to the U.S. Court of Appeals for the District of Columbia Circuit.

In court responses to the consolidated challenges to the OSHA standard, the federation and the BCTD said that the federal safety and health agency failed to consider the evidence of several studies showing the feasibility of setting the worker exposure limit at 100,000 fibers per cubic meter of air. In June 1986, OSHA set an exposure limit of 200,000 fibers—a 10-fold reduction from the level that had been in existence since 1976.

The Asbestos Information Association, an industry trade group, has challenged the OSHA 200,000-fiber limit as being too stringent for all businesses to comply with all the time. The AIA argued that the limit should be 500,000 fibers.

Federation safety specialist Margaret Seminario characterized the AIA's arguments against setting a lower standard as "just another employer tactic aimed at getting weaker OSHA standards." She noted that the OSHA hearing record has ample evidence that many firms are already controlling exposures to levels well below the 200,000-fiber limit.

The AIA's approach would leave most workers exposed at levels greatly in excess of what their employers are capable of achieving through the use of engineering and work practices controls.

The AFL-CIO refuted AIA's contention that OSHA exposure limits should be set at levels which all employers can meet, by holding that the OSHA asbestos standard does not set a "never-to-be-exceeded" limit on the amount of asbestos that may be permitted in the workplace. The federation's brief explained that under the standard, employers would not be held in violation if they can demonstrate they used the best available engineering controls and work practices, supplemented by respirators, to control worker exposures.

Construction experience

In a separate brief, the BCTD likewise challenged the AIA's contention that the 200,000-fiber exposure limit is too low, addressing the asbestos standard OSHA issued for the construction industry. The BCTD maintained that OSHA focused on the exposure levels achieved by construction employers generally, rather than on the levels achieved by employers using the "best currently available methods."

The BCTD further noted that Congress intended OSHA to set the exposure standards at the "lowest feasible limit" and that the standards can be "technology-forcing," meaning that "OSHA can impose a standard which only the most technologically advanced plants in an industry have been able to achieve—even if only in some of their operations some of the time."

The BCTD also urged the court to order OSHA to set a short-term exposure limit of 500,000 fibers in both asbestos standards and noted the AIA also supports establishing such a limit. It noted that "the record is replete with evidence showing that in the construction industry asbestos exposures often follow the pattern of low background levels and high intermittent exposures."

Full steam ahead

Pair of bills being considered by House Education & Labor Committee get a strong endorsement from AFL-CIO Sec.-Treas. Thomas R. Donahue and Legislative Director Robert M. McGlotten. One would expand education and training programs; the other would provide advance notice to plant closings. Both bills should move "full speed ahead," Donahue urged.

James O'Brien dies, senior citizen leader

Arlington, Va.—James "Cuff" O'Brien, retired director of the Steelworkers' political action department who helped forge the National Council of Senior Citizens, died Mar. 9 at his home, following a heart attack. He was 62.

O'Brien joined the USWA staff in 1954 and became director of the department of older and retired workers in 1957. He headed the political action department from 1966 to 1978 and retired a year later. In 1973, he was named to coordinate activities between the USWA and the NCSC.

Waymen celebrate 100th birthday

New challenges arise as union heads into second century

By Arlee C. Green

The Maintenance of Way Employees are celebrating the union's 100th anniversary this year.

Setting the stage for the second century, BMWE President Geoffrey N. Zeh noted the "ability of our members to maintain their dignity in the workplace is being challenged," and meeting that challenge will require innovative approaches designed to deal with unprecedented problems.

The union's founding is traced to the forming in July 1887 of the Order of Railway Trackmen, headed by John T. Wilson and headquartered in Demopolis, Ala., and later in Birmingham. In 1891, the Trackmen merged with the Brotherhood of Railway Section Foremen of North America. Following a tie vote for the "Grand Chief Foreman" post, Wilson won by drawing the longer straw.

For the International Brotherhood of Railway Foremen of America, headquartered in St. Louis, its beginnings were as rocky as the roadbeds its members cared for, as membership grew, then fell as other unions fought to organize the rail workers. In 1892, the union started the Foremen's Advance Advocate magazine. It affiliated with the American Federation of Labor in 1900.

It sanctioned its first strike in June 1901 against the Maine Central Railroad. It was unsuccessful, but the union learned from the experience. Almost immediately, it was involved in a strike by 5,000 workers against the Canadian Pacific Railroad—a two-month-long job action that resulted in union's first-ever contract.

Name change

At the 1902 convention, the union's name was changed to the International Brotherhood of Maintenance of Way Employees. It grew to more than 40,000 members by 1903, reached agreements with 22 railroads by 1908 and five years later moved its headquarters to Detroit, where it is still based.

Federal takeover of the railroads during World War I resulted in major pay gains for workers—up to 43 percent for some. In 1918, a federal order barred employment discrimination based on "membership or non-membership in labor organizations." That became rail labor's Magna Carta and membership jumped fourfold by year's end.

After the war, Chicago lawyer Glenn Plumb developed a plan for continued government operation of the railroads. Rail labor favored the idea and 15 rail unions joined in establishing the newspaper "Labor" to promote it. But the railways returned to private ownership in 1920.

Collective bargaining became accepted by the mid-1920s, enhanced by passage of the Railway Labor Act of 1926 and the amended Act of 1934. The success of the rail unions' unified action in gaining the legislation led to the formation of the Railway Labor Executives' Association, of which the BMWE has been a member ever since.

Gains wiped out

By 1929, the union had raised its members' wages and reduced the workday to eight hours with time-and-a-half for overtime. But in 1932, rail unions took a 10-percent pay cut and employment fell by two-thirds. Significant legislation won in the mid-1930s included the Railroad Retirement Act and the Railroad Unemployment Insurance Act.

On BMWE's golden anniversary in 1937, then President F.H. Fljozdal noted major accomplishments, but added "much remains yet to be done and it is our job to do it. Fifty years from now, when 1987 rolls around, it must not be said that we failed in 1937 to keep faith with those who started the movement in 1887."

In the 1940s, unemployment insurance was improved, a minimum wage for rail workers set, vacation pay won and a national agreement on overtime rules signed. Wages continued to improve and the 40-hour workweek was established. The union shop amendment was added to the Railway Labor Act in 1951 and the BMWE soon signed its first union-shop contract with the Tennessee Railroad Co. Later that year, BMWE dedicated a new headquarters building.

In 1955, it won fully paid health and welfare benefits for its members. But membership continued to decline as rail lines increased mechanization, contracted out work and switched to using traveling crews. Employers launched a publicity campaign in 1959 to create the impression that rail workers were "featherbedders." The union defended its members' skills and productivity increases.

By 1970, the union won an adequate rule covering travel time and away-from-home expenses, full pensions at age 60 after 30 years' service and major medical coverage. Bankruptcies, however, put at risk the jobs of 9,000 BMWE members. To address this, the Rail Reorganization Act of 1973 offered a strong blueprint for survival.

BMWE's first national strike was set for Dec. 10, 1970, but within hours, President Nixon signed a measure ordering the union members back to work. Subsequently, BMWE, along with the AFL-CIO and other rail unions, fought off Nixon-backed legislation to gut the gains railway workers had made over the years. The measure failed in the Senate.

Rail passenger service came under government control in 1970 with the creation of Amtrak, and Conrail was formed in 1974 from bankrupt carriers in the Northeast and Midwest. In 1976, Congress budgeted $1.75 billion to upgrade Northeast rail lines, creating employment for BMWE members.

In 1979, the union won check-off of voluntary contributions to the Maintenance of Way Political League. The Reagan Recession of 1981-82 resulted in the need for the Railroad Retirement Solvency Act of 1983, under which a two-tier retirement system was created.

Air controllers file petition for union election

Denied union representation since 1981, the nation's air traffic controllers filed 5,800 signatures, nearly 20 percent more than required by law, petitioning the government for a representation election.

The Federal Labor Relations Authority's regional office in Washington certified that the National Air Traffic Controllers Association, an affiliate of the Marine Engineers, went over the top with its show-of-interest petitions. The number of signatures was far above the 4,000 needed to satisfy the requirements of the Civil Service Reform Act of 1978.

NATCA and the FAA will meet Mar. 24 to discuss the scope of the unit and details concerning the representation election. If agreement is reached at the meeting, controllers could vote as early as May on a bargaining agent.

Since the petitions were filed, NATCA said it has gotten an additional 400 names and that its show of interest exceeded 30 percent in all 10 Federal Aviation Administration regions.

In August 1981, President Reagan fired 11,400 air traffic controllers for striking the FAA and has since banned their rehiring, despite severe shortages of adequately trained workers. There are now 13,000 air controllers nationwide, about 2,000 less than in 1981.

Flight plan

Meanwhile, the FAA's latest plan to increase the number of flights handled by controllers was denounced by NATCA as "madness and a breach of faith between the controllers and the FAA." The union charged that safety was taking a back seat as the agency succumbs to airline industry pressure to get more planes in the sky.

NATCA National Coordinator John Thornton said that controllers at high-density facilities, such as New York, Chicago and Los Angeles, have "been pushed to their limits for years. What held the system together was the promise that relief in the form of more controllers and better equipment was on the way. Now the controllers are told that they must do still more with less."

NATCA's nine-member executive board charged that the FAA's new plan to reduce airline delays is a "transparent attempt to reinstitute airborne holding and a complete about-face of previously stated policy." It noted that in January, FAA Administrator Donald Engen told Congress the agency was not going to support a proposal by the industry's Air Transport Association to return to airborne holding.

At that hearing, the National Transportation Safety Board had expressed concern over the ability of controllers who have never handled stacked traffic to perform such a delicate task. It was joined by the Air Line Pilots which opposed any change that would involve in-flight holding.

Nation slips deeper into debtor status

Continued from Page 1

Although the nation has run a deficit in merchandise trade for 15 of the past 16 years, the current account continued to show a surplus because Americans' earnings on overseas investments were enough to offset the trade loss. But the flood of foreign goods since the Reagan Administration took office in 1981 steadily eroded the margin once provided by investment earnings.

Last year ended on a particularly somber note. The Commerce Dept. reported that the quarterly deficit from October through December hit a record $36.8 billion because of the continued deterioration in trade. The figure was 4.4 percent above the previous high-water mark of $35.3 billion set in the July-September quarter.

The report also suggested that foreigners are continuing to shift investments in this country from U.S. Treasury securities—on which interest rates are declining—to direct investment in such items as industrial plants and equipment.

According to the government data, this direct investment rose in the fourth quarter to $14.4 billion—a shocking 260-percent increase over the $5.6-billion level in the previous three-month period.

Leaky umbrella

The Reagan Administration's catastrophic health care proposal is a leaky umbrella, lawmakers and representatives of senior citizen groups demonstrate on Capitol Hill. Earlier, Karen Ignagni, assistant director of the AFL-CIO Dept. of Occupational Safety, Health & Social Security, told Congress the elderly also need financial help to pay for community-based treatment and home health care as alternatives to being forced into nursing homes. Under umbrellas with gaping holes are, from left, Cyril F. Brickfield of the American Association of Retired Persons, Rep. Claude Pepper (D-Fla.), Executive Director William R. Hutton of the National Council of Senior Citizens, Rep. Henry Waxman (D-Calif.) and Ronald F. Pollack of the nonprofit Villers Advocacy Association.

It's Time To RAISE The MINIMUM WAGE

By Jay Mazur
President, International Ladies' Garment Workers Union

On January 7 of this year, the New York Times ran a story in its news pages, headlined: "Now, Maximum Interest in the Minimum Wage."

One week later, the New York Times ran an editorial, titled: "The Right Minimum Wage: $0.00."

This dramatic juxtaposition of news and opinion strongly suggests that the question of the federal minimum wage will be high on the legislative agenda this year and that the matter will be hotly contested.

That has been the fate of the minimum wage since its inception almost a half-century ago in 1938.

Those opposed to a minimum argued that by elevating the wage to 25 cents an hour, the legislation would be pricing many workers out of the market. They would be too expensive for their employers. Hence, unemployment would increase, especially among the lowest paid.

Those favoring a floor to wages and a ceiling to hours argued that the law would put more people to work and would elevate their living standards. The higher wage would increase buying power and would therefore stimulate the economy. The shorter work week would distribute the work so that unemployed could now find jobs. Increased supply would help enrich the lives of one and all.

Between 1938 and the present, the minimum wage law has been changed several times—to raise the level and to extend coverage. (Not all employees were covered by the law then and not all are covered today.) Inevitably, with each move to lift the floor and to widen its benefits to more people, the debate broke out all over again—with the same old arguments. The opponents said that to lift the floor would bring on unemployment and hurt most those who were supposed to be helped most; the proponents said that a higher wage would be of direct benefit to the lowest paid and that added buying power would add more jobs.

Living Wage

Why has the minimum wage been changed—raised—repeatedly over the last half-century? Fundamentally, to stay abreast of the times. The original idea was to set a minimum that would somewhat resemble a living wage. The rule of thumb was a wage that was slightly more than half the going wage in the private sector. As the general wage level rose, it was expected that the minimum was to go up accordingly. In addition, if the "living wage" was to be maintained, there had to be adjustments for the cost of living; otherwise the livable would become unlivable.

Unfortunately, this concept was never written into law. The minimum was changed at the whim of Congress—and, of course, the President. When enough fuss was made about how the floor was collapsing into the cellar, the government would bestir itself. Where there was no agitation, there was no action. And since the direct beneficiaries of the minimum wage are, as might be expected, usually unorganized and politically unpowerful, the fight had to be made on their behalf by unions.

The added buying power implicit in a higher minimum means greater demand and more work for wage and salaried workers in general. In addition, a living wage makes it less likely that the wage earner's family will end up on the welfare rolls—as millions do when the minimum begins to lag behind the rising cost of living.

Step Increases

The idea that the minimum should not be frozen at some fixed sum was clearly in the mind of those who wrote the original law. It provided that the minimum would be 25 cents an hour for the first year; 30 cents for the second, and was to become 40 cents in 1944. What happened after that date depended on the mood of Congress and the White House. Sporadically, the minimum was raised in a sort of "collective bargaining" among congressional factions and between Capitol Hill and the White House. The last big change took place in the Carter Administration when, as in the original bill, the legislation provided for a series of ascending steps that ended in January 1981 at the present $3.35 per hour. There the minimum has been frozen ever since.

Now it is proposed that the minimum once more be adjusted to keep up with the times. And again the old debate is renewed as if we were back in 1937—a half-century ago—and as if there were no body of historical experience from which to draw conclusions.

But the experience is there. In 1950, when the minimum rose from 40 cents to 75 cents an hour, the New York Times, informed by the lessons of more than a decade, concluded: "None of the dire results predicted have materialized from the 1938 Act, and the present legislation merely brings the latter into line with the wage and living-cost realities of today. So long as the principle is confined to its original social objectives of protecting the worker from exploitation and assuring him a living wage there is no reason to doubt that it will continue to justify itself in the future as it has in the past." (Jan. 26, 1950.)

To prevent exploitation and to provide a living wage, however, requires constant review and revision of the minimum—with several objectives in mind. First, to keep the minimum abreast of changes in the cost of living so that anyone at the legal minimum does not find himself or herself in a declining state of living as prices rise. Second, to keep the minimum slightly above 50 percent of the average wage in the private sector. Third, now that the government has, since 1959, officially been defining "poverty," to see to it that the minimum allows a person to maintain a family of three above the poverty line. In all these

Current statistics on the real value of the minimum wage today, on the deteriorating relationship of the minimum to the average wage, and of the continuing decline of the minimum wage below the poverty line are based on the recent research of Sar Levitan, director, and Isaac Shapiro, research associate, at the George Washington University Center for Social Policy Studies. The tables and charts in this presentation are taken from their forthcoming book, Working But Poor.

respects, the present minimum wage is not working.

The value (buying power) of the minimum wage has been declining steadily in the 1980s, as might be expected at a time when the minimum remained fixed while the cost of living climbed. Inflation since 1981 has reduced the purchasing power of the $3.35 minimum by 77 cents an hour. That amounts to a pay cut of $26.80 for a 40-hour work week.

(See Table A and Chart A on the falling value of the minimum wage.)

If an employer were to do this to his employees, especially to those most poorly paid, we would consider the act to be unconscionable. Is it less unconscionable if Uncle Sam does it to his nieces and nephews?

The history of the minimum wage in the last two decades reads like a lesson in political science. When President Kennedy came into office in 1961 the minimum wage of $1.00 could buy what it would take $3.70 to buy today. Then as the minimum went to $1.15 in 1961 and to $1.25 in 1963 and, under President Johnson, to $1.40 in 1967 and $1.60 in 1968, the buying power of the minimum rose to its highest point in the years since 1950, able to purchase as much as it would now take $5.04 to buy.

The story of the Reagan years is quite the opposite. When he came into office in 1981, the minimum of $3.35—enacted under Carter—could buy what it would take $4.04 to buy in mid-1986. By 1987, that buying power had slipped steadily so that at present, the dollar equivalent would need to be $4.20—a 25 percent adjustment in real dollars.

Some may argue that "things are bad all over" and the working poor are suffering along with all other workers. In part, this notion is supported by the decline of real wages and salaries of non-supervisory employees. The fall in the *minimum* wage (real dollars) has however, been much steeper than the drop in the *average* wage. From 1950 to 1968, the minimum wage was always slightly higher than half the average hourly wage in the private sector—an intent of the law whenever Congress acted. Since then the minimum has slipped. Right now it is at the lowest point since 1949, worth only 37 percent of the average wage.

Poverty Level Wages

Still another way to measure the minimum wage is to see whether it is adequate to keep a small family from falling into the pit of poverty. From 1960 to 1979—almost two decades—a wage earner working a full year at the federal minimum wage *could* support a family of three at an above-poverty level—with the exception of two years in the early 1960s and in 1973. From 1980 on, a wage earner, fully employed at the federal minimum wage, *could not* keep a family of three above the poverty line. In 1986, the wage earner at the minimum could earn about 80 percent of what would have been necessary to keep his or her family out of poverty. In absolute dollar terms, this breadwinner would fall about $1,800 short. To keep this household above the poverty line, the earner would have to work a full year (2080 hours) at $4.20 an hour—a full 85 cents more than at present. (*See Chart B and Table B.*)

In the 1980s, the minimum wage has been going from bad to worse; it has not kept up with the cost of living; it has not kept up with the average wage; it has not provided earnings sufficient to stay out of poverty. Because of neglect, it has not been, as intended, an instrument "for protecting the worker from exploitation and assuring him (her) a living wage."

Why has this been happening? The simple answer is that the powerless are powerless. Senior citizens living on social security represent a respected political force in America. Hence, their pensions have a cost-of-living adjustment clause. Many wage and salaried people also work under negotiated contracts with a COLA clause. Unionized workers without COLAs are able to engage in collective bargaining at stipulated periods. Sellers of commodities raise prices in line with inflation. But those at the bottom of the economy—the "working poor"—have no protection except the minimum wage.

Why have not compassionate citizens cried out to Congress more loudly to protect our most vulnerable

Table A

Data: value of the minimum wage

	Current	1986 dollars (Using estimated 1986 CPI=328.4)

wage earners? Partly, it is due to a stereotype of those working for the minimum. The common perception is that they are few, teenagers, and part of the minority elements who have not yet found their place in the American mainstream. Put vulgarly, they are seen as a handful of stray outsiders. The facts, however, belie the belief. The victims of the descending floor are not few. In 1986, about 6.7 million salaried and hourly workers earned the minimum wage—or less. An additional six million received wages that were just above the minimum, usually employed in establishments where the pay is customarily set somewhere near the minimum. The wages of these latter range from $3.36 an hour to $3.99.

All in all, the number of workers whose wages revolve around the federal minimum is 12.5 million. This adds up to about 13 percent of wage and salaried employees.

Contrary to the myth, most of those working at the minimum wage are white: three out of four, according to Earl F. Mellon and Steven E. Haughen in a piece on "Hourly paid workers," appearing in the *Monthly Labor Review* (February 1986, p. 25). While it is true that there is a disproportionately high number of blacks who work at the minimum, they are actually only one out of five in that unhappy level. If it were true that most of those employed at the minimum were black, that would be an added reason to lift the minimum, to avoid further polarization of American society along economic and racial lines.

Finally, most of those who work in the minimum world are not teenagers. The largest number—20 years or older—make up more than two-thirds of those at the minimum. Only 31 percent are teenagers. In short, adults—age 20 or older—make up nearly 70 percent of those earning the minimum. (These were the findings of a Minimum Wage Study Commission in 1981and prevail in 1986 Current Population Survey statistics.) Twenty-eight percent are the heads of households and another 28 percent are spouses.

In sum, those who depend on the minimum wage for their living are not few, not kids, and not predominantly black. They are mainly adults of all races and ethnic strains—and they are many.

To lift the floor, however, would mean much more than to bring a measure of economic justice to this significant portion of the American people. Although they would be the direct and immediate beneficiaries, many others would also benefit, because the American market would be vitalized by the increased earnings of the nation's working poor.

How much of a stimulant would a higher minimum be? That depends on how much the minimum is raised. But, just for the purposes of illustration, let us play with one scenario that begins by adjusting the minimum wage so that its buying power is back to where it was in 1968, when it could buy what it now takes $5.04 to buy. This would mean an increase of $1.69 an hour. Now, to be conservative in our calculations, let us assume that the worker does not work full weeks but averages about 27 hours a week instead of the standard 40 hours. The average weekly earnings would be increased by $45.63. Now, to continue in our conservative reckoning, let us suppose that this worker is employed only 34 weeks out of the 52. The annual average increase would be $1,551.42 a year. If that adjustment is applied to the 14 million people whose earnings move almost directly with changes in the minimum then buying power in the United States would be increased by $21.9 billion.

There is another compelling reason why raising the minimum would benefit the nation as a whole. The relief rolls would be lightened. At present many of those working at the minimum are receiving welfare payments—legitimately. Lifting the minimum would reduce the tax burden.

There is a final reason why something resembling a "living wage" would be beneficial to America. Such earnings would provide an incentive to be more productive. Who could possibly be inspired to make a real effort for a wage that yields no more than a welfare payment? If America is to improve its "productivity," its output per worker, it must think of incentives for the millions of wage and salaried people who now toil for pay that is not sufficient to meet poverty standards.

Free Market Myth

In the face of all these positive and compelling reasons to lift the minimum wage, what is the argument for setting the minimum wage at zero? "Objections to a statutory floor under wages are grounded more in free market theory than in empirical evidence," comments Sar Levitan, director of the George Washington Center for Social Policy Studies.

The principle that government should have no role in setting a floor under wages, that there should be no legal minimum, is based on the belief that the way in which "the market" sets wages is the way things ought to be—a latter day lapse into laissez-faire.

That theory holds that to raise the legal minimum price of labor above the productivity of the least-skilled worker would mean that fewer would be hired.

The argument has been the stock response of employers from the beginning of time. "I can not pay you more than you are worth." And who determines the worth? The employer.

Once workers organize into a union or once the government legislates a higher wage, however, employers have somehow managed with the higher wage. The ways are obvious: a) pass on the cost to the consumer; b) reduce the margin of profit; c) introduce more efficient methods of production so that

unit costs do not rise even as wages do; d) where the wage raise is widespread—as in the case of the minimum wage—take advantage of the expanded market by lowering profit per item while increasing overall profits by enlarged sales.

When the first federal minimum wage was under consideration in the mid-1930s, employers in the apparel industry appeared before Congress to argue that a 25-cents minimum would mean bankruptcy and more unemployment to deepen the crisis of the time. How, they complained, could they pay 25 cents an hour and survive when they were barely able to surving paying 5 cents an hour?

The law was passed. The employers survived and prospered. How did they do it?

In part, they did it by adding to the price of their commodities. But not much. It was not necessary.

Their cost of production did not necessarily rise—even with the higher wage. The reason was their increased sales. As the demand for their product rose—in part because of the higher minimum—they were able to run their factories at 100 percent of capacity, instead of 50 percent. They saved on once-idle overhead. So while hourly wages went up, unit costs did not necessarily do so.

In some cases, employers lowered their profit margin *per unit*. But because sales were booming, they were able—even with a lower profit per item—to increase their overall sales for a better rate of return on investment.

The higher minimum wage was, of course, not the only higher "labor" cost imposed upon companies by the government. There were also unemployment insurance, social security, workers' compensation. As the government proposed such legislation, employers resisted with the same old argument: they would have to get rid of workers because they were too costly. Yet, the economy continued to expand, more workers got jobs, more employers prospered.

To the employer, the higher minimum wage, the higher wage negotiated by unions, unemployment insurance, social security were all cost items. In his myopia, he did not recognize that what was a cost to him was income to others and what was income to others was a market for his wares.

Employer Fantasy

The fantasy world of the employer is one in which workers will work for nothing while he reaps a fortune from the highly profitable sale of his almost costless products. This has always been the instinctive fantasy of employers who, as a consequence, repeatedly drove the system into periodic depressions until the governments of the world in the 1930s intervened to save the "free enterprise" system with devices such as the minimum wage.

The very notion that a wage is determined by productivity is a myth. Productivity is only one of the many factors. During the Black Plague in Europe wages rose to astonishing heights, although the laborers did not improve their "productivity." In the American colonies, a mechanic could earn about twice as much as his European counterpart because of the relative scarcity of labor here, although his "productivity" was not greater. When corporations wanted to build atomic energy plants in our Northwest or drill for oil in Alaska, they paid very high wages although "productivity" there was not greater than elsewhere. When workers organize into unions, when there is a sudden huge demand for a commodity, when a competing plant in the vicinity pays higher wages, the hourly earnings of workers rise, regardless of "productivity." When there is a tidal wave of immigrants into an area or when there is massive unemployment in the nation, wages are put under a downward pressure—although productivity has not declined.

Actually, there is an intimate relationship between wages and productivity that is quite different from, indeed the opposite of, that expounded by the free marketeer. Higher wages spur greater productivity.

Historically, in the United States—a traditionally high-wage nation going back to colonial times—when labor costs rose, employers found more efficient methods of producing so that the worker would turn out more for his or her hourly pay. In that way, the high wage spurred greater productivity. Indeed,

Minimum wage earnings for full-time, year-round worker plunged well below the poverty line.

Source: U.S. Department of Labor

there have been long periods when *wages rose and unit labor costs came down* because of the greater "productivity" spurred by higher wages. And vice versa: when wages are low, the employer has little incentive to produce more efficiently. Why make a big investment in "labor-saving" machinery, at the risk of costly idle overhead, when labor is so cheap?

All these conceptual points about the role of the minimum wage are not new. They are the standard refutation to the argument that however inhumane the wage of the least skilled may be, it is the necessary expression of some "iron law of wages" set by the invisible hand of "productivity." But the case for minimum wages and higher floors to keep abreast of changing times does not rest on theory alone. There are the facts—conscientiously gathered by government agencies over many years.

In 1966, the Secretary of Labor, in a report to the 89th Congress, summarized the experience of more than a generation: "The record is that following the original establishment of the minimum wage—after it was set at 25 cents in 1938, 30 cents in 1939, 40 cents in 1944, 75 cents in 1950, to $1.00 in 1956—employment in the United States always went up." More specifically, the report noted, turning its eye to those sectors of the economy where many workers were employed at the minimum, employment "usually went up more in the lower-paid occupations most directly affected by the statutory requirement than in other occupations." The report concludes: "There is clearly no evidence in the 28 years of experience of unemployment resulting from statutory minimum wage rate increases."

The report then went on to fill in the gap between 1956 and 1966. It noted that the record of "the past five years, during which four increases in statutory minimum wages became effective, parallels and confirms the previous experience."

In 1968—thirty years after the passage of the minimum wage law—another report was submitted to Congress, in which it was noted that after the minimum was raised to $1.60 "total employment continued to rise from 72.2 million in January 1967 to 74.6 million in September 1967, an increase of almost 2.5 million workers." How about jobs in the sectors where many were employed at the minimum? "Increases in employment were concentrated in such relatively low-wage groups as tobacco, textiles, apparel, food and kindred products."

Particular attention was paid to sectors of the economy where the minimum wage law had not applied and that were now covered under the extended act. The customary fear was expressed by employers that retail and service establishments could not make the adjustment and that the extended coverage would bring on unemployment. The report found that in these sections "employment was greater in September 1967 than in January 1967, the month before the minimum wage went into effect."

In a separate report from the Office of Research and Legislative Analysis of the Wage & Hour and Public Contracts Division, the same findings recur. "All of the major non-agricultural industry divisions showed employment gains over the period from September 1966 to September 1968, except construction. The largest increase in the private sector in relative terms was in the service group, where the minimum wage had the largest impact."

Job Gains

In 1970, the Department of Labor recorded that "in the retail, services, and state and local government sectors—where the minimum wage had its greatest impact in 1969, since only newly covered workers were slated for federal minimum wage increases—employment rose substantially."

In the face of all this evidence, in 1977 the New York Times, in an editorial that foreshadowed its recent stance to wipe out minimum wage laws entirely, warned of the new increases: "Just how many jobs would disappear is not known. Rough calculations put the figure between 200,000 and 1 million."

Now what are the facts? Between 1977 and 1978, the number employed rose by more than four million and the next year the number employed rose by 2.7 million. In the same years, the rate of unemployment fell from 6.9 percent to 5.8 percent.

The dire consequences forecast by the New York Times did not materialize. Quite the reverse happened.

Does this mean that raising the minimum wage will mean more employment and a drop in the jobless rate? Not necessarily. The minimum wage is only one factor—a relatively small one—in a huge economy. Dozens of other factors—trade deficits, removal of plants overseas, a stock market crash, a massive repudiation of debt by nations in debt to American banks, bankruptcy of a GM or a McDonald's, etc.—could bring on an old-fashioned crisis with calamitous rates of unemployment. To measure the impact of the minimum wage or of any other single factor by itself in our presently complex global economy is an inexact science.

Indeed, it is altogether possible, even likely, that raising the minimum wage will cost some workers their jobs. There are marginal operators, usually small and inefficient, who are able to "make it" by paying a non-living wage. If they could hire workers for 5 cents an hour, as they once did, they would and, with all their inefficiency, they might well drive out of business more efficient competitors who pay a more humane wage. But even as these job "opportunities" are lost, other job opportunities open up because of additional jobs brought into being by the new stimulants injected into the economy by higher wages. Indeed, many of those who lost jobs in the fragile marginal sectors might be re-employed at

better pay (the new minimum) in the sturdier sectors that expand in the stimulated economy.

Again for purposes of illustration, let us consider a scenario based on our earlier calculations of purchasing power increase resulting from an adjustment of the minimum wage to the level of real buying power in 1968. The stimulant to the economy would come to more than $20 billion. How many jobs does that equal? In 1986, a $4-trillion economy generated about 100 million jobs—about $40,000 a job. A $20 billion increase in buying power should stimulate another half-million jobs.

Many Factors

Remember that this is an example, not an arithmetic forecast. Neither the number of jobs lost nor the number gained can be predicted with accuracy; there are too many other factors, not the least of which is our trade policy. But to focus on "jobs lost" only while ignoring "jobs gained," including jobs gained at better wages by many who lost jobs at lower wages, is to distort reality by putting a magnifying glass on one eye and a blinder on the other.

In the coming months, there will be legitimate room for discussion and debate about how large the raise in the minimum should be, how the increases should be timed, to whom the law should be extended. Almost a half-century of experience strongly suggests, however, that it would be a mistake to leave the determination of the minimum to Congress and the President without any proviso on what is to happen in between their itch to act. It is only logical that the minimum wage, like social security, should be tied to some measurable change in the economy, such as the average wage in the private sector. Historically, congressional adjustments to the minimum wage have averaged 54 percent of the average wage of nonsupervisory production workers, and in 1977 when the last four step increases were debated, it was set at 52 percent of the average wage. A strong case can be made for setting the minimum at 60 percent of the average. Certainly, the legislation should adjust for inflation, for the rise in the average wage, and for the higher earnings needed to stay out of poverty.

One thing, however, is certain: to leave the minimum at the present inadequate and deteriorating level is to increase poverty, to weaken incentives to step up productivity, to deny the neediest a living wage and protection from exploitation, and—most important—to deprive our economy of a necessary stimulant to lift us from our present perilously stagnant state.

New Books

The Transformation of American Industrial Relations

By Thomas A. Kochan, Harry C. Katz, Robert B. McKersie, Basic Books, New York City, 304 pages, $23.

Unions in Crisis and Beyond: Perspectives from Six Countries

By Richard Edwards et al., editor, Auburn House, Dover, Mass., 34 pages, $35.

Unions Today: New Tactics to Tackle Tough Times

Bureau of National Affairs, Washington, D.C., 140 pages, $30.

Unions in Transition: Entering the Second Century

By Seymour Martin Lipset, editor, ICS Press, San Francisco, 506 pages, $30 ($13 paper).

Every union official does a lot of talking, explaining, persuading, organizing. You do this with your union members, with potential members, with management people, with the general public. You do this to "continue the never-ending process of renewal and regeneration" of the labor movement called for in the AFL-CIO report on "The Changing Situation of Workers and Their Unions."

To learn more about this process of renewal, about past changes and future options, take a look at "The Transformation of American Industrial Relations." This is a recent book by three industrial relations professors, Thomas Kochan and Robert McKersie of Massachusetts Institute of Technology, and Cornell University's Harry Katz.

One useful chapter deals with attitudes and expectations of American workers. It draws on a number of surveys of workers, including the Harris poll used by the AFL-CIO Committee on the Evolution of Work.

Most union members are "satisfied" or "very satisfied" with their unions, according to the Kochan-Katz-McKersie report.

Unions rate high with their members on getting good wages (84 percent approval), getting good fringe benefits (76 percent), and protecting workers from unfair treatment (83 percent).

But unions get lower ratings from union members on gaining workers a say on how to do their jobs (40 percent approval), making the job more interesting (46 percent), getting workers a say in the business (27 percent), and representing workers' interests in management decision-making (41 percent).

Union wages, benefits, and fair treatment are not enough to meet the current needs and expectations of American workers, according to Kochan-Katz-McKersie.

They say workers also want more opportunity for participation in job-related decisions, more control over their workplace environment, more self-esteem and personal fulfillment and non-material rewards through their work.

Anti-union employers are giving a key role to behavioral-science-trained human resource management specialists instead of to management people with experience in labor relations and collective bargaining. Kochan-Katz-McKerzie consider this a highly significant trend.

The new, more sophisticated, non-union, anti-union management systems are often based on new theories of worker motivation and organizational behavior which favor "participatory decision-making" and "employee involvement" in group or team problem-solving. Big non-union companies often develop complaint and review procedures that are modeled on negotiated union grievance procedures.

In unionized shop-floor settings, "quality of work life" programs are more likely to succeed if there is joint labor-management trust and cooperation at higher levels of the industrial relations system, the Kochan-Katz-McKersie book concludes. Success means not only better organizational performance by the company's standards but also more job security and better compensation for the workers.

The authors warn that "it is difficult and politically risky for both union and management officials to introduce and manage union-management change efforts." They present examples of both QWL success and QWL failure.

Unions are more and more using their bargaining power to get into top-level strategic business decisions outside the "normal" range of collective bargaining over wages and working conditions and job security. Strategic business decisions deal with such issues as new investment, workforce adjustment, new technology, and new forms of work organization.

Kochan-Katz-McKersie see these union actions as part of a significant break with past labor-management relations restricted in a more simple way to wages and working conditions and job security.

For union leaders there are dangers of being co-opted into painful decisions, of being identified too closely with management, of losing touch with rank-and-file worker interests. But Kochan-Katz-McKersie point out that in a major crisis, as unions seek to protect and to advance the welfare of their members, it's logical and necessary for union leaders to get involved directly in strategic business decisions which carry unions outside the old range of collective bargaining.

Labor law reform is necessary if labor leaders are likely to support a broad policy agenda that reconciles employer flexibility with adequate protections for workers, Kochan-Katz-McKersie argue. The authors assert:

"If American labor policy is to uphold the objectives stated in the National Labor Relations Act—to promote collective bargaining and provide employees with the opportunity to decide whether or not to be represented by labor organizations of their own choosing—then the current law and its administration require substantial reform."

Unions and collective bargaining will not wither away or disappear, Kochan-Katz-McKersie declare, but "unions will continue to face intense pressure to modify their traditional strategies in order both to cope with changes in business and human resource management strategies and to give workers more say over the issues that affect their working lives."

The Kochan-Katz-McKersie book is often not pleasant reading for union people—but we can use it to advance the union cause.

You get an international perspective on problems facing unions in the major industrial democracies, in "Unions in Crisis and Beyond: Perspectives from Six Countries," a book edited by Professor Richard Edwards of the University of Massachusetts at Amherst. This book shows that unions in other countries have problems similar to those of American unions.

The Edwards book notes that a general trend to conservative political leadership—Ronald Reagan in the USA, Margaret Thatcher in the United Kingdom, Helmut Kohl in West Germany, and the Swedish conservative-liberal coalition—has put unions in all of these countries "in new and distinctly less favorable contexts."

But Edwards asserts that "unions have survived and in some cases even strengthened themselves during the economic crisis."

Edwards and co-author Michael Podgursky praise various innovative actions by U.S. unions—increased union control ofpension fund assets, corporate campaigns, coordinated union organizing campaigns, and union experimentation with new ways of worker participation and worker organization, including services for associate members and union political action.

A variety of new union tactics are spelled out in 30 case studies in a useful book, "Unions Today: New Tactics for Tough Times," from the Bureau of National Affairs. The tactics include alternatives to plant closing, negotiating job security, employee ownership and gain-sharing, building community support, corporate campaigns and use of outside consultants, new media techniques, and dealing with deregulation.

You get much more pain and much less gain from "Unions in Transition: Entering the Second Century," edited by Seymour Martin Lipset of the Hoover Institution at Stanford University. The general theme of union decline is old stuff to union folks, and that's what AFL-CIO President Lane Kirkland says in his chapter, "It Has All Been Said Before . . . ." But don't buy the $30 book to read the Kirkland chapter.

AFL-CIO Dept. of Economic Research

Unemployment rates rise in 48 states as benefit loss undercuts jobless workers

The nation's unemployment crisis deepened between December and January, with jobless rates rising in 48 states, the District of Columbia and Puerto Rico—and holding unchanged in the other two states.

At the same time, the Bureau of Labor Statistics reported that January's unemployment in 15 states and Puerto Rico was above the level for the same month a year ago, and remained stagnant in three other states.

Adding to the grimness of the figures, two-thirds of this growing army of jobless workers are being forced to subsist without benefit of assistance from the unemployment insurance system—a program enacted half a century ago to put an economic floor beneath those whose jobs have been shot out from under them.

BLS data showed nine states with double-digit jobless rates in January, compared to only four states the month before and seven a year earlier.

The figures threw cold water on Reagan Administration boasts of a healthy economic recovery. They also made clear that the surge of new service industry jobs—many of them part-time and at or near minimum-wage levels—was not sufficient to offset the continued slide in better-paying jobs in industry.

Although all states experienced employment increases in services and finance, insurance and real estate, 26 states reported job losses in manufacturing from year-ago levels. The largest drops occurred in Massachusetts, Michigan, New York, Ohio, Pennsylvania and Texas.

Oil glut impact

In addition, BLS said, mining employment—which includes the oil and gas extraction industry—fell in 30 states. The biggest losers were California, Louisiana, Oklahoma and Texas.

Louisiana remained the state with the highest January unemployment rate—14.7 percent. Other states with double-digit joblessness included West Virginia, 13 percent; Mississippi, 12.7 percent; Alaska, 11.6 percent; Kentucky, 10.8 percent; Idaho, 10.7 percent; Wyoming, 10.6 percent; Montana, 10.1 percent, and Alabama, 10 percent.

The jump in unemployment between December and January hit Maine the hardest, with its rate rising 2.5 percent. Other states experiencing major increases in the one-month period included Kentucky, up 2.3 percent; Idaho, 2.1 percent; Montana, 2.1 percent; Pennsylvania, 1.8 percent; Colorado, 1.6 percent; Louisiana, Utah and West Virginia, 1.4 percent; Florida and Illinois, 1.2 percent; Indiana and Texas, 1.1 percent, and Maryland, Massachusetts, Mississippi and Washington, 1 percent.

Despite the mounting joblessness, some 22,000 long-term unemployed in Louisiana lost extended jobless benefits as the result of harsh Reagan Administration criteria enacted in 1981, according to the Center on Budget & Policy Priorities.

Benefits stopped

Up to mid-March, the long-term jobless in Louisiana—whose 14.7-percent unemployment rate is the nation's highest—were able to draw an average $148 a week in benefits for 39 weeks instead of only 26 weeks. These extended benefits, financed equally by the federal and state governments, are supposed to be available when a state's unemployment level reaches crisis proportions.

But the Administration changed the way it arrives at that definition. The method incorporated into the 1981 relies on the extent of insured unemployment—those eligible for benefits—rather than the total number of people on the jobless rolls.

The law is so stringent that although Louisiana has more than 284,000 people out of work, it no longer qualifies for extended aid. This means that the 100,000 unemployed workers now drawing benefits in that state face a cutoff in assistance at the end of 26 weeks, even if they haven't found new jobs.

This leaves Alaska—whose jobless rate is 11.6 percent—as the only state still providing extended unemployment payments.

State Fed leaders review key issues at Meany Center

Top officers from 41 state federations met to exchange ideas and review on-going activities at the George Meany Center for Labor Studies.

Joining the chief state body officers for the three-day conference were AFL-CIO COPE and regional directors.

Kenneth Young, executive assistant to AFL-CIO President Lane Kirkland, discussed the 1988 elections and outlined the federation's plans to provide union members with responses from all interested presidential candidates on issues of major concern to workers.

The State AFL-CIO officers examined plans to increase union affiliation with state and local central bodies and heard reports on the federation's legislative action committees and other grassroots lobbying projects.

Federation activities

Presentations included an evening session with AFL-CIO Sec.-Treas. Thomas R. Donahue, a report from New York AFL-CIO President Edward Cleary on a labor-management-government pact to bolster the state's economy, an overview of the federation's organizing projects, a panel on labor's support groups and videos on bargaining for health care benefits and affiliation.

Other speakers included AFL-CIO Directors Charles McDonald, Organization & Field Services; Tom Kahn, International Affairs; Robert McGlotten, Legislation; Rudy Oswald, Economic Research; John Perkins, COPE; Bert Seidman, Occupational Safety, Health & Social Security; James Kennedy, executive assistant to Sec.-Treas. Donahue, and Robert Pleasure, executive director of the Meany Center.

In a separate one-day meeting, the presidents of 20 affiliated unions—not seated on the Executive Council—met with Donahue and federation officials for an exchange of ideas and information on AFL-CIO activities.

The officers discussed the proposal to increase union affiliation with state and local central bodies and reviewed the federation's legislative priorities set at the February council meeting.

Other briefings included an update on the activities of the Committee on the Evolution of Work, a review of the Union Privilege Benefit Programs and a report on the Labor Institute of Public Affairs.

Conventions

The Maine AFL-CIO convention will be Nov. 4-6 in Rockport.

The Flight Attendants will convene Nov. 17-19 in San Diego.

UFCW President William Wynn rallies striking Local 222 members.

IBP Inc. chops pay package to turn lockout into strike

Dakota City, Neb.—More than 2,500 Food & Commercial Workers struck the flagship plant of IBP Inc., 24 hours after the company lifted a three-month-old lockout by arbitrarily putting deep pay and benefit cuts into effect.

The union branded this latest company move "a throwback to the dark ages of American labor-management relations."

Members of UFCW Local 222 voted unanimously to reject the new round of wage cuts—a last-ditch offer that was even worse than management's previous pay-freeze proposal that triggered the lockout on Dec. 14.

The union has filed charges against IBP, a subsidiary of Occidental Petroleum, contending the lockout was an unfair labor practice and that the harsh new contract proposal is evidence that the company hasn't negotiated in good faith.

If the National Labor Relations Board rules in favor of the UFCW, the company could be liable for approximately $10 million in back pay, the union said.

The new package that IBP put into effect unilaterally calls for pay cuts of as much as 60 cents an hour and elimination of overtime pay for work after eight hours in a day. In addition, the company wants workers to pay a portion of their health insurance premium. In 1982—the last time the union negotiated a contract with the giant meat packer—workers accepted a $1.07-an-hour wage cut.

"The members of Local 222 are sick and tired of being the victims of IBP's unfair labor practices," said Vice President Lewie Anderson, director of the UFCW's packinghouse division. And, he added, they're "sick and tired of the unsafe working conditions."

The Occupational Safety & Health Administration is investigating UFCW charges that IBP has underreported or failed to report hundreds of workplace injuries. The union has also charged management with failing to correct 13 specific safety hazards in the plant.

Safety ignored

The union has asked OSHA to conduct a plant-wide inspection of the facility, charging that in its drive to stimulate productivity, IBP has ignored "basic safety requirements."

The complaint points out that employees have suffered cuts, repetitive trauma disorders, falls on slippery floors and other widespread injuries.

The UFCW charges about safety at the plant, and the meat packer's consistent underreporting of injuries are due to be aired at a hearing by a House Government Operations subcommittee.

In addition to pressing its legal challenges to the lockout and the federal safety investigations, the UFCW has launched a campaign to organize workers at the company's 10 nonunion plants.

UFCW wins vote at Armour packing plant

Mason City, Iowa—Workers at the Armour Food Co. meat packing plant here voted in favor of the Food & Commercial Workers by a margin of 157 to 122. The victory by Local 31-P was the union's largest organizing win at a major packinghouse since 1979.

The plant is one of 13 Armour facilities that ConAgra Inc. purchased from Greyhound Corp. in 1983. Greyhound voided the union contract days before the sale and ConAgra opened most of the plants with nonunion workers, paying wages substantially below those at unionized meatpacking plants.

Unfair labor practice charges filed by the UFCW at that time charged ConAgra with illegally discriminating against union members in its hiring practice. The case is still pending before the National Labor Relations Board.

UFCW President William H. Wynn said the election victory sent a clear signal to management that the workers were "determined to exercise their right to organize despite the company's outrageous anti-union tactics."

Wynn said that the union would intensify its organizing efforts in the packinghouse industry.

More companies locking out workers

A get-tough attitude by corporate management caused a near doubling of lockouts in 1986, in a period in which the Labor Dept. reported that the number of work stoppages was among the lowest in the last 40 years.

There were 41 lockouts in 1986, involving more than 56,600 workers—a 43.9-percent leap over 1985, when some 24,600 workers were locked out in 23 contract disputes.

The largest 1986 lockout involved 22,000 Steelworkers at USX Corp., formerly U.S. Steel. They lost 2.3 million workdays from the time management slammed the ggates shut on them last Aug. 1 until a settlement was reached in late January 1987. By contrast, most other steel producers settled with the USWA without shutdowns.

Other major lockouts last year forced idleness on 12,000 Auto Workers at 10 Deere & Co. plants, and 5,800 USWA members at Timken Co.

Management's resort to the lockout as a weapon against workers has continued to grow in recent years, according to data complied by the Bureau of National Affairs. There were only 22 lockouts, idling 17,000 workers in 1983, and 40 lockouts that affected 15,200 workers in 1982.

The Labor Dept. reported a total of 69 work stoppages last year, involving 533,000 employees, compared with 1985's record low of 54, affecting 324,000 workers.

Work stoppages

The largest involved 155,000 Communications Workers who struck American Telephone & Telegraph Co. Another 8,000 CWA members struck four of the telephone industry's regional operating companies in their first negotiation since the 1984 court-ordered divestiture of the communications giant.

But the negotiations with the other "baby Bells" produced agreements covering 275,000 CWA and Electrical Workers members without a walkout, and 30,000 IBEW members reached peaceful settlement of their contracts with AT&T.

Other major stoppages included the strike of 30,000 Longshoremen against the Council of North Atlantic Shipping Associations at ports from Maine to Virginia; 15,000 Steelworkers and Aluminum, Brick & Glass Workers against Aluminum Co. of America, and 13,600 USWA members against the major can corporations.

Industries that negotiated collective bargaining agreements without work stoppages in 1986 included 200,000 members of 10 unions in railroad transportation and 50,000 Oil, Chemical & Atomic Workers in petroleum refining.

There were no major stoppages in federal or state government, and only seven—involving 35,000 workers—in local government. The largest was the walkout of 12,300 Philadelphia city employees represented by the State, County & Municipal Employees.

Seniors assail deep slashes in '88 budget

The Reagan Administration's "short-sighted and callous" 1988 budget proposals would heap an unacceptable burden on the elderly, Jacob Clayman, president of the National Council of Senior Citizens, testified.

To pay for continued growth in defense spending, Clayman told the Senate Aging Committee, the White House has singled out the programs for the elderly for "some of the deepest cuts, particularly in the areas of health care and housing."

This continues the Administration's pattern of the past six years, he declared, which have involved axing "billions of dollars from federal programs for children, the elderly and the poor" to pay for the military buildup.

The NCSC president pointed out that Medicare has suffered a $42-billion slash in funding and Medicaid has been cut $21.6 billion in the past five years. The Medicaid cuts, he emphasized, have severely curtailed the ability of the states to meet the health needs of the poor.

Instead of cutting these programs, Clayman emphasized, Congress should enact legislation to help the elderly meet the cost of long-term health care. These costs continue to rise out of control, he told the committee, and have become "the single greatest threat to the financial security of older Americans."

Clayman also criticized Reagan's proposal to eliminate virtually all new housing for the elderly and the handicapped. If that scheme is not "soundly defeated" by Congress, he said, the handicapped and the poor will be left to shift for themselves at a time when there is a "shortage of low-cost housing" on the market.

Programs to meet the "desperate" needs of the elderly and the poor can be put in place without aggravating the budget deficit, the NCSC president said, if Congress restrains military growth and adopts "responsible" revenue-raising measures.

Job safety programs get Labor Dept. funds

Thirteen labor organizations will share $883,500 in federal grant money awarded by the Labor Dept.

The awards, made under the Occupational Safety & Health Administration's "New Directions" program, provide funds to set up education and training programs and for existing projects.

The grant recipients are: Government Employees, $35,000; Arkansas AFL-CIO, $50,000; Alaska Laborers Training Trust Fund, Anchorage, $100,000; State, County & Municipal Employees, $100,000; AFL-CIO Industrial Union Dept., $130,000; Fire Fighters Local F-106, McGuire Air Force Base, N.J., $500; Chemical Workers, $71,000; Laborers Local 17 Education & Training Trust Fund, Vails Gate, N.Y., $51,000; Philadelphia AFL-CIO, $50,000; Retail, Wholesale & Dept. Store Union, $76,000; Steelworkers, $120,000; Orlando, Fla., Building & Construction Trades Council, $50,000, and unaffiliated New York State Association of Fire Chiefs, Kinderhook, $50,000.

Questions for the candidates

The AFL-CIO has invited candidates for the Democratic and Republican presidential nominations to answer these four questions. Replies will be printed in full and given wide distribution among union members.

Foreign Trade

How would you propose to reduce America's trade deficit and encourage the fair exchange of goods with other nations, while maintaining and improving our standard of living?

Budget Deficit

How would you reduce the federal budget deficit without hurting working Americans and the poor? Would you rule out raising federal revenues, including tax increases, as a component of deficit reduction?

Human Needs

What role do you see for governments—federal, state and local—in such areas as: education, employment, training, health care, housing, equal opportunity, the environment, and programs for the elderly? At your first Cabinet meeting, what instructions would you give to the heads of departments with responsibilities in these areas?

The Political Process

Unions, like many other membership organizations, have historically played an active role in the political process by assisting their members in registering, by communicating with their members on the issues, and by endorsing candidates whose positions further the best interests of their membership. What are your views of organized labor's proper role in the political process?

Open forum gives candidates chance to seek labor backing

Continued from Page 1

video to help members make an informed choice was given final approval at the AFL-CIO Executive Council session last month.

Democrats invited to participate in the process are: Bruce Babbitt, former governor of Arizona; Sen. Joseph Biden Jr. of Delaware; Sen. Dale Bumpers of Arkansas; Gov. Michael Dukakis of Massachusetts; Rep. Richard A. Gephardt of Missouri; Gary Hart, former senator from Colorado, and Jesse Jackson, civil rights activist.

Republicans on the list are: Vice President George Bush; Senate Republican Leader Robert Dole of Kansas; Pierre S. duPont, former governor of Delaware; Alexander Haig, former Secretary of State; Rep. Jack Kemp of New York; Paul Laxalt, former senator from Nevada; Pat Robertson, television evangelist, and Donald Rumsfeld, former Secretary of Defense.

Kirkland explained to the potential candidates that the early start in the AFL-CIO's voter education effort is essential because "party rules and delegate selection timetables make it necessary for the labor movement to consider the endorsement question before the 1988 primary season begins if we are to take an effective part in the nation's political process."

He asked that response to the written questions, up to 200 words for each, be sent in by Apr. 17.

The AFL-CIO will publish the replies in full in early May and other labor publications are expected to carry the questions and answers in issues going to press in June or soon thereafter. The videotaping will be completed by Apr. 30 for release in May.

Kirkland assured the presidential contenders that the video question "concerning your views on the unique leadership role of the presidency" will be provided well in advance, and "uniform ground rules" will apply to the taping.

Donahue outlines plan.

Donahue told reporters that there is no single "litmus test" issue that will determine labor's support.

The preamble to the questionnaire sent to candidates expresses labor's concern with the state of the economy and the lowering of American living standards.

"We want to give our members a chance to read the candidates' own words and to watch the candidates as they articulate their own bid for leadership of the country," Donahue said.

Unions spur economic lift at state level

Continued from Page 1

est wage costs and lowest overall business costs. These indicators alone "measure the cost of everything and the value of nothing," he said.

"We wanted to know how well the states' economies are actually performing, if their citizens are doing better. . . and if state government policy encourages long-term, broad-based growth," Friedman said.

"This report card is meant to help business, labor and community leaders and government officials gauge the health of their economies and take action. . . by asking the right questions," he added.

The research group is supported by labor, business and foundation grants. Labor sponsors include the Service Employees, State, County & Municipal Employees, Teachers and AFL-CIO Public Employee Dept.

Workers' role

SEIU President John Sweeney said the report card demonstrates that the United States cannot use Third World economic policies as a model for this country and must take into account workers' contributions to economic development.

AFT President Albert Shanker stressed that particularly in education, years of investment are necessary before the states will realize benefits. "Many states are just now reaping the benefits of what they did 25 or 30 years ago," he said.

AFSCME Sec.-Treas. William Lucy said the study proves that tax cuts and budget reductions in vital programs "have been counterproductive" and threaten to destroy real economic progress. The building blocks of economic development are public services, schools, the arts, health care and other activities that contribute to an improved "business climate," he stated.

The determining factors of the "development report card for the states" contrast sharply with those of other business surveys because those reviews looked only at cost, the council said. While offering lower taxes and wages, states that score well on traditional business indexes limit investments in education, job training, water and sewer systems, road maintenance, housing and other factors that businesses consider important, the report found.

Strong growth

By comparison, states experiencing strong economic growth—including Massachusetts, California and Connecticut—are judged to have a "bad business climate" by some surveys, due to higher wage rates, taxes and percentage of union membership.

The study analyzed 78 factors—including employment growth, competitiveness, per capita income, quality of life concerns, labor force skills and financial resources—considered by economists and top executives to be key factors in assessing economic growth.

The New England states topped the performance index—which rated employment, income and quality of life concerns—with several "Rustbelt" states close behind.

Southern states trailed the rest of the country in that category, the survey found, "victims of a history of low-paying, footloose industries, the steady decline of agriculture and a more recent decline of energy-related industries."

Only in the policy index does the performance of Southern states improve, the survey found, with new emphasis on education reform and development of new technologies.

OPEIU negotiates gains at Journal of Commerce

New York—The Journal of Commerce Employees Association, affiliated with Office & Professional Employees Local 153, ratified a new two-year contract providing wage and pension improvements.

The Journal of Commerce, which specializes in shipping, energy and transportation news, is one of 37 newspapers in the Knight-Ridder chain. The Local 153 members, who are reporters, copy editors, marketing and customer sales representatives, and office workers, will get a 4 percent raise, retroactive to May 1, 1986, plus a 3.5-percent increase on May 1, 1987.

Economy sags as corporate profits soar

Continued from Page 1

estimate for the fourth quarter. In January, the government estimated the GNP grew at an annual rate of 1.7 percent during that period, a figure that was reduced last month to 1.3 percent.

Despite the gloomy GNP figures, the Administration continued to predict a rebounding economy in 1987 with a growth rate of 3.1 percent. But economists were dubious. Personal consumption—which accounts for two-thirds of overall economic activity—slumped four-tenths of 1 percent during the fourth quarter. Analysts called this a particularly worrisome sign.

Even so, there were smiles in corporate board rooms as business profits soared $8.4 billion in the fourth quarter to a seasonally adjusted annual rate of $310.4 billion.

For all of 1986, pre-tax profits totaled $237.4 billion and after-tax profits were $133.9 billion. Of that latter figure, $87.8 billion went to dividends, leaving $46.1 billion in undistributed profits.

In other developments:

- The congressional Joint Economic Committee warned that the economy is "skating on thin ice," and called for a wide range of actions to stem the foreign trade and federal budget deficits, provide job training and benefits for the unemployed and the poor, increase investment in education and health, develop an energy policy and resolve the Third-World debt crisis.

"Real wages have stagnated and unemployment has remained stubbornly high," the JEC said, and there are a number of "warning signs" that the nation could find itself faced with "a new recession."

- Business sales tumbled a record 4.5 percent in January while inventories shot up nine-tenths of 1 percent—the biggest rise in more than seven years—the Commerce Dept. reported.

The plunge in sales to $428.7 billion was the biggest one-month decline since the government began keeping this data in 1967. And the rise in inventories to $592.2 billion was the largest increase since July 1979.

Economists blamed the wide swings on both industry and consumers who went on a buying binge in the last few months of 1986 trying to anticipate the impact of the new income tax law that went into effect Jan. 1.

- American factories, mines and utilities operated at 79.8 percent of capacity in February, the highest level in a year. The operating rate went up two-tenths of 1 percent last month. But it was still four-tenths of 1 percent below February 1966, and a full 2 percent lower than the summer of 1984, when American industry hit the peak of the so-called recovery from the Reagan Recession.

EDITORIALS

Addressing the Issues

THE AFL-CIO and its affiliates exist to serve the needs and advance the interests of America's working people. We seek to accomplish that mission in a variety of ways, among them collective bargaining, legislative action and political participation.

In the 1988 presidential election, our goal is to help union members and their families become more involved in deciding which candidate or candidates offer the standard of leadership this nation seeks.

Union members, like all citizens, are looking for a President who is able to understand and confront the challenges we face today and tomorrow.

The American standard of living is under attack. Persistent unemployment and lower pay scales have strained family budgets. Consumer purchasing power is eroding. The good jobs that formed the basis for a stable middle class are disappearing in the face of intense and often unfair foreign competition. At the same time, as the federal role has been reduced, an increased burden is being placed on state and local governments to provide community services and to rebuild deteriorating public facilities.

As the proper role for government continues to be the subject of national debate, American workers and their unions are deeply concerned about the need to provide: better jobs, improved education, equal opportunity for all, affordable housing, access to health care, and all the elements necessary to give the next generation a chance at a better life than its parents.

Against this background, and as part of the effort to help our members and their families exercise their civic rights and responsibilities, we have asked the potential candidates for President in both major political parties to tell us how they would approach these issues.

—Preamble to AFL-CIO questions for presidential candidates.

Panic in the Senate

DRUGS AND ALCOHOL abuse are problems in many workplaces, in many schools, and in many homes. America's unions have never tried to pretend otherwise. We know better.

That's why unions, often in cooperation with other community groups and with employers, have tried to reach out to fellow workers who have these problems and steer them to programs and counselling that have proved most effective.

Thousands of workers and their families can testify to the value of these programs.

Is such an approach 100 percent effective? Of course not.

Is the solution an intrusive and demeaning policy of indiscriminate random testing of workers—or of any other segment of society? Surely not.

Must the urine cup and the eagle-eyed monitor be the price of employment, along with the polygraph and psychological tests that ask how much you stole on your last job?

Some in Congress apparently think so, or assume their constituents think so.

The Senate Commerce Committee approved a bill for random drug and alcohol testing of some 3 million transportation industry workers by a 19-1 vote. The margin reflects political panic. Several senators who voted for the bill in committee expressed grave doubts about both the constitutionality of the legislation and the reliability of the tests.

There are situations where the magnitude of a problem and the potential risk to others calls for consideration of stronger measures than would be generally acceptable.

But the flexibility of the collective bargaining process is clearly the preferred means of dealing with such issues. Certainly, the solution is not a legalized police state. Nor is it likely to be found in the closed mind of a United States senator bellowing at union witnesses, "What's so abusive about urinating into a paper cup?"

Congress should be concerned with preventing unnecessary infringements on the privacy and dignity of workers, not adding to them.

Washington Window

Fundraiser scare tactics undermine social security

By Press Associates

When President Franklin D. Roosevelt signed the historic Social Security Act into law in 1935, he said it was the cornerstone in a structure being built, but which was by no means complete. Today with Medicare and other benefits, social security represents a family protection plan for the elderly as well as lifting the burden of expense and worry from their children.

Or at least that's what everyone believed until a dozen or so direct mail operators discovered how to make millions of dollars by stirring unfounded fear among the elderly.

Tragically, according to congressional hearings, the largest and most notorious of the groups preying on the elderly is headed by FDR's son, James Roosevelt. Critics believe that the National Committee to Preserve Social Security & Medicare is misnamed since its activities may be doing more to undermine and destroy the program than to preserve it.

James Roosevelt, 79, is a former member of Congress. He may be a $60,000-a-year figurehead chairman of the association judging by the vagueness of his replies under intense questioning by the House Ways & Means Subcommittee on Social Security.

Published reports say the national committee was created in 1982 and was run by BFC Direct Marketing, formery Butcher-Forde Consulting.

Magic of name

But it was the magic of the Roosevelt name that pulled in tens of millions of dollars, and James Roosevelt was attacked by angry members of Congress who have been inundated with mail from frightened elderly. The subcommittee said the BFC-Roosevelt operation raised more than $30 million in 1985, spending more than 80 percent of its funds on direct mail to raise more funds.

The Roosevelt group's exploitation of the so-called "notch problem" is by far the most serious issue.

Robert M. Ball, Social Security Commissioner under Presidents Kennedy, Johnson and Nixon, said the big threat to social security this year comes from a push by "notch babies" to win higher benefits.

Ball said that, in retrospect, it is clear a mistake was made in the 1977 social security amendments in not preventing over-generous payments to some of those who became 62 just before 1977 and who worked after 62. Many born a little later who worked after 62 get lower benefits. To raise benefits for those born later and give them the same accidential hikes would cost $300 billion over the next 15 years and $80 billion in the next five years alone, he said.

Unscrupulous claims

And that's not the only issue which angers members of Congress.

"Unscrupulous lobbyists like James Roosevelt are preying on senior citizens across the country," declared Sen. Albert Gore Jr. (D-Tenn.). He called the national committee "a menace and a shame."

Last year, Gore said, "Roosevelt used phony congressional stationery to send letters to millions of elderly Americans, claiming that social security and Medicare programs were in jeopardy. After reading his letter, one woman called my office and asked if 'everyone who was on social security had to send in $10.'" Gore charged that "Roosevelt chiseled $10 million out of frightened senior citizens in 1984 alone."

Gore said James Roosevelt has launched a new mail campaign "that stoops lower than ever." Gore said Roosevelt claims in the letter that he enclosed a one-dollar bill that he would like the recipient to return along with an extra contribution.

"But of course, my constituents tell me, there is no dollar enclosed. Roosevelt appears to have left it out on purpose, so that recipients will think they lost the dollar themselves and send back one of their own."

Hopefully, remedial legislation will tame the worst tactics of all the direct mail groups and end the disgraceful exploitation of the elderly.

Merger toast

Communications Workers President Morton Bahr and Robert S. McMichen, right, former Typographical Union president, toast the signing of merger documents, combining the ITU with CWA. The 134-year-old ITU adds its 70,000 members to CWA's 650,000. McMichen became a vice president of CWA and head of its Printing, Publishing & Media Workers division. The ITU will move its executive office to Washington by Apr. 1.

Newspaper unions set layout for coordinated bargaining

In a move aimed at reversing erosion in existing contracts in the newspaper industry, six major news and communications unions have established the machinery for joint and coordinated bargaining.

Taking part in the effort are the Newspaper Guild, Graphic Communications Union, Communications Workers, Service Employees, Machinists and the unaffiliated Teamsters.

Following a meeting at Guild headquarters, invitations were extended to three other unions—Operating Engineers, Electrical Workers and Paperworkers—to join in mapping strategy for 1987 contract talks.

Guild President Charles A. Perlik Jr. said coordinated bargaining was essential to "bring back the climate of progress and achievement to newspaper bargaining tables."

Coordinated bargaining in the industry already exists in Philadelphia, San Francisco, Hawaii and Toledo, Ohio. But even those efforts require fine-tuning, and the drive must be extended beyond those metropolitan centers to other major areas, Perlik said. The biggest contracts up for renewal this year are with New York City's three dailies, where existing agreements are due to expire in April.

Participants in the initial meeting included CWA President Morton Bahr; Robert S. McMichen, head of the CWA's Printing, Publishing & Media Workers' Sector and James Woods, chief assistant of the division; GCIU President James J. Norton and Sec.-Treas. Michael P. McNally; David Cromer, special assistant to the SEIU president; IAM Vice President George Kourpias, and Carmen Parise, director of the IBT's newspaper drivers' division.

8,000 Hawaii hotel workers win contract gains

Honolulu—Some 8,000 members of the Hotel Employees & Restaurant Employees won major wage gains, job security, and pension and health improvements to head off a walkout against the 13 largest hotels in a state whose economy is fueled by tourism.

The settlement between HERE Local 5 and the Council of Hawaii Hotels was reached 48 hours after the old contract expired.

HERE won wage increases averaging 18 percent over the three-year life of the contract, and management agreed to make the pact binding on successor owners. The major hotels here have experienced repeated changes in ownership, forcing the union to negotiate new contracts each time.

The union succeeded in winning safeguards against subcontracting, an increase in pension benefits from $15 to $20 for each year of covered service, and continuation of full medical benefit coverage at no cost to the workers.

OSHA finds new excuses to stall hazard warning

The Reagan Administration's attempt to scuttle a Steelworkers' lawsuit seeking to expand the federal hazard communication standard beyond manufacturing underscores the White House's lack of commitment to worker safety, the AFL-CIO charged.

Federation safety specialist Margaret Seminario said the Occupational Safety & Health Administration has merely offered up "more excuses as to why they don't want to expand the scope of the hazard communication standard. If fact, they still haven't indicated they are going to do it."

In the meantime, she pointed out, "millions of workers remain without protection." The agency could move immediately to expand the scope of the standard, she said, stressing that a dozen states that operate OSHA-approved state plans already have expanded coverage to workers in sectors outside of manufacturing.

OSHA's hazard communications rule, issued in November 1983 with coverage limited to the manufacturing sector, was challenged by the USWA and several other unions in the 3rd Circuit U.S. Court of Appeals in Philadelphia.

In May 1985, the appellate court ordered the standard expanded to workers outside the manufacturing sector, unless OSHA could explain why it is not feasible to do so. The Labor Dept. contends that the court set no time limit for action and that OSHA's response has been "reasonably expeditious."

Seminario said OSHA chose not to act even though the court had noted that the agency, by law, must set a standard "which most adequately assures, to the extent feasible, on the basis of the best available evidence" that no worker will suffer impairment of health or functional capacity. Further, the 1985 ruling stated, "There is record evidence that workers in sectors other than manufacturing are exposed to hazards associated with use of toxic materials or other harmful physical agents."

Seminario said the court indicated that the agency should act based on the existing record. Instead, OSHA reopened the hearing record for additional comments, and now has headed down the lengthy rulemaking road to perhaps produce a final standard next year—nearly three years after the court's order, she added.

Evidence provided

"The existing hearing record provides the evidence that covering workers outside manufacturing is feasible," Seminario said. "Certainly there is no evidence that it is not feasible, and industry has had full notice that OSHA was considering expanding the scope of the standard."

The Labor Dept. insisted that the original hearing record is insufficient for determining the feasibility of expanding the standard's coverage and for that reason, OSHA initiated rulemaking procedures.

OSHA has drafted a proposed rule, but internal reviews prevented it from being issued this month—the deadline the agency set last fall, according to the Labor Dept.'s brief. OSHA said it still expects to issue a final rule by early 1988.

Because "nothing in the court's mandate precludes or curtails further rulemaking," OSHA is "justified in interpreting the mandate to permit necessary rulemaking to amass and evaluate facts bearing on the feasibility of expanding the rule," the Labor Dept. said.

No blarney

New York—The luck of the Irish won out for some young musicians who almost missed their chance to march in the city's St. Patrick's Day parade.

The Sea Cadets—a 65-member drum and glockenspiel squad from St. Nicholas Torrentine Catholic School—thought its place in the parade was lost when the band's eight drums were stolen.

But a pot of gold and a happy ending were supplied by President Richard Costello of Longshoremen's Local 1964, who donated $1,300 to replace the drums in time for the parade.

Costello heard the story of the stolen drums on a radio program and called to donate $500. "When no one else offered to contribute, I called back and said 'We can do better than that. I'll go for the whole thing,' " he said. The ILA local and friends of Costello pitched in, with the radio show's co-hosts also donating $200.

The students—Chinese, Puerto Rican, black and white children from the Bronx—met with Costello before the parade. President John E. Lawe of the Transport Workers was grand marshal of the march.

Governors tap labor's ranks for cabinet posts

From New York to Washington state, trade unionists are in state cabinet-level posts as commissioners or secretaries of labor agencies. A survey of state federations showed that a growing list of union members are serving their state governments in key labor agency offices, with several appointments made by governors elected last November.

The following is a state-by-state rundown of top new labor department appointees:

Alabama—Robin Rea, a member of the Steelworkers, was named labor commissioner by newly elected Gov. Guy Hunt (R).

Rea, 56, is a 33-year member of USWA Local 12030. He joined the union in 1954 when he began working at the Alabama Gas Co. and also served as a shop steward. Rea was a member of the local's negotiating committee when he was appointed labor commissioner.

Alaska—James A. Sampson, 35, was serving as secretary-treasurer of the Alaska District Council of the Laborers when he was tapped by Gov. Steve Cowper (D) to be commissioner of labor. Sampson recently received his bachelor of arts degree at the George Meany Center for Labor Studies.

Previously he had been assistant business manager of Laborers Local 942. He had an associate degree from the University of Alaska when he began his labor studies curriculum.

Colorado—Newly elected Gov. Roy Romer (D) appointed Robert F. Goss to head the state's Dept. of Labor.

Goss, 65, was elected president of the Oil, Chemical & Atomic Workers in 1979 and served until his retirement in 1983.

He also was a member of the AFL-CIO Executive Council from 1979 to 1985.

Idaho—Gov. Cecil Andrus (D) named David Duthie to be deputy director of the labor department. Duthie, 41, is a 20-year member of the USWA. As president of a USWA local, he focused national attention on health problems at the Bunker Hill smelter, particularly high levels of lead in workers' blood. Duthie also served on the executive board of the State AFL-CIO.

Illinois—Gov. James R. Thompson (R), re-elected this year with labor support, has named Gwen Martin to head the state's Dept. of Labor. Martin, a member of the Communications Workers, had been a CWA shop steward when she worked for Ohio Bell. After holding local union offices, she was appointed to the CWA staff and has been based in Illinois.

Martin has been a vice president of the Illinois State AFL-CIO since 1978, active in the Coalition of Labor Union Women and a member of the union panel of the Illinois Commission on the State of Women.

Lousiana—Gov. Edwin Edwards (D) appointed Gayle Truly to head the state's labor dept. Truly, a member of State, County & Municipal Employees Local 421, had served as undersecretary of labor since 1983.

Truly, 44, also served as a research specialist with the State AFL-CIO, focusing on health and welfare programs and laws to aid the handicapped. She also worked as a lobbyist for the state body.

Maryland—Harry Kollein Jr., who had been president of the Baltimore AFL-CIO central body since 1980, was apppointed labor commissioner by newly elected Gov. William D. Schaeffer (D).

Kollein, 60, is a former business representative of Local 68 of the Bakery, Confectionery & Tobacco Workers and served as secretary-treasurer of the Baltimore central body for 12 years before his election as president.

North Dakota—Byron Knutson, a 21-year member of the Railway & Airline Clerks, was elected state labor commissioner last November.

Knutson, 57, joined the system-wide BRAC local when he worked for the Sooline Rail Road. He also was an organizer for the Iowa Farmers Union.

Tennessee—Newly elected Gov. Ned McWherter (D), chose the CWA's James White as the state's labor commissioner.

White, 49, a former switching technician for South Central Bell, has been a CWA member for 31 years, holding several local offices until his election as president of Local 3806 in Memphis. He served in labor liaison posts during the Carter Administration and in the last election organized a phone bank for Local 3806 retirees.

Besides the new appointees, some continuing state labor department officers have trade union roots. Among them are:

- Dewey D. Stiles, director of the Arkansas Dept. of Labor and a USWA member.
- Iowa's Labor commissioner Allen Meier of the Electrical Workers.
- Robert Fowler, head of Missouri's Labor & Industrial Relations Commission and a member of the Plumbers & Pipefitters.
- Labor Commissioner Frank McDonald of the unaffiliated Teamsters in Nevada.
- Labor Commissioner Charles Serraino of the United Textile Workers and Deputy Commissioner Sam DiUbaldi of the Electrical Workers in New Jersey.
- New York's Labor Commissioner Lillian Roberts, former associate director of District Council 37 of the State, County & Municipal Employees.
- Ohio's Jim Harris, director of industrial relations and a member of the Auto Workers.
- Deputy Director Joe Dear of the Dept. of Labor & Industry in Washington state and a member of the Office & Professional Employees.

AFL-CIO LEGISLATIVE ALERT!
PAGE 8

Congress gears up for minimum wage boost

Chairmen of key House and Senate committees introduced a labor-backed bill to raise the minimum wage to $4.65 an hour over three years, and set a fast timetable for Congress to act.

Starting in 1991, the minimum would be adjusted each year to its traditional level of 50 percent of average hourly earnings of America's workers. That would avoid both long intervals of declining buying power and unpredictable catch-up increases.

The bill's chief sponsors—Sen. Edward M. Kennedy (D-Mass.) and Rep. Augustus F. Hawkins (D-Calif.)—told a crowded Capitol Hill news conference that the legislation is overdue. Today's $3.35 minimum wage has dropped 27 percent in buying power since it took effect in 1981, they stressed.

Hawkins, who heads the House Education & Labor Committee, and Kennedy, who chairs the Senate Labor & Human Resources Committee, said it would be hypocritical for a Congress that has approved big pay raises for top government executives to ignore the plight of the nation's working poor.

Today's minimum wage is so far below the poverty level that it is an obstacle to achieving real welfare reform, Hawkins charged.

Raising the wage floor would be an anti-poverty program that wouldn't add to the deficit and in fact would save the government money on social services, Kennedy noted. Now, he said, taxpayers are forced to make up the difference between a poverty-level minimum wage and a living wage.

To no one's surprise, both the Reagan Administration and employer organizations will be fighting to block any rise in the minimum wage.

The Chamber of Commerce used the argument that has been raised against every minimum wage rise since the Fair Labor Standards Act was adopted in 1938—that it will cause joblessness because employers will fire workers rather than raise their pay.

That hasn't been the pattern of past minimum wage increases and Hawkins retorted that putting more dollars in the hands of minimum wage workers "will benefit the entire economy."

Reagan has repeatedly expressed his dislike of any minimum wage, and his Administration has several times proposed a lower subminimum wage for youth. The White House Economic Policy Council voted unanimously to oppose any increase in the $3.35 wage floor, the Bureau of National Affairs reported.

They want their pensions

Outside the Washington offices of Drexel Burnham Lambert, members from ACTWU Local 2500 in Cornelius, N.C., and supporters protest Drexel's concocted bank loan provision undermining their pension plan at Reeves Brothers Inc. Current Reeves retirees draw only about $60 a month in pension benefits. At left is, ACTWU's organizer for the Washington area, Richard Bensinger with son Robert. (Story on Page 6.)

Airline workers upheld on job rights

High court affirms 'first-hire' rule for deregulation victims

By Gene Zack

A unanimous Supreme Court upheld labor protection provisions aimed at preserving the jobs of thousands of airline workers caught up in the wave of mergers, takeovers and acquisitions that followed deregulation of the industry.

Part of the 1978 Airline Deregulation Act was held unconstitutional earlier because it provided for a legislative veto. But the latest court ruling made clear that this didn't cancel out the industry's duty to protect the jobs of veteran airline employees.

At issue was the requirement that commercial airlines involved in mergers, takeovers and acquisitions must hire employees laid off by other affected carriers before considering new job applicants.

The decision was greeted enthusiastically by the unions involved in the long legal struggle.

President Richard I. Kilroy of the Railway & Airline Clerks said it capped a nine-year struggle to protect the rights of employees "affected by the merger mania sweeping this industry. We just wish it hadn't taken so long."

Industry upheaval

Resolution of the "first right of hire" principle was "long overdue," Machinists President William W. Winpisinger said, noting that many thousands of workers have been "adversely affected by the upheaval in the airline industry." He pointed out that Congress promised nearly a decade ago to provide a monthly assistance program to aid displaced airline employees but has never appropriated funds for this purpose. "It's time for the Legislative Branch to make good on this commitment," Winpisinger said.

Air Line Pilots President Henry A. Duffy called the ruling "a vindication of our position that employees were granted certain protections under the law but that this Administration never promulgated regulations to give them these safeguards." There is no reason, Duffy said, why "all pilots who lost their jobs due to deregulation shouldn't be rehired immediately."

Flight Attendants President Susan Bianchi Sand called it "tragic that some of the airlines that benefited from deregulation have refused to hire employees who were

Continued on Page 2

Court backs hiring goals to fight bias

In a landmark ruling, the Supreme Court strongly endorsed the legality of voluntary gender-based affirmative action in the workplace.

The AFL-CIO, which had filed a brief in support of the voluntary affirmative action program, hailed the decision as a major step forward in wiping out the last traces of job discrimination in a way that recognizes "the legitimate needs of all members of the workforce."

The federation expressed satisfaction in "the affirmative role the labor movement has played—in collective bargaining and in the courts—in forwarding the cause of constructive affirmative action."

Service Employees President John J. Sweeney said the ruling "cuts new ground in establishing that you can consider statistical disparities alone in choosing among qualified candidates for a job." The result, he predicted, will be "a fundamental restructuring of fairness standards."

By a 6-3 vote, the high court said that Title VII of the 1964 Civil Rights Act permits the promotion of women ahead of men in the same way that earlier rulings sanctioned giving minorities a promotional edge.

Kirkland says thanks for get-well messages

AFL-CIO President Lane Kirkland expressed his deep appreciation for the many cards, phone calls and flowers he received following his recent operation.

Kirkland, who is home recovering from the operation, said:

"The many get-well messages and kind thoughts of our brothers and sisters in the labor movement have given real meaning to the phrase 'trade union family.' My wife and I will never forget them."

First regional conference draws raves

By David L. Perlman

San Francisco—The AFL-CIO's 1987 round of regional conferences opened here to rave reviews from participants at both ends of give-and-take sessions that covered in depth the issues on which the trade union movement will judge presidential candidates.

For nearly 400 union activists from 13 western states who took part in the weekend program, it was a chance to meet with AFL-CIO staff specialists who deal regularly with complex economic, legislative and political issues in terms of worker concerns.

For Sec.-Treas. Thomas R. Donahue and the headquarters staff that took part in the four workshop panels, it was an opportunity to get feedback on labor's approach to national issues from a lively mix of union activists.

"We hold these conferences to find out what's on your mind, what you'd like us to be doing," Donahue told participants in his opening remarks.

Speaking out

The participants—from AFL-CIO central bodies and from scores of local unions—took him at his word.

They had opinions, and they expressed them. They asked questions, and got answers. Mostly they were satisfied with the answers. Sometimes they weren't, and said so. That's what a regional conference is about.

The opening session included a videotape produced by the Labor Institute of Public Affairs featuring political columnist and satirist Mark Shields. Its humor-coated barbs were a voters' guide to deciphering what candidates mean when they respond to questions with issue-ducking evasions or trendy buzz words such as "competitiveness."

The questions the AFL-CIO has asked candidates for both the Democratic and Republican presidential nominations to address were the themes of the 90-minute workshops held the following day. Each

Calling for congressional action to boost the minimum wage: Sen. Edward Kennedy and, seated, Representatives Pat Williams and Augustus Hawkins.

Legislators pledge fast action on labor-backed pay floor bill

Continued from Page 1

In the first official Administration reaction to the introduction of the bill, Labor Sec. William E. Brock contended that a rise in the pay floor would take away job opportunities for young people.

Kennedy's response to the Administration's repeated push for a subminimum youth wage was that "we already have a subminimum wage—for everyone."

Kennedy said he hoped for sufficient Republican support in Congress to turn the Administration around on the issue—or to override a veto if necessary. Reagan "has demonstrated his ability to flip-flop on issues," he noted.

The proposed legislation is in line with the position taken by the AFL-CIO Executive Council last month for step-ups to restore the real value of the minimum wage, followed by annual indexing.

As proposed by Hawkins and Kennedy, the wage floor would go from $3.35 to $3.85 an hour at the start of 1988, to $4.25 an hour the following year, and to $4.65 in 1990.

Annual indexing thereafter would tie the minimum to 50 percent of the average private, nonsupervisory, nonagricultural hourly wage as determined by the Bureau of Labor Statistics.

Charts displayed by Kennedy at the news conference dispelled some of the myths spread by foes of a minimum wage.

They showed that 70 percent of all minimum wage earners are adults, largely women. Among workers in low-income families, 92 percent are adults and 70 percent of them are heads of household.

49-year low

Hawkins said the minimum wage has shrunk in relation to the average hourly wage for production workers to its lowest point in the 49-year history of the Fair Labor Standards Act.

Rep. Pat Williams (D-Mont.), who coordinates labor legislation as part of the Democratic leadership team, said the legislation is needed "to re-establish the nation's commitment to a minimum wage."

Congress last raised the minimum wage in 1977. That amendment to the Fair Labor Standards Act raised the wage floor from the existing $2.30 level to $2.65 on Jan. 1, 1978. It provided for additional annual step-ups to $2.90 in 1979, to $3.10 in 1980, and to $3.35 in 1981.

Justices uphold first-hire rule in airline mergers

Continued from Page 1

hurt by its effect. Hopefully the court's decision will put an end to this hypocrisy."

Organized labor's effort since 1978 to get the Executive Branch to carry out the congressional mandate were stymied by Reagan Administration inaction and by the lawsuit filed by 20 of the nation's air carriers challenging the legality of the law based on the congressional veto provision.

But labor insisted this was just a smokescreen thrown up by the industry to evade its responsibilities to its workers.

As the AFL-CIO pointed out in a brief to the court, the language giving Congress the right to nullify labor protection regulations issued by the Labor Dept. could successfully be severed from the law without throwing out the "first right of hire" provision.

Unanimous decision

The opinion written by Justice Harry Blackmun for the unanimous court took the same position.

"The legislative history of the employee protection program supports the conclusion that Congress would have enacted the duty-to-hire provisions even without a legislative veto provision," Blackmun wrote. "Congress regarded labor protection as an important feature of the act."

It was a stunning defeat for the airline industry management which has consistently opposed the provision, and for the Reagan Administration which dragged its feet on issuing regulations safeguarding airline employees' job rights.

A hiring preference rule drafted in the Carter Administration was scrapped after President Reagan took office. And when the Labor Dept. finally issued a new regulation in 1986, it was delayed by the airlines' lawsuit.

At the same time, Transportation Sec. Elizabeth Dole repeatedly refused to require job protection safeguards as a condition for approval of airline mergers or takeovers. Such provisions were routinely enforced by the Civil Aeronautics Board before it was put out of business by the airline deregulation legislation.

Out of limbo

Aliens' jobs protected without work permit

Sacramento, Calif.—Hundreds of thousands of aliens awaiting legalization under the new immigration reform law will have job rights safeguarded under the terms of a court-approved settlement of a lawsuit brought against Atty. Gen. Edwin M. Meese.

The agreement, approved by Judge Larry Karlton of the U.S. District Court for the Eastern District of California, provides that aliens will not be required to obtain formal work permits from the Immigration & Naturalization Service in order to get or hold a job.

Instead, those who believe they qualify for legalization will be able simply to notify employers that they expect to be granted legal status under the new immigration law.

Work authorization

In the past, the INS required issuance of such work permits as a condition of employment. But the federal government stopped issuing such permits in recent weeks, claiming such applications would clog the system at a time when procedures for the legalization process were being put into effect.

Organized labor, religious, social welfare and immigrant rights groups filed suit against the Justice Dept., charging that this left aliens in limbo, because employers were firing some of them in wholesale lots and refusing to hire others. Management claimed it feared the imposition of sanctions for hiring illegal aliens.

The sweeping provisions of the new immigration law include fines ranging as high as $10,000 against employers who habitually engage in such illegal hiring practices.

The INS agreed to notify employers that they will be exempt from these penalties through Sept. 1 if the aliens say they expect to be granted legal status under the new law.

The government will publish a notice to that effect in the Federal Register before Apr. 3, followed by the distribution of 500,000 brochures to employers explaining the process.

Steve Nutter, western regional director of the Ladies' Garment Workers, said the procedure means aliens will have, in effect, "self-issued work permits."

The settlement will "avoid the loss of tens of thousands of jobs," Nutter said. He pointed out that the ILGWU has "increasingly encountered employers who are firing union members" because they lack INS work authorization.

The union intends to "monitor and respond to complaints against employers who refuse to honor" aliens' declarations concerning legalization, Nutter emphasized.

Hiring halls exempt from verification role

The Immigration & Naturalization Service reversed its earlier decision that would have required union hiring halls to verify the citizenship of workers they refer to employers.

Earlier this month, Assistant INS Commissioner William Slattery told a New York conference that regulations implementing the new immigration reform law would impose the same verification rules on hiring halls that apply to employers and for-profit employment agencies.

The labor movement protested this move, pointing out that it was in direct contradiction of congressional intent.

When the INS formally published the proposed regulations, they contained no reference to hiring halls. An INS spokesman explained that unions shouldn't be held to the verification rule because they don't make any money from the referrals.

Mayors join unions in drive for plant-closing legislation

Mayors of America's cities joined with labor in urging legislation that would require advance notice of plant closings, seek to avoid a shutdown, and make training programs and job search assistance immediately available to displaced workers.

Labor's case was presented by Auto Workers President Owen Bieber, AFL-CIO Industrial Union Dept. President Howard D. Samuel and Food & Commercial Workers President William H. Wynn at joint hearings by two House Education & Labor subcommittees.

Samuel was a member of the Labor Dept. task force whose recommendations formed the basis for the job training and worker assistance portion of the bill.

Mayor Angelo Martinelli of Yonkers, N.Y., spoke for the U.S. Conference of Mayors in urging mandatory notification.

Legislation is needed, he testified, because the track record of companies that have shut down plants is so poor. "The majority of workers who have lost their jobs have received little notice or assistance in the adjustment process," he stressed.

Wynn termed early notice essential to set up the machinery for helping displaced workers get back in the job market. Early start programs are much more successful than those that don't get under way until the plant gates have closed, he stressed.

Bieber said the UAW has been able to soften the impact of plant closings through the collective bargaining process. But the transition to a new job is still traumatic, he said, and "millions of nonunion workers have no support system at all."

Samuel challenged Administration claims that the problem is diminishing. "The same percentage of the workforce lost their jobs in 1985 as in 1983," he said.

On the road again

Bank members from St. Nicholas Catholic School in New York step lively in the St. Patrick's Day parade, their new drums a gift from ILA Local 1964 and its president, Richard Costello. After learning that band lost its chance to march in the parade because its drums were stolen, Costello determined that the squad would go on, and donated $1,300 to replace the drums. Right, President John E. Lawe of the Transport Workers was grand marshal.

OSHA policy spawns record-juggling on injuries

By Arlee C. Green

The Occupational Safety & Health Administration's policy of exempting workplaces from general inspections based on understated injury and illness rates has produced a recordkeeping scam that endangers workers' lives and should be discontinued, unions told a congressional panel.

The Steelworkers, Food & Commercial Workers and Clothing & Textile Workers, in testimony before the House Government Operations employment subcommittee, called for an end to OSHA policies that reward employers for underreporting worker injuries, charging that such employer practices are widespread.

Underreporting of job-related injuries and illnesses has always been attractive to businesses willing to take the risk, because company liability insurance is tied directly to those rates. But in 1981, the Reagan Administration's OSHA raised the ante by promising no general inspections to those employers with rates below the national average.

At that time and since, unions have argued that the exemption policy was misdirected and would result in employer cheating on recordkeeping. UFCW Vice President Lewie Anderson, head of the union's packinghouse division, told panel members, "OSHA's policy of exempting workplaces from full-scale inspections based on company injury logs has really become a way for companies to cover up unsafe conditions and avoid their responsibility under the law."

UFCW Local 222's Elizabeth Pinneke, right, testifies about injuries she received working at IBP Inc. From left, Deborah Berkowitz of Food & Allied Service Trades Dept., Steve DeRaad and Joseph Eck of Local 222 and Vice President Lewie Anderson of the UFCW's packinghouse division.

Dangerous industry

Keying on the meat packing industry, Anderson said OSHA's flawed policy has resulted in "the most dangerous industry in the country and the most dangerous plants being exempted from inspections." Production in that industry rose 52 percent between 1981 and 1983, while employment fell 20 percent. Injury rates increased dramatically and at the nation's largest meatpacker, IBP Inc. (formerly Iowa Beef Processors), more than one-third of the workforce is injured each year.

IBP maintained dual injury logs at its Dakota City, Neb., plant, Anderson testified. The "sanitized" one that OSHA inspectors saw contained only 160 injuries for a three-month period in 1985—compared to the 1,800 that actually occurred for that period, he said.

Last January, UFCW Local 222, which represents the Dakota City workers, filed a complaint with OSHA charging that IBP "knowingly and willfully violated OSHA reporting requirements by engaging in deceptive injury and illness recording practices," Anderson said.

IBP declined a congressional request to testify, saying it was "inappropriate" to attend the hearing while the plant's records are under OSHA review. But three current and former IBP workers testified about the injuries they received on the job.

Elizabeth Pinneke told how her work at the Dakota City plant permanently disabled a finger on her right hand. Repetitious work involving carving fat off of pieces of meat moving down a conveyor belt caused a cyst to grow in her knife hand.

Following surgery, IBP demanded she return to work against her doctor's orders, saying she could sort dirty gloves with her good hand. But the job involved lifting 30-pound bags of laundry and contact with a harsh soap. The stitches from her surgery got infected and she may face amputation of her finger, Pinneke told the panel. Having a disabled finger has prevented her from finding other work, she said.

Steven E. DeRaad, a seven-year IBP employee, told the panel of two "of many injuries" he has received at the plant. In one case, he slipped on a blood and fat covered floor, landing on his back on a steel peg—a wound that still bothers him in cold weather.

Sanitized log

And last May, his finger was broken by a jack handle that he had tried for two months to get the company to repair. He was given a four-month medical restriction against using that hand. IBP's sanitized injury log showed he had a "right middle finger pain" with "seven days restricted duty."

The third worker, Joseph Eck, lasted just three weeks at IBP in January 1985. Just 18 years old then, he received a lifetime injury from repeated blows to his leg from 70-pound loins of meat coming down a ramp. His job was to grab the meat, throw it into a box, and push the boxes on a conveyor belt, which he said was damaged and caused a log-jam in the production.

His leg got weaker each day from the repeated blows, and finally a direct hit on his knee popped the knee cap. Other workers carried him to the foreman's office where he was fired. IBP justified the firing, saying Eck had not listed a college injury—where he fell off a bunk-bed and hit his leg on a chair—on his job application. He may face amputation of his leg because of damage to veins, Eck said.

ACTWU safety director Eric Frumin urged that OSHA rescind "all of its various exemption policies, vigorously enforce its recordkeeping requirements and continue working to improve its recordkeeping guidelines." Frumin, who is also chairman of the Labor Research Advisory Committee on Occupational Safety & Health Statistics for the Bureau of Labor Statistics, called the widespread employer practice of falsifying injury records "rampant lawlessness."

Records check

He recalled how a "records" check by OSHA at Film Recovery Systems Inc., in Chicago in November 1982 failed to result in a plant inspection. Three months later, a worker died of cyanide poisoning from the 70 open vats of foaming cyanide used in film recovery. Three company officials were sentenced to 25 years in prison for murder. OSHA issued a fine of $4,850 for violations related to the worker's death, and later reduced it to $2,425.

Mary Win O'Brien, assistant general counsel for the Steelworkers, reported on several recordkeeping "scams" the USWA has encountered. Underreporting by North American Refractories Co. of Womelsdorf, Pa., resulted in an injury rate below the industry average, she said. Had those injuries been recorded, the firm's injury rate would have been triple the industry average. After USWA Local 3269's safety committee uncovered the underreporting, OSHA issued a single citation covering 137 willful violations and set a $5,000 fine that was eventually reduced to $3,500.

She added that with this "type of agency-sponsored underreporting, no wonder it is difficult to document workers' claims that occupational illnesses greatly exceed the officially recorded numbers."

Fair payback

Minneapolis—An innovative employee stock ownership plan negotiated by the Machinists is providing a $33-million payoff to workers at Republic Air Lines.

Individual payments ranging up to $31,000 are being sent to 2,500 IAM members who worked at Republic. The carrier has merged with Northwest Air Lines.

On the verge of bankruptcy, Republic demanded wage and benefit concessions from the IAM members during negotiations in 1983-84. The union rejected the bid for concessions but offered a combination of stock warrants, options and profit-sharing that Republic accepted, President Guy Cook of IAM District 143 said.

"Employees saved Republic Air Lines from Chapter 11 bankruptcy and preserved their own jobs," Cook stressed.

Affirmative action upheld for women

Continued from Page 1

The court's action validated the promotion by the Santa Clara County, Calif., Transportation Agency of Diane Joyce, a steward in Service Employees Local 715, to become the first road dispatcher in the county.

It was a major defeat for the Reagan Administration, which has consistently opposed any form of affirmative action, whether to overcome gender or racial bias, and which filed a brief arguing against the Santa Clara County plan.

The decision, written by Justice William J. Brennan Jr., was another milestone in overcoming bias in the workplace. In a 1979 Steelworkers case, the court sanctioned voluntary affirmative action plans in private industry. This latest ruling extends that same concept to the public sector—and for the first time makes clear that gender, as well as race, can be taken into consideration.

The ruling also marked the first time that the high court unambiguously held that, without any proof of past discrimination against women or minorities by a particular employer, racial and sexual preferences can be used in hiring and promotions to bring its workforce into line with the makeup of the local population or labor market.

"In determining whether an imbalance exists that would justify taking sex or race into account," Brennan said, "a comparison of the percentage of minorities or women in the employer's workforce with the percentage in the area labor market or general population is appropriate" in making hiring and promotion decisions.

Santa Clara County's affirmative action plan, adopted voluntarily in 1978, had as its principal goal correcting the imbalance of women in the workforce, particularly in skilled and managerial jobs. The transportation agency found that none of the 238 skilled craft jobs had ever been held by a woman.

When the road dispatcher's job opened up in 1979, the agency found nine qualified. Joyce, a road maintenance worker who received an interview score of 73 was selected over male road worker Paul Johnson who received the highest interview score, a 75. The agency head testified he "tried to look at the whole picture" including "qualifications" and "affirmative action."

A federal district court in San Francisco declared the plan illegal in 1981, but the 9th Circuit U.S. Court of Appeals overruled the lower court and held that the affirmative action plan was valid. Johnson appealed to the Supreme Court, backed by the Reagan Justice Dept. which filed a friend-of-the-court brief calling the plan discriminatory.

Flexible goals

In the majority opinion, Brennan emphasized that the plan didn't establish specific quotas but merely set up flexible goals to correct "a manifest imbalance" in the workforce, without putting male workers at a disadvantage.

"The agency has sought to take a moderate, gradual approach to eliminating imbalance in its workforce," Brennan wrote, "one which establishes realistic guidance for employment decisions, and which visits minimal intrusion on the legitimate expectations of other employees."

Such a plan, the high court said, is consistent with the provisions of the Civil Rights Act because "it embodies the contribution that voluntary employer action can make in eliminating the vestiges of discrimination in the workplace."

Writing the dissenting opinion, Justice Antonin Scalia argued that, by giving preference to women and minorities, the court had, in effect, provided a "guarantee" that employment decisions will be based on race and sex—an outcome that Scalia called a violation of the Civil Rights Act's intent.

Joining Scalia in the minority opinion were Chief Justice William H. Rehnquist and Justice Byron White.

Rallies run counter to convention positions

The AFL-CIO is not supporting rallies in Washington and San Francisco next month to protest U.S. policies in Central America because the demonstrations run counter to policy positions adopted through the democratic process at the Federation's 1985 convention, President Lane Kirkland said.

The Apr. 25 protests will call for a cutoff of U.S. aid to the democratically elected governments of El Salvador, Honduras and Guatemala. This contrasts sharply with the convention's call for "massive economic aid to the impoverished nations of Central America to attack the deeply rooted problems of inequality, illiteracy and social justice," Kirkland pointed out.

He emphasized that some of the speakers represent organizations supporting the guerilla forces who oppose "the democratically elected Duarte government in El Salvador" and others who endorse the Sandinista government in Nicaragua "which was not democratically elected."

Clear voice

In the debate over foreign policy, Kirkland said, "labor's voice should be heard clearly, especially where vital trade union issues like freedom of association and workers' rights are at stake. Our voice should not be garbled, confused or drowned out in demonstrations with others who have different views on these issues, however well-intentioned they may be."

Because the federation's policies were adopted through the democratic process, Kirkland emphasized, any changes should be made "by trade unionists working through the democratic processes available in our movement," rather than by "groups seeking to shape AFL-CIO policies from the outside in accordance with their own agendas."

He stressed that "until and unless those policies are changed, they remain binding on the federation itself and on its state and local central bodies."

Under the AFL-CIO Constitution, affiliated international unions are autonomous "and are free to pursue their own policies," Kirkland said. Accordingly, some international unions have endorsed the rallies while others have withdrawn support. But the federation and its state and local bodies are obliged to conform to the convention's mandate, he emphasized.

Regional conference participants are welcomed by Executive Sec.-Treas. John F. Henning of California AFL-CIO.

Conference workshops covered such subjects as trillion-dollar budgets, the need for a rise in the minimum wage, interpreting politician language—and the nuts and bolts of presidential nomination politics.

Keynote by AFL-CIO Sec.-Treas. Donahue stressed two-way interchange of ideas. Seated, California State AFL-CIO President Albin Gruhn and Kenneth Young, executive assistant to AFL-CIO President Kirkland.

First regional conference draws raves

400 from 13 western states in lively give-and-take sessions

Continued from Page 1

was repeated four times so that participants could take part in all workshops in groups small enough for discussion.

Presidential candidates are being asked how they propose to reduce America's trade deficit.

A panel moderated by AFL-CIO Research Director Rudy Oswald explored the magnitude of the problem, its impact on jobs and the legislative battles that lie ahead. Economist Mark Anderson and Legislative Rep. William J. Cunningham highlighted the issues and fielded questions.

How would you reduce the federal budget deficit without hurting working Americans and the poor? Would you rule out any tax increases? Those, too, are among the tough questions the AFL-CIO is putting to presidential candidates.

They were also the focus of a panel moderated by Kenneth Young, executive assistant to AFL-CIO President Lane Kirkland.

Education Director Dorothy Shields, Assistant Research Director Arnold Cantor and Associate Legislative Director Peggy Taylor discussed the huge growth of the budget deficit under the Reagan Administration and the options for dealing with it. So did the union men and women taking part in the conference. LIPA Director Larry Kirkman reported on recent public opinion polls on the issues being discussed.

The AFL-CIO is asking presidential candidates how they envision the role of the various levels of government in dealing with such human needs as education, employment, training, health care, housing, equal opportunity, the environment and programs for the elderly.

That was the broad range of topics assigned to the panel moderated by James J. Kennedy, Donahue's executive assistant. Three AFL-CIO department directors helped shape the framework—Bert Seidman, Dept. of Occupational Safety, Health & Social Security, Legislative Director Robert M. McGlotten, and Civil Rights Director Richard Womack.

Local perspective

Participants added their own perspective. Jim Bender of Seattle, agreeing with criticism of the Reagan housing policies, made the point that replacing public housing with a voucher system hasn't created any new housing, at least in his area. "All we did is bail out the real estate people."

A question to Seidman: "How do we get rank-and-file members to share our concern over those that don't have health plans like they do?"

The response: "With plant closings and layoffs, we all could be in that situation. So many people in need never thought it would happen to them."

The fourth question being put to presidential candidates solicits their view of organized labor's "proper role in the political process."

Donahue moderated that panel and COPE Director John Perkins was the only panelist. The trade union movement, as far back as the Samuel Gompers era, had already answered that question. This panel dealt with the nuts and bolts of delegate selection, the reasons for the AFL-CIO's early involvement in the process, the means by which unions will get the views of the competing candidates before their members.

At the closing session, Donahue spoke of the value of the regional conferences in helping the AFL-CIO serve its members.

"We have met not to lecture but to discuss, to listen and to learn together," he said. "This movement is rich with every shade of opinion." That diversity, he said, "far from being a weakness, it is one of our strengths."

The conference drew trade unionists from 13 states—Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming.

Next on tap is the Apr. 10-11 conference in New York, with participants from Delaware, Connecticut, Maine, Maryland, Massachusetts, New Hampshire, New York New Jersey, Pennsylvania, Rhode Island, Vermont, Virginia, West Virginia and the District of Columbia.

The Chicago conference, May 29-30, will cover Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Nebraska, North Dakota, Ohio, South Dakota and Wisconsin.

The final conference, in New Orleans June 5-6, will include Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee and Texas.

Reagan defies Congress on highway bill

A veto battle with job implications for America's workers and political implications for the Reagan presidency is taking shape over a highway construction and mass transit bill that passed Congress overwhelmingly.

It authorizes $70 billion for highway projects and approximately $18 billion for mass transit programs through fiscal year 1991. The transit funding is about double Reagan's budget request.

Despite 407-17 bipartisan approval in the House and 79-17 passage by the Senate, Reagan announced he will veto the bill.

Republicans had appealed to him not to do so. Instead the White House is pulling out all stops to line up enough GOP votes in the Senate to prevent a two-thirds majority needed to override. It's likely that the veto will be easily overridden in the House.

The President objected both to highway demonstration projects funded by the bill and the money added for mass transit programs.

Veto opportunity

But as the White House sees it, the veto is an opportunity to show that Reagan has not been rendered ineffective for the final two years left in his presidency.

Senate Republican Leader Robert Dole (Kan.), who is supporting Reagan in the confrontation, told a news conference that the President "needs to demonstrate that he's in charge. One way to do that is to show that you're tough."

Nearly all of the money involved comes from the Highway Trust Fund, which is replenished by the federal gasoline tax. It pays for most interstate highway construction and repair, and a portion is earmarked for mass transit programs important to cities and commuters.

Available funding has already run thin and some layoffs and construction halts have occurred. A further delay will mean fewer good weather days to complete current projects—and more unemployment in the construction trades.

The AFL-CIO and its directly affected unions supported passage of the legislation and will be pressing for an override of the Reagan veto.

Marco Hirigoyen dies, exiled Cuban unionist

Miami—Marco A. Hirigoyen, an executive board member of the Labor Council for Latin American Advancement here and former Gen.-Sec. of the Transport Workers in Cuba, died Mar. 6 after a heart attack. He was 62.

Hirigoyen was a popular Cuban labor leader who spent a year in jail for leading a national strike of bus drivers. Harassed by the Castro regime, Hirigoyen left Cuba in 1961.

He was a founding delegate of the International Confederation of Free Trade Unions and became a member of the State, County & Municipal Employees.

Unions sponsor job training centers

San Francisco—AFL-CIO Sec.-Treas. Thomas R. Donahue visited a union-management retraining program here, one of six such state-funded programs in the Bay area.

California has earmarked a portion of its unemployment insurance tax revenue to fund programs approved by the state's Employment Training Panel, made up of four union and three management representatives.

Donahue met with representatives of the six Bay Area programs at the training site used by Electrical Workers Local 6 to integrate computer technology and electrical equipment skills. The program, cosponsored with the San Francisco Electrical Contractors Association, is retraining 60 journeymen electricians to install and repair computer program control units.

The other Bay Area programs reflect the variety of union-management training projects that California is funding throughout the state. They are:

- Communications Workers and PAC Bell, at Oakland. This program is retraining 921 workers whose jobs are being eliminated in skills that are needed. Those being retrained include operators and clerical, craft and mechanical workers.
- Office & Professional Employees and Glenn Slaughter & Associates, Oakland. Here, 120 workers are being retrained in computer skills to handle processing of health and pension plans.
- Bakery, Confectionery & Tobacco Workers and Svenhard's Swedish Bakery, Oakland. The training involves higher skills for 60 presently employed bakers and the hiring of 60 unskilled persons to train as bakery helpers.
- CWA's typographical division and Mercury Typography, San Francisco. This program is training 19 typesetters in microcomputer technology.
- Operating Engineers and Building Owners & Managers Association, San Francisco. Twenty experienced stationary engineers are being trained in the operation of automated controls systems.

William Turnbow of IBEW Local 6 shows Tom Donahue equipment used in San Francisco job upgrading program for experienced union electricians.

San Francisco catch-up

SEIU pay equity pact gives raises to 12,000

San Francisco—The Service Employees and the city of San Francisco reached a pay equity settlement giving $35.4 million in special raises to women and minorities—the second largest such agreement in the nation.

The accord between the city and SEIU Locals 250, 535 and 790 affects over 12,000 workers concentrated in lower-paid jobs—clerk-typists, licensed vocational nurses, librarians, hospital workers and many school employees.

The only larger pay equity package was the $46.5 million won by 15,000 State, County & Municipal Employees in 1985 to settle a federal lawsuit against the state of Washington. That sum was to be paid over a 15-month period, with another $50 million be added to their salaries in annual $10-million increments through 1992.

The two-year agreement—negotiated by SEIU Joint Council President Paul Varacalli, Mayor Dianne Feinstein (D) and Supervisors President Nancy Walker—gives most of the affected workers a 4.5-percent pay hike July 1 in addition to an average 4.1-percent cost-of-living raise set previously. Another pay equity increment of 5 percent becomes effective July 1, 1988.

5-year effort

The settlement climaxes a campaign the SEIU launched in 1982. At that time, the Board of Supervisors went on record in support of the comparable worth concept and joined the union in a study that confirmed the existence of glaring pay inequities.

In 1985, SEIU negotiated with the board to spend $28 million over a two-year period to begin narrowing the pay gaps. But Feinstein and then-City Attorney George Agnost contended such adjustments were illegal under the city charter. Her veto of the legislation was overridden by a 9-2 vote of the board.

Rather than fight the charter issue for years through the courts, Varacalli said, the union "decided to go political." Enlisting the support of virtually all the supervisors, women's and community groups, and eventually Feinstein herself, the union succeed in getting the issue on the ballot in November 1986.

The charter amendment was approved by 61 percent of San Francisco's voters, paving the way for a Civil Service Commission survey to determine the extent of the disparities—a study that found women and minorities were paid an average of 42 percent less than males in comparable jobs, with some of the gaps running as high as 127 percent.

Study results

Board President Walker said the study proved the validity of the union's contention that women and minorities had been "relegated to lower paying jobs," while being called on "to be productive on a comparable level with others paid much more."

SEIU's negotiations that followed the survey were made easier, Varacalli said, because the union's contract with the city called for setting the pay equity monies aside in a reserve fund.

"By the time we reached agreement," he pointed out, "the fund had grown to over $30 million." Both parties then negotiated an additional $5 million to make certain that the 1987 and 1988 comparable worth payments were adequate.

All of the parties to the settlement agreed that the $35.4-million payout doesn't resolve all of the pay equity problems. Varacalli called it "a very good first step" but emphasized that "we have a ways to go" before achieving full comparability.

Walker said it was "a beginning . . . at eliminating those disparities," and Feinstein said the package "represents a good balance between the legitimate concerns of our women and minority members, and the fiscal needs of the city."

Air controllers cleared for vote on representation

The 12,000 federal air traffic controllers were cleared to vote for union representation in a mail ballot election from May 6 through June 10. The votes will be tallied June 11.

AFL-CIO President Lane Kirkland hailed the breakthrough as the fledgling National Air Traffic Controllers Association gained the right for the election.

"Air traffic controllers will now have the chance, through a vote for NATCA, to have an effective voice in bringing about improvements in working conditions at the Federal Aviation Authority," Kirkland said. "The public also needs NATCA as a strong voice speaking out for improved safety conditions in the air system."

Procedures for the election were ironed out at a Mar. 24 "consent" meeting between NATCA, FAA and the Federal Labor Relations Authority. NATCA, an affiliate of the Marine Engineers, had petitioned for the election by getting more than 6,000 controller signatures—20 percent more than required.

The controllers have been without union representation since 1981 when President Reagan fired 11,000 members of the Professional Air Traffic Controllers Organization for participating in a strike.

NATCA National Coordinator John Thornton said controllers will finally have "an opportunity to have a united voice when dealing with the Congress and the FAA, as well as effective representation for every controller," Thornton said.

Increasing workload

He stressed that controllers work the air traffic control system day after day and "must be consulted and involved in formulating decisions that affect safety and the future of the system." He cited the FAA's recent decision to increase the workload on already overburdened controllers as a reason why controllers need strong union representation.

MEBA President C.E. DeFries said that thousands of controllers have "already demonstrated their commitment to NATCA" and noted that for "too many years, controllers have sacrificed to keep the system going without having a voice when air traffic system decision are made." When they vote for NATCA, they will be gaining the voice that lets them play an important role in shaping decisions affecting their working conditions and national air traffic safety, he said.

Air Line Pilots President Henry Duffy welcomed the election on behalf of the nation's commercial pilots, stressing that pilots and controllers are "partners in professionalism, essential to maintaining America's aviation system as the best and safest in the world."

Correction

A story on the defeat of the balanced-budget constitutional amendment in the Montana Senate, which appeared in the Mar. 21 issue of the AFL-CIO News, incorrectly reported that Rep. Andy Jacobs (D-Ind.) joined labor in opposing the measure. Jacobs supported the bill.

Union lapel buttons worn on the job by AFGE and NALC members.

Uniformed government workers spruce up with union lapel pins

The right of uniformed federal workers to wear union pins while on duty was upheld in separate California cases involving the Government Employees and the Letter Carriers.

The Federal Labor Relations Authority ruled it was an unfair labor practice for a port director of the Immigration & Naturalization Service in San Ysidro, Calif., to forbid an inspector to wear an AFGE pin.

And an arbitrator in San Francisco agreed with the NALC that the Postal Service can't prohibit employees from wearing union lapel buttons since it has allowed other uniformed personnel to display insignia promoting particular causes.

In the AFGE case, the FLRA supported an administrative law judge's finding that banning the union button violated a worker's right to form, join or help a labor organization as guaranteed by the Federal Service Labor-Management Relations Statute.

The INS contended that everything on a custom agent's uniform should pertain to law enforcement, insisting that the rule was necessary to avoid distracting the public. But the union pointed out that the half-inch, shield-shaped AFGE pin resembles a patriotic emblem.

Moreover, the law judge ruled, and the FLRA agreed, the restriction hadn't been enforced in the past. Some San Ysidro inspectors wore such ornaments as a pin in the shape of an Olympic torch, tie tacks depicting football helmets, an "I-Love-America" button and a baseball team's emblem during the 1984 World Series.

In the NALC case, the Postal Service insisted that its regulations prohibit wearing any items other than the stars and bars, safe driving awards or other insignia recognizing special accomplishments.

But Arbitrator Neil N. Bernstein rejected the argument, pointing out that supervisors permitted letter carriers to wear buttons promoting the Employee Involvement Process, among other matters. If other types of buttons and insignias are permitted, Bernstein ruled in sustaining the NALC grievance, letter carriers must be allowed to wear union buttons, too.

Missouri legal ruling bars local curbs on union shop

Jefferson City, Mo.—Missouri counties and cities cannot impose "right-to-work" restrictions on workers, State Atty. Gen. William L. Webster ruled.

Webster's action outlaws anti-union-shop ordinances adopted by Pemiscot County and several other municipalities.

The localities had passed standard anti-discrimination measures but added the provision that "the right to work shall not be infringed or restricted in any way based on membership in, affiliation with or financial support of a labor organization or on refusal to join, affiliate with or financially or otherwise support a labor organization."

In his opinion, Webster wrote that the National Labor Relations Act preempts local actions affecting interstate commerce in states with non "right-to-work" laws. That ruling applies equally to noncharter jurisdictions and charter cities or counties exercising home rule, he said, adding that the "attempted exercise of other proper 'home rule' power" cannot supersede "the federal regulation of union security agreements within interstate commerce."

Missouri AFL-CIO President Daniel J. McVey applauded the opinion as "a welcome continuation of Webster's strong record of support for the rights of workers."

In Albuquerque, N.M., the state legislature adjourned without taking further action on a right-to-work bill that passed the Senate but was defeated in the House.

The bill passed the Republican-controlled Senate by a 25-16 vote but was rejected in the Democratic-dominated House on a voice vote.

President Teddy Gleason announces retirement plans to ILA council. Seated, Sec.-Treas. Walter L. Sullivan and Executive Vice President John Bowers.

Gleason to retire after 24 years as president of ILA

Tampa, Fla.—Thomas W. Gleason, president of the Longshoremen, will retire in July at the end of his sixth term. He is the senior member of the AFL-CIO Executive Council.

Gleason, 86, has served as ILA president for 24 years. He announced his plans to meetings of the Atlantic, Great Lakes and South Atlantic & Gulf Coasts Districts executive boards and the ILA executive council.

A third-generation dockworker, Gleason first joined the ILA in 1919. He was elected president and business agent of ILA Checkers Local 1346 and later became president of the merged ILA Local 1, a position he still holds.

Gleason was named the international's general organizer prior to his election as president of the ILA's Atlantic Coast district in 1961, when he also became the union's chief negotiator for waterfront workers. Gleason was elected international president in 1963. He was elected an AFL-CIO vice president in 1969.

New officers will be elected at the union's quadrennial convention July 20-23 in Bal Harbour, Fla.

At congressional pension hearings: USWA's Karen Fledman and John Sheehan, AFL-CIO's Lawrence Smedley and UAW's William Hoffman.

Unions want Congress to beef up safeguards on retirement benefit plans

Major industrial unions called for strengthening of pension benefit guaranty law but warned that some changes sought by the Administration would weaken the law's protection for workers.

Lawrence T. Smedley, who testified for the AFL-CIO at joint House-Senate hearings, said that neither existing law nor Administration proposals deal adequately with employer raids on pension funds to pocket so-called "excess assets."

Smedley, associate director of the Dept. of Occupational Safety, Health & Social Security, stressed that "employer contributions paid into a pension fund have been earned by workers." Employer contributions to the fund should be as irrevocable as cash wage payments, he said.

A Labor Dept. task force has recommended that workers and retirees share in surplus assets when a company terminates a pension plan, Smedley noted.

The hearing was called to consider Administration proposals for changes in the Employee Retirement Income Security Act (ERISA). Despite a long-overdue rise in the insurance premium last year, the pension guaranty program has a soaring deficit because of terminations of underfunded pensions plans. The biggest plans that have gone under are in the import-battered steel industry.

Premium increases

There has been no comparable problem with multiemployer funds and the Administration proposals would not make any substantive changes in that area. Apart from the long-term changes the Administration has proposed, but not yet put in legislative form, the Pension Benefit Guaranty Corp. is expected to seek a new increase in the single-employer pension insurance premium in the near future.

Auto Workers Social Security Director William Hoffman said the UAW supports an immediate rise in the insurance premium to meet the program's needs. But he cautioned against proposals involving a greatly accelerated pace of amortizing the cost of covering past service of employees after benefits are raised or when a plan is established.

While some changes may be needed, "a balance must be struck between retirement income needs and funding security," he emphasized.

Steelworkers Legislative Director John J. Sheehan noted that the heavy burden of closed-out pension funds, on both retirees who receive only limited protection and on the government insurance program, are an added cost of failed foreign trade policies.

Hardest hit, he testified, are long-term workers left jobless who qualified for union-negotiated "supplements" that are added to a basic monthly pension until a worker qualifies for social security, usually at age 62. The supplements, about $400 a month, are not guaranteed by the federal program and their loss has forced layoff and plant closing victims on welfare, Sheehan noted.

Supplements lost

He protested that the PBGC has fought efforts by the Steelworkers to recover from companies early retirement benefits provided by contract but not guaranteed by law.

The preferred solution, he urged, would be to guarantee such benefits and adjust the insurance premiums accordingly.

A North Carolina member of the Clothing & Textile Workers, Steve Knox, told the congressional panels of an attempted management raid on the pension fund set up for employees of Reeves Brothers Inc., where he has worked for 12 years.

When the company was sold to Shick Inc. last year, there was no immediate indication that anything would be changed. But it turned out, he said, that the banks that financed the buyout had exacted an agreement that the pension plans would be terminated so that the excess assets could be paid toward the bank loan.

"We feel this is very unfair," Knox said. "We believe the pension surplus belongs to all of the workers." The average pension benefit for retired workers is only $61 a month, he testified.

ACTWU protests bank raid on workers' pension plans

Clothing & Textile Workers from North Carolina, victims of a bank deal that requires their employer to terminate two worker pension plans as part of a loan repayment, brought their protest to the Washington offices of Drexel Burnham Lambert Inc., the financial advisers who concocted the loan scheme.

Accompanied by a cluster of journalists and television crews, ACTWU stepped up the campaign to get the nine banks involved in the $100-million pension fund raid to rewrite the terms of the loan. The workers, members of ACTWU Local 2500, are employed by Reeves Brothers Inc., a foam rubber manufacturing plant in Cornelius, N.C. They are negotiating for a first contract at Reeves.

Once inside the Drexel offices, Reeves workers met with Assistant Manager William Spies, who denied knowing anything about the loan deal under which Schick Inc. bought out Reeves Brothers last May. Spies said that the workers' questions would be "more properly addressed to the New York office."

Steve Knox, a mechanic at Reeves and a member of the union negotiating committee, told Spies, "I think it's immoral what your company has done. We're human beings who will have to survive someday on what pension we get. We intend to fight this from coast to coast." ACTWU national field coordinator William Patterson echoed those sentiments and promised, "This is only the beginning."

The following day, Knox testified before a joint congressional hearing to evaluate the current law's effectiveness in safeguarding American workers' pensions. And at the same time in Los Angeles, about 100 workers tried to meet with Drexel officials at the office where its "junk bond" operations are conducted. The Drexel office locked its doors and refused to meet with the workers.

ACTWU members were part of a much larger demonstration in New York at Drexel offices in the Wall Street financial district.

That rally included members of the Auto Workers, Electrical Workers, Hotel Employees & Restaurant Employees and an unaffiliated flight attendants union—all of whom have been stung by financial deals put together by Drexel.

Steel pact brings bonus and job security

Pittsburgh—The Steelworkers reached a new three-year agreement with Allegheny Ludlum Steel Corp., providing increased bonuses and benefits and restrictions on contracting out to protect jobs.

The USWA members at five plants in Pennsylvania, Indiana and Connecticut ratified the settlement by a 5-to-1 margin. The agreement covers 3,200 workers.

The contract freezes wage rates but calls for an immediate $200-bonus for each worker, plus additional payments of 55 cents per hour worked during the first contract year, 70 cents in the second and 90 cents in the the third. Other benefits include an additional holiday and improvements in the grievance process. Negotiators also agreed to establish a committee to review profit-sharing plans.

The agreement suspends cost-of-living adjustments and combines some job classifications. It expires Apr. 1, 1990.

Final 3 agreements resolve LIRR dispute

New York—Three unions reached agreement with the Long Island Rail Road, bringing to an end a labor dispute reaching back to June 1984.

The Electrical Workers, Sheet Metal Workers and Boilermakers approved settlements providing for a 19.5-percent wage increase over four and one-half years, retroactive to Jan. 1, 1985. The new contracts become renewable on June 30, 1989.

The pacts follow a pattern set last fall by the Railway & Airline Clerks and the unaffiliated United Transportation Union. Ten other unions later either accepted the settlement or agreed to submit their disputes to binding arbitration.

CBS staffers realize they're just hired hands

By Russell Baker

People in the news business tend to forget it's a business, so when something like the firings at CBS News jolts them back to reality, they respond with shock and rage.

Psychologically, this is entirely natural and explains why news people have given the CBS story such extensive coverage. Press critics are saying the coverage is out of proportion to the numbers fired, particularly in a labor market where other shops are firing thousands, but this misses a bizarre point which press critics should be the first to grasp:

News people cannot resist the delusion that they are different. Few can bring themselves to acknowledge that they are hired hands who become expendable whenever the boss scowls at the bottom line. Here are people whose work is supposed to be the tireless pursuit of truth, yet they cannot resist lying to themselves about their own situation.

The disproportionate coverage given to a couple of hundred firings at CBS is not excessive from the newsfolks' viewpoint, because it is not about firings; it is about an assault on a mass delusion.

I first noticed the power of this delusion 40 years ago in Baltimore when I was a kid reporter active in trying to organize the newsroom in a labor union. Resistance from the graybeards was fierce, and not solely because they regarded me as a youthful sorehead who had succumbed to Bolshevism because my pay was only $30 a week.

Their fiercer objection was that being news people meant they were "professionals." And professional people, they argued, did not join labor unions.

Fortunately, the boss was a realist, so didn't know the depth of his reporters' self-deception or understand that this was his most powerful weapon against the union. Talking one day about who was entitled to more than sweatshop pay, he made the mistake of singling out a half-dozen faithful oldtimers who had been with the paper forever and telling union negotiators it was outrageous to ask him to pay these "aged incompetents" more than $60 a week. After it was duly publicized, most of the staff forgot their "professionalism" long enough to join the union, but doubtless resumed thinking of themselves as "professionals" once the chilly exposure to reality wore off.

Reality short-lived

If the illusion of being something more elegant than hired hands is even stronger in the era of the CBS firings than it was in the age of $30-a-week pay envelopes, it is surely because of the oceans of malarkey spoken and written about "the power of the media" since politics turned into television.

When you are constantly marinated in declarations, accusations and denunciations, all to the effect that you are part of a powerful organism—"the media"—that settles the fate of the mighty, that makes and unmakes governments, that dispenses cruel justice or grants quixotic mercy at a whim—you might very naturally start thinking of yourself as having certain godlike characteristics.

You might understandably fail to notice that you have more in common with disemployable steelworkers in the Rust Belt than with the buccaneers of Wall Street or even with doctors and lawyers whose heads cannot be served to a boss to improve the famous bottom line.

The conservative right has done heroic work in creating the illusion of amazingly "powerful media." In the right's "Catalogue of Simple Explanations of Everything That's Wrong With the World," one of the biggest entries is "the media."

Technically, of course, "media" embraces all outlets that offer a forum for advertisers to address their markets—newspapers, magazines, radio, TV stations, billboards and junk mail. As defined by the awestruck right, however, its meaning is more specific.

When a rightist says "the media did it," he is referring to what he perceives as a conspiracy of the three network television news departments, the New York Times, the Washington Post, Time magazine and Newsweek. Characteristically, rightists who wanted to strangle the media monster used to talk about gaining control of CBS so they could become "Dan Rather's boss."

Not surprisingly, all this encouraged news people everywhere, but especially those of the designated "powerful media," to settle deeper into the delusion that they lived a far world away from luckless steelworkers and mill hands who ruin the boss's bottom line. Then Laurence Tisch bought CBS and woke everybody up. Mr. Tisch is a hotel man. Chambermaids don't kid themselves. He must have thought news people were at least as smart.

Russell Baker's columns appear regularly in the New York Times. This on ran in the Mar. 21 issue.

EDITORIALS

To Redeem the Promise

THE TIME HAS come for Congress to redeem the promise of the minimum wage by restoring its value to American workers.

In America in 1987, the minimum wage is not a subsistence wage, and Congress should not let another year go by without correcting it. A minimum wage that does not permit full-time workers to provide the bare necessities for their families is unacceptable:

- It permits unscrupulous firms to exploit their lowest-paid workers.
- It violates the work ethic by condemning to lives of hardship and deprivation millions of citizens who are ready, willing and able to work. A full-time job in the workplace should never mean a lifetime of poverty or welfare dependency.

What we have today is a failed system in which the taxpayers are making up the difference. Through welfare and other safety net programs, the government is subsidizing the payrolls of firms with low-wage employees.

Throughout the half-century history of the minimum wage, Congress has tied increases to the level of hourly earnings. Sometimes the minimum wage has been above 50 percent, sometimes below, but 50 percent is the standard. By that measure, the minimum wage today should be $4.45 an hour.

IT IS difficult to make up for six years of abdication of responsibility. But it has to be done, and this legislation achieves its goal in annual steps designed to minimize the hardship on any firm.

Complaints about this legislation come with ill grace from those who have profited from six years of neglect by profiteering at the expense of workers.

I hope that those concerned with this issue will take the ideological diatribes raised against it with a grain of salt. As we have learned in past battles on the minimum wage, no one fears more for the future of the country than a well-paid executive about to be required by law to raise the minimum wage for his lowest-paid employees.

Six times we have made this fight, and six times the sky has not fallen in. And it is not going to fall in when President Reagan signs this legislation—or when Congress overrides his veto.

—Remarks by Sen. Edward M. Kennedy (D-Mass.) at Mar. 25 news conference announcing his co-sponsorship with Rep. Augustus F. Hawkins (D-Calif.) of a bill to raise the minimum wage.

The Alternative

BY OPPOSING a minimum wage increase, the Reagan Administration is in effect asking Congress to repeal one of the proudest achievements of President Franklin D. Roosevelt's New Deal.

FDR asked Congress to set a floor under wages and a ceiling on hours, and that's what it did 49 years ago through the Fair Labor Standards Act. Since then, every President has acknowledged the need to keep the wage floor reasonably current—until now.

President Reagan has repeatedly made clear his personal opposition to any form of minimum wage. The White House knows that outright repeal is politically unattainable, but there is more than one way to skin a cat.

The Administration's first effort was a call for a subminimum youth wage to push down the pay level for some workers.

Congress, to its credit, didn't adopt that approach. But the Administration knows that it can accomplish the goal of wiping out nearly all minimum wage protection simply by blocking any further increase in the pay floor.

The longer the President is able to keep Congress from fulfilling its obligation to bring it up to date, the fewer people will benefit from its protection.

Eventually the marketplace, which this Administration so reveres, would set the effective minimum at the lowest level at which any person is willing to work.

As far as workers at the bottom of the ladder are concerned, that's the same thing as repeal.

Family earnings fall

Counting part-time workers skews federal jobless data

By Gus Tyler

Steve Jovanich used to average about $435 a week in the steel mill. He has two boys in college who were paying their tuitions with student loans. When the mill closed down about 18 months ago, the boys decided not to re-enroll for the year. They got jobs. At about $5 an hour they were making about $100 a week each. The jobs were typically teenage—a buck or so above the minimum wage and part time.

The family income was down about $200 a week—to a little over $10,000 a year.

But when the statistics on employment were published the record showed that the number of employed in this household had increased by one.

If Mrs. Jovanich finds a job, which she is trying to do at a local restaurant, she may add another few dollars to the family income. And the statistics will show that, in this one household alone, the number of employed had risen by two.

What is going on in the Jovanich household is the key to explaining what is going on in the American economy. Although the economy is soggy, hardly keeping up with the growth in population, employment figures rise.

The reason is part-time employment. If you are employed 20 hours a week, you are counted as "employed." In the final statistics, two people employed 20 hours count for twice as much as one person for 40 hours.

Part-time boom

Part-time employment has been booming. In October, for instance, 350,000 new jobs were created. Almost all of these were part-time, according to the Bureau of Labor Statistics. In the two years between November 1982 and November 1984, the number of such employees rose by 70 percent—well on the way to doubling. It is presently estimated that about one out of every five employees in the work force is a part-timer.

Not all these part-timers are teenagers—as the Jovanich family. Retired people take on part-time work. Women, who cannot devote 40 hours a week to a job, take part-time jobs. Indeed, most part-timers are women—60 percent of them.

Finding jobs for part-timers is a growing industry in the United States. Of all industries employing 50,000 or more, the "temporary help" industry is the fastest growing.

Part-time work as such is both necessary and desirable for many people in the country. To hold such a job is perfectly proper.

But when part-timers are lumped with full-timers in the government's report, an optical illusion is created that the whole country is better off. When it is realized, however, that such part-timers do not add to the family income what was lost with the disemployment of a full-timer and part-time wages average on 58 percent of hourly full-time wages, then it is clear that the official figures badly mistake what is happening to the income of American families.

We get the impression that the income of a wage earning family is rising when it is falling.

Are you better off now?

Candidate Ronald Reagan used an effective campaign statement in 1980 when he asked the question, "Are you better off now than you were four years ago?"

A similar question was posed to middle-class families in a recent Wall Street Journal/NBC News poll.

It asked: "Compared with five years ago, do you think it is now more or less difficult for middle-class people to maintain their standard of living?"

The answer: 65 percent of those interviewed replied, "more difficult." Those replying "less difficult" totaled 22 percent.

AFL-CIO LEGISLATIVE ALERT!

House Committee Approves No-Meat Version Of H.R. 3

Workers Are Forced To Fight For Fair Trade: Trade Deficit Reduction Battle Coming On House Floor

In the House of Representatives, the moment of truth for meaningful trade reform is fast approaching. On March 25th, the House Ways and Means Committee and its chairman, Dan Rostenkowski (D-IL), gave approval to a trade bill which omits the most vital component of any effective trade legislation: provisions ensuring the reduction of America's trade deficit.

The bill, which Democratic leaders have termed the most important measure before the 100th Congress, is expected to be considered on the House floor near the end of April. There, Rep. Richard Gephardt (D-MO) will offer an AFL-CIO supported amendment on deficit reduction, and representatives will have a chance to put the meat back into the Trade Package being developed in the House of Representatives.

In a March 16th letter to Chairman Rostenkowski, AFL-CIO Legislative Director Robert McGlotten explained that the Gephardt amendment responds to the fact that "U.S. efforts to eliminate the unfair trading practices of our major trading partners on a case-by-case basis have been unsuccessful." The fact that the American economy and its workers are now suffering from the effects of a staggering $170 billion trade deficit is ample proof that, under the Reagan Administration, the current negotiating process has not been working.

The Gephardt amendment offers a mechanism by which trade inequities can be remedied and jobs saved. Only those nations with huge trade surpluses and unfair trading practices would be affected.

If the countries which have been identified remove barriers to American goods and modify other unfair trading practices, no action would be taken. The amendment would also provide for an extended negotiation period during which the Administration could try to work out mutually agreeable solutions. Only if all negotiating efforts fail, would the President be required to take action to reduce our trade deficits with these countries by 10% per year.

It is expected that Japan, Taiwan, South Korea, and West Germany among others, would be subject to the Gephardt amendment, but it is important to note that under the amendment these "super-surplus" nations are given every opportunity to engage in free and open trade. Reductions in their trade surpluses can easily be accomplished by opening their markets, instead of by closing ours.

Currently, our trading partners have no reason to change their way of doing business with us. Without the inclusion of some form of enforcement mechanism, like the Gephardt amendment, this year's trade bill will not provide a reason.

What You Can Do: Write to your representative. Tell him or her that uncontrolled U.S. trade deficits contributed to the loss of 13.1 million American jobs over the last five years, and that real trade reform is of the highest priority for working men and women who care about their country and their jobs. Tell them that if they are serious about dealing with America's trade crisis, they will support the Gephardt Amendment when it is introduced on the House floor.

Worker's Constitutional Rights At Risk

Drug Testing Bill For Transportation Workers Approved By Senate Committee

On March 10, members of the Senate Commerce Committee voted 19-1 to approve legislation which calls for the Transportation Department to require drug testing programs in the aviation, rail, bus and truck industries, including random, periodic, pre-employment, post-accident and probable-cause testing. A bill number has not yet been assigned.

Many senators who voted for the bill expressed "serious concerns" about the accuracy of drug tests, questions of privacy, cost and a potential for employer abuse.

The random testing requirement could lead to "countless court cases and countless lives being disturbed," said Senator John Kerry (D-MA), who reserved the right to offer an amendment on the Senate floor. He also noted that there is evidence of false readings on as many as half of all tests.

Ironically, the only vote against the bill was by Senator Larry Pressler (R-SD), who said that he was worried that the measure might prove burdensome for small truck and rail operators.

The fact that public concern over drug abuse continues to rank high on opinion polls, means that some elected officials feel pressure to show that they are doing something to "get tough" on drugs. Yet, most random testing advocates have not bothered to fully examine the ramifications of these programs.

Unions and other drug abuse and legal experts have testified that random testing is an unconstitutional invasion of workers' privacy, is inaccurate, and would be so exorbitantly expensive as to draw funding away from needed rehabilitation programs.

Unless senators hear from you, their constituents, that you want responsible, considered, and non-hysterical solutions to this complex social problem, random testing may soon be inflicted on workers throughout the entire American work force.

No Comment . . .

Senator Warren B. Rudman, Republican of New Hampshire, likes to tell a self-effacing story about a yet-to-be-issued commemorative postage stamp, honoring sponsors of the budget balancing law, himself and Senators Phil Gramm, Republican of Texas, and Senator Ernest F. Hollings, Democrat of South Carolina. The stamp, he says, has one big problem: It keeps sliding off envelopes. The Postal Service calls in a high-priced consultant to check the glue, which is all right. Finally, the reason is discovered. Government workers who buy the stamp "spit on the wrong side."

The New York Times 3/4/87

Committee Action Expected Soon On Polygraph Bill

Action on H.R. 1212, the Employee Polygraph Protection Act, should begin shortly in the House. The Subcommittee on Employment Opportunities of the Education and Labor Committee is scheduled to mark-up the bill this week.

This labor supported legislation comes in response to an escalating abuse of polygraphs in America's workplaces. Workers in the private sector are subjected to more than two million "lie detector" tests every year, four times the number given just ten years ago. According to estimates, at least 200,000 Americans lose jobs or are denied their employment opportunities solely because of inaccurate "lie detector" tests.

This important measure to protect workers' rights to privacy is expected to be considered by the full Committee in late April or early May.

Conference explores needs of working families

By Candice Johnson

Millions of working parents who must balance the demands of work and family are looking to their unions, employers and their government for help.

These growing concerns of working parents—including child care, parental leave and flexible work schedules—were the focus of a national conference sponsored by the Labor Dept. in conjunction with the AFL-CIO and the National Association of Manufacturers.

More than 1,000 participants—from labor unions, corporations, universities and community organizations—met to debate problems and find some solutions to the dilemma facing women workers in particular.

Labor Sec. William Brock opened the conference with a look at the changing workforce, stressing that organizations "that cannot adjust to change will not be able to recruit and retain the skilled and committed employees who are essential to a company's success."

"In a single generation," Brock observed, the work landscape "has been dramatically altered—the labor force has become less male, less young and more heterogeneous." The changes "are putting tremendous pressures on America's families" which must be met, whether by "private parties, government entities or some combination of the two."

Brock noted that women, minority workers and immigrants "will account for 80 percent of the net additions to the labor force between now and the year 2000," with a corresponding jump in demand for support services including child and elder care, job training, alternative work schedules and other programs.

AFL-CIO Sec.-Treas. Thomas R. Donahue took issue with politicians and government officials "who pay lip service" to the needs of children and working families. He stressed that "this country should invest more—much more, rather than less and less—in nutrition, education, housing and health care."

The tie between work and family is a

Congress overrides Reagan highway veto

Funding voted for urgent job-expansion projects

By David L. Perlman

Congress freed $88 billion for highway construction and mass transit assistance over the next five years by overriding a presidential veto that the AFL-CIO had termed "a knockout punch for our nation's economy."

President Reagan had seized on the highway bill, which had passed both the House and Senate with overwhelming bipartisan support, to demonstrate his continued political effectiveness.

If Reagan had won the political battle he touched off, billions of dollars in the Highway Trust Fund would have been frozen while Congress battled over substitute legislation. Tens of thousands of jobs would have been lost during the prime time for outdoor construction.

The stakes were too high.

The AFL-CIO's grass roots lobbying effort helped spur calls and letters stressing the job impact of the veto override vote.

Most House Republicans joined with Democrats to override the veto, responding to back-home concerns for jobs and economic development. The 350-73 margin was well over the two-thirds vote needed to override a veto.

The see-saw battle was in the Senate, where Reagan needed the votes of 34 of the 46 Republican senators to block an override.

Reagan falls short

He fell short. Thirteen Republicans voted to override the veto, both on an inclusive first vote and in the final showdown—despite repeated personal appeals from Reagan. The President came to the Capitol for a 90-minute meeting with Senate Republicans that failed to change any votes.

The defection of North Carolina Democrat Terry Sanford on the first attempt to override the veto gave the President a temporary victory. Sanford had voted against the bill when it was passed, contending that his state had been short-changed in the allocation of funds. He wavered, then cast a last-minute vote against overriding the veto.

Senate Majority Leader Robert C. Byrd

Pensioners protest

Thirty busloads of retired Steelworkers, facing loss of health and life insurance benefits when companies they worked for file for bankruptcy, came to Washington with USWA President Lynn Williams to press Congress for legislative safeguards. Last year's law expires May 15. (Story on Page 2.)

House pressed to put teeth in Ways & Means trade bill

The AFL-CIO has asked House members to vote for a "sorely needed" strengthening amendment to a committee-approved trade bill that is expected to reach the House floor in late April.

Legislative Director Robert M. McGlotten termed the committee bill's attempt to deal with the trade deficit "seriously defective." He expressed the federation's strong support for the amendment that will be proposed by Rep. Richard A. Gephardt (D-Mo.) to bring exports and imports into closer balance.

A similar Gephardt amendment was the heart of the trade bill the House passed in the last Congress. The Reagan Administration is vehemently opposed to the measure because it would require the President to take action to reduce trade imbalance if bilateral negotiations don't get results.

"Those who profit from the massive flood of imports will label the Gephardt approach as 'protectionist,' " McGlotten noted. But he urged House members to "look beyond mere labels" and consider the consequences of continued huge trade deficits.

Surging oil costs drive consumer prices higher

By Gene Zack

Consumer prices edged up another four-tenths of 1 percent in February under the influence of large increases in the cost of gasoline and fuel oil.

In the first two months of this year, the government's consumer price index rose a total of 1.1 percent and is now 1.8 percent above the February 1986 level.

Meanwhile, real average weekly earnings—the buying power of a worker's paycheck—continued on a roller-coaster ride, increasing sixth-tenths of 1 percent from January to February. They had been virtually unchanged the previous month after dropping nine-tenths of 1 percent in December.

Measured in constant 1977 dollars, this means that the average weekly paycheck was worth $169.66 in February, a scant 71-cent improvement over the previous month. This remained well below 1978's real earnings level of $189.31. In other words, the average worker's paycheck now buys 10 percent less than nine years ago.

The rise in weekly earnings stemmed from a five-tenths of 1 percent increase in average hourly earnings and a six-tenths of 1 percent improvement in average weekly hours. These were partially offset by the four-tenths of 1 percent rise in the price index.

Prime rate up

In a related development, the nation's three largest banks—Citibank, Chase Manhattan and Manufacturers Hanover—raised their prime lending rate one-quarter of 1 percent to 7.75 percent. A number of other banks followed suit. It was the first increase since mid-1984.

The move was designed to lure more foreign investment to this country. Higher interest rates, the banks said, would help offset the continued decline in the U.S. dollar. But for the domestic economy, the move signals higher housing costs and an

Workers pay dearly for corporate raids

America's workers are paying with their jobs for the high cost of corporate takeover schemes, those that are turned back as well as those that succeed, union witnesses testified at House hearings.

President James E. Hatfield of the Glass, Pottery & Plastics Workers pointed to the wreckage of workers' lives resulting from the $2.6-billion debt that Owens-Corning Fiberglas Corp. incurred last year in beating back a raid by the Wickes Corp.

The raider walked away with a profit, Hatfield noted in his testimony before a House Government Operations subcommittee.

But the aftermath, Hatfield said, is that Owens-Corning "will close plants, sell plants, terminate production on certain items and reduce by half its research and development activities."

When the corpses are counted, according to business publications, total employment will be cut almost in half.

Local 252 President Delbert Walsh told the panel that the Barrington, N.J., fiberglass plant was a steady profit-maker for Owens-Corning and had been slated for expansion at the time of the corporate raid.

Destined for shutdown

Now its workforce has been slashed and the entire plant is destined for shutdown, Walsh testified. He tried to convey to members of Congress what this means in terms of the lives and expectations of the workers affected.

The AFL-CIO expressed similar concern in a statement to the subcommittee.

"No matter which side wins control in a takeover battle," the federation noted, "workers, customers and the community in which the company is located are the likely ultimate losers."

Subcommittee Chairman Tom Lantos (D-Calif.) welcomed the labor testimony for its linkage of "takeover mania" with "lost jobs, pressure to cut wages, and deteriorating working conditions."

Airline coordinator William L. Scheri and the general chairmen of two air transport districts of the Machinists gave first-hand witness to the upheavals caused by airline mergers and takeovers.

4/4/87

Glass, Pottery & Plastics Workers President James E. Hatfield testifies at House hearings on the adverse effects of corporate takeovers, with Local 252 President Delbert Walsh, left, and attorney Robert O'Brien.

Corporate raids yield profits, workers pay with their jobs

Continued from Page 1

"Deregulation of the airline industry has reintroduced the law of the jungle," Scheri charged.

Mergers and takeovers affecting 33 airlines have reduced competition that deregulation was supposed to promote, Scheri noted. Service to the public has deteriorated and the economic hardship "continues to be borne disproportionately by the working men and women of this industry."

He noted that since the takeover of Eastern Airlines by Frank Lorenzo's Texas Air Corp., 1,600 jobs have been wiped out and the new owner has demanded that mechanics and maintenance workers take pay cuts of nearly 50 percent.

Two other IAM witnesses, District Chairmen Guy K. Cook and J. Thomas Higginbotham, attacked the refusal of the Transportation Dept. to impose congressionally authorized labor protective provisions on airline merger agreements in order to safeguard the workers affected.

Destructive battles

In separate testimony before the Senate's antitrust subcommittee, Machinists President William W. Winpisinger and Rubber Workers President Milan Stone added to the documentation of destructive corporate takeover battles.

Winpisinger warned that the "ill-conceived" deregulation law "has bred a merger-mania which has permitted the few largest airlines which remain in existence to act as sharks in a feeding frenzy."

Stone testified to the needless plant closings and cutbacks resulting from the debt burden incurred by Goodyear Tire & Rubber Co. in successfully turning back a hostile takeover attempt by a British financier.

The URW wants its employers to make money "because we expect to share in that prosperity," Stone noted. But corporate takeovers "make enormous profits for the already rich without creating anything new in the way of jobs, products or enhanced competitiveness."

In its statement to the House subcommittee, the AFL-CIO said the federation is "now in the process of preparing recommendations for legislation to protect workers against the adverse effects of takeover mergers and leveraged buyouts."

The high cost of debt incurred to stave off takeovers has tilted corporate balance sheets, the AFL-CIO noted. Some stores or plants that had previously shown modest profits drop into the money-loser category because higher earnings are needed to carry the extra cost of the new debt.

Bankruptcy shuffle

Retirees urge action to safeguard benefits

Some 1,600 retired Steelworkers rose before dawn or traveled overnight in bus caravans to lobby Congress for legislation to bar companies from canceling health or life insurance benefits of pensioners.

Temporary legislation passed last year when thousands of LTV Corp. retirees were threatened with loss of benefits will expire on May 15. But LTV retirees aren't the only persons directly affected. Tens of thousands of other workers and retirees in import-battered, bankruptcy-threatened industries are also endangered.

Despite spring snowstorms that left huge drifts, most of the union-chartered buses left on schedule from steel centers in the East, Midwest and as far South as Alabama.

Some early arrivals were able to find space in the hearing room where a Senate Judiciary subcommittee was taking testimony from USWA President Lynn Williams and other union witnesses.

Williams challenged the concept that the claim of retirees on the assets of a company seeking bankruptcy law protection from its creditors is no greater than that of a commercial supplier of goods or services.

Dependent on benefits

A creditor can take a tax deduction on a bad debt or make up an unpaid bill by passing on the cost to other creditors, Williams noted. Retirees earned and are totally dependent on their company benefits, he stressed. Both the Auto Workers and the unaffiliated Mine Workers joined in urging quick action on the legislation.

A similar battle was fought and won three years ago, when Congress amended the bankruptcy law to remedy a damaging Supreme Court decision that allowed employers to tear up their union contracts and cut wages unilaterally when filing for bankruptcy.

The labor-backed bill, introduced by Sen. Howard M. Metzenbaum (D-Ohio), Rep. Louis Stokes (D-Ohio) and bipartisan co-sponsors, would treat health and life insurance benefits of retirees comparably with wages.

Any changes not agreed to in negotiations could be imposed only if a bankruptcy judge ruled that they were fair to all concerned and necessary to the company's ability to survive.

Industry failures

Williams told the Senate panel that the wave of bankruptcies which has hit the steel industry hardest stems from the failure of the Reagan Administration and Congress to deal effectively with the one-way flow of trade that has eroded America's industrial base.

LTV, he noted, embodies what once was Youngstown Sheet & Tube, Jones & Laughlin Steel and Republic Steel. He listed dozens of other steel firms in every part of the country that have also been forced into bankruptcy reorganization.

"The human suffering is already devastating, and it increases by the day," he testified.

From the hearing room, Williams joined the USWA rally being held near the Capitol, where a stream of House and Senate members welcomed the union members and pledged support for their legislation.

The retirees, many of them veterans of strikes that had won the pensions and benefits they are fighting to keep, ate their box lunches and broke up into lobbying groups to seek out members of Congress who hadn't declared themselves on the issue.

Their message was that retirement benefits are a form of deferred wages and if the existing law doesn't protect their rights, the law needs to be changed.

IUE hits feeble move in computer chip war

The Reagan Administration's token crackdown on Japan for violating its pledge to stop dumping computer chips on the American market is "nothing but a temporary step," Electronic Workers President William H. Bywater warned.

The White House announced it would double the duty on a wide range of Japanese electronic products because that nation failed to live up to a July 1986 accord that was supposed to end the underpricing and open Japan's market to American-made semiconductors.

"I don't see this move as anything we can count on for jobs," Bywater said, noting that the White House had conceded that Japan's predatory practices have cost nearly 40,000 jobs in the last eight months.

The new duties are supposed to take effect Apr. 17. But between now and then, Bywater noted, the Administration plans another round of talks with the Japanese in an effort to end the unfair trade practices.

Representing the United States in the talks will be Commerce Sec. Malcolm Baldrige and Trade Rep. Clayton K. Yeutter. The IUE president recalled that Baldrige said he was "sad" about imposing the penalties, and Yeutter said they were "tough steps" and expressed the hope that something could be worked out before final action is taken.

Little confidence

"It doesn't inspire a lot of confidence to have these guys as our negotiators," Bywater said.

He accused the Administration of having engaged in "unilateral trade disarmament" as far as the microchip industry was concerned and called for a "crash program" to save American companies and jobs before the nation becomes totally dependent on foreign technology and production.

"The semiconductor industry is only one of many hurt by unfair trade," Bywater emphasized. "Other industries—from steel to televisions, from automobiles to textiles—have long been slipping." He accused the Administration of posting "hunting permitted" signs in front of the industrial sector of the American economy.

He urged joint labor-industry-government action to determine "what industries need what kind of help and then give it—not for fat profits but for full employment."

Bywater stressed that "by passively accepting the current trend, the United States is committing itself to a future as one of the world's industrial lightweights. We must stop striving to be loved and start acting in our own interest, as Japan does, as the European Common Market does, as all the other countries in the world do."

Consumer price increases cut hole into wage gains

Continued from Page 1

increase in the interest rate consumers will be paying on bank credit cards.

In the 12-month period since last February, consumer prices were up 1.8 percent. The rise would have been sharper—a full 2-percent increase in a year's time—except that the Bureau of Labor Statistics recently adopted a new basis for figuring consumer costs.

The new market basket of goods and services de-emphasizes such costs as transportation and food, and gives greater weight to such items as home computers and video cassette recorders.

Food price increases slowed to two-tenths of 1 percent in February, but were up 4.6 percent from the same month a year ago, and shelter costs rose five-tenths of 1 percent to stand 4.8 percent higher than in February 1986.

Heating oil prices rose 3.5 percent in February and gasoline prices were up 4.1 percent. Both were significantly lower than in the same month last year when an oil glut and disagreements between members of the Organization of Petroleum Exporting Countries triggered a worldwide price-cutting binge.

New car prices dropped 1 percent between January and February, reflecting special cash-rebate programs by automakers trying to reduce heavy inventories. But they were up 4.4 percent over the same period last year.

Medical costs soar

Underscoring the continuing need for labor-backed proposals to impose effective cost containment on the health care industry, the government reported that medical care costs rose another three-tenths of 1 percent in February. Over the past 12 months, these costs soared a staggering 7.1 percent—the largest increase for any component in the price index.

In other developments:

- A sharp upward surge in the stock market lifted the index of leading economic indicators seven-tenths of 1 percent in February, more than offsetting the decline of five-tenths of 1 percent recorded the previous month.

Although things looked bright for investors, the same couldn't be said for workers. On the down side among the indicators which help measure future activity was a substantial increase in new unemployment insurance claims.

- Sales of machine tools in February were 31 percent behind the same month last year, reflecting cutbacks in the import-troubled auto industry and general uncertainty in the rest of the manufacturing sector. Orders totaled $145.1 million, compared with $210.4 million in February 1986.

Moreover, machine-tool builders said they have yet to see any significant benefit from the "voluntary" import limitations the U.S. government negotiated with Japanese and other overseas producers. That's because foreign firms loaded American warehouses with their products before the quotas took effect Jan. 1.

- Bolstered by heavy demand for military hardware, orders for big-ticket durable goods shot up 6 percent in February, the biggest gain in five months. Without the transfusion of Pentagon dollars, the increase would have been only 3.8 percent.

Even then, the improvement in orders failed to offset the massive 9.9-percent decline suffered the previous month, and analysts were cautious about the significance of the February figures. Until the nation's trade balance improves and consumer spending accelerates, they said, there will continue to be an underlying sluggishness to the economy.

Downward revision

In a revision of earlier figures, the Commerce Dept. reported that for all of 1986, new orders totaled $2.27 trillion—down six-tenths of 1 percent from the 1985 total. Originally, the government had indicated orders were essentially unchanged between 1985 and 1986.

- New home sales fell for the second consecutive month in February, declining 2.7 percent. The previous month saw an 8.6-percent drop. Sales are running at an annual pace of 680,000—9.3 percent behind last year's level of 750,000 units, and 25 percent below the peak set in March 1986 when falling interest touched off a sales stampede.

TVA must pay $5 million in sex bias case

Nashville, Tenn.—Some 5,000 Office & Professional Employees will share a $5-million payment to settle a sex discrimination suit against the Tennessee Valley Authority.

After the U.S. District Court for Eastern Tennessee ruled that the union had a clear case of gender bias, TVA agreed to the payment for employees at the federal power authority's plants and offices spread over a seven-state area.

The dispute dates back to 1981, when TVA radically altered the salary survey system it had been using for decades to measure pay scales against prevailing wages in the region.

Instead of employing Labor Dept. statistics based on urban area wages paid by major corporations, TVA shifted to a rural-based measurement that compared its clerical employees' salaries with those paid by churches, convenience stores and retail outlets.

Wages frozen

As a result of the switch, thousands of women workers in clerical positions had their salaries frozen. At the same time, however, TVA continued to use urban statistics for engineers so that workers in male-dominated categories received increases.

In the 1981 negotiations, the Reagan-dominated TVA board threatened to fire workers—as the Administration had just done a few months earlier with the Air Traffic Controllers—unless workers agreed to removal of the binding arbitration clause that had been in their bargaining agreement previously.

Under the court-approved settlement, TVA agreed to return to binding arbitration for future salary negotiations.

Letter Carriers elect Conners in re-run vote

Letter Carriers Vice President Frank Conners won a re-run election for executive vice president in defeating incumbent Tony Huerta, who held post for 10 years.

Conners, 59, won the regular election last September. Huerta appealed and the NALC election committee ordered a new election.

Conners, who had been a vice president since 1976, drew 85,846 votes to Huerta's 44,162.

Huerta, 64, had served as NALC's secretary-treasurer for two years before he was elected executive vice president in 1976.

At work and family conference, Donahue calls for federal action to ease the burden on working parents.

Panelists discuss labor-management solutions. From left: retired UAW President Douglas A. Fraser, Mannie Jackson of Honeywell Inc., AFL-CIO's Rudy Oswald, Alfred S. Warren of General Motors Corp. and Service Employees President John Sweeney. At right, are Labor Sec. William Brock and Deputy Under Secretary Stephen Schlossberg, seated.

Families in crisis

Aid urged for working parents

Continued from Page 1

critical one, Donahue said, but the good-paying jobs that have nurtured and built self-reliant families "are being wiped out by attrition or sudden-death plant closings."

To ensure a healthy family life, Donahue declared, "America must have more and better jobs. That means an end to the systematic destruction of America's industrial base. It means an end to one-way trade policies that flood the nation with cheap imports at the cost of mass unemployment.

"It means training programs for jobs that pay a living wage that permit families to keep a roof overhead and put food on the table and a little money in the bank for a brighter family future.

"It means a minimum wage sufficient to keep body and soul together and a level of unemployment compensation sufficient to prevent the dispossession and impoverishment of families when hard times come around."

Reagan Administration policies that seek to eliminate "what few child care programs exist," that press for a reduction in the minimum wage or that tolerate chronic, high unemployment threaten the welfare and stability of working families, Donahue charged. "We can't cure the ills of family life until we cure the ills of work life," he declared.

In another address, Chairman Stanley C. Gault of the National Association of Manufacturers said employers are adapting to the rapid growth of women in the workforce by making changes in key areas—including benefits, working conditions and assistance programs.

Work patterns

Panel discussions examined alternative work patterns in public and private jobs, collective bargaining for family issues, parental leave, child care and help for workers through employee assistance programs.

In a session on work and family structure, Commissioner Janet Norwood of the Bureau of Labor Statistics pointed out that the so-called traditional family—a working husband, a wife at home and two children—represents only 5 percent of all American families. She called child care "a tremendously important issue" that is not getting enough attention from public or private employers, adding that only one 1 percent of workers have child care available in the workplace.

Norwood also stressed that flexible hours and work schedules are not available to most working women.

Panelists agreed that the solution to working parents' concerns must come from a collaborative effort of government, business, labor and education leaders.

In a discussion of parental leave, some business representatives balked at legislation that would give new parents up to 18 months of unpaid leave without fear of losing their jobs, arguing that companies could work out their own systems.

But other participants disagreed, stressing that collective bargaining or corporate actions alone cannot respond to the problems of working families.

Other labor participants included AFL-CIO Vice Presidents John Sweeney, Barbara Hutchinson and Morton Bahr; retired Auto Workers President Douglas Fraser; Federation Directors Rudy Oswald and Bert Seidman; Karen Nussbaum, 9to5, National Asssociation of Working Women; Barbara Feldon, Screen Actors; Linda Lampkin, State, County & Municipal Employees; Patricia Scarcelli, Food & Commercial Workers; Meredith Miller, Service Employees, and John Zalusky and Karen Ignagni of the AFL-CIO.

Postal Service callous after shooting

The Postal Service failed to show compassion to families of 14 employees who were killed and six others who were wounded when a gunman went on a rampage at the Edmond, Okla., post office in August 1986, and was insensitive to the emotional trauma of survivors of the massacre, union officials testified.

Postal Workers President Moe Biller and Letter Carriers President Vincent Sombrotto told a joint hearing by two House Post Office & Civil Service subcommittees that the USPS fell down on the job by delaying and denying benefits for victims' families and in failing to provide adequate counseling to those workers who witnessed the shootout.

Relatives of those who lost their lives when a part-time letter carrier went berserk were assured the Postal Service would expedite death benefits and burial costs and injured workers were promised prompt financial help for medical treatment. But, Biller emphasized, they ran into a "bureaucratic stonewall" erected by the USPS and other federal agencies.

Emotional 'aftershock'

Sombrotto charged that the Postal Service did not do "a very good job dealing with the aftershock of the tragedy." He urged that reforms be instituted to determine how best to "deal with these awful situations when they occur."

Sidney Brehm, an APWU member from the Edmond facility, testified that the local postmaster failed to be supportive of survivors who developed emotional problems.

He said the postmaster—who since has been reassigned—told workers two months after the tragedy that they really didn't need counseling to get over the shock, and insisted that they see counselors "on non-scheduled time."

Brehm said sympathy cards that flooded in from around the country were withheld from clerks for more than a month, that they were made available to employees for only three days before being destroyed, and that postal workers were told that reading these messages "will be done on your own time."

And APWU member Cliff Guffey told the congressional panel that many postal workers were trapped in the facility due to inadequate and blocked emergency exits. He charged that the building failed to comply with emergency exit codes issued by the Occupational Safety & Health Administration and the USPS.

Rep. Mickey Leland (D-Tex.), who chaired the hearings, expressed shock and anger. "I don't know how this breakdown in the system occurred," he declared. "It doesn't matter whether it was unintentional, the result of negligence, or a failure by postal officials to fulfill their responsibilities to the affected persons. What I do know is that something went terribly wrong."

Postmaster General Preston R. Tisch acknowledged that "the USPS dropped the ball" in handling the affair, and apologized for those postal managers "who didn't show appropriate sensitivity" to workers and their families.

Regional conference in New York, Apr. 10-11

Trade unionists from 13 New England and Mid-Atlantic states will meet in New York Apr. 10-11 for the second of four 1987 regional conferences.

The AFL-CIO conference agenda will focus on:

- Foreign trade issues.
- The role of union members in the 1987-88 political process.
- The effect of budget deficits on jobs and the nation's economy.
- Labor's goals to meet workers' needs.

The 13 states involved in the New York conference are: Connecticut, Delaware, Maine, Maryland-D.C., Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia and West Virginia.

Regional conferences will be held May 29-30 in Chicago for midwestern states and in New Orleans June 5-6 for southern states.

The first regional conference was held Mar. 20-21 in San Francisco. Nearly 400 trade unionists participated.

Joint effort vital to recovery from economic decline

A cooperative effort by labor, industry and government can help reverse an economic decline that has depressed wages and kept unemployment high, President Howard D. Samuel of the AFL-CIO Industrial Union Dept. told the Senate Commerce Committee.

Samuel expressed concern at both the decline in industrial jobs and the sharply lower wage levels of the service jobs that have replaced them. Average weekly wages, adjusted for inflation, have sunk to the levels of a quarter-century ago.

Samuel termed the decline "a startling reversal of the long-term trend of a steadily increasing standard of living for American workers."

The nation's first priority should be effective trade legislation, Samuel said. A second big need, he testified, is advance notice of plant closings and a rapid response to help move dislocated workers into new jobs or into training programs that will prepare them for new jobs.

Looking ahead, Samuel stressed the value of tripartite forums in which industry and labor can participate with government to strengthen the U.S. economy by such measures as raising capital for industrial modernization, expanded research and development, and the upgrading of the educational system.

Court hits NLRB on hospital unit rule

Remands 7-year-old case for 'community of interest' test

The National Labor Relations Board improperly interpreted federal law when it refused to certify Electrical Workers Local 474 as bargaining agent for 43 maintenance workers at St. Francis Hospital in Memphis, Tenn., a federal court ruled.

The case has been bouncing back and forth in the administrative and judicial process for seven years, and has seen successive labor boards take diametrically opposing positions on what constituted an appropriate bargaining unit in the hospital field.

Now the U.S. Court of Appeals for the District of Columbia Circuit, reviewing the language and legislative history of the 1974 Health Care Amendments to the National Labor Relations Act, said there was "no basis in the law" for a 1984 NLRB decision putting strict limits on the number of "potentially appropriate" bargaining units.

The court sent the case back to the NLRB to reconsider whether the hospital's maintenance employees constitute an appropriate unit. The court did not mandate how the issue must ultimately be decided. But it strongly suggested the board would have to explain "adequately" any deviation from the historic rule of thumb that permits certification of a union if its members share "a community of interest"—a test uniformly applied in the private sector.

Although the IBEW won the representation election in 1980, hospital management refused to bargain. In 1982, by a 3-to-2 margin—with two Reagan appointees in the minority and three Carter Administration holdovers in the majority—the NLRB upheld the union.

In doing so, the board identified seven "potentially appropriate" bargaining units at health care facilities, applying the same "community of interest" test it has always used in other industries. That decision came, over the years, to be known as St. Francis I.

Policy switch

Two years later, with the Reagan Administration holding a firm grip on the board, the NLRB reversed its policy and came down on the employer's side. This ruling, called St. Francis II, insisted the 1974 amendments required the application of stricter standards for nonprofit hospitals than for private industry. The Reagan board said the law required that there be sharp differences between wages, hours and working conditions before workers could be divided into separate bargaining units.

Although the court agreed that the purpose of the amendments was to avoid proliferation of bargaining units in the medical industry, it said the NLRB "misconstrued" what Congress intended and was operating under an "erroneous view of the law."

The court noted that the late Sen. Robert A. Taft (R-Ohio) had proposed that there be only four bargaining units at a health care facility unless the employer and union agreed otherwise. But, it pointed out, Congress decided against Taft's proposal and left untouched the section of the NLRA that the Ohio Republican wanted to alter.

Despite that action, the NLRB insisted that the 1974 amendments mandated separate units only when there was a "disparity of interest." The court disagreed, pointing out that, in rejecting Taft's approach, Congress specifically declined to tamper with the "community of interest" criterion that guided the board for over 40 years.

The purpose of the legislation was to extend labor law coverage to employees in nonprofit health care facilities, the court emphasized, and all of the references to reining in any potential disruption of hospital services were contained in committee reports and the NLRB should have, at best, placed only limited reliance on these admonitions.

These statements cannot be taken as "statutory gospel," the court insisted, and are "an illegitimate source of authority for the agency's construction of the law."

Madam Secretary

"You May Call Her Madam Secretary," a documentary video on the life of Labor Sec. Frances Perkins, opened at a Washington premiere sponsored by the Food & Commercial Workers. Perkins, the first woman to serve in the Cabinet, greets President Franklin D. Roosevelt in a 1945 photo.

Officers of State AFL-CIOs discuss the agricultural crisis during Capitol Hill lobbying on behalf of the nation's family farmers. From left, North Dakota Sec.-Treas. Myron Yantzer, Iowa President James J. Wengert, Missouri Sec.-Treas. Donald F. Owens, Montana Executive Sec. James W. Murry and Nebraska President Gordon L. McDonald.

Labor backs family farmers in fight for agriculture reform

Labor, religious and consumer groups joined hands with the nation's embattled family farmers for three days of lobbying Congress in support of legislation to end the deepening agricultural crisis.

The message carried to House and Senate members was that President Reagan's current agricultural policies aren't working. What's needed is the cultivation of a new agenda to head off more bankruptcies of family farms, the coalition stressed.

Gathering under the banner of the Rural Urban Action Campaign, the more than 100 grassroots lobbyists pressed the case for "action now—no excuses" to end the rural economic recession.

Earlier, in a letter signed by a number of leaders, including AFL-CIO President Lane Kirkland and Auto Workers President Owen Bieber, the coalition urged price support loans to help cover "at least the cost of production," and a producer referendum on a plan "to enable farmers and ranchers to determine their own fate."

RUAC stressed that a compassionate farm policy should also provide "sufficient assistance to the less fortunate in our society to enable them to afford adequate food to nourish their minds and bodies."

Economic spur

The goals of a new farm bill, the grassroots lobbyists emphasized in their Capitol Hill meeting, should be to improve farm prices, bring commodity supplies and government costs down to manageable levels, and generate needed activity in productive sectors of the economy.

The federation has repeatedly stressed the common concern of workers and farmers and has called for a fair return to family farmers for their labor. As the Executive Council said in a May 1985 statement, "a healthy agricultural system based on strong, prosperous family farms is essential to America's economic and social well-being."

In addition to the AFL-CIO and the UAW, the coalition includes the American Agricultural Movement, Central Conference of American Rabbis, National Consumers League, National Council of Churches, National Council of Senior Citizens, National Farmers Organization, National Farmers Union, Presbyterian Church USA, Union of American Hebrew Congregations, and Women Involved in Farm Economics.

Electronic Workers open organizing office in South

Nashville, Tenn.—The Electronic Workers opened a southern organizing headquarters here that will also be the home of IUE's Furniture Workers division.

At dedication ceremonies Mar. 30, IUE President William Bywater stressed the great potential for union organizing in the South. He said the IUE will be easily accessible to a vast area, including numerous electronic, electrical, furniture and other manufacturing plants whose workers need union representation.

Carl Scarbrough directs the new IUE division created by the merger of IUE and the Furniture Workers, which he headed.

Overhaul of worker benefits tops Louisiana Fed's agenda

Baton Rouge, La.—Delegates to the Louisiana AFL-CIO convention called for changes in the workers' compensation and unemployment insurance systems, charging that the state drastically limits benefits for injured and jobless workers.

In other action, the 402 delegates reelected President Victor Bussie to his 32nd one-year term. John R. Bourg of the Electrical Workers was elected secretary-treasurer, succeeding K. Gordon Flory who retired.

Flory was first elected executive vice president of the State AFL-CIO in 1956 and had earlier served as president of the Louisiana CIO. A member of the Aluminum Brick & Glass Workers, Flory was first elected secretary-treasurer of the state federation in 1978.

In exploring serious flaws in the state's unemployment compensation system, delegates cited the discrepancy between February's official jobless rate of 14.6 percent and the insured unemployment rate of 5.1 percent.

Workers can receive supplemental benefits only when the insured rate exceeds 6 percent or remains at a level of 120 percent of the insured rate over a two-year period. But the formula used to calculate that rate was changed by the Reagan Administration in 1981.

Supplemental benefits

Louisiana, with the highest unemployment rate in the nation, "triggered off" the supplemental program last month, the convention pointed out.

Delegates also scored the 1983 changes in the workers' compensation program which prevent many injured workers from obtaining benefits.

AFL-CIO Sec.-Treas. Thomas R. Donahue told the delegates that the labor movement is beginning to see the benefits and "turnaround" of its new initiatives in organizing, legislative and benefit programs and political action.

He reported labor's successes in defeating open shop campaigns in Oklahoma and New Mexico and stopping a drive in Montana that would have made that state the 33rd to call for a constitutional convention to consider a radical overhaul of the federal budget process.

Labor's agenda

Legislative priorities include effective legislation to ease the nation's crippling trade deficit and recognize the denial of rights and exploitation of workers by other countries an unfair trade practice, and a plant closing measure that would give advance notice of shutdowns to workers and communities, Donahue said.

He stressed that labor intends to play a key role in the 1988 presidential campaign and outlined the federation's process for bringing the candidates' positions and promises to union members.

"Our members will tell us what they think about the candidates and about the kind of leadership they would offer, and then we'll act on their recommendations. That's how this democratic movement operates," Donahue declared.

In a series of resolutions, delegates called for raises for public employees, opposed the privatization of government services and urged a ban on polygraph testing.

Aid expanded for Philippine unions

American labor is stepping up its assistance to fellow trade unionists in the Philippines as that nation continues to move toward a democratic government despite strong opposition from political extremists from the right and left.

Using funds made available through the National Endowment for Democracy, the AFL-CIO's Asian-American Free Labor Institute is providing technical assistance to the Philippine Trade Union Congress—training unemployed workers, resettling displaced employees and developing basic community health-care plans.

And in a separate action, AAFLI is helping provide a medical clinic for workers at the Bataan Export Processing Zone. The clinic will give the Associated Labor Unions—the largest TUCP affiliate—more strength to fight raids by the communist-dominated National Democratic Front.

During a recent trip to the Philippines, Federation Sec.-Treas. Thomas R. Donahue met with workers in the processing zone and was told of workers squeezed by the anti-union practices of employers and the intimidation tactics of the NDF.

The grant from AAFLI will enable the ALU to provide full-time medical treatment which in the past was limited to assistance from roving teams of nurses. The clinic will serve members of the ALU's four locals, employees at three workplaces that are current organizing targets, and residents living near the processing zone.

Past assistance from American labor was instrumental in the TUCP's mobilization of the "people power" that drove dictator Ferdinand Marcos from office, brought President Corazon Aquino to power and produced overwhelming approval of the nation's new constitution.

TUCP President Ernesto Herrera, recipient of the 1985 George Meany Human Rights Award, has played a key role in the resurgence of democracy in the Philippines. He is running for the Senate in May as part of Aquino's ticket.

Public unions flourish under bargaining laws

In states with comprehensive public employee bargaining laws, better than 70 percent of state and local government workers are represented by unions. This compares to just 14 percent in those states without such laws.

This was the key finding of a study done by the AFL-CIO Public Employee Dept. to determine the extent to which state approval of such bargaining contributes to a healthy organizing climate.

Al Bilik, executive director of PED's state/local division, pointed out that in general, unionized workers earn substantially more than their nonunion counterparts and the same holds true in the public sector as well.

He noted that last year, more than 250,000 public workers got pay hikes when the Supreme Court ruled that state and local governments come under the Fair Labor Standards Act and are required to pay at least the federal minimum wage. Of that number, most were in the "non-bargaining" states.

Of the 6.5-million eligible state and local government employees in the 27 states and the District of Columbia that have comprehensive collective bargaining laws, 71 percent have voted for union representation.

Differing approaches

While some states had enacted just one law covering all these employees, many states achieve comprehensive coverage with several laws, the study reported.

In the remaining 23 states that lack such laws, only 14 percent of four-million eligible public workers are represented by unions.

PED's study, titled "One Country, Two Different Worlds: How the Absence of Collective Bargaining Laws Limits Public Employee Bargaining Rights," found that in the "bargaining" states, the percentage of public workers in unions grew from 60.1 percent in 1976 to 71.2 percent in 1982.

The range of unionized representation in the "bargaining" states runs from 18.2 percent in North Dakota to 98.6 percent in New York. Twenty-three of the 27 states and the District of Columbia have representation rates higher than 40 percent, with seven of those states and Washington, D.C., above the 80-percent level.

The unionized level in the "non-bargaining" states, however, fell during that period from 16.1 percent to 14 percent. The range of representation in these states runs from a low of zero in North Carolina to 54.2 percent in Nevada. Nine of the 23 states have a union representation rate less than 10 percent.

When the focus is turned to just state employees in the non-bargaining states, the representation rate falls to zero in 16 states.

Significant gains

PED's study included figures for several "bargaining" states updated to 1985 and 1986. It pointed out that in Ohio and Illinois, significant gains in public employee union representation were made, due in large part to the passage of comprehensive bargaining laws there in 1984.

For Illinois, the percentage of union-represented public workers grew from 45.5 percent in 1982 to 80 percent in 1985. In Ohio, the gain was from 41.2 percent in 1982 to 51.6 percent in 1986.

Political action boosts ranks of Ohio federation

Columbus, Ohio—Some long-term political strategy and a bit of patience provided big dividends for the Ohio AFL-CIO as thousands of public workers exercised new organizing and collective bargaining rights to join affiliated unions over the past two years.

State Federation President Milan Marsh and Sec.-Treas. John Hodges welcomed the newest members in a ceremony at the state body's headquarters.

In 1982, the entire COPE-endosed slate of delegates was elected, and for the first time in a generation, the governor's office and both houses of the legislature were led by Democrats, Marsh recalled.

That election laid the groundwork for legislation that provided public workers with collective bargaining rights in 1984, he said, noting that the law is considered one of the best in the nation.

As a result, more than 272,000 public workers are covered by collective bargaining agreements including 150,000 school employees, 80,000 city and county employees and 42,000 state workers.

It's a "good feeling knowing there are new trade unionists in Ohio whom we are able to represent in our political programs, legislative activities, community services, workers' compensation, education" and other activities, Marsh said.

The largest unit to join the State AFL-CIO is the 36,000-member Ohio Civil Service Employees Association, an affiliate of the State, County & Municipal Employees. Other unions affiliating with the Ohio state body included the Communications Workers, Fire Fighters and Teachers.

Marsh credited the state body's "outstanding political program" for labor's success, adding that the trade union movement "is only as good as its political programs are effective in getting COPE-endorsed candidates elected and getting good legislation enacted."

NFLPA President Marvin Powell cites need to "spread the truth" about the bargaining issues.

Eight-point game plan

NFL players set contract signals

Los Angeles—After huddling for three days at the annual convention of the National Football League Players Association, 450 delegates adopted an eight-point "game plan" for 1987 contract negotiations—covering issues ranging from free agency and guaranteed contracts to pensions and grievance machinery.

The contract talks will begin Apr. 20, when the union and the NFL management council exchange proposals. The present five-year agreement expires Aug. 31.

"Dignity, fairness and freedom" was the call of the active and retired players, said Gene Upshaw, executive director of the NFLPA and president of the Professional Athletes. "We don't see them as economic issues."

Although the national news media focused more attention on free agency and guaranteed contracts, the convention made clear that these goals are no more critical to members than the other six bargaining proposals.

"Our priority list is a horizontal one," Upshaw stressed. "We are not numbering our priorities in order of importance." The remaining bargaining issues include:

- A greatly improved pension program.
- A more efficient grievance system.
- A strengthened program of drug and alcohol prevention with stiffer penalties for abuse, more educational emphasis, and continued opposition to random testing.
- Improvements in safety and working conditions.
- A three-year agreement to reflect rapid changes in the game's financial picture.
- Protection for members who serve as union officers or player representatives.

"We don't want to isolate any one issue," Upshaw explained. "If we did, management would pick off what they could. We intend to push a package across the table. We want to bargain on the entire package."

Free agency—which would give a player the right to switch teams at the end of his current contract—and guaranteed contracts binding on both parties are issues unique to professional sports.

Job guarantee

Less than 4 percent of the players have negotiated guaranteed contracts, the union pointed out, which means a player can be dismissed anytime during the season at management's whim and his salary terminated. By contrast, 98 percent of professional basketball players and 50 percent of major league baseball players have such guarantees and are paid even if they're cut from the team.

Presidents of three large AFL-CIO affiliates pledged their unions' support for the players, speaking via television hookup to the convention's opening session. They are John J. Sweeney of the Service Employees, William H. Wynn of the Food & Commercial Workers, and Gerald W. McEntee of the State, County & Municipal Employees.

Marvin Powell, NFLPA president and an active player with the Tampa Bay Buccaneers, emphasized the need for convention delegates to return home and give players and the public the truth about the issues, charging management with engaging in a campaign of disinformation.

"The owners say they are losing money on the television contract; however, they are not," Powell asserted. "The last contract brought in an average $15 million per team over the last five years; the new contract will provide $17 million per team over the next three years."

Call for unity

Former NFLPA Executive Director Ed Garvey told delegates they have one of the strongest unions in the nation because the membership can't be replaced. "You're it," he said as he urged members to "be unified and support your leadership."

Garvey reminded players that "it doesn't matter whether management and union members are friends or not. If they think you'll shut down the game, they'll bargain. If they think you're divided, they won't. It's as simple as that."

For the first time in the NFLPA's history, retirees were included among convention delegates. The 121 former players expressed satisfaction that league owners, after a 27-year delay, granted pensions previously denied athletes who had played prior to 1959.

Although the owners announced the action a week before the players' convention and claimed they had made the pension decision on their own, the ex-players here credited the union for the victory. They pointed out that the union had applied continuing pressure on the pre-'59 pension issue and was responsible for the owners' change of heart.

Among the retired player delegates, representing the 1,800 former athletes who pay dues even though they no longer play in the NFL, were such Hall of Famers as Dick (Night Train) Lane, Johnny Unitas, Ron Mix and Art Donovan.

Congress rebuffs Reagan, overrides highway bill veto

Continued from Page 1

(W.Va.) quickly switched his vote in a parliamentary maneuver. He was then able to offer a motion to reconsider before the sustaining vote became final.

The tactic succeeded. Sanford recanted and joined the 53 other Democrats and 13 Republicans in voting to override the veto. That made the final count 67-33, the two-thirds majority required by the Constitution.

Reagan had sought to portray the highway bill as a "budget buster," a charge that was repeated during the Senate debate but easily refuted.

Nearly all of the $88 billion allocated over a five-year period will come from the Highway Trust Fund, part of which is earmarked for mass transit assistance.

The fund is built up and replenished by the federal gas tax and can't be used for other government purposes.

As several senators noted during the debate, the fund will continue to grow during the five-year period despite the expenditures. Thus it will reduce rather than add to the federal budget deficit.

Initially, the legislation had a strong bipartisan brand and the chief obstacle to its enactment had been a House-Senate dispute that crossed party lines. A majority of senators strongly supported raising the federal speed limit on rural interstate highways from 55 to 65 miles an hour. The House first rejected this, but finally agreed to go along to break the deadlock.

After the President's veto, Republican leaders tried to assure their colleagues that a relatively unchanged "compromise" bill could be quickly cleared for the President's approval if the veto were sustained.

But the bill's floor manager, Sen. Daniel Patrick Moynihan (D-N.Y.), warned of deep economic potholes ahead if the veto were sustained. And a bloc of House Democrats who had reluctantly provided the key votes on the speed limit served notice that they would vote against a 65-mile limit if the veto made a new bill necessary.

Senate Republican Leader Robert Dole (Kan.) and his wife, Transportation Sec. Elizabeth Hanford Dole, lobbied hard for the votes to back Reagan, and sought to portray the issue as party loyalty to a beleaguered President.

ACTWU Sec.-Treas. Jacob Sheinkman and IUD Legislative Director David Mallino, right, testify for high risk notification bill.

Nationwide search called vital for victims of toxic exposure

Workers who have been exposed to health-damaging chemicals should be located and alerted, labor witnesses insisted in testimony supporting a proposed High Risk Occupational Disease Notification & Prevention Act.

The labor-backed bill has been under attack from industry opponents as unnecessary and costly. To do nothing would be costlier, unions retorted at hearings held by the House Subcommittee on Health & Safety.

Sec.-Treas. Jack Sheinkman of the Clothing & Textile Workers said the high risk notification bill sponsored by Subcommittee Chairman Joseph M. Gaydos (D-Pa.) will save lives.

In the textile industry alone, Sheinkman noted, tens of thousands of workers and former employees are at high risk of bladder cancer because of long exposure to cancer-causing dyes made from benzidine.

He cited a 1980 "health hazard alert" from the Occupational Safety & Health Administration that publicized the risk and recommended a "medical monitoring program" for workers who had been exposed to benzidine-based dyes. But the recommendation was widely disregarded, Sheinkman said, and virtually no effort was made to locate former employees to inform them of the importance of regular checkups for early detection.

AFL-CIO Industrial Union Dept. Legislative Director David L. Mallino termed the bill "a basic self-defense measure" that will enable workers and retirees to get couseling to minimize their health risk.

It would supplement, not duplicate, OSHA's hazard communications standard, Mallino testified.

The measure would set up a Risk Assessment Board to identify groups of workers at high risk of cancer or other diseases because of on-the-job exposure to health hazards. The Dept. of Health & Human Services would then seek to track down persons at risk, including those who have left for other employment or retired.

Technical assistance

Features of the Gaydos bill include technical assistance to local health facilities to help in early recognition and treatment of occupational disease. It also protects workers identified as at risk from loss of jobs or insurance coverage, Mallino testified.

Sen. Howard M. Metzenbaum (D-Ohio) has sponsored a companion bill in the Senate and Mallino urged quick action by Congress. The potential benefits vastly exceed the modest cost, he said.

House pressed to put teeth in Ways & Means trade bill

Continued from Page 1

The trade deficit cost the United States 2.5 million jobs last year alone, McGlotten stressed.

The measure approved by the Ways & Means Committee and provisions endorsed by other committees with overlapping jurisdiction include elements the AFL-CIO has urged.

The bill would make exploitation of workers and denial of worker rights by nations exporting goods to the United States a basis for U.S. trade sanctions against the offending countries.

It also would tighten the mandate of the President to retaliate against countries that violate trade agreements.

But while the bill echoes the goals of the Gephardt amendment, it leaves action to enforce these goals largely to the discretion of the President. As the labor movement sees it, a large part of the problem has been that the President hasn't used powers he already possesses under existing law.

Key steps

McGlotten's letter to House members gave this summary of the labor-supported Gephardt amendment:

- As a first step, the International Trade Commission would be required to determine which of our major trading partners has an "excessive trade surplus" with the United States. The definition is that U.S. imports are at least 175 percent of its exports to that country.
- Then, the U.S. Trade Representative would determine whether that country also has a pattern of unjustified, unreasonable or discriminatory trade practices that have a significant impact on U.S. commerce.
- If both these conditions are met, the Gephardt amendment would go into effect. The United States would first try to negotiate a reduction in the deficit, and no further action would be needed if the trade imbalance with an offending country slipped below the 175 percent rate. The reduction could be achieved through more U.S. exports, reduced U.S. imports, or a combination of the two.
- But if the trade deficit was not reduced, the President in 1989 would be required to act to reduce the bilateral deficit by 10 percent, with further cuts in future years if the imbalance persists.

Incubators for change

States seen best hope for women's agenda

Women must shift their campaign for economic and social justice from the federal to the state level, according to the National Center for Policy Alternatives, if they hope to achieve such goals as pay equity, an opportunity to move from welfare rolls to payrolls, and dignity and security in their retirement.

State legislatures must assume the crucial role as "incubators for policies of change"—the role they held in the decades before Franklin Roosevelt's New Deal—because "government minimalists" in Washington have undercut the federal leadership role adopted more than a half century ago, said Linda Tarr-Whelan, the center's president.

"Women's work is the backbone of our country—in paid or unpaid capacities in homes, schools, offices, factories and farms," Tarr-Whelan said, in introducing a lengthy study, "The Women's Economic Justice Agenda." It addresses 40 key issues ranging from affirmative action and child care to pay equity and unemployment compensation.

Unequal share

By virtually every statistical measure, the center said, women have yet to achieve a share in the nation's economy equal to that of men. Women's needs and desires are for "equal pay for equal work, for compassion for the old and the young, for the assurance of equality under the law and for the opportunity to be self-sufficient . . . not to raise their children in poverty," the NCPA president emphasized.

Yet the reality is that they face the multiple problems of "less food, poorer educational opportunity and less day care for children, more older women without the resources for an old age with dignity, and more unemployment," the 248-page report emphasized.

The pay equity issue provides a clear comparison between the unfulfilled promises at the federal level and the breakthroughs accomplished by the states. It dates back to 1974, when the State, County & Municipal Employees sued the state of Washington because women's work was consistently undervalued when compared to that performed by men.

Comprehensive studies, legislative debates, collective bargaining negotiations and court actions led ultimately to a multimillion-dollar settlement to end the inequity. And, the study pointed out, that case triggered progress for female public employees in California, Connecticut, Iowa, Minnesota and New York.

Among the center's hundreds of recommendations to state legislatures are:

- Enforcing equal employment opportunity laws, or adopting new statutes, to prohibit job bias based on gender, minority status, disability or age with particular attention to imposing such requirements on firms receiving contracts or other funds from state and local government.
- Protecting the elderly through adult day care and personal care services under Medicaid and establishment of community mental health services.
- Providing child care assistance to low-income working families, adopting strong licensing requirements for day-care facilities and helping provide start-up funds to make more such services available.
- Raising the state minimum wage to its traditional standard of 50 percent of the average hourly wage in private industry.
- Increasing benefits under Aid to Families with Dependent Children to "an adequate standard of living level," and offering job training and placement services and remedial and vocational education to help people move from welfare to work. In the process, states should avoid "punitive workfare plans," provide equal pay and benefits for work performed and ban the displacement of existing workers.
- Assuring minimum protection for the growing ranks of those working on video display terminals, pressing forward with worker right-to-know legislation, cracking down on the use of carcinogens and chemicals in the workplace and adopting guidelines for safe work practices for health care employees who work with victims of acquired immune deficiency syndrome.
- Enacting family and medical leave laws and establishing state insurance systems to provide "some continuing income" during periods of leave for medical and family reasons.

The report recommends that states serve as "model employers" by extending such benefits to public employees immediately as a spur to similar action by business and industry.

State improvements

And it points up successes already achieved by some states—including California in providing in-home support services for the disabled; California, Florida, Massachusetts and Indiana in the area of child care; Colorado, Maryland, Massachusetts, Michigan, New York and the District of Columbia in providing employment and training opportunities for women; Montana in banning sex discrimination in insurance, and legislative safeguards for VDT users enacted in California, Colorado, Maine and Rhode Island.

Among contributors to the proposed agenda for state action were Safety Director Deborah Berkowitz and safety specialist Bobbette Bond of the AFL-CIO Food & Allied Service Trades Dept.; AFSCME's Marilyn De Poy, women's rights coordinator, and Nanine Meiklejohn, assistant legislative director; Laura Walker, executive director of the Center for Education & Research of the Coalition of Labor Union Women, and Winn Newman, a longtime labor lawyer.

Minnesota House approves boost in minimum wage

St. Paul, Minn.—The House of Representatives voted to raise the state's minimum wage by 50 cents over the next two years.

The measure would increase the hourly minimum rate from $3.35 to $3.55 as of Jan. 1, 1988, with an additional 30-cent hike the following year. The bill is now before the Senate's Employment Committee.

Studies Center courses for April and May

The George Meany Center for Labor Studies will offer 10 workshops during April and May. The schedule:

TV: The Cool Medium, Apr. 12-15—Three days of coaching union officers on how to face television cameras and work with TV reporters.

Advanced Arbitration, Apr. 12-17—A program for experienced union representatives that focuses on examination and cross-examination of witnesses, preparation of briefs and research.

Organizing in the Construction Industry II, Apr. 20-24—The course covers media techniques, Davis-Bacon Act enforcement, legal issues and bidding strategies.

Organizing Techniques for Public Employees, Apr. 26-May 1—A workshop on successful methods of attracting and signing up public employees in bargaining units.

Organizing II, May 10-15—An institute cosponsored by the AFL-CIO Dept. of Organization & Field Services for experienced union staff. Key topics include internal private sector organizing, issue-oriented campaigns and recruiting and training union members.

Advanced Editing Skills, May 10-15—A workshop for union editors who have completed the center's newswriting course and are ready for more work on layout, photo editing and headline writing.

Individual Rights in the Workplace, May 10-15—An examination of the union representative's role in protecting workers' rights on polygraph tests, pre-hiring tests and discipline and discharge cases.

Computers for Local Unions, May 17-21—An institute to provide union staff with information about the uses of mini- and micro-computers for their unions.

Negotiating Contracts with State & Local Agencies, May 17-22—One-week session on preparing initial proposals, developing committee work, recordkeeping procedures, opening statements, appropriate contract language and ratification.

Researching a Private Employer, May 17-22—An institute on corporate finances for unions to develop employer profiles for negotiating and organizing activities.

Opinion Polling for Organizers, May 26-29—A workshop on the use of opinion polls in campaigns, case studies and practice sessions, developing questionnaires and analyses of poll results.

AFL-CIO organizations using the campus for their own staff training programs are:

Carpenters, Apr. 12-17; Plumbers & Pipefitters, Apr. 12-17; Fire Fighters, Apr. 21-24; African-American Labor Center, Apr. 25-May 15; State, County & Municipal Employees, Apr. 26-May 1, and the American Institute for Free Labor Development, Apr. 26-May 29.

More information about labor studies programs is available from the Registrar, George Meany Center, 10000 New Hampshire Ave., Silver Spring, Md. 20903. Telephone 301/431-6400.

EDITORIALS

Work and Family

IN AMERICA today, seven out of every 10 mothers of school-age children work outside the home, and in it as well.

Instead of deploring the fact that both mothers and fathers work, let's help working parents to be better parents.

Instead of trying to reverse a trend that has been accelerating for 30 years, let's do what has to be done to promote and enrich family life as it is.

Instead of writing off those who have no place in the community, let's recognize the duty to see that they have a chance to make a place for themselves and their children.

We don't raise the level of our society by urging jobless young men to provide decent, stable homes for the children they beget while, in the same breath, pressing for reduction of the minimum wage for that same age group.

Indeed, one of the most urgent tasks before Congress is to restore the minimum wage to the level of buying power that Congress established 10 years ago, and see that it never again sinks below the level needed to keep body and soul together.

WE'RE NOT going to improve the rate of family formation and reduce the rate of family breakups as long as we tolerate an unemployment rate that hangs above 7 percent year after year.

We're not going to strengthen the family by trying to send working mothers back into the home by killing off what few child-care programs exist, at a time when the real earnings of young wage earners are dropping steadily while the costs of establishing and maintaining a home are climbing to levels never before dreamed of.

And it's certainly no good reopening the home sweatshop. Unfair employers have always stood ready to invade the home and exploit the family. After half a century of government efforts to eradicate the home workshop rackets, it's an outrage to see this Administration forcing the door open for swindlers who want to evade worker benefits, payroll taxes and the minimum wage, child labor and safety-and-health laws.

This country should invest more—much more, rather than less and less—in nutrition, education, housing and health care. And if every politician who pays lip service to our children as "our most precious natural resources" really meant it, that's what would happen.

Above all, to ensure a healthy family life, America must have more and better jobs.

—From address by AFL-CIO Sec.-Treas. Thomas R. Donahue at National Conference on Work & Family, Mar. 30, 1987.

Corporate Vultures

HOUSE AND SENATE hearings have turned a needed spotlight on the high social and economic cost of corporate takeover raids, whether successful or not.

"Not enough attention is being given to the human side of mergers and acquisitions," Rep. Tom Lantos (D-Calif.) said in opening the House hearings. He called for a closer look at the price in terms of "lost jobs, pressure to cut wages, and deteriorating working conditions."

Union witnesses, including workers at plants being closed for no other reason than huge debt burdens incurred in takeover battles, helped provide that closer look.

The House and Senate hearings also spotlighted the unconscionable profits reaped by speculators who profit from takeover raids. Too often, the "winner" in a takeover battle is left with a company saddled with unnecessary and unproductive debt. Funds needed for research and development must then be siphoned off to meet interest payments.

There is a clear need to shape legislation that will take the profit out of corporate raiding of economically viable companies without closing the door on mergers that might enable an endangered enterprise to survive.

Toward that end, the AFL-CIO will be working closely with members of Congress and congressional committees that have shown concern for the victims of corporate cannibalism.

Bark without bite

Trade policy in shambles as reciprocity abandoned

By Gus Tyler

The hottest question in Washington right now—next to Iranscam, of course—is foreign trade policy: the flood of imports, the lagging exports, the mounting deficits that have made this wealthiest of all nations the greatest debtor nation in the world. Right now, our loss of world markets, including our own domestic market, is costing us between two and three million jobs. The threat to our economic stability can no longer be ignored.

But it will be, even as the White House and Congress claim they are on top of the issue.

The White House—that is, President Reagan—claimed that it had a solution: devalue the dollar. It isn't working. Although the dollar has fallen precipitously against the Japanese yen, Tokyo reported a February trade surplus with the United States of $3.97 billion, up from $3.28 billion in January and up from $3.73 billion January 1986.

On the hill, there is great commotion with bills from the Senate and from the House. They are all sweeping statements of the obvious problem with equally sweeping solutions, embroidered with pretentious phrases like "generic" and "omnibus."

The bill approved by the House Ways & Means Committee is all bark and no bite.

Up to President

It says that if some country, like Japan, has excessive trade surpluses with us and if that country is engaging in unfair trade practices, then we should do something about it. What should be done depends on what the President wants to do. And if the President does not want to retaliate, he need not. Congress might overrule his decision not to act, but the President could veto congressional action.

What we are witnessing is the end product of a process in motion over two centuries during which the power to decide trade policy has moved from Capitol Hill to the White House.

In the earliest years of the Republic, trade policy—tariffs—was determined by two considerations. A tax on imports was a way to raise funds to run the federal government at a time when there were no income taxes. The other consideration was "protection" of infant industries against the more advanced British manufacturers.

Shift under FDR

That was our policy into the first quarter of this century. Then in the 1930s, trade policy turned more sophisticated. Under Roosevelt we engaged in a game of reciprocity and retaliation— "if you're nice to us, we'll be nice to you; you nasty, we nasty." This was a fast moving game, requiring an executive to do the playing.

After World War II, trade policy became an instrument of foreign, rather than domestic, policy—a way to buy friends by giving them a piece of our economy. Whether we have won friends is dubious but there is no doubt that we have given away vital chunks of our economy.

Copyright 1987, Gus Tyler Columns

On the other foot

President Reagan keeps hollering that labor-backed trade legislation is "protectionism," and last year he vetoed a bill that would have put some curbs on the glut of foreign-made shoes.

But the President ought to take a look at the latest report from his own International Trade Commission.

Last year, the ITC said, imports accounted for 80 percent of all the shoes sold in this country. U.S. production dropped 12 percent to 234 million pairs while imports soared by the same 12 percent to 941 million pairs.

As a result, U.S. shoe industry employment was just over 90,000 in the fourth quarter—down 9 percent from the same period in 1985. From 1980 to 1985, the jobs of 113,000 American shoe workers were stomped out by imports.

Dollar down, imports up

Despite Reagan Administration claims that a falling U.S. dollar would solve the nation's mounting foreign trade deficit, America is two years into devaluation without any dent having been made in the trade crisis.

Since February 1985, the value of the dollar has declined an average of nearly 36 percent against world currencies—43 percent against the Japanese yen and 45 percent against the German mark. Now the Federal Reserve Bank and central banks abroad are joining forces to keep the American dollar from sliding any further.

In that same two-year period, the foreign trade deficit grew 27.6 percent, adding to the woes of workers and their industries. Nor are there any indications that they're going to find any relief from their troubles through the international money markets.

"The Administration was in error in believing the money exchange rate was the solution to the import crisis," said AFL-CIO economist Mark Anderson. "The White House assumed that a lower U.S. dollar would hike the price of imports, drive down the price of exports, and somehow bring things into balance."

What's wrong with that theory, Anderson said, is that foreigners reaped record-breaking profits from the goods they shipped into this country when the dollar was high. Now that its value has dropped, they are "settling for lower, but still very healthy, profit margins, keeping prices pretty much where they were, and continuing to penetrate the American market."

As for a falling dollar making U.S. goods more attractive abroad, he said, the Administration chose to ignore the impenetrable barriers erected by foreign governments to keep American-made goods from entering their markets and who show no sign of yielding on that subject voluntarily. "Without regard to price," Anderson emphasized, "the attitude abroad is that they're going to restrict American products."

The result: a greatly devalued dollar, but no respite from cut-throat foreign competition that's pushing workers out of jobs, companies out of business and communities into economic despair.

Improved catastrophic care plan urged

Labor calls for wider Medicare coverage as costs rise

Medicare coverage should be broadened to more adequately protect older Americans from catastrophic health care expenses, both in and out of hospitals, the AFL-CIO urged at Senate hearings.

Senate and House committees are considering a range of options, from a relatively bare-bones Administration proposal to more comprehensive legislation proposed by various members of Congress.

Bert Seidman, director of the AFL-CIO Dept. of Occupational Safety, Health & Social Security, pointed out that America's elderly are being battered by rising costs and gaps in Medicare services. Medical costs actually take a larger portion of the income of the elderly than was the case before enactment of Medicare, he testified before the Senate Finance Committee.

"The AFL-CIO has long questioned the equity of penalizing the most seriously ill people by requiring steep out-of-pocket payments," Seidman noted.

Protection against catastrophic illness is "a needed and important first step," but legislation shouldn't be limited to acute care, Seidman said. He urged that Medicare be expanded "to cover all essential health services, especially preventive care and prescription drugs."

Congress should also start to explore ways to help the elderly meet the cost of nursing homes and alternative forms of long-term care, Seidman said. He noted that most older Americans mistakenly believe that Medicare already covers such long-term care.

Eligibility for long-term health care shouldn't be linked to a hospital stay, Seidman said. And "both community-based treatment and home care alternatives to nursing home care should be available when appropriate," he urged.

Seidman expressed the AFL-CIO's objections to proposals to fund additional Medicare coverage through a tax on the actuarial value of the added benefits.

Pluses and minuses

He acknowledged the good intent of its sponsors in proposing a system that would avoid extra costs for persons with incomes too low to be subject to tax. But he voiced concern at the precedent of taxing health care or other comparable benefits, for retirees or for workers.

Instead, Seidman urged the committee to consider combining premium funding of the program with a refundable tax credit for low-income beneficiaries. He suggested that the tax credit refund the full added premium paid by households with incomes under the poverty line, with a phaseout of the credit for households with incomes above 150 percent of the poverty line.

A broader package of Medicare protection was also urged by the Auto Workers, in testimony by UAW Assistant Social Security Director Patrick F. Killeen.

While the Administration's catastrophic insurance plan would be "a small step" toward meeting the need, it would help only "a minuscule percentage of Medicare beneficiaries," Killeen noted. He said the UAW is opposed to taxing the value of Medicare benefits and transforming Medicare into a means-tested program.

New Orleans Symphony back on cue

New Orleans—The promise of a $200,000 grant by the city council to the New Orleans Symphony, a partial payment on the back wages owed to 80 Musicians, was enough to end a five-day walkout.

Paychecks for members of AFM Local 174-496 had been held up for six weeks before the city council authorized payment of the grant from a fund for the performing arts. Final action on the grant should be completed shortly, according to David Winstein, president of the AFM local.

Publicity from the work stoppage probably helped bring the plight of the city's symphony to the public's attention, Winstein said. An anonymous donor promised $100,000 if symphony management could raise $200,000 in donations, Winstein said. They have collected more than $165,000 thus far, he added.

The local is still in negotiations with symphony management, Winstein said, and the musicians are working under an extension of last year's contract.

Funding problems have plagued the symphony since last season. "Hopefully, they can climb out from under their current debts with the grant and the donations," Winstein said.

As for the rest of the season and gaining an equitable contract, Winstein said, "We still have our fingers crossed."

IBEW-Zenith settlement to restore jobs

Springfield, Mo.—Zenith Electronics Corp. has agreed to bring back 200 jobs it exported to Mexico in 1985 and has cancelled plans to ship another 600 jobs abroad.

The decision—the first dent in Zenith's pattern of moving key assembly operations abroad—followed negotiation of a "competitiveness" contract with the Electrical Workers under which employees made wage concessions that will be recouped by the time the new five-year agreement ends.

Zenith said that two color television assembly lines it moved to the sprawling "maquiladora" complex across the Rio Grande will be returned to the Springfield facility and 200 laid-off IBEW members will be rehired. And the company agreed to drop plans to transfer its plastic plant to Juarez—a move that would have cost another 600 jobs.

By a nearly 3-to-1 margin, the 1,600 members of IBEW Local 1453 ratified a new five-year contract calling for an 8.1-percent across-the-board pay cut the first year and a wage freeze throughout 1988 and 1989. Pay will rise 3 percent in 1990, another 4.3 percent in 1991 and will increase an additional 1.3 percent during the last quarter of 1991.

Equal sacrifice

To guarantee that the sacrifice will be spread evenly, Zenith signed a separate letter of intent agreeing that the same formula would apply to the pay of management, professional and clerical employees.

The new contract—replacing an earlier agreement that wasn't due to expire until March 1988—left the existing profit-sharing and benefit plans untouched.

The union agreed to the settlement, the IBEW said, to help reverse Zenith's flight to Mexico—lured there by low wages and strict government curbs on labor. The union said the "competitiveness" contract will help keep jobs in this country and will make a positive contribution to the company's fight for survival against foreign competition.

Workers assail GM on runaway contract

Dayton, Ohio—Workers at the Harrison Radiator Division of General Motors Corp. were betrayed by the giant automaker when it switched production to a Japanese manufacturer to build compressors for the new Saturn car, Electronic Workers officials charged.

"Harrison workers who have done everything they can to make the operation a success have been given the royal shaft," Bob Livingston, chairman of the IUE-GM conference board said. The jobs of 4,700 IUE members at the plant are in peril.

Garment union bares hepatitis hazard in sweatshop

New Haven, Conn.—More than half of the 53 workers of Uretek Inc. are suffering from hepatitis or liver abnormalities resulting from constant contact with toxic chemicals used in sweatshop conditions.

That's what the Ladies' Garment Workers brought to light in launching an organizing drive at the fabric-coating plant in February.

ILGWU Organizer Daniel Perez got 50 of 53 workers—mainly Hispanics—to sign authorization cards after he found out about Uretek's sweatshop conditions. The employees worked 12-hour shifts, standing on a concrete floor. There were no scheduled breaks and machine operators ate lunch while tending their machines, surrounded by the toxic substances.

Uretek pays its employees an average $4.50 a hour and employer-paid medical insurance is not provided until after five years on the job. On Feb. 20, the workers voted unanimously to go on strike.

Perez said the company has questioned workers illegally about union activities, threatened them with closing the plant and promised health benefits and higher wages in an attempt to derail the organizing drive.

The ILGWU has petitioned the National Labor Relations Board for a representation election and also filed several unfair labor practice charges against the management.

Dr. Mark Cullen of Yale-New Haven Hospital's occupational medicine program tested 45 Uretek workers and found 10 had acute noninfectious hepatitis and 20 had liver disorders. "To find as many liver problems as this in one location, you would have to go to a liver clinic," he declared. Acute hepatitis is a liver inflammation, characterized by nausea, abdominal pain, vomiting, loss of appetite and yellowing of the skin.

Chemical hazard

The Uretek workers coat fabrics with polyurethane. Cullen and the Atlanta-based Center for Disease Control said the solvent dimethylformamide is the likely cause of the workers' problems. DMF is readily absorbed through the skin and lungs.

Company attorneys called the ILGWU "opportunistic" for trying to organize the workers, but it was Perez who brought into public view the lack of government action after the workers' health problems were first uncovered. Now government agencies at all levels are fingerpointing at each other for the breakdown in communications.

Cullen's staff examined one Uretek employee last September and a second worker a few days later after they went to the hospital's emergency room. In November, he learned of other cases. Cullen persuaded Uretek to temporarily shutdown while the workers were screened. He chose not to contact OSHA, saying "the company recognized the severity of the problem and took steps to alleviate it."

The city health department, contacted by Yale-New Haven officials, claimed it immediately contacted OSHA, but agency's area director Ron Morin denied getting a call. He said he first learned of the problem from Perez on Feb. 17.

Uretek was last inspected by OSHA in 1979. Because the plant is shutdown, OSHA compliance officers said they are unable to get accurate air quality readings. Compliance officer Basil Bocyneski said that some air samples were taken while management is operating the equipment.

But Uretek's troubles are deeper than just trying to thwart a union organizing drive. The State Attorney's Office has filed suit against the firm for violating environmental laws and the company and its vice president were convicted in February for illegally storing and disposing of hundreds of barrels of hazardous waste. Sentencing in that case is set for Apr. 13.

Uretek is located in a four-story building in a residential neighborhood that no longer wants it as a neighbor. Residents of Fair Haven Heights have picketed with Uretek workers and recently traveled in a motorcade to the Woodbridge, Conn., home of Uretek President Harold Hoder.

Public knowledge

With signs reading "Move Uretek to Woodbridge," the pickets shouted, "No more poison." Hoder wasn't home, but Perez urged the group not to be disappointed. Hoder's neighbors have now found out "he doesn't own an ice cream factory," Perez said.

At an earlier rally outside the plant, union representatives called Uretek a sweat shop. Nicholas Aiello of the Clothing & Textile Workers and a close neighbor of the plant declared, "If we have to attract industry like this, tell them to stay the hell out of here."

Mayor Biagio DiLieto toured the plant, trekking through a mucky yard stacked with 55-gallon drums, some open and partly filled with foul-smelling liquids.

Union leaders were barred from taking the mayor into the plant through a rear entrance and were not allowed on the inspection tour.

LIPA camera crew tapes actor Ned Beatty.

Presidential candidates focus of video quiz on leadership

As potential presidential candidates, how do the declared and likely contenders in the major political parties view the vital issue of leadership in the White House?

That's the question that's being put to aspirants by the AFL-CIO as part of labor's continued participation in the political process.

Standing in front of the White House, which the winner will occupy for four years beginning in 1989, veteran screen actor Ned Beatty poses labor's question of presidential leadership in a video taping session produced by the Labor Institute of Public Affairs.

The candidates will provide their own responses, which will be taped by LIPA this month.

The results will be previewed by the Executive Council at its May meeting. The video question and the candidates' answers will then be made available to all AFL-CIO affiliates for viewing in union halls and at union meetings to help members make informed decisions on the 1988 presidential campaign.

The federation has also asked candidates to put down in writing where they stand on four vital issues—foreign trade, the budget deficit, human needs and labor's role in the political process.

The information derived from both sources will be given wide distribution among federation affiliates and will serve as the starting point for the AFL-CIO's participation in next year's presidential campaign.

Firm steps demanded to end corporate raids

Donahue calls for strong worker protections

By David L. Perlman

America's unions want Congress to take the profit out of corporate raiding and stop the looting of company assets and worker pension funds to pay the cost of takeover battles.

Workers and their communities are "the ultimate losers" in financial struggles for corporate control, AFL-CIO Sec.-Treas. Thomas R. Donahue told the Senate Banking Committee. The only "winners," he suggested, are speculators whose consolation prize if their takeover attempt fails is usually millions of dollars in quick profits from the sale of their stock holdings.

More than 80,000 workers represented by AFL-CIO unions have lost their jobs because of corporate restructuring after a takeover bid, Donahue testified. Thousands more have had wages cut or pension plans skimmed.

To shield workers from victimization, Donahue proposed:

- Making existing union contracts binding on corporate successors or new owners.
- Barring corporate raiders from tapping a company's pension fund and siphoning off so-called "excess assets" in order to pay off debts incurred in the raid.
- Eliminating special "golden parachutes" that protect corporate executives, but not ordinary workers, against loss of income if jobs are eliminated after a merger.

Donahue welcomed a "developing consensus" for legislation to eliminate "greenmail" payoffs to corporate raiders. He said raiders should be barred from all windfall profits when they sell off stock that has shot up in value because of speculation fueled by the takeover war they started.

First-hand accounts

Two panels of international and local union officers documented labor's concerns with first-hand accounts of takeover attempts—both successful and repelled—that left once healthy companies burdened with debt or skeletons picked clean by corporate vultures.

On the day of the hearings, a newspaper story cited by Donahue dramatically illustrated the point union witnesses were making.

The Associated Press account noted the

Sharp decline in workforce nudges jobless rate down

By Gene Zack

Increased employment in the low-paying service trades in March offset the loss of another 25,000 industrial jobs, nudging the nation's jobless figure down one-tenth of 1 percent to 6.6 percent.

Although civilian unemployment fell by 14,000 to 7.9 million, the government reported that the jobless rate declined because 127,000 people disappeared from the workforce.

At least some of those factored out of the workforce joined the ranks of "discouraged workers"—those who have given up looking for jobs because none are available. In the first quarter of 1987, there were 1.2 million workers in the "discouraged" category, a figure that has remained virtually unchanged for the past three years.

And the number of persons who would prefer full-time jobs but have been forced to settle for part-time work stood at 5.5 million—the same level as January.

Adding the involuntary part-timers and discouraged workers to nearly 8 million officially listed as unemployed means that the stagnating economy has claimed the jobs of 14.6 million workers, for a real rate of joblessness and underemployment of 12 percent.

Aggravating the situation, the number of jobless workers on the unemployment compensation rolls dropped more than 20,000 in mid-March to 3.1 million. But 62 percent of the jobless—4.8 million persons—currently receive no benefits.

Downward revisions

At the same time, the Bureau of Labor Statistics made major downward revisions in employment figures for the first two months of the year. Nonfarm employment increased by only 236,000 in February, the BLS said, rather than the 335,000 it originally estimated. And in the second markdown of January's total, the gain of new jobs was reduced from the original 450,000 to only 304,000.

BLS Commissioner Janet Norwood told the congressional Joint Economic Committee that workers in manufacturing "did not fare so well" last month. The normal pattern is for employment to increase once "winter recedes and good weather sets in," she said. But after seasonal adjustment, "nearly 70,000 jobs were lost in the goods-

Public worker privacy rights stressed by Supreme Court

Public employees do not surrender all rights to privacy when they go to work for the government, the U.S. Supreme Court ruled in the first case testing Fourth Amendment safeguards of government workers.

The decision, involving a California state employee, received general praise from government employee unions.

President Gerald McEntee of the State, County & Municipal Employees expressed disappointment that the court did not insist that "a warrant is required, based upon a showing of probable cause" before an employer could conduct a search of a worker's office.

But he took satisfaction from the court stressing that "public employees do have legitimate expectations of privacy in their work areas vis-a-vis their employers"—the position AFSCME maintained in its amicus brief filed in the case.

President Kenneth Blaylock of the Government Employees hailed the decision, pointing out that it makes clear that "the government needs just cause" before conducting random searches. The decision, Blaylock said, "lends added credibility to our position with respect to drug testing, namely that public employees have Fourth

South African union journals hit by censorship crackdown

Johannesburg—The white minority government of South Africa intensified its harassment of this nation's black trade union movement by banning labor publications it deems "prejudicial to the safety of the state."

Latest victim of the sweeping press censorship—which has sharply curtailed reporting on the excesses of the military and the police—was the monthly newspaper of the South African Council of Metal Unions, an affiliate of the International Metalworkers' Federation.

The government outlawed the South African Metal Worker because it carried a front-page account of a police assault on the annual meeting of the Metal & Allied Workers' Union in Durham, when one unionist was killed and 20 others wounded in a hail of police gunfire.

The banning order was directed against that single issue of the 50,000-circulation newspaper. The action was announced by the government long after most copies had been distributed.

But the decision makes continued possession of the publication unlawful, subjecting unionists to arrest or punishment for having the paper in their possession.

4/11/87

Academics join in study of changing workplace

Linthicum Heights, Md.—Union officials and academics explored the changing workplace and its effect on unions in a two-day symposium sponsored by the AFL-CIO and Cornell University.

In welcoming the participants, Federation Research Director Rudy Oswald said the group would explore the economic and social impact brought about by a changing workforce, with a look at employer and union strategies for dealing effectively with an ever-changing work environment and each other.

AFL-CIO Sec.-Treas. Thomas R. Donahue said the labor movement realized that achieving its long-term goal of "advancing workers' interests" requires new strategies and different methods.

The product of that soul searching—the report titled The Changing Situation of Workers and Their Unions—became a blueprint for ways to serve the needs of union members in a changing economy and society, Donahue said.

In another presentation, Prof. John T. Dunlop of Harvard University discussed the "tyranny" of legal and academic circles in their view of workers and their concerns.

Economists must alter their traditional notions of the labor market, Dunlop told the symposium, emphasizing that labor cannot be treated as though it were another commodity.

Dunlop criticized the National Labor Relations Board, stressing the need for greater balance and even-handedness and suggesting that different people—including labor mediators—be included on the board.

In other conference highlights:

- Mark Levinson of the Auto Workers stressed that the displacement of workers in today's economy differs dramatically from the country's earlier shift from an agricultural to a manufacturing base because the current changes are producing a declining standard of living for affected workers.

Levinson underscored the link between the manufacturing and service sectors, estimating that 40 to 60 million service jobs depend on manufacturing. The nation must maintain control over manufacturing to keep service sector jobs, he stressed.

- Douglas Meyer of the Electronic Workers spoke of competition as the dominant force in business decision-making. He noted that competition among corporations for worldwide profits drives them to seek low wages, substandard working conditions and lax job safety.

Meyer called for legislative measures that recognize workers' rights in trade, economic development aid and other international programs.

- Daniel G. Gallagher of the University of Iowa reviewed research on differing union participation rates among full-time and part-time workers.

Other panelists included AFL-CIO General Counsel Laurence Gold, Organizing Director Charles McDonald and Assistant Research Director Arnold Cantor; Tom Balanoff, Boilermakers; William Montrose, Food & Commercial Workers, and Richard Prosten, Industrial Union Dept.

Stop fueling apartheid

Members of AFL-CIO unions and the unaffiliated Mine Workers picket Shell Oil Co. headquarters in Washington to protest the multinational's continued support for the racist white minority government in South Africa. A worldwide boycott of Shell products was launched at the request of South Africa's National Union of Mineworkers after black miners at a Shell-owned plant were fired and subjected to reprisals for attending funeral services for a fellow miner who was killed on the job.

South African union journals hit by censorship crackdown

Continued from Page 1

The union was informed by the censorship board that the article and photographs were deemed "undesirable" because they were "likely to incite unrest among readers."

The statute also permits banning any material that the government believes threatens "the general welfare or the peace and good order." It has been used in recent months to intimidate newspaper, radio and television reporters both in this country and abroad in reporting on the racial tension and unrest in this divided country.

The Metal Workers' editor, Ian Bissell, one of South Africa's leading trade union journalists, was attending a meeting of IMF editors in Brussels when the ban was announced. He immediately flew back to Johannesburg to file a protest with the government and prepare publication of a new issue of the paper.

Immediately prior to banning the Metal Workers' publication, South African postal authorities invoked the statute to justify the confiscation of material mailed into the country by the British Trades Union Council.

The TUC report highlighted its own actions in calling for worldwide sanctions to end apartheid in South Africa in line with anti-racist policies enunciated by the International Confederation of Free Trade Unions.

Postal censorship

The report, mailed to the Council of Unions of South Africa/Azanian Confederation of Trade Unions, was blocked by postal censors under the vaguely worded Publication Act which is part of the state of emergency measures enacted by the regime of Prime Minister P. W. Botha.

The ban prohibits the possession or distribution of the specific report, but does not affect previous issues or future TUC publications, which can still enter the country, providing they meet the government's criteria.

CUSA/AZACTU, acting on behalf of the TUC, lodged a formal appeal against the banning of the material from Britain and the matter is scheduled for an early court hearing.

Earlier, calendars and a diary published by CUSA/AZACTU were confiscated by police. The South African labor movement was successful in appealing this decision, and the material is now available for sale and distribution.

The regime's concerted drive to interfere with organized labor's communication of information and ideas was further underlined in a recent public complaint filed by the National Automobile & Allied Workers' Union about censorship by postal authorities.

Missing deliveries

The union listed six recent examples of mail that was not delivered, even when sent as registered letters, and of other correspondence that arrived torn open with the contents obviously examined by censors.

NAAWU has been forced to resort to using costly courier services to make certain that important documents or notifications of meetings are properly delivered.

It has also asked the IMF to contact international postal authorities to complain about this interference in mail addresed to, or sent by, unions in South Africa.

In another development underscoring the anti-union bias of the Pretoria regime, members of the Metal & Allied Workers staged a five-hour work stoppage to protest the continuing imprisonment of their general secretary, Moses Mayekiso.

Although Mayekiso has been in prison since June 1986, no charges have been brought against him and the state has stubbornly refused his attorneys' pleas that he be released on bail.

Almost 70 percent of MAWU's 60,000 members took part in the protest after industry officials—who have insisted they wanted good industrial relations—refused to join them in calling for Mayekiso's release.

Rail dispute 'cooling-off' law held valid by appellate court

Boston—A federal appellate court upheld the right of Congress to impose an added "cooling-off" period in the Maintenance of Way Employees dispute with the Maine Central Railroad and Portland Terminal Co.

The 1st Circuit U.S. Court of Appeals ruled that Congress "exercised its power over interstate commerce" when it acted last August. The court held the legislation was constitutional and "did not violate the separation of powers."

The BMWE dispute with Maine Central began in April 1984. Job security was the key issue for BMWE because the railroad furloughed all but 65 of the 390 waymen in active service.

Stalemate triggers strikes

When bargaining deadlocked, BMWE struck the rail line in March 1986, and expanded picketing a month later to other carriers that were aiding Maine Central. A presidential emergency board, named in May 1986, presented its report on July 20, 1986, under a procedure barring any changes in the "conditions out of which the dispute arose" until 30 days after the report was made to the President.

Congress adopted a joint resolution on Aug. 12, 1986, calling for second 60-day cooling-off period, retroactive to July 21. The railroad's challenge to the legislation was dismissed by the U.S. District Court in Portland, Me.

Maine Central appealed the court's dismissal on Sept. 18, 1986, the final day of the congressional cooling-off period. It contended that the law was unconstitutional because it violated the equal protection component of the Fifth Amendment.

Judge Hugh H. Bownes, in a unanimous opinion, rejected that argument, holding that "if Congress had the power to create the Railway Labor Act, which it did, it also had the power to modify it."

Unique situation

The railroad however, argued that it was singled out by Congress for an additional cooling-off period. It claimed that legislation imposed against "a class of one" can be justified only by unique or compelling circumstances. The court, however, held that "Congress specifically found that Maine Central, by virtue of its labor problems, was uniquely situated."

The court said that the legislation had a "legitimate national purpose"—to provide "a temporary prohibition of strikes or lockouts with respect to the Maine Central . . . labor-management dispute."

Maine Central also argued that the resolution passed by Congress was unconstitutional because it violated the principle of separation of powers and it amounted to "adjudicating rather than legislating." The court held otherwise, however, noting the measure "was merely an extension to a constitutionally valid scheme for encouraging dispute resolution by preserving existing rights."

Saul Miller dies at 68, editor of AFL-CIO News

Saul Miller, who edited the AFL-CIO News for more than a quarter-century before his retirement in 1982, died of respiratory failure at George Washington University Hospital, Apr. 9, after a brief illness.

Miller, who was 68, was director of the federation's Dept. of Information at the time of his retirement. A longtime member of the Newspaper Guild, he was a reporter and editor on a number of daily newspapers before he joined the staff of the AFL News Reporter in January 1955.

When the AFL and the CIO merged in December 1955, he became managing editor of the new publication, the AFL-CIO News. Three years later he was appointed director of the Dept. of Publications, editor of the News and executive editor of the American Federationist monthly magazine. When that department was merged with the Dept. of Public Relations in January 1980, he was named director of the newly formed Dept. of Information, a post he held until his retirement in January 1982.

Saul Miller

"Saul was a good trade unionist, a good newspaperman and a longtime personal friend," said AFL-CIO President Lane Kirkland. "All of us in the AFL-CIO will miss him. He was a member of our family. Our deepest sympathy goes to his wife Betty and their children."

Miller was born in New York City and graduated from New York University. After World War II service in the Army, he began a newspaper career that included posts as a reporter with the York, Pa., Gazette & Daily; copy editor, Richmond, Va., Times-Dispatch; news editor, Jamestown, N.Y., Sun, and director of the New News Service, Washington, D.C.

He served on the executive council of the International Labor Press Association for many years and was a member of the National Press Club.

He is survived by his wife, the former Beatrice (Betty) Elbaum; four children, David, Kate, Mrs. Judith Chambers and Jonathan, and a sister, Mrs. Lee Goodman.

A memorial service will be held at 10 a.m. Apr. 17 at Temple Emanuel, 10101 Connecticut Ave., Kensington, Md. The family has asked that in lieu of flowers, contributions be made to the Saul Miller Memorial Fund in care of the AFL-CIO, 815 16th St., N.W., Washington, D.C. 20006.

House rebuffs Reagan, votes social budget

The House rejected President Reagan's budget proposal by a crushing 394-27 vote but then broke largely along party lines to approve a Democratic-shaped alternative, 230-192.

Reagan's budget would have raised military spending sharply, cut domestic programs heavily and sold off government assets to hold down the budget deficit.

The Democratic budget sought to preserve domestic programs from spending cuts, trim some military programs and hold down the deficit with $18 billion in new revenue—about triple the revenue rise Reagan sought.

The Senate Budget Committee completed action on a companion measure that would cut deeper than the House version—partly by using a less optimistic set of economic assumptions to estimate tax revenues. The House panel loosened the Gramm-Rudman-Hollings straitjacket somewhat by accepting the economic assumptions that Reagan used to soften the impact of his budget.

In a letter to House members, AFL-CIO Legislative Director Robert M. McGlotten termed the budget resolution "a reasonable approach" and noted that it protected domestic programs such as education, job training, community development grants and transportation "from the harsh cuts that have befallen them in earlier budgets."

Housing bill passed

While the budget resolution debate was heavily partisan, the Senate mustered a bipartisan 71-27 majority for a housing bill that includes programs opposed by the Administration even though it holds overall spending to existing levels.

Reagan wants to kill off the Urban Development Action Grant economic development program but the Senate refused by a 75-23 vote. The Senate also voted, 54-44, to keep in the bill a new program of interest-free loans of up to $15,000 to help low- and middle-income families buy homes in run-down neighborhoods.

Senate Republican Leader Robert Dole attacked the bill as a "budget-buster." But 20 Republicans joined 51 Democrats in supporting it. Opposed were 25 Republicans and two Democrats.

AFTRA donation bolsters striking Writers Guild

New York—The Television & Radio Artists donated $10,000 to the unaffiliated Writers Guild to help pay health insurance premiums of its members who are on strike against ABC and CBS television networks.

Noting it is highly unusual for health benefits to be terminated as a result of a contract dispute, AFTRA Executive Sec. John Hall declared, "We cannot be witness to this unconscionable pressure without lending a hand. Words alone are not enough." Many Guild members also belong to AFTRA.

BCTD President Georgine keynotes legislative conference with a call for union members to "get involved."

Building Trades hail veto override

Legislative session makes double-breasting bill next goal

Local and state building trades leaders pressed labor's program on Capitol Hill, thanked members of Congress who overrode President Reagan's veto of the highway construction bill, and headed home to follow through on the "get involved" theme of their legislative conference.

The goal is to mobilize the 4.1 million members of the 15 unions in the AFL-CIO Building & Construction Trades Dept. into a year-around, home-town lobbying force.

The immediate priority is passage of House and Senate bills to prevent double-breasted contractors from evading union agreements by setting up parallel non-union operations that pay substandard wages and benefits.

Workers and their unions can make a difference, BCTD President Robert A. Georgine reminded the more than 3,000 delegates at the start of the four days of meetings, workshops and lobbying.

He told them that labor's efforts in last November's elections made a difference and helped break the Reagan Administration's control of the Senate. Without that turnaround of control, Georgine said, the highway construction and mass transit bill would never have become law over Reagan's veto.

Hero's welcome

Senate Majority Leader Robert C. Byrd (D-W.Va.), introduced as the architect of the parliamentary strategy that made the veto override possible, got a hero's welcome when he addressed the conference.

Byrd responded with a fighting speech that had the delegates on their feet cheering.

He rebuked Reagan for seeking to use a broadly supported bill affecting nearly 800,000 jobs "to rehabilitate his prestige from the mistakes of a failed foreign policy."

Byrd warned Reagan that "government by veto" would "gridlock" the nation's progress. And he suggested that Republicans who voted with the Democrats to override the veto were sending the President the same message.

Two key sponsors of the double-breasting bill—Rep. William L. Clay (D-Mo.) and Sen. Edward M. Kennedy (D-Mass.)—sharply challenged such anti-union groups as the National Right to Work Committee and contractor associations that have misrepresented the double-breasting measure.

Clay's Labor-Management Relations subcommittee has already approved the legislation, which is based on a bill the House passed in the last Congress. Kennedy, who heads the Senate Labor & Human Resources Committee, predicted that this time around the Senate will act on the legislation. "If the President refuses to sign it," he said, "we'll work to override the veto."

Good and bad

A Republican sponsor of the double-breasted bill, Sen. Alfonse M. D'Amato (N.Y.), got a warm welcome when he addressed the conference. But Georgine had harsh words for Senate Republican Leader Robert Dole (Kan.) for aligning himself with the Right to Work Committee's "labor-bashing" campaign to defeat the bill.

Georgine termed double-breasting "indefensible" and said the legislation is needed to "restore integrity and justice to the collective bargaining system in the construction industry."

He warned that the election changes did not immunize construction workers against repeated efforts to destroy the prevailing wage protections of the Davis-Bacon Act.

Last year, the Reagan Administration sought to exclude construction contracts of less than $1 million from Davis-Bacon coverage, a move which Georgine said would be tantamount to repeal.

Georgine termed White House advocacy of such an "outrageous" change in the law a repudiation of the promise Reagan "made to me and all building trades workers not to seek repeal."

Job safety concerns

The building trades are pressing for legislation to tighten safety and health enforcement at construction sites, and Georgine termed the current level of 500,000 serious on-site injuries each year "shameful and unacceptable."

Political figures who addressed the conference also included Representatives Tony Coelho (D-Calif.) and Claude Pepper (D-Fla.), Senators Joseph R. Biden Jr. (D-Del.) and Barbara Mikulski (D-Md.), and Gov. James R. Thompson (R-Ill.).

Two half-day sessions were devoted to workshops covering such diverse issues as drug and alcohol concerns, pension investment, job training, communications and media relations, asbestos screening, presidential delegate selection, Davis-Bacon developments and legislation.

The building trades leaders met with House and Senate members from their home areas in Capitol Hill offices and in breakfasts with state congressional delegations. Then they headed back to encourage the members they represented to also "get involved."

Hero of the hour

Senate Majority Leader Robert C. Byrd is congratulated by union lobbyists and other supporters of the highway construction-mass transit bill Congress enacted over President Reagan's veto. Byrd's parliamentary strategy saved the day. Building Trades Legislative Director Leo Zeferetti, left, is elated.

Victims of plant closing win severance and vacation pay

Portland, Me.—Some 1,000 Clothing & Textile Workers, displaced by the closing of three Health-Tex Corp. plants, will share a $1-million severance and vacation pay settlement won by the union.

They could receive another $1 million in severance if Maine's plant closing law survives a U.S. Supreme Court challenge filed by a poultry processing and packing firm.

The settlement—$660,000 in severance pay and $340,000 in vacation pay—was negotiated after Health-Tex spurned a proposal by thousands of ACTWU members in other states to "share the work" to prevent the shutdown of plants here and in Brunswick and Gardiner.

Vacation payments will be made immediately, and Health-Tex will make the severance payments to ACWTU in three installments—$100,000 now, $150,000 in August and $140,000 in November.

Most of the recipients are women who operated sewing machines. They were paid on a piece-work basis and had worked for the company between 12 and 14 years.

Until the payments come due, the union will borrow funds at the prime interest rate from ACTWU's Amalgamated Bank in New York so eligible workers will get their money immediately.

Maine's plant closing law, enacted in 1979, imposes a stiffer liability. It requires severance equal to one week's pay for each year of employment for those with at least three years' service. Health-Tex agreed to a stipulation that the union may file suit to recover the remaining $1 million if the nation's highest court upholds the statute.

The severance provision is designed to ease hardship in the many small Maine towns where one employer dominates the local economy.

Meanwhile, Health-Tex faces other legal difficulties. The Maine Attorney General has sued the firm for failing to comply with the requirement of 60 days' advance notice of any plan to shut down or relocate its operations.

The suit seeks payment of wages for the 60-day period to each affected employee, a civil penalty of $500 for each employee Health-Tex failed to notify, and an additional $1,500 civil penalty for failing to notify authorities in the three affected communities.

Governor acts

In a related development, Gov. John R. McKernan Jr. (R) announced creation of a Rapid Employment & Training Initiative to help workers stung by the Health-Tex layoffs as well as any future plant closings in the state. He asked the Maine legislature to appropriate $200,000 to fund the program, in addition to the $150,000 in federal funds already available and another $429,000 expected in July.

Health-Tex is consolidating the Maine operations at 11 other U.S. plants, mostly in the South and Puerto Rico.

State Labor Commissioner John Fitzsimmons noted that Maine has experienced 64 plant plant closures since 1983. He attributed the problem to foreign competition in the shoe and textile industries in particular. Last year, President Reagan vetoed legislation to provide some relief for these import-battered industries.

Work and dignity

Regaining American jobs lost to predatory competition and ending "secret monitoring" of employees in the workplace are the Communications Workers' top legislative goals, President Morton Bahr tells the union's annual legislative conference. Gathered on the Capitol steps, some 1,000 CWA delegates are reminded that not a single new residential telephone bears a "made in America" label thanks to runaway U.S. firms and the capture of the domestic market by imports.

Donahue urges crackdown on job-wrecking takeovers

Continued from Page 1

"handsome profit" that an investment group stood to make by dropping its "hostile" attempt to gain control of Gencorp Inc., a multi-billion-dollar conglomerate.

By selling back its stock, the story indicated, the raiders stand to collect a profit that could run as high as $106.8 million.

To pay for the buyback, Gencorp will borrow $1.75 billion from a group of banks. It will then sell or shut down its tire manufacturing, bottling and broadcast operations in order to focus on product lines with the strongest growth prospects.

Food & Commercial Workers President William H. Wynn found the pattern painfully familiar. He noted that the cost of beating back recent corporate raids on supermarket chains includes 15,000 lost jobs in Safeway stores and 14,000 jobs at Gemco stores.

Rubber Workers President Milan Stone cited the payoff Goodyear Tire & Rubber made to repel a raid and its decision to close down less profitable plants as part of a restructuring. URW Local 26 President Clayton Oster told the Senate committee that the 1,100 Cumberland, Md., workers he represents are among those who will be put out of work on May 21.

Nor were the tactics surprising to Sec.-Treas. Jack Sheinkman of the Clothing & Textile Workers. He testified to the buyout of the Reeves Brothers textile firm by Schick Inc. last year. The banks that provided money for the takeover will have part of their debt repaid by the termination of the workers' pension funds so that the new owners can siphon off the so-called excess assets.

High job toll

President James E. Hatfield of the Glass, Pottery & Plastics Workers and Local 252 President Delbert Walsh testified for workers at a New Jersey fiberglass plant that will be closed down to help Owens-Corning pay off a $2.6-billion debt it incurred to fight a takeover raid last year.

Banking Committee Chairman William Proxmire (D-Wis.) noted that U.S. companies spent $41 billion last year on hostile takeovers. He warned that "takeover mania" may cause corporations to "drown in debt."

Video conference slated on hazards

A nationwide "right-to-know" teleconference on hazardous chemicals in the workplace will be broadcast Apr. 23-24 via satellite from AFL-CIO headquarters to 18 university and college sites.

Union job safety specialists will explore the history of right-to-know statutes, the federal hazard communication standard, coverage under state laws and strategies for getting and using chemical hazard information.

The participating universities and teleconference locations are: University of Arkansas, Little Rock; University of California, Berkeley and Los Angeles; University of Connecticut, Storrs; University of the District of Columbia, Washington, D.C.; University of Illinois, Chicago; Indiana University, Marion; Dundalk Community College, Baltimore; Michigan State University, East Lansing; University of Minnesota, St. Paul; University of Missouri, St. Louis and Kansas City; University of Nebraska, Omaha; Cornell University, Albany, N.Y.; Ohio State University, Columbus; Pennsylvania State University, Philadelphia; Indiana University of Pennsylvania, Pittsburgh, Harrisburg and Indiana, Pa.; West Virginia University, Morgantown, and the University of Wisconsin, Madison.

Jobs in peril

Education conference spotlights trade issue

New Orleans—Labor educators from unions and universities attending the annual AFL-CIO Education Conference focused on issues facing the trade union movement today, including foreign trade and competition, technology, health and safety, unemployment and organizing.

Some 165 educators attended the week-long session sponsored by the federation's Dept. of Education and the University & College Labor Education Association.

AFL-CIO Education Director Dorothy Shields said the joint program permits an exchange of ideas between trade unionists responsible for labor education and community service programs and their university counterparts.

Among the featured speakers was Prof. John M. Culbertson of the University of Wisconsin, a rarity among economists as a proponent of balanced trade.

'Free trade' posture

The free trade game is played by two sets of rules, Culbertson said, one for the developing countries and another for industrialized nations. The less developed countries operate with no health and safety protections, no environmental laws and no unions, thus allowing them to undercut prices of other nations.

The result is downward economic integration that results in lower living standards for everyone, Culbertson observed.

AFL-CIO Economic Research Director Rudy Oswald discussed the myths of high technology and how this heralded savior of industry ended up creating a $4-billion trade deficit in 1986. He noted that a number of countries don't honor U.S. copyrights and patents, some U.S. firms enter into co-production agreements with foreign manufacturers, and technology created in America is controlled by corporations that transfer it overseas.

Oswald called for action against countries with trade surpluses, retaliation against foreign suppliers that have harmed specific industries, improved U.S. education and training, and a sensible trade policy.

A panel discussion on labor education programs dealing with foreign trade included Steve Beckman of the Auto Workers, Yvonne Coleman of the Electrical Workers and Saul Rosen of the Ladies' Garment Workers.

The conference also included workshops on developing leadership skills to meet the needs of a changing workforce, led by Gloria Johnson of the Electronic Workers and Richard Dwyer of the George Meany Center for Labor Studies, and an updated analysis on the federation's "Future of Work" report by Shields.

Legal issues

David Silberman, an AFL-CIO associate general counsel, described the changing nature of legal issues in labor relations, and participated in a workshop on organizing.

The implications of next year's "Super Tuesday" primary vote were discussed by Joan Baggett, Bricklayers director of communications and Loretta Bowen, Communications Workers' COPE director.

Other workshop topics included union literacy training, labor studies in the schools, the training of union trainers, innovative teaching techniques, the scope of unemployment and underemployment, employee ownership, retraining programs, alternatives to strikes, drugs and alcohol in the workplace and discrimination.

Eugene Spector dies, NMU research director

New York—Eugene P. Spector, research director of the National Maritime Union since 1966, died Apr. 1 from heart complications following surgery. He was 64.

Spector was an expert in maritime labor economics. Prior to his appointment as NMU research director, he served as research analyst with the American Merchant Marine Institute. Earlier, Spector was an economist at the National Academy of Sciences and the Labor Dept., and served as an attorney in the Commerce Dept.

Harley-Davidson's comeback attributed to workers' stake

A rejuvenated Harley-Davidson Inc. asked the International Trade Commission to end duties imposed in 1983 on larger imported motorcycles one year before they would have expired.

But the sacrifices and efforts of Harley employees had as much to do with the company's economic turnaround as the tariff protections granted by the Reagan Administration, said members of the two unions that represent Harley workers.

At a Washington press conference, Vaughn L. Beals Jr., Harley's chairman and chief executive officer, announced that the company no longer needed tariff relief to compete. With him were four union members—two members from the Allied Industrial Workers and two members from the Machinists—who were surprised by the announcement.

"I thought they were going to announce four more years of tariffs," said President Harry Smith of Machinists Lodge 175 in York, Pa. "Copycatting Japanese production methods isn't what worked. It's that we got time to do quality work."

Jerry Knackert, president of AIW Local 209 in Milwaukee, praised the workers "who supported the hard decisions the union had to make" on concessions that helped the company fund the production changes.

Knackert expressed concern that the company's comeback might be used to thwart needed trade legislation.

Eric Burkey, a past IAM Lodge 175 president, also attended the press conference. He said the workers' concessions aided the company and noted that the "minute the tariff was given to us, the Japanese did an about-face and downsized their engines to avoid the tariff."

Donahue calls for legislation to curb corporate takeovers at Senate Banking Committee hearing. With him are Associate Gen. Counsel David Silberman, left, and Deputy Research Director Henry Schechter.

Federationist
VOL. 94 NO. 3 APRIL 11, 1987

BARGAINING·IN·1987

AGAINST THE WIND

By Matt Kane

Most unions that marched to the bargaining table in 1986 held or gained ground despite adverse economic conditions and a no-holds-barred anti-union attitude among employers.

Base wages increased in about 80 percent of the major 1986 collective bargaining settlements for private sector workers. And 90 percent of the major 1986 agreements for state and local government workers registered pay hikes. Despite slower than normal union wage growth, union workers kept pace with last year's low-level inflation and earned significantly higher pay than their non-union counterparts —37 percent more a week on average.

The economy did little to boost and much to block unions in their drive for better wages, benefits and working conditions. The official 1986 unemployment rate stood at 7 percent, making last year the sixth in a row with that percent or more of the labor force out of work. Millions of Americans not counted in the official rate had quit looking for work out of discouragement or were caught in part-time jobs although they wanted full-time work.

The U.S. trade deficit hit a record-breaking $170 billion last year and cost the United States 2.5 million jobs. International conditions ranging from exchange rate levels to Third World debt, from unfair trade practices to violation of foreign workers' rights have created a flood of imports that is undercutting U.S. jobs and incomes, especially in the manufacturing sector. A good number of unions at the bargaining table were forced by import pressures to moderate their demands.

Other ominous economic developments put many union negotiating teams on the defensive. More than 13 million workers were displaced from their jobs in the period from 1981 through 1985. Wages and salaries for most of the new jobs created in the last seven or eight years have been $7,000 a year or less. Workers' real earnings after inflation have fallen 10 percent over the last 7 years. And family incomes have been dropping even though the number of two-earner families is on the rise.

Anti-union actions and attacks on worker rights also made bargaining a tough go. The National Labor Relations Board has moved from labor's friend to foe in the last six years, repeatedly backing the interests of employers against the rights of workers. Company use or threatened use of strikebreakers influenced 1986 bargaining outcomes in a number of cases. Strikebreakers were a factor in settlements for the Distillery, Wine & Allied Workers with 11 California wineries, for the United Food & Commercial Workers with Oscar Meyer in Chicago, and for workers bargaining through the U.S. Forest Products Joint Bargaining Board with Weyerhaeuser on the West Coast. In several industries, companies that have traditionally bargained together bargained separately, complicating the process for the unions involved.

Against this backdrop, unions on average won modest wage and benefit gains and bargained for better standing on such issues as job security, profit-sharing, pay equity and health and safety.

Negotiated wage increases were below those of recent years, but so too was the inflation rate. Inflation registered at 0.7 percent for 1986, its lowest rate since the early 1960s and significantly below its rates of 3.6 percent for 1985 and 4.3 percent for 1984. As a result, smaller wage increases were needed last year than in the past to keep workers' pay ahead of inflation. The U.S. government's measure of 1986 wage increases for all private sector union workers under major contracts, whether in bargaining last year or not, stood at 2.3 percent.

The government's Bureau of Labor Statistics (BLS) tracks collective bargaining through the year, but limits its attention to major contracts each covering 1,000 workers or more, for a total of 2.5 million workers last year. Average wage increases for private sector workers, according to the BLS, were 1.2 percent for the first year of a contract and 1.8 percent a year when measured over the life of the contract—both averages the lowest since this series began in 1968 but again above last year's inflation rate.

The BLS wage levels also ignore cost-of-living adjustments and the value of lump-sum payments. About one-third of the major private sector settlements included COLAs. Lump-sum payments, were negotiated in such industries as steel, communications, aerospace, petroleum refining, railroad, retail food, and health services.

Looking only at settlements with wage increases, almost 2 million private sector workers were to receive raises averaging 2.7 percent a year over the life of their contracts, according to the BLS. Seventeen percent of these workers won annual pay increases of 4 percent or more.

Average wage settlements overall stood at 1.9 percent for the first year of the contracts and 2.1 percent a year over the life of the contracts. After five years of hardship, higher-than-average increases in the nonmanufacturing sector.

About half the private sector workers with new major contracts received lower wage adjustments in the first contract year than in the contracts' later years. Contracts for a third of the workers had higher average wage increases in the first contract year than later years.

BLS data on major collective bargaining settlements with state and local governments show average annual wage gains of 5.7 percent for the first contract year and through the duration. A full 90 percent of the 873,000 workers under these public sector 1986 settlements received increases over the life of the contract and the remaining 10 percent suffered pay decreases. Increases averaged 6 percent a year for state workers and 5.6 percent for local government workers, measured over the life of the contract. The BLS collected these data on major contracts covering 1,000 or more workers. Again, lump-sum payments were ignored.

Two-tier wage structures, with lower pay for new workers, continued to pop up in 1986 settlements—8 percent of them compared to 9 percent in 1985, according to a survey by the Bureau of National Affairs, a private research organization. But a number of unions eliminated two-tier systems started under previous contracts. Others beat back employer demands for two tiers.

For example, the Food & Commercial Workers (UFCW) undercut a two-tier system in place at Washington, D.C., area supermarkets and eliminated one for pharmacy clerks in southern California. Members of the State, County & Municipal Employees (AFSCME) ended a two-tier system used by the City of Detroit. Unions turning back employer demands for two-tier wages included, among others, the Boilermakers at Medusa Portland Cement Co., the Communications Workers at GTE Co. in California, and the Machinists, Electrical Workers, Maintenance of Way Employees, and Firemen & Oilers, all bargaining with the railroads.

The problem of high unemployment, continued trade pressures, declining real incomes and anti-union action will make 1987 another tough bargaining year. Forecasts indicate unemployment will remain at about 7 percent. The U.S. economy is expected to grow at the slow rate of between 2 and 3 percent, the inflation rate is likely to go just over 3 percent and the trade deficit will remain high.

Investment in both residential housing and non-residential facilities is stagnating. And consumer spending is likely to slow as people cut personal spending in light of the high debts they now carry. In all, the outlook is far from rosy with many downside risks that could further exacerbate economic problems.

These economic conditions will set the stage for contract negotiations involving a total of about 2 million private industry workers and 1.1 million state and local government employees under major contracts. Scheduled contract expirations or reopenings for this many workers means 1987 bargaining will affect 35 percent of all workers under major collective bargaining agreements.

In the private sector, contracts covering 576,000 workers at General Motors and Ford are up for renewal. Also up for negotiation are contracts in the construction industry covering another 377,000 workers and contracts in the wholesale and retail trades covering 251,000. A half-million postal workers also will negotiate new agreements late this summer. State and local government bargaining will affect about half the union workers in those sectors, with contracts up for 262,000 workers in New York City alone.

JOB SECURITY

In their 1986 bargaining, unions tackled a wide range of issues aside from wages, often accepting lower pay increases in exchange for other gains. Some of the year's most significant victories came in the area of job security.

The Communications Workers (CWA) and the Electrical Workers (IBEW) won a solid job security program from AT&T last year. CWA President Morton Bahr called the agreement "a quantum leap toward CWA's goal of lifetime employment security."

Building on provisions of the 1983 contracts, the new settlements require the company to publish yearly reports on emerging job opportunities and the skills needed to qualify for them. They also establish a company-funded, union-administered training and retraining program to equip employees with those skills.

AT&T workers now have channels for making their career interests known, with the company promising to consider these interests when job openings arise. And finally, the agreement requires the company to tell active and laid-off workers about job opportunities. Laid-off workers are allowed to transfer to jobs in AT&T divisions other than their own.

The theme of job security carried over into many of the settlements CWA and IBEW reached with the Bell operating companies that were part of AT&T prior to its court-ordered breakup in 1984.

continue a job training program that has helped many employees make the transition from one line of work to another. The Bell South pact with CWA commits the company to spending $23 million on an employment security program over the life of the contract, and the Bell Atlantic agreement also strengthens job security measures. Under its contract, Southwest Bell will establish a Career Resource Center for job counseling, information and placement. And Pacific Telesis now guarantees no worker layoffs.

The Steelworkers (USWA) also made job security gains in negotiations with steel companies throughout the country. The union's agreement with the troubled LTV Steel Co. includes a clause prohibiting the contracting out of work that can be done by bargaining unit workers. It also establishes a company-funded program for retraining, job counseling and placement assistance.

The USWA contract with National Steel guarantees no layoffs over the life of the agreement. Employees who would have been laid off will now receive retraining and reassignment to new jobs without reduction in pay. Also, contracting out is limited and outside work will be retrieved.

The union's contract with Inland Steel Co. sets limits on the contracting out of work. USWA workers at Armco Steel won a provision protecting their jobs in the event that plants are sold. And the new contract with Harnischfeger Corp. of Milwaukee commits the corporation to modernization of the plants.

Steelworker agreements with a number of companies include successorship clauses requiring that facilities be sold only to parties agreeing to union contracts and recognizing the USWA as the bargaining agent.

Other unions also scored victories for job security. The Auto Workers at Caterpillar's five heavy equipment manufacturing plants secured a $21-million job retraining program for workers affected by technological change. The UAW-Caterpillar pact also protects 90 percent of the union employees from layoffs of longer than six weeks related to economic conditions, market changes, outsourcing, productivity gains, use of new technology, or consolidation of operations.

Newspaper Guild members with the New UPI Inc. news service won a guarantee against reductions in the number of full-time permanent employees during the one year of their contract, and the company is committed to $15 million of investment for new equipment over the next two-and-one-half years. UFCW workers in the Minneapolis area won guarantees against most layoffs from grocery store chains in trade for changes in work rules and pay scales.

The new contract between the Machinists (IAM) and Boeing Co. establishes a joint committee on pilot programs for new technology in the workplace. But the agreement also gives the union the power to veto or cancel the programs when jobs are endangered.

In a tough year of airline deregulation and nonunion competition, the Air Line Pilots traded with Delta Air Lines for an agreement from the company not to eliminate jobs or downgrade workers because of productivity improvements. Pilots at TWA traded for a provision barring the sale of company assets beyond those equal to the carrier's losses. The contract also requires the airline to retain pilot jobs in the event of any asset sales.

The Sheet Metal Workers landed a two-year agreement with the Air Conditioning Contractors of Arizona that establishes a work stabilization fund, and the Carpenters signed a three-and-a-half year agreement with construction employers in northern California that sets up a work preservation fund. Recall rights are extended to 30 months for laid-off employees of Arsarco Inc. under new contracts with the Steelworkers, the IBEW, the Operating Engineers and the Teamsters.

Unions continued to promote education and training for the job security of their members. A number of unions won contracts increasing employers' per-hour-worked contributions to apprenticeship and training funds. Securing increases were, among others, the Sheet Metal Workers, the Operating Engineers, the IBEW, the Iron Workers, the Carpenters and the Painters.

A number of other contracts include prohibitions and limits on work contracted out. For example, UAW workers at Delco Electronics Corp. staged a six-day strike to win a contract curtailing subcontracting and ending company plans to send some parts production to Mexico. The Service Employees International Union (SEIU) secured a contract from Kaiser Permanente Health Plan that limits subcontracting.

The Retail, Wholesale & Dept. Store Union workers at New York hospitals and nursing homes beat back employer efforts to allow contracting out. Weyerhaeuser was forced to limit its subcontracting plans in a settlement with West Coast lumber workers. The contracting out issue also is addressed in pacts for IBEW and CWA workers with Bell Telephone units, for Amalgamated Transit Union workers with the City of New Orleans, for the UAW members at the Volkswagen of America plant in Westmoreland, Pa., for Machinists at Pratt & Whitney Group, and others.

UFCW members at several meat processing companies secured advance notice of plant closings. Their agreement with Wilson Foods Corp. requires the company to give six months' notice of plant closings. Under the contract, UFCW workers are guaranteed employment or pay for one year beyond the notice period as well as continued health insurance for six months after the closing of a plant or unit. The union will appoint a representative to the Wilson board of directors, and the company must provide the union with annual certified audits and regular reports on its finances

UFCW workers at Farmstead Foods plants in Cedar Rapids, Iowa, and Albert Lea, Minn., won many of the same plant closing and job security provisions, plus a requirement that the company give the union 45-days notice on the possible sale of assets in cases affecting union jobs.

Other unions bargained for prior notification of plant or facility closings. The Steelworkers established a jointly funded committee with major container manufacturers to study ways of preserving three-piece can plants. A number of unions won training and relocation assistance funds for workers who lose their jobs. And unions bargained for successorship provisions protecting jobs and union representation in the event that operations are sold.

A SHARE IN PROFITS AND GAINS

Profit sharing and gainsharing, both around since the turn of the century, found a place in a number of union contracts last year. Labor has had a mixed experience with sharing company profits or the gains from worker-initiated short cuts or ideas. Sometimes the share options have unfairly shifted risk to workers, undercut compensation levels and jobs, and served as a tool for union-busting. But union-negotiated profit sharing and gainsharing also have brought good results in cases where they have stabilized worker incomes and increased worker control. In 1986, many of the unions that adopted profit sharing and gainsharing used them to recapture wage and benefit reductions granted to hard-pressed employers.

Profit sharing provisions are common in union agreements with the troubled steel industry. The Steelworkers and the LTV Steel Corp. reached a settlement that uses profit sharing and stock ownership to restore cuts in workers' compensation. A worker's paycheck now lists his or her accumulated wage and benefit cuts. Then in April, the company will use profits to restore the forgone compensation or will distribute stock if profits are inadequate to cover the shortfall.

Similarly, the settlement between the Steelworkers and Bethlehem Steel requires that workers be repaid in cash or stock for their sacrifices. The Bethlehem contract also includes a gainshare clause for compensation increases to match improvements in output and quality.

In the agreement between USWA and USX, a percent of the corporation's steel profits will be distributed annually to workers up to an amount equal to their wage and benefit sacrifices. USX must pay out a minimum amount even in the absence of profits. The union's contract with National Steel Co. also establishes a profit-sharing plan with a guaranteed minimum annual payment when no profits are recorded.

At Inland Steel Co., members of the USWA will receive 10 percent of the company's pretax profits, as well as added bonuses if productivity improves. Steelworkers at Armco's Kansas City and Baltimore facilities also will get a cut of the profits, up to 20 percent if pretax profits are more than $2 per work hour.

The union's contract with CF&I Steel Corp. in Pueblo, Colo., gives workers 38 percent ownership of the corporation over the three-years of the agreement. And a settlement between the Steelworkers and Harnischfeger Corp. of Milwaukee includes the possibility of profit sharing.

Some CWA and IBEW members also adopted profit sharing plans in settlements with telephone companies. For example, contracts that both unions hold with Pacific Telesis call for bonuses based on the company's projected net income and calculated as a percent of base pay. Contracts for union workers at Ameritech's operating companies of Michigan

1987 Collective B

AEROSPACE—The Auto Workers' national agreement with Rockwell International covering 16,000 workers reopens in June.

AIRLINES—The Machinists' agreement covering 12,000 Eastern Airlines employees reopens in December.

AUTO—The Auto Workers and the Electronic Workers agreements with Ford and General Motors reopen in September covering 480,000 workers.

BAKING—The national agreement between the Bakery, Confectionery & Tobacco Workers covering 9,000 workers at Nabisco will be renegotiated in September.

CLOTHING—In September the Clothing & Textile Workers will negotiate a new national agreement with the Clothing Manufacturers Association USA covering 56,000 workers.

CONSTRUCTION—The Carpenters' agreement with the Building Construction Contractors in New York City covering 20,000 workers reopens in June. In April the Laborers and Carpenters will negotiate for 26,000 workers employed by the New Jersey Building Contractors Association.

HEALTH CARE SERVICES—The Service Employees in March will bargain for new agreements covering 15,000 workers employed by members of the Greater New York Health Care Facilities Association.

INSURANCE—The Food & Commercial Workers

Bell, Ohio Bell, Indiana Bell, Illinois Bell, Bell South and Wisconsin Bell all include profit sharing provisions. The annual payments are known as "team awards" and are based on company earnings and customer service and satisfaction.

The Woodworkers and members of the Carpenters' division of Lumber Production & Industrial Workers bargained together with Weyerhaeuser to secure a mill-by-mill profit-sharing plan. A third of all profits over 5 percent will be added to the base pay of workers up to a set amount, after which a smaller slice of the profits will be distributed quarterly as lump sums not affecting wages.

Under its contract with UFCW workers, Wilson Foods Co. will distribute lump-sum payments based on company profits and incorporated into base wages. UFCW workers with Farmstead Foods also will receive lump-sum payments based on profits but without any impact on base pay.

The Newspaper Guild's agreement with New UPI, Inc., calls for establishment of a profit sharing plan. At the Aluminum Co. of America (Alcoa) and Reynolds Metals Co., contracts with the Steelworkers union and the Aluminum, Brick & Glass Workers set up joint labor-management committees to consider profit sharing.

The Air Line Pilots retained previously established profit sharing and stock ownership plans that could offset wage cuts. And in a variation on profit sharing, Newmont Mining Corp. will pay bonuses to workers from a number of different unions based on increases in the price of copper.

FAMILY ISSUES

Often enough, union workers are parents, and more and more unions are using contract negotiations to address the parental concerns of their members. Sick leave for family illnesses, child care, maternity and parental leave, and other such issues are included in 1986 settlements. The AFL-CIO has recognized the need for "family-strengthening programs through the collective bargaining process" as well as through federal legislation.

A number of unions pushed child care in last year's contracts. For example, the Office & Professional Employees, bargaining with Northwestern Mutual Life Insurance Co., won a flexible spending account for various benefits including day care. Under its settlement with AFSCME, the City of Detroit will fund a prototype day care facility.

The Steelworkers' agreements with Bethlehem and Inland steel companies establish labor-management committees to investigate the child care needs of workers and determine ways of meeting them. A joint committee will study day care under a three-way agreement between the Farm Labor Organizing Committee, Campbell Soup Co., and tomato and cucumber growers.

AFSCME members working for Ulster County, N.Y., now may use sick leave when family members become ill. In Philadelphia, the Firefighters secured an increase from $100 a month to $200 in pensions paid to the spouses of deceased workers. And nurses represented by the unaffiliated District of Columbia Nurses Association bargained to extend unpaid maternity leave from six months to a year. Their agreement guarantees that returning mothers will be reinstated in their old jobs or other positions within the same medical specialty.

UNION SOLIDARITY

In a number of cases last year, different unions joined together to coordinate their bargaining efforts or simply lend support. Such solidarity gave union workers greater strength in a tough bargaining year. And in some instances, it helped counteract breakdowns in long-standing patterns of coordinated bargaining by employers.

The move away from coordinated bargaining by employers came as companies sought to tailor settlements to their individual financial conditions. The Steelworkers were forced to negotiate with individual steel companies last year. Similarly, stevedoring firms and shippers abandoned their long-standing practice of uniform settlements with the Longshoremen at Atlantic and Gulf ports. The court-ordered breakup of AT&T left the Communications Workers and the IBEW negotiating about 40 different contracts with the parent corporation and the separate regional operating companies.

Bargaining between the Marine & Shipbuilding Workers and Pacific Coast shipbuilders moved to a company level for the first time since the 1950s. And seven timber firms that have bargained before as the Western States Wood Products Employers Association negotiated on a company-by-company or even a mill-by-mill basis.

In a show of solidarity, the Woodworkers and the Lumber Production & Industrial Workers formed the U.S. Forest Products Joint Bargaining Board to coordinate contracts with timber companies in the West and South. In the copper industry, members of 14 unions faced with company-by-company negotiations coordinated efforts through the National Nonferrous Industry Coordinating Committee.

Five unions negotiated with North American Philips Lighting under the coordinated bargaining program of the AFL-CIO Industrial Union Dept., which assisted other negotiating unions as well. The Steelworkers and the Aluminum, Brick & Glass Workers maintained close liaison in their negotiations with Alcoa, Reynolds and Kaiser Aluminum.

Workers stood in solidarity away from the negotiating table, too. Members of AFL-CIO affiliated railroad unions helped win a settlement for the unaffiliated Locomotive Engineers and the United Transportation Union when they joined a walkout against the Santa Fe railroad. And in the USX dispute, the entire labor movement rallied around the AFL-CIO coordinated support for the locked-out members of the Steelworkers.

Thousands of city workers in Detroit honored picket lines during a 19-day strike against the city by AFSCME members from District Council 25. Trojan Luggage reached an agreement with the Furniture Workers and El Al Airlines settled with the Machinists after long strikes and AFL-CIO sanctioned boycotts of products and services from both companies.

Local unions representing 750,000 workers urged their members to drop enrollment in the Kaiser Permanente Health Plan when the SEIU and the Marine Engineers' Beneficial Association (MEBA) struck that health maintenance organization. Prior to settlement of the contract, 30 large unions and 100,000 union members had begun to withhold monthly payments to Kaiser in solidarity with the workers. Unions also urged members to cross the picket lines and demand service after Kaiser ran advertisements asking enrollees to delay treatment until after the strike.

Source: BLS; ECI

HEALTH CARE CHANGES

Most 1986 contracts included changes in health care provisions. In many cases, employer contributions for health coverage increased. Some settlements secured new benefits for workers, and others established health care cost containment measures.

Revisions were found in hospitalization insurance and plans covering life, sickness and accident, dental care, major medical care, surgery, accidental death and dismemberment, prescription drug needs, vision care, disability and comprehensive medical plans.

Members of Actor's Equity performing on Broadway and in national touring productions secured a new contract that increases employer contributions for health insurance by 60 percent. Among others recording gains were the Rubber Workers, which won an 11-percent increase in sickness and accident benefits for members at Armstrong World Industries in Lancaster, Pa.

Longshoremen working on the East Coast negotiated for increased employer funding of the union's medical clinics. Machinists at the Lockheed Corp. in four states gained improved group insurance, medical benefits and dental coverage, as well as a prescription plan.

The Todd Shipyard Corp. in Los Angeles, in its contract with the Marine & Shipbuilding Workers, agreed to establish a health maintenance organization, offer dental insurance, and increase benefits for sickness and accidents. Allied Industrial Workers and the Whirlpool Corp. in Fort Smith, Ark., settled on a "flex- choice" benefit package that allows workers to choose among medical plans. The contract between the Sheet Metal Workers and air conditioning contractors in California establishes an employee assistance program to help workers overcome drug abuse problems.

Several unions won provisions for insurance coverage of non-traditional health care. For example, CWA and IBEW members now have a medical plan at AT&T that covers costs for home health care and birthing centers. They also extended their medical plan to cover treatment of drug dependency.

Communications Workers at NYNEX secured a new substance abuse program and won expansion of insurance coverage to home health, hospice and birthing center care. The Machinists with Avco Corp.'s Aerostructure Division in Nashville are now covered for home hospice care, also.

Workers and employers share an interest in capping rapidly rising health care costs. But often cost containment measures shift the burden for health care to workers without putting any checks on health

gaining Schedule

agreement covering 16,000 Prudential Insurance employees will reopen in September.

RETAIL FOOD STORES—The Food & Commercial Workers will negotiate new agreements in August covering 65,000 workers employed by members of the California Food Employers Council in April covering Food Town in New York City.

SHIPBUILDING—The Steelworkers' agreement with Newport News Shipbuilding and Dry Dock covering 18,000 workers reopens in May.

STATE AND LOCAL GOVERNMENT—The State, County & Municipal Employees, American Federation of Teachers, Fire Fighters, and Service Employees will be negotiating new agreements for 26,000 Washington, D.C., workers. The Service Employees, representing 17,000 Los Angeles County clerical workers, will bargain for a new agreement in September, and 26,000 members of the Teachers will seek a new agreement with the Chicago Board of Education in August. The contracts of all public employee unions covering 300,000 New York City workers will be up for renegotiation in June.

U.S. POSTAL SERVICE—The Postal Workers, the Letter Carriers and the Laborers will be seeking new agreements in September covering 600,000 USPS employees.

UTILITIES—The Northern States Power Company agreement with the International Brotherhood of Electrical Workers covering 22,000 workers reopens in December.

care providers who really control the costs.

In their agreement with four major can producers, the Steelworkers won cost containment measures without adding to the burden on the workers. The union's members at Bethlehem accepted cost containment measures in order to preserve their benefits and win improved major medical coverage. Steelworkers at National also adopted a cost containment program.

Members of five unions at North American Philips Lighting Corp. won improvements in coverage, pre-admissions review and second opinions on some surgical procedures. Cost containment was adopted or opened for study in contracts negotiated by many other unions, including the IBEW, the Utility Workers, the CWA, the Railway & Airline Clerks and the UAW.

A number of unions fought off employer attempts to raise workers' health care costs. The Communications Workers turned away a proposal from General Telephone Co. of California that would have automatically increased worker health care expenditures as health care costs rose. CWA workers at the Bell companies generally succeeded in beating back cuts in health insurance coverage.

Members of the USWA and the Aluminum, Brick & Glass Workers rebuffed attempts by Alcoa and Reynolds to institute high deductibles and worker co-payments for insurance. And in Philadelphia, the city's underpayments to the health and welfare fund for AFSCME-represented, blue-collar workers were a key issue in the negotiations, a strike and the settlement.

PAY EQUITY

Union workers continued to make strides in equal pay for comparable work. A number of contracts required pay equity—or comparable worth—payments designed to bring underpaid workers up to fair wage rates.

Under an agreement with AFSCME, the State of Washington began paying out what will total $106.5 million in pay equity wage adjustments over six years. The action stems from a 1981 AFSCME suit that accused the state of underpaying workers in female-dominated occupations.

A contract between AFSCME Council 31 and the State of Illinois establishes a special fund of $4 million a year to raise the pay of workers in jobs that the union and the state agree are underpaid. An AFSCME contract with the City of Chicago also requires pay equity adjustments for 3,500 workers in 79 predominantly female job classifications.

The UAW secured special wage adjustments for some 21,000 Michigan state employees in an effort to "achieve a greater degree of pay equity between traditionally 'female' state jobs and other jobs," the union reports. In Detroit, a new contract requires the city to provide AFSCME with data on female employment so that the union can conduct a pay equity study.

And in San Francisco, SEIU pushed the city hard for corrective wage increases to end pay discrimination against women and minority members in city jobs. Other unions fought for pay equity as well.

HEALTH AND SAFETY

Union workers also pushed for better health and safety provisions in their 1986 collective bargaining agreements.

UAW members at the Ford Motor Co. in Hapeville, Ga., struck for almost a month to win better ventilation, reduced noise levels and stricter asbestos guidelines at their plant. Utility Workers with Boston Edison also struck for a month in part to secure establishment of a joint safety committee. The committee will see to the removal of asbestos from a main company building and will handle installation of a fire sprinkler system. The Operating Engineers and general contractors in California also agreed to set up a joint safety committee.

In a significant victory for farm workers, the Farm Labor Organizing Committee signed an agreement with Campbell Soup Co. and growers in Ohio and Michigan setting up a joint committee to study safety programs, health care, housing conditions and the dangers of pesticides. The agreement, which came after a long struggle and an AFL-CIO sanctioned boycott of Campbell Soup, also set wage rates, established a grievance process and granted official recognition to the union.

Safety procedures for stunt people and working conditions for child actors are improved in contracts between television and movie producers and members of the Screen Actors Guild and the Television & Radio Artists (AFTRA). Other unions also made significant health and safety gains.

OTHER BARGAINING DEVELOPMENTS

Unions addressed a variety of other issues in their 1986 collective bargaining agreements. Recognizing the political nature of the economic difficulties confronting them, some bargained for a checkoff system of payroll contributions from workers to political action committees (PACs). More and more union members are using this approach to fund the PACs of their national unions.

Communications Workers at U.S. West Directory successfully fought to retain a contract provision prohibiting indiscriminate monitoring of employees. Steelworkers with Armco Steel won a ban on the use of "lie detector" tests in the grievance process. And a number of unions, including the Steelworkers at USX, secured limits on drug testing of workers.

Hospital & Health Care Employees at 18 facilities in the Philadelphia area won guarantees against workers having to deny health treatment to indigent patients. Their contracts also establish joint labor-management committees to review staffing and health care for the poor. The contracts for Service Employees and MEBA members at Kaiser Permanente require annual labor-management conferences on patient care.

Pension plan changes were common. Many agreements raise employer contributions to the plans or increase monthly payments for retirees. In some cases, contracts alter pension plans in order to encourage early retirement.

A number of new contracts establish or improve 401(k) savings plans for union workers. A settlement between UFCW members and major supermarkets of northern California set up Individual Retirement Accounts. The UFCW also won a pension plan for part-time workers at 55 stores in eastern Pennsylvania.

The birthday of Dr. Martin Luther King Jr., already a national holiday, became a paid holiday under some of last year's contracts. Joining the union workers who already celebrate the memory of Dr. King with a paid holiday were, among others, Marine & Shipbuilding Workers at Todd Shipyard Corp., Auto Workers at Caterpillar, Electrical Workers at Florida Power & Light, and members of the Retail, Wholesale & Dept. Store Union working at homecare agencies in New York.

The contracts for members of the Screen Actors Guild and AFTRA include changes in affirmative action hiring by television and movie producers. Members of the Actor's Equity Association performing on Broadway and with national touring productions won a provision committing the theaters to elimination of discrimination in employment. An agreement between the Hotel Employees & Restaurant Employees (HERE) and Boston hotels includes a stronger anti-discrimination policy and provides for annual seminars on sexual harassment for supervisors and workers.

HERE workers at Hyatt Hotels in southern California secured bereavement pay, and those working at various San Francisco hotels won a legal fund. Workers bargaining as the U.S. Forest Products Joint Bargaining Board fought off an attempt by Weyerhaeuser to remove seniority as the basis for job promotions and retention.

These are just some of the highlights from collective bargaining agreements reached last year. Unions throughout the country fought hard for the interests, needs and desires of millions of their members. Unions made strides, great and small, in improving the lives of America's working women and men. And in 1987, they will carry on this charge.

New Books

Gender Justice

by David L. Kirp, Mark G. Yudof and Marlene Strong Franks 246 pp. University of Chicago, Press, 1986 $19.95.

On the surface, Gender Justice appears to be a useful resource for unionists active in promoting equal treatment of the sexes. Thoughtful in outlook and broad in scope, the book explores how the different status of men and women came into being and proposes governmental policies to help society attain gender equality.

But the authors—David L. Kirp of the Graduate School of Public Policy and the School of Law at the University of California, Berkeley; Mark G. Yudof, Dean of the University of Texas Law School; and Marlene Strong Franks, a Ph.D. candidate in public policy at Berkeley—present their case in overblown language that may impress the academic community but impedes the clear communication of their ideas.

For instance, here is how they chose to state the purpose of their book:

> Our aim is to elaborate the argument for comprehending gender justice primarily in procedural, not substantive, terms. In our view, justice means enhancing choice for individuals, securing fair process rather than particular outcomes for the community. By opting for process over outcome, we value self-determination over collective determinations of sex roles.

Simply put, the authors believe that gender justice can best be achieved not by laws that dictate specific remedies or results, but by governmental policies that encourage individual choice. Promoting equal liberty for men and women to choose the way they earn their livings and raise their families is central to Gender Justice.

Thus, instead of affirmative action and other specific measures to end job discrimination, the authors favor monitoring employment practices and offering information about career opportunities so that individuals can select work that suits their interests and abilities. The fact that employers themselves still limit opportunities available to women does not concern the authors.

"When male employers single out women, they are in effect discriminating against their own wives, lowering their own family incomes," they write, "and that makes no sense." Unfortunately, lower wages for women makes economic sense to employers interested in maximizing their profits.

Moreover, the authors downplay the consequences of job discrimination by contending that today's gap between men's and women's wages can be explained for the most part by "personal characteristics such as training, experience, and family-induced limitations."

Although Gender Justice reports the growing pay equity movement as a way to close the wage gap, the authors do not endorse the concept of equal pay for work of comparable value because "the comparisons it insists on cannot be made."

Gender Justice is strongest when it is promoting "choice-enhancing" solutions to sexual inequality. The authors support job sharing, part-time work and flextime as ways to expand the range of options open to men and and women. They encourage parenting leave for whichever parent chooses to stay at home with an infant—with cash grants from the government to offset loss of income. They recommend pooling the earnings of both spouses for the purpose of calculating social security contributions, so that housewives may derive larger benefits.

Apparently unions are antithetical to the authors' belief in individual autonomy, because the book gives the labor movement no credit for contributing toward gender justice and even depicts unions as helping to perpetuate inequities.

National Association of Letter Carriers

Stemming import glut

Trade reform vital to economy

Labor's alternative to mounting trade deficits and a shrinking U.S. economy is a healthy, two-way flow of commerce that will build employment and buying power, AFL-CIO Research Director Rudy Oswald testified.

Oswald urged the Senate Finance Committee to write a trade bill that will give U.S. negotiators a legislative "stick" to bring exports and imports into closer balance.

That's common sense, not "protectionism," Oswald insisted. He said it would be "naive" to expect other countries to reduce their trade imbalance "simply because the U.S. asks them to do so." That's been the Administration policy, he noted, but it hasn't worked.

Time is running out, Oswald warned. "No sector of the economy has been left unscathed. Mines are closing, manufacturing communities are devastated, and farm families are being driven off the land."

The Senate committee has invited comment on an array of trade bills it is considering, and Oswald's testimony focused on two major areas of AFL-CIO concern.

He urged adoption of a strong worker rights provision as part of any trade legislation—so that countries that exploit workers, suppress unions or use child labor won't be given red-carpet access to U.S. markets.

The House will vote later this month on strengthening a committee-approved trade bill by including an reduction amendment that will be offered by Rep. Richard A. Gephardt (D-Mo.) to bring down the nation's job-destroying deficit.

Sen. Donald W. Riegle (D-Mich.) is the chief Senate sponsor of a counterpart bill, and Oswald strongly urged its adoption.

Inclusion of the Riegle-Gephardt formula "is essential if trade legislation is to have any meaning," he insisted.

Discriminatory practices

It would target only major trading countries that have used unjustifiable, unreasonable or discriminatory practices to build up a large trade surplus.

The goal would be to reduce the trade surplus by 10 percent a year. If negotiations do not achieve such a reduction, the President will be required to take action.

"It is clear that negotiations without the prospect of some ultimate penalty fail," Oswald testified. "The U.S. has been negotiating with Japan for years and U.S. exports to that market are not substantially higher than they were six years ago," he noted. Other major trading partners have been unwilling to open up markets.

The present system of investigating and negotiating about unfair trade practices one by one hasn't been effective, Oswald said. "As soon as one unfair practice is dealt with, another crops up and takes its place." Meanwhile, the deficit continues to grow.

The labor-supported trade measure would not require an exact balance of trade, Oswald noted, and would not come into play except when a country exports at least 75 percent more goods to the United States than it imports. The President is given a wide range of alternatives to reduce the imbalance, he noted.

But the measure's real value, Oswald stressed, is that "it puts backbone and, most importantly, predictability in a trade policy that has been notable mostly for bluster, negotiations, broken promises, press releases and, as a result, massive trade deficits."

The companion worker rights bill before the committee is similar to provisions in the House trade bill that were originally sponsored by Rep. Don J. Pease (D-Ohio). It would designate violations of internationally recognized labor protections as unreasonable and unfair trade practices, subject to retaliation by the United States.

The worker protections listed in the bill are those adopted by the International Labor Organization. They cover the right of association, the right to organize and bargain collectively, prohibition of use of any form of forced labor, a minimum age for employment of children, and acceptable standards of minimum wages, hours of work, and occupational safety and health.

"Ignoring foreign sweatshops costs American jobs and limits economic growth," Oswald noted.

Oswald testifies on trade reform.

The ability to sell in the world's greatest consumer market should be used as a means of raising standards of living around the world, he urged.

Without such a provision, Oswald testified, the United States would be saying that it will retaliate against counterfeiting of American-made videotape cassettes but is unconcerned "about children being sold into slavery or forced into factory work 15 hours a day, seven days a week."

INS gives edge to foreign technicians on scarce jobs

The Immigration & Naturalization Service plans to throw open the door to a major influx of foreign professional and technical workers at a time when Americans with similar skills are unable to find jobs, the AFL-CIO Dept. for Professional Employees warned.

DPE Director Jack Golodner, noting a 350 percent increase in the issuance of visas to these nonimmigrant aliens in the past decade, filed a strong protest with the INS, objecting to proposed new rules that would make it even easier for these aliens to compete for scarce jobs.

When Congress enacted legislation in 1970 authorizing such visas, Golodner noted that it limited them to aliens with "distinguished merit and ability." But the INS has ignored the requirement of law and often the findings of its own district directors, to broaden the interpretation in a way that has permitted a flood of foreigners into the professional job market, he emphasized.

Professional workers make up 16 percent of the American workforce, the DPE said, and recent statistics make clear that "market conditions for professional workers . . . are deteriorating."

"According to the Bureau of Labor Statistics, supply will outstrip demand in many professional occupations throughout the 1980s," Golodner told the INS. "In several fields, over half of the new PhDs cannot find the type of employment for which they have been trained. BLS has predicted that in the current decade as many as one of every five new college graduates will be underemployed"—forced to take jobs requiring less than their level of education and training.

With the supply of professionally trained people already outpacing the economy's ability to employ them properly, the INS was told, the proposed rules "pose an additional threat to members of the American professional workforce."

Unsupported policy

Golodner said it was "patently absurd and contrary to the plain meaning" of the law for the INS to say that recently graduated engineers and computer programmers, those who have just received a teachers' certificate or nurses who have just passed a state board examination "are persons of distinguished merit and ability."

Beyond that, he stressed, there is no requirement that aliens receiving these special visas will be paid prevailing wages. "They can work here for what they please and undercut the wages and benefits of similar American workers," Golodner declared.

He cited a 1981 case in which 15 alien engineers holding the special visas kept their jobs at a General Electric Co. plant in Lynchburg, Va., while 169 American engineers were being laid off.

One-sided decisions

Golodner said the INS has reached its decisions in favor of alien workers without going through any labor certification process and, in most cases, without giving unions an opportunity to argue against a particular action.

In 1975, Golodner pointed out, 15,550 "distinguished merit and ability" visas were issued; by last year, the number had skyrocketed to 54,426. Thousands of these immigrants, he said, are working "unbeknown to the general public, the American workers with whom they are competing, or their unions. They are here because of INS decisions made, in effect, in secret and based upon the wholly biased allegations" of the immigrants and their employers.

The DPE called for advance notification that petitions for these visas have been filed, to give workers and their unions an opportunity to present relevant information so that the INS has all of the facts before it acts. This, Golodner said, would "do much to improve the integrity of the system."

The department is comprised of 27 national and international unions, representing over 3 million professional and technical workers.

Aliens awaiting documentation get labor's help in workplace

Los Angeles—A union coalition is helping one million undocumented aliens in southern California to get and keep jobs while waiting for amnesty under the 1986 immigration reform law.

The campaign is keyed to providing these workers with simple forms with which to notify employers that they expect to be granted legal status under the law. The forms will take the place of formal work permits—documents that the Immigration & Naturalization Service has stopped issuing, claiming that the INS system is jammed up as it prepares for the legalization process.

The use of these "self-issued work permits" was built into a court-approved settlement of a suit against Atty. Gen. Edwin M. Meese. Unions, religious, social welfare and immigrant rights groups charged that, without the permits, workers were being denied employment or subjected to wholesale firings by employers claiming they feared sanctions for hiring illegal aliens.

Details spelled out

The announcement of the plan to provide undocumented aliens with the notification forms was made at a joint press conference by Ernesto Medrano, coordinator of the Los Angeles County AFL-CIO's immigration assistance project; Rick Icaza, president of Food & Commercial Workers Local 770; Rev. Louis Olivares, who chairs the Los Angeles Coalition for Humane Immigration Rights, and Luz Elgna Monteon of the Labor Community Immigration Network.

Undocumented workers will also get an information leaflet detailing their rights under the new law and explaining how the declarations concerning legalization should be filled out and presented to current or prospective employers.

Leaflets will also go to employers to make sure they get the message about the court-approved method for employing workers who will be seeking amnesty in the months ahead. The Justice Dept. is also supposed to distribute 500,000 brochures to employers explaining the notification process.

The settlement reached under the guidance of Judge Larry Karlton of the U.S. District Court for the Eastern District of California requires the INS to inform employers that hirings between now and Sept. 1 will not be challenged as long as aliens have indicated they will be seeking legalization.

The coalition made clear that if the INS doesn't resume issuing work permits by that date, it will go back into court and ask Judge Karlton for an extension to prevent job discrimination against undocumented workers while their applications for legal status are being processed.

Triangle fire tragedy

AFL-CIO Archivist Katharine Vogel, left, looks over exhibit commemorating the tragic fire 76 years ago at New York's Triangle Shirtwaist Co. The fire claimed the lives of 146 young women who were trapped by locked doors and blocked fire exits. Many jumped to their deaths. The haunting collection of photographs, news accounts and other items was assembled by the Ladies' Garment Workers and the Fashion Institute of Technology. The George Meany Archives will have it on display at AFL-CIO headquarters through Apr. 23.

Jobless rate dips with drop in workforce

Continued from Page 1

producing sector" in March, Norwood reported.

"Employment in durable goods manufacturing was somewhat weaker than in the nondurable industries," the BLS commissioner testified. "After growing sharply in the first two years of recovery, employment in durable manufacturing generally has been weak. Nondurable manufacturing jobs picked up in the last quarter of 1986 but have shown little overall growth this year."

BLS said that 52 months after the economy bottomed out from the depths of the Reagan Recession, only half the 1.8 million durable manufacturing jobs lost and only three-fifths of the 500,000 lost jobs in the nondurable field have been regained.

Much of last month's industrial job losses were in the automobile, electrical and electronic equipment fields—areas under sharp attack from foreign imports.

The American Electronic Association reported that employment in that industry fell 1.6 percent last year, the second annual decline.

GM shutdowns

And General Motors Corp. shut down one-fifth of its automobile assembly plants for at least a week because of a glut of inventories, idling 28,100 Auto Workers at facilities in Pontiac, Hamtramck and Flint, Mich., Tarrytown, N.Y., Wentzville and Leeds, Mo., Oklahoma City, Okla., and Oshawa, Ontario.

Virtually all of the March employment gains occurred in the service-producing industries. Two-thirds were in business and health services, and the rest were spread among finance, insurance, real estate and retail trade.

Unemployment rates in March were either unchanged or little different from those of the previous month. For both adult men and women, the jobless rate was 5.8 percent. It was 5.6 percent for whites, 13.9 percent for blacks, 9 percent for Hispanics and 18.1 percent for teenagers.

Pilots caution Washington passengers of Eastern's unsafe policies.

Pilots warn of safety hazards in Eastern's pursuit of profits

Flying Eastern Airlines could be hazardous to the public's health, the Air Line Pilots warned, charging management with neglecting safety in pursuit of profits.

ALPA accused Eastern of unilaterally implementing a new absenteeism policy that has pressured pilots to report to work when sick, coerced them into working more hours than permitted by federal law, deferred maintenance and introduced new equipment without giving pilots adequate training.

The union set up informational picket lines at airports in Washington, Miami, Atlanta, Chicago, New York, Philadelphia and Orlando, Fla., passing out leaflets accusing management of a "bottom-line mentality" that pursues "profitability at any cost." The pilots pledged that they would work to ensure "maximum safety procedures on all our flights."

The dispute is part of the continuing confrontation between Eastern's new owner—Frank Lorenzo, president of Texas Air Corp.—and the unions representing its pilots, mechanics and flight attendants. ALPA President Henry A. Duffy denounced the latest scheme as part of Lorenzo's "overall anti-labor policy."

In other developments in the turbulent airline industry:

- The Machinists called on Congress to to restore Eastern to its rightful owners—its 40,000 employees.

Testifying before the Senate Banking, Housing & Urban Affairs Committee, Charles E. Bryan, president and general chairman of IAM District 100, charged that Lorenzo engaged in a "clandestine takeover" of the carrier. He noted that he and three other employee members of Eastern's board of directors were excluded from the meeting at which Lorenzo wrested control of the corporation.

Eastern's unions offered to buy the airline at a price higher than the one ultimately paid by Texas Air and they are now suing to undo the takeover. But, Bryan pointed out, the judicial process is "complex and time consuming," and relief could be delayed for years.

- ALPA offered to purchase United Airlines for $4.5 billion in response to speculation that the parent company, UAL Inc., might sell off some of its diversified holdings that include Hertz Corp., Westin Hotel Co. and Hilton International Co.

The union said it would buy the air carrier and its computerized reservation system for a combination of cash, notes and assumed debts and would commit a minimum of $300 million of its pension plan assets to purchase stock in the airline. ALPA said it would offer ownership participation to other unions at United.

- Vacating an injunction obtained by the unaffiliated Teamsters and the Independent Air Transport Employees, Supreme Court Justice Sandra Day O'Connor allowed the merger of Delta Airlines and Western Airlines to take place.

The injunction was issued by a three-member panel of the 9th Circuit U.S. Court of Appeals. It ruled that Delta was wrong in asserting that the takeover "extinguished" Western's union contracts that contained strong successorship language negotiated in 1984 in exchange for wage concessions. The agreement provided for continued representation, labor protective provisions and the right to approve the merger of seniority lists.

Court procedure

Under O'Connor's ruling, Delta must file a formal appeal of the appellate court's decision. If the high court then agrees to review the case, the stay will be put back into effect until a decision is rendered.

Meanwhile, the U.S. District Court for the District of Columbia refused a petition filed by a third union at Western, the Flight Attendants, to compel arbitration of a similar successorship clause in its contract. It cited National Mediation Board policy that union certification at an acquired airline ends on the integration date.

AFA has appealed the ruling. The NMB currently is reviewing its policy and expects to issue a new standard soon.

Court upholds privacy rights in public jobs

Continued from Page 1

Amendment rights that cannot be breached by their supervisors on a wholesale basis."

The high court held in a 5-to-4 decision that a supervisor's search of a government worker's desk must be guided by a "standard of reasonableness."

Justice Sandra Day O'Connor—in an opinion in which Chief Justice William H. Rhenquist and Justices Byron R. White and Lewis F. Powell Jr. joined—emphasized that "individuals do not lose Fourth Amendment rights merely because they work for the government instead of a private employer."

Justice Antonin Scalia concurred with the action in ordering the case back to a lower court for hearing on the evidence, but criticized the "reasonableness formula" proposed by O'Connor because "it produces rather than eliminates uncertainty in this field."

Formula challenged

In a dissenting opinion, Justices William J. Brennan Jr., Thurgood Marshall, John Paul Stevens and Harry A. Blackmun also criticized the "reasonableness formula," warning that it could give legality to almost any workplace search by a public employer. They emphasized that the "traditional warrant and probable-cause requirements" should not have been ignored.

McEntee said that AFSCME agreed with the minority opinion. "A traditional standard of probable cause should apply," he said, and the "reasonableness" test proposed by O'Connor "is so vague and open-ended that it covers almost anything."

The case involved the claim of Dr. Magno J. Ortega, a psychiatrist at Napa State Mental Hospital for 17 years, who said his privacy was invaded when hospital authorities searched his desk while investigating complaints of harassment by two female employees and charges that he coerced residents to help pay for his personal computer.

Labor's support helps Washington to Chicago victory

Chicago Mayor Harold Washington, welding together a coalition of black, Hispanic and white voters, was re-elected to his second term—the first Windy City mayor to win back-to-back terms since the late Richard J. Daley.

Running with COPE endorsement, Washington polled 53 percent of the vote to beat back challenges from two former Democrats—Councilman Edward Vrdolyak, who ran under the banner of the Illinois Solidarity party and Northwestern University Prof. Don Haider, who was drafted as the Republican candidate.

Vrdolyak drew 42 percent of the vote while Haider managed to win only 4 percent. Thomas Hynes, who dropped his third-party bid 36 hours before the polls opened, got 1 percent.

In San Francisco, Democrat Nancy Pelosi garnered the most votes in a 14-candidate race to replace the late Rep. Sala Burton (D)—but didn't get enough votes to avoid a runoff.

Pelosi received 36 percent of the votes cast in the special election while San Francisco Supervisor Harry Britt, another Democrat, received 32 percent. In a June 2 runoff election, Pelosi will be pitted against the top Republican vote-getter, Harriet Ross. She received 2.8 percent of the vote.

Pelosi, the daughter of former Maryland Congressman and Baltimore Mayor Thomas D'Alessandro Jr. (D), was endorsed by Burton before her death.

Syracuse council endorses Coors boycott

Syracuse, N.Y.—The City Council unanimously endorsed labor's boycott against the Adolph Coors Co. and urged citizens "to take an active interest" in the campaign against Coors's anti-worker policies.

The council resolution reviewed Coors's history of violating workers' human and civil rights by its demands for "lie detector" tests and physical searches and repeated incidents of discrimination against minority and women workers.

Noting that the brewer is seeking to expand Coors sales in upstate New York, the council pledged to support the area boycott—sponsored by the Syracuse AFL-CIO—until "all wrongs have been justified and all involved have received their final justice."

The Price of Neglect

MUST IT ALWAYS take a disaster to compel action on festering problems?

A bridge collapse in New York state, less than a month after the near-collapse of a heavily travelled bridge in Missouri has swung public attention back to the long-neglected deterioration of the nation's aging infrastructure.

It's not as if no one was paying attention to the problem. Periodically, documented and detailed public reports have warned that lack of replacement and inadequate maintenance threatened the underpinnings of industrial America and the viability of its cities.

Every AFL-CIO convention in this decade has addressed the problem.

"The urban infrastructure of sewers, water systems, streets and bridges needs to be renewed and the nation's transportation network must be upgraded," the 1981 convention affirmed. Railroad, highway, port facilities and airports are in "desperate need of rehabilitation," and urban transit systems need modernization, it said.

The 1983 convention warned in even more urgent terms that "the nation's infrastructure continues to deteriorate" as a result of inadequate public investment.

The most recent convention, in 1985, called for a "priority program of public investment in our eroding infrastructure."

WHILE THE federal government is not the sole source of funds, nor should it be, the problem is national and requires national leadership.

This Congress, to its credit, has shown signs of accepting that premise. The Reagan Administration, to its discredit, has not.

One of the first acts of the 100th Congress was to pass a clean water bill to help state and local governments build efficient sewerage systems. President Reagan vetoed it as a "budget-buster." Congress promptly overrode his veto.

The scenario was repeated this month when the President vetoed the highway construction and mass transit funding bill, which includes funds for bridge rehabilitation. It, too, was a "budget-buster," Reagan complained, although the program is funded by a gasoline tax that cannot be used for other purposes. Again, Congress was forced to override the President's veto.

How many more messages must it send before the President turns on his hearing aid?

How Many Deaths?

THE BOSTON GLOBE reports that the district attorney's office in Middlesex County, Mass., is considering whether to bring criminal charges against a contractor in the death of an apprentice roofer.

The newspaper account makes very clear that if there is criminal liability, the co-defendant should be the Occupational Safety & Health Administration, the agency Congress set up to protect America's workers on the job.

It relates the efforts of Martin Ploof, the business agent for Carpenters Local 475, to get a contractor to remedy job hazards during construction of an addition to a General Motors plant. It quotes the call he finally made to the nearest OSHA area office. "We've got a dangerous situation out here. This place is a mess. Someone's going to be seriously hurt or killed."

The OSHA representative told Ploof to submit a written complaint form and the agency would consider whether to make an inspection. "This is an emergency," Ploof insisted.

OSHA was adamant. Its economy-dictated guidelines bar inspections based on telephone complaints, even if the complaint alleges a "life-threatening condition." It will act only if the complaint alleges that workers are in "imminent" danger.

It wasn't all that imminent. It wasn't until four days later, while OSHA officials were processing Ploof's written complaint, that 19-year-old Martin Lawless fell to his death through an unguarded opening in the roof. Six days later, OSHA inspectors got to the site and issued citations for some 80 safety violations.

Is it any wonder that building trades unions are seeking passage of a bill to set up a separate agency within OSHA to tighten enforcement of construction safety standards?

Washington Window

Takeover mania undercuts everyone but dealmakers

By Press Associates

Nearly every day brings news of Wall Street wheeling and dealing—a mullti-billion-dollar corporate takeover, a "raider" who bleeds a healthy company through "greenmail," a "leveraged buyout" to fend off a "hostile" merger bid, a big fish swallowing a small fish, a small fish swallowing a big fish.

Who are the winners and who are the losers? The winners clearly are the rich Wall Street dealmakers who get richer off their deals—the raiders, brokers, bankers, lawyers and "arbitrage" speculators like Ivan Boesky.

Boesky, by the way, didn't get into trouble from raiding other companies or extorting greenmail, a legal payoff for backing away from a takeover move. It was just that he went too far by pocketing extra millions from illegal "insider trading" on the tangled web of deals he was spinning.

Who then, are the losers? They are harder to identify because they normally don't make headlines or appear on TV news. But evidence has been accumulating that, more often than not, the losers are working people, communities, consumers and the nation's economy and financial stability.

In 1986, an estimated $150 billion was spent on takeovers and similar activities that produced no goods or services. It was just a paper shuffle of existing assets, amounting to nearly four times the amount spent three years earlier. It exceeded by $10 billion the amount which manufacturers invested in plant and equipment.

Human toll

The cost to workers and communities has grown, local and national trade union leaders told a House Employment & Housing subcommittee hearing which examined what Chairman Tom Lantos (D-Calif.) called "the human side of takeover mania."

Delbert Walsh, president of Glass, Pottery & Plastics Workers Local 252, told the panel that he and his fellow workers were "shocked and stunned" when Owens-Corning Fiberglas Corp. announced last October that it planned to close its highly profitable Barrington, N.J., fiberglass plant. The plant had been slated for expansion last year, Walsh said, when the company was confronted with a takeover attempt by the Wickes Corp.

Walsh, 48, said the average worker in the plant makes $12.56 an hour, is 45 years old, and has 17 years' seniority. "The guys are scared of going out and having to compete with a 21-year-old. I'm scared too," Walsh testified. "Since the shutdown notification, we've had two deaths by heart attack."

Law of the jungle

Airline industry deregulation in 1978 "reintroduced the law of the jungle," Machinist Airline Coordinator Bill Scheri told the subcommittee. Mergers and takeovers affecting 33 airlines cut the competition that deregulation was supposed to promote, he said. Meanwhile, air safety and service to the public has deteriorated, thousands of jobs have been lost, wages and working conditions have been lowered, and lives have been disrupted through forced transfers, he added.

Tom Higginbotham, chairman of IAM District 142 in Missouri, said takeovers like that of Ozark Airlines by TWA has produced "innumerable examples of human suffering." He cited the case of Shirley Yakel, a former Ozark technical clerk, who was told that she had to move from St. Louis to another city to keep her job. With her husband suffering from terminal cancer, she could not relocate. "The company's response? On Oct. 26, 1986, Ms. Yakel was laid off, leaving her and her husband with no means of support and, worst of all, no insurance," Higginbotham said.

Legislation to dampen merger mania and curb such practices as greenmail is getting a good rehearing in this session of Congress, after having died in the last session. The time for Congress to act is past due.

Every Year, Over 2 Million Americans Lose Their Jobs Due To Unfair Trading Practices And A Runaway Trade Deficit:

Do You Know Where Your Congressman Is?

America's trade problems have reached catastrophic proportions. Last year's trade deficit was a staggering $170 billion. For manufactured goods alone, the U.S. has gone from a positive balance of $13 billion in 1980 to a deficit of $145 billion in 1986. To finance these imported goods, the United States has had to borrow from abroad. $256 billion was borrowed in 1986, and economists project that this figure will reach $1 trillion by the early 1990s.

Most American workers have already begun to feel the effects of this massive trade imbalance:

- Foreign imports contributed the loss of 13.1 million American jobs between 1981 and 1986; 2.5 million jobs were lost in 1986 alone.
- Our industrial base has been eroded, families and their communities shattered.
- Our GNP growth is being sapped: money borrowed from abroad must be repaid with interest, and is not available for the development of U.S. business and jobs.

The fact that nearly all other countries keep tight control over their domestic markets, means that many of our trading partners are enjoying huge trade surpluses at our expense. Many also engage in other unfair trading practices, such as dumping, industrial targeting and subsidies, which have decimated large sectors of the American manufacturing industries.

As it was first introduced in the House, H.R.3, this year's omnibus trade bill, went a long way toward providing a solution to these problems. However, the most vital provision of the bill—one ensuring the reduction of America's massive trade deficit—was omitted from the version approved by the House Ways and Means Committee. Representative Richard Gephardt (D-MO), a principal architect of the original bill, will offer a compromise amendment on trade deficit reduction when the measure reaches the floor.

The Gephardt Amendment

Briefly, here is how the Gephardt amendment works: First, the International Trade Commission (ITC) would be required to determine which of our major trading partners has an "excessive trade surplus" with the United States (175% of imports over exports). Second, the U.S. Trade Representative (USTR) would then determine if that those countries also have patterns of unfair, unjustified, unreasonable or discriminatory trade practices which affect the well being of the U.S. economy. If *both* of these conditions are met, the USTR and the President are given a period of eight months to negotiate with the identified countries in order to reduce their surpluses. If, as a result, the country eliminates its unfair trade practices or eliminates its standing as an "excessive trade surplus" trading partner, there is no further action required under the Gephardt amendment. If, however, a country fails to act, the President is required to reduce our deficit with that country by 10 percent per year starting in 1989.

It is important to note that under the amendment those countries with excessive surpluses are given every opportunity to engage in free and open trade. Other monetary or multilateral trade negotiations are encouraged, not inhibited.

Currently, our trading partners have no reason to change their way of doing business with us. The Gephardt amendment is vital to our trade policy. It is the "stick in the closet" which our country and our economy so sorely needs.

Floor Fight Coming Soon— If You Have Not Written To Your Representative, Please Call Today!

You can find the phone number of your representative's District Office by looking under his/her name in the Business White Pages, calling Information, or calling his/her Party's local office.

Call your representative's office and urge them to vote for the Gephardt Amendment when H.R. 3 reaches the House floor. Tell them that uncontrolled U.S. trade deficits contributed to the loss of 13.1 million American jobs over the last five years, and that real trade reform is of the highest priority for working men and women who care about their country and their jobs.

Tell them that if they are serious about dealing with America's trade crisis, they will support the amendment on the floor.

Investigation finds OSHA near 'total paralysis'

By Arlee C. Green

A federal report warning that the Occupational Safety & Health Administration "risks total paralysis" recommended needed changes in agency operations. But these reforms will be "meaningless until there is a commitment from top OSHA officials and the Reagan Administration to carry them out," the AFL-CIO said.

Margaret Seminario, associate director of the federation's Dept. of Occupational Safety, Health & Social Security, called the report a "useful study, although its findings are not surprising. We've known for a long time that OSHA has no priority system for determining which standards to work on and that it needs much more in the way of funding and staff to get the job done."

The 199-page report was done at OSHA's request by the Administrative Conference of the United States, an independent federal agency. OSHA has been reviewing the report since February, and expects to develop some form of response in the near future, the agency said.

The report keyed on the major complaints organized labor has had with the agency. It attributed long delays in setting standards to the inability or unwillingness of upper level management to make tough decisions and urged the "infusion of fresh blood" into OSHA, which it said is underfunded, understaffed and lacking direction.

A similar report by the Government Accounting Office in August 1985 cited OSHA's need to "establish a credible rulemaking process" and suggested it set up a special committee to determine how to expedite rulemaking. The report noted OSHA had long been accused of foot dragging in setting standards.

Seminario emphasized that organized labor has for years urged the agency to establish an effective priority system and to "bring some order to its standards-setting process." She expressed the hope that OSHA officials will "take the findings to heart and take the needed steps to improve the agency."

A lack of commitment by the Reagan Administration over the past six years along with a continual turnover in agency administrators has set the tone at OSHA, Seminario said, and a report that warns of "total paralysis" can be seen as a "grade of

Variable rate held threat to pension plans

An across-the-board increase in insurance premiums for single-employer pension plans is preferable to the Administration's variable rate plan, labor witnesses asserted at House hearings.

The government's Pension Benefit Guaranty Corp. wants to charge substantially higher premium rates for underfunded plans which constitute the greatest risk. PBGC told Congress it needs additional revenue to meet heavy obligations it incurred in recent years, mostly because of the collapse of several large pension plans in the depressed steel industry.

PBGC also wants to stiffen minimum funding standards and to allow employers to take some but not all "excess assets" out of a pension plan without terminating it.

Lawrence Smedley, associate director of the AFL-CIO Dept. of Occupational Safety, Health & Social Security, said both minimum funding standards and premium costs must "strike a balance" between the need for sound financing and the cost burden on a struggling company.

Soaring cost

The present pension insurance premium for single-employer plans is a flat $8.50 a year for each worker covered. The PBGC plan could add $100 per employee.

Employers in distressed industries, who could least afford the added cost, would be most affected by a sharp rise in premium costs, Smedley told a House Ways & Means subcommittee.

Similar concerns were expressed by Steelworkers Legislative Director John J. Sheehan and Auto Workers Social Security Director William S. Hoffman.

A switch to a risk-related premium would be "a profound departure from the social insurance concept adopted by Congress" when it passed the pension reform law in 1974, Sheehan noted.

He pointed out that a substantial cause of underfunding of steel company pension funds has been the heavy one-time drain caused by early retirements resulting from the restructuring of the industry. As an

Trade deficit balloons

Nurses settle

A walkout by Los Angeles-area nurses who staff Red Cross blood collection centers ended after ten days with a new three-year agreement. An all-night bargaining session at Los Angeles AFL-CIO headquarters resolved the impasse between the Red Cross and Service Employees Local 535 over wages, scheduling and staff assignments. Blood donors joined the striking nurses in picket line demonstrations. (Story on Page 2.)

Shortfall hits $15 billion as imports surge

By Gene Zack

The nation's foreign trade deficit ballooned to $15.1 billion in February—the third largest monthly gap in history—despite Reagan Administration claims that the plummeting U.S. dollar would stem the tide of red ink.

The Commerce Dept. conceded that the month's shortfall was $1.2 billion above the average monthly deficit in 1986—the year in which the nation's trade imbalance roared to a record-shattering $170-billion high under a surge of imports.

The latest dismal figures, issued after a two-week delay, brought a renewed call from the AFL-CIO for strong congressional action to lift the crushing trade burden from the back of the American economy.

Crisis deepening

"After two years of a falling dollar, the trade situation continues to worsen," said Federation Research Director Rudy Oswald. And the countries against whose currency the U.S. dollar has fallen the most—Japan and West Germany—"are the countries where our trade deficit has mounted the most," Oswald stressed.

The Administration's theory was that a falling dollar would push up the cost of imports and lower the foreign price for American-made goods. But in the past 24 months, Oswald pointed out, the dollar has declined 45 percent against both the Japanese yen and the West German mark, while the trade deficit with each country has risen by a wider margin.

White House spokesman Marlin Fitzwater, in California with the vacationing President, continued to insist that "the falling dollar will have a favorable impact" on the trade balance. Fitzwater conceded,

Factory and housing slump triggers economic worries

Declining industrial production and housing starts, rising producer prices, lackluster retail sales and rising mortgage interest rates added up to a new period of economic uncertainty at the end of the first quarter of 1987.

In the nation's manufacturing sector, pummelled by huge trade deficits, output dropped three-tenths of 1 percent in March. It was the biggest decline in 10 months, the Federal Reserve Board said.

Last month's setback virtually wiped out a five-tenths of 1 percent increase in industrial production recorded in February. The government said the weakness reflected widespread declines in factory operating rates in a variety of industries. The blow fell heaviest on the automobile industry, as production skidded 3 percent last month.

The Bureau of Labor Statistics reported a four-tenths of 1 percent jump in producer prices in March—the third successive monthly increase. The index rose one-tenth of 1 percent in February and six-tenths of 1 percent the previous month.

IBP's scab recruiting drive sputters

By Candice Johnson

A nationwide search for scabs has been slow-going for IBP Inc. The company wants to replace 2,800 Food & Commercial Workers that it locked out of the Dakota City, Neb., plant last December.

That lockout became a strike last month after IBP slashed wages and benefits further, rather than negotiate with the UFCW.

Recently, IBP's hunt for replacement workers moved to Texas, where its newspaper ads in cities with high unemployment rates—including Beaumont, Dallas, Houston and Brownsville—offer "employment to those who want to work."

The Beaumont Enterprise reported that IBP was running want ads in newspapers throughout the country because it was having trouble replacing the Dakota City workforce. The Enterprise also noted UFCW's charges that IBP forced the lockout so it could shut down operations for a $5-million renovation project.

Wage cut reopening

After the renovations were completed, IBP reopened the plant at even lower wages, the union pointed out.

IBP, the nation's largest beef processor, is scouring refugee centers in the state, seeking to hire recent immigrants from Southeast Asia. About 500 of the UFCW strikers are immigrants from Vietnam, Laos and Cambodia.

In a letter to more than 500 refugee organizations, President Robert Harbrant of the AFL-CIO Food & Allied Service Trades Dept. called the plant "a dangerous workplace, especially when the bulk of the workforce is inexperienced." He urged the groups not to place or refer workers to the IBP plant until the strike is settled.

"IBP is having a difficult time" finding workers to fill the slaughtering and processing jobs, and John Mancuso, assistant to the director of the UFCW's pack-

Sec.-Treas. Donahue stresses conference goal of two-way communication.

COPE Director John Perkins.

New York State AFL-CIO President Ed Cleary.

Federation staff members Dorothy Shields, Ken Young, Arnold Cantor and Peggy Taylor detail impact of the budget deficit run up by President Reagan.

Two-way flow of ideas highlight conference

New York—Seven hundred union members from 13 states took part in two days of workshops and discussions dealing with national issues affecting America's workers and the process the AFL-CIO is using to assess the presidential candidates and gauge membership support.

The occasion was the second in the series of four AFL-CIO regional conferences being held this spring. Each conference is structured to give active union members an opportunity to take part in a two-way exchange of views with federation officers and staff experts.

Labor's diversity is a source of the trade union movement's strength, AFL-CIO Sec.-Treas. Thomas R. Donahue told the participants.

Rotating workshops dealt with foreign trade and the legislation awaiting House action, the budget deficit, human needs and the political process.

The first of the regional conferences was held in San Francisco last month. Next on the agenda is a May 29-30 conference in Chicago for 11 midwestern states. The series will conclude in New Orleans June 5-6, with participants from 12 southern and southwestern states.

The New York program drew union members from Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, West Virginia and the District of Columbia.

Probe warns of OSHA 'paralysis'

Government report cites long delays, lack of leadership

Continued from Page 1

'A' for those in the Administration bent on neutralizing OSHA."

What is needed, Seminario stressed, "is a commitment from the top." Certainly, the agency needs more in the way of funding and staffing, she said, pointing to severe budget slashes made throughout President Reagan's first term.

The study, conducted by Thomas O. McGarity of the University of Texas School of Law and Sidney A. Shapiro of the University of Kansas School of Law, proposed two kinds of reforms for the agency—a better priority setting system and new management tools to enhance accountability.

At present, OSHA can pursue no more than 15 to 20 major rulemaking efforts at a time and can take on only about two to five new projects a year, the report found. Its regulatory agenda for health standards is "determined in an ad hoc fashion by outsiders," including worker and consumer groups, Congress, the White House, the Office of Management & Budget and the Environmental Protection Agency.

Vying for attention

The report likened OSHA to a company expecting its business to come in the front door from "criteria documents, recent petitions, information from the field, and recently amended recommendations from private standard-setting organizations." But meanwhile, the OMB and the White House are pushing their recommendations through the back door, and "Congress and the courts are forcing some rulemaking petitions and other 'hot' topics through the side window."

OSHA long ago lost control over its "front-door agenda," the report declared, and "it now risks total paralysis as its limited capacity to produce rules becomes overwhelmed by the press at the side window."

Seminario pointed out that it has been labor and consumer groups, aided by the courts, that have produced the only health standards set under the Reagan Administration.

Labor pressure

The report held that OSHA has been more effective in setting safety regulations than in providing health standards. Seminario disagreed, saying, that "despite the chaos in the setting of health standards, final rules do come out, resulting mainly from labor pressure through the courts."

The study suggested that OSHA "make priority-setting a priority" by naming a committee to determine an initial ranking of the topics currently before the agency within six months. It further urged establishing procedures for dealing with petitions for emergency action and for referrals from other agencies.

The need for greater coordination was stressed by the report which cited an interagency regulatory liaison group set up under the Carter Administration as an example of effective cooperation. The "most foreboding obstacle" to reviving such a group, however, is "likely to be the OMB, which perceives itself as playing this coordinating role." The report said the OMB has had since 1981 to fill the gap, and "it has not done so."

The study identified a half dozen severe management problems that it said plague OSHA's internal operations, including the inability or unwillingness to make timely decisions on difficult issues. Also lacking, it said, are procedures for setting and monitoring internal deadlines, incentives to meet deadlines, a procedure for "policy interchange" between management and staff, and coordination among essential federal agencies.

A computerized "action tracking system" similar to that used by EPA was recommended by the study. It also urged upper level management to stress that "OSHA's task is an important one that requires commitment" to expeditious implementing of standards.

OSHA was strongly urged to stop using "advanced notices of proposed rulemaking" to solicit information because, the report said, they "rarely result in the production of useful information," and further delay promulgation of standards.

ILO presses world action on housing

Geneva—Government, labor and business representatives called for a sharp step-up in the stagnating construction industry to end a global crisis that finds more than a billion people lacking decent housing.

The demand for action came from delegates to the 11th session of the Building, Civil Engineering & Public Works Committee of the International Labor Organization.

Representatives from 30 countries welcomed the United Nations proclamation designating 1987 as the International Year of Shelter for the Homeless and adopted a resolution urging the creation of "adequate and affordable housing" that would meet the needs of home buyers and end the employment slump in the industry.

AFL-CIO Vice President John T. Joyce, president of the Bricklayers and worker vice chairman of the committee, told delegates that the world faces critical economic problems, including "growth rates far too low to generate full employment, the debt burden, trade imbalances, unstable exchange rates and real interest rates which are still much too high."

Stumbling growth

In addition to meeting the needs of those without adequate shelter, Joyce said, the construction industry can stimulate economic recovery by replacing an "inadequate and deteriorating" infrastructure.

The price of improving highways, bridges, water supply and sewage treatment systems, harbor and port facilities and railroads is high, he noted, but failure to address the problem will add to future costs and will damage productive sectors of the economy.

Joyce emphasized that the challenge is not simply to create jobs but to make sure that they are "good jobs, secure jobs, with decent pay, working conditions, health and safety protections and social security coverage, and full observance of freedom of association."

Delegates called for a global study of the social and labor practices of multinational enterprises in the construction, building materials, civil engineering and public works sectors, with special attention to the issue of the use of migrant labor and "clandestine work" in the less-developed countries.

They also agreed to devote next year's session to such issues as vocational training and retraining in the industry and the impact of productivity and technology. In addition, a tripartite group will examine the problem of foreign construction workers employed in some Middle East and Far East countries.

Ewan Clague dies, former BLS chief

Ewan Clague, Commissioner of Labor Statistics for the Labor Dept. from 1946 to 1965, died Apr. 12 in a Bethesda, Md., nursing home of Alzheimer's disease. He was 90 years old.

Clague headed the Social Security Board's Bureau of Employment Security for 10 years prior to being named to the BLS post by President Truman. He was subsequently reappointed by Presidents Eisenhower and Kennedy.

For a decade after leaving government service, he taught at the Universities of California at Los Angeles, Michigan State, Pennsylvania, New Hampshire and Drexel University.

Nurses ratify pact with blood centers

Los Angeles—Nurses who oversee blood donations at Red Cross centers and bloodmobiles ended a 10-day strike after ratifying a new contract that resolved their staffing and salary concerns.

The health care workers—registered and licensed vocational nurses—are members of Service Employees Local 535.

The 225 nurses walked off the job after the Red Cross indicated it wanted to expand the number of donors per nurse from three to four. Local 535 members said that move would jeopardize the safety of donors and would impede efforts to screen for high-risk diseases.

The new three-year agreement, ratified by 70 percent of the members, maintains the one-nurse-for-three-donors ratio but permits preparation work for a fourth donor.

The settlement calls for a 4-percent wage increase in each contract year and closes the pay gap between RNs and LVNs with an additional yearly raise for LVNs of 1.5 percent.

The AFL-CIO's nationwide blood donor campaign—in conjunction with the Red Cross—is continuing with plans for a major blood drive during August in the 43 target cities.

SEIU President John J. Sweeney is the federation's chairman of the drive.

Navy's role questioned in supplier firm lockout

Simplex demands givebacks from IBEW unit

Newington, N.H.—A lockout of more than 300 skilled Electrical Workers by the Navy's sole supplier of an undersea cable used to detect enemy submarines is in its ninth month, raising questions about the impact on national security and the Navy's role in the matter.

The House Armed Services Investigations Subcommittee, at the request of Rep. Joseph Brennan (D-Me.), asked the Navy whether lengthened repair times and delayed projects, caused by the use of scabs at Simplex Wire & Cable Co. during the lockout, have posed any threat to national security.

The subcommittee also asked whether work on a new cable surveillance system had been completed on schedule and how long it took to repair an older system that was brought back to Simplex last December. The repair project took six weeks instead of the normal three days, according to quality control inspector G. Stanley Raynes, a IBEW Local 2208 member who has worked 31 years at Simplex. The cable was damaged while reloading it on the ship and had to be repaired, he said.

The Navy said it wants to remain neutral in the dispute, but it apparently let Simplex revise repair and production schedules. When Local 2208 asked the Navy's assistance to bring the company back to the bargaining table, as it did in 1970, the Navy refused.

Local 2208 President N.E. Duplessie charged that "the Navy's in bed with Simplex. As far as I'm concerned, they are jeopardizing national security."

Schedules juggled

The Navy denied taking sides on the issue and claimed national security hasn't been affected by strike. It conceded that there had been some schedule shifts in contracts existing prior to the lockout, but that "to date no deliveries required by the Navy have been delayed."

The lockout began last July 30 when company security guards escorted members of Local 2208 out of the plant just one day before the workers voted 321-to-5 to reject a concession-laden final contract offer. Simplex sought to end seniority rights, change vacation, holiday, overtime and shift premium pay, and end restrictions on transfers. It also demanded that employees pick up the cost of medical premiums and accept a three-year wage freeze and a two-tier pay system.

A week later, Simplex offered workers a chance to return to work under conditions even more severe than those rejected in the contract offer.

Local 2208 members won unemployment benefits when the state Employment Security Dept. ruled the situation a lockout. The company appealed that ruling to the Rockingham County Superior Court.

State Labor Commissioner Vance R. Kelly, asked by the union to help mediate the dispute, expressed his frustration "that the management of Simplex continues to block the mediation or arbitration process." The burden of "breaking the stalemate that now exists lies squarely with Simplex."

Innocent victim

Newington, N.H.—A pet cat may have been the first casualty in Simplex Wire & Cable Co.'s lockout of 300 members of Electrical Workers Local 2208.

The mascot used to live in the plant's boiler room. But Charles Kelso, a union-busting attorney from Atlanta who represented Simplex in negotiations, told IBEW bargainers that the cat "has been terminated."

"This is war," Kelso said. "There will be casualties."

Calls to Simplex and Kelso to determine the cat's fate were not returned.

Members of HERE Local 17 and their supporters, including Frontlash volunteer organizers, picket the Radisson Plaza Hotel in Minneapolis.

Hotel workers in two cities hit by reneging employers

A trail of broken promises has left hundreds of hotel workers at the Marriott Marquis in New York without the union representation they desire and in Minneapolis the new Radisson Plaza Hotel has refused to rehire former union workers who were promised their jobs back following rebuilding of the hotel.

In a June 29, 1982, letter of understanding with the New York Hotel & Motel Trades Council, Marriott Corp. agreed to a "card check when authorization cards representing a majority of the non-management employees employed at the (Marquis) hotel are presented."

The council, for its part, agreed not to "take any action which interfers with the site preparation, construction or opening of the hotel." Now that the council, representing nine local unions, has a majority of representation cards signed, Marriott has broken the agreement.

It a letter to its workers, Marriott said the company officials "agreed to the contents of the letter because if they didn't, the union would have made the building of this hotel even more difficult that it was." Marriott told the council to get a representation election if it wants to bargain for the workers. In self-serving flag-waving, it told its employees, "the secret ballot is the cornerstone of our American democracy."

Marquis workers said they weren't surprised by Marriott's tactics. Room attendant Maria Paquin said at a recent meeting, "Now every worker in the hotel knows how unreliable Marriott's word is. They lie and now they've let all of their workers know it."

Management cops out

Meanwhile in Minneapolis, the Radisson refused to rehire 180 union workers left unemployed by the 1981 closing of the old hotel. Under an agreement with Hotel Employees & Restaurant Employees Local 17 at the time of the closing, management agreed to rehire workers with full seniority and benefits and agreed to a card count.

Last December, Radisson management began advertising for workers and has hired back only a few Local 17 members, according to local organizer Mick McGibbon. The hotel refused the union access to the workers during a two-week orientation and allows organizers contact with workers at "unsatisfactory" times, McGibbon said.

Recently, 700 union members and their families picketed the hotel to protest the Radisson's union-busting tactics. The Minneapolis AFL-CIO and the local Frontlash volunteers aided in setting up the rally.

Auto Workers set goals

Postal talks top '87 bargaining

Negotiations involving 600,000 postal employees open this month and contract talks affecting 480,000 workers in the import-beleaguered auto industry kick off in July, offering a preview of a year of intense collective bargaining for more than 1.7 million union members.

On Apr. 22, the Letter Carriers and Postal Workers will launch joint negotiations covering carriers, clerks and craft workers at the U.S. Postal Service, a day after the Laborers open talks for mail handlers. All three pacts expire July 20. The unaffiliated Rural Letter Carriers, whose contract runs until Jan. 20, 1988, won't begin bargaining until October.

At the top of the unions' agenda will be pay raises linked to increased productivity that saw overtime plunge 34 percent last year despite a 5-percent rise in mail volume. Negotiations will also center on the two-tier pay structure approved by an arbitrator after the 1984 talks deadlocked.

The unions will raise health and safety issues in light of the mass murder of 14 Edmond, Okla., postal workers in August 1986 and job-related injuries involving 125 workers exposed to toxic chemicals used to clean floors at an Oklahoma City, Okla., post office earlier this year.

Other issues

The talks will also focus on child care, more regular hours for part-time workers and a curb on the use of "casual workers" during the Christmas rush and other peak mail periods.

Unlike three years ago, when then-Postmaster Gen. William Bolger dug in his heels during contract talks, both sides expressed optimism about reaching a settlement at the bargaining table without having to resort to mediation, fact-finding or binding arbitration.

For the Auto Workers and Electronic Workers, gearing up for negotiations with Ford and General Motors, job and income security will be key issues. The negotiations come during a period of plant closures and a growing industry trend to shift work to outside suppliers and to move assembly operations to Mexico and other offshore plants to exploit low-cost labor.

"Guaranteed employment is a concept whose time has come," UAW President Owen Bieber told the union's bargaining convention in Chicago, as 3,000 delegates mapped negotiation strategy for new contracts to replace those expiring Sept. 14.

"We don't say it's possible to win guarantees that the exact number and nature of jobs existing today will be there tomorrow," Bieber said. "It is possible however to demand of employers that our new agreements provide every worker with a guaranteed future."

Broad agenda

Also on the table will be such issues as safeguards for workers whose jobs are shot out from under them by plant closures, improved profit sharing—particularly at GM where workers came up empty handed despite 1986 corporate earnings of $2.9 billion—and wage gains geared to what Bieber called "spectacular" increases in productivity.

Meanwhile, the Steelworkers reopened contract negotiations with LTV Corp., a year after giving the financially troubled steelmaker deep concessions. Although the present contract runs through August 1989, the union went go back to the bargaining table to preserve pension and insurance benefits threatened by LTV's Chapter 11 bankruptcy proceedings.

Also under way or scheduled to open this month are negotiations involving 26,000 State, County & Municipal Employees, Teachers, Fire Fighters and Service Employees with the District of Columbia government; 15,000 Service Employees with the Greater New York Health Care Facilities Association; 26,000 Laborers and Carpenters with the New Jersey Building Contractors Association, and 24,000 Food & Commercial Workers at Food Town, Shop Rite, Grand Union and Pathmark in New York City.

Other negotiations, to replace contracts expiring this month, include:

- 21,500 Laborers, Carpenters, Operating Engineers and Iron Workers with Associated General Contractors in Colorado, Connecticut, New Jersey, Columbus and Dayton, Ohio, and Marquette, Mich.
- 6,200 Carpenters and Painters with the Cleveland Contractors and Employers Associations.
- 5,300 Electrical Workers with the National Electric Contractors Association in Washington, D.C., Nassau and Suffolk Counties, N.Y., and Minneapolis.
- 3,500 Laborers and Carpenters with the North Texas Contractors Association.
- 7,300 Electrical Workers, Plumbers & Pipefitters and members of the unaffiliated Utility Co-Workers Association with New Jersey's Public Service Electric & Gas Co.

The rest of 1987's bargaining calendar looks like this:

May—18,000 Steelworkers at Newport News Shipbuilding & Dry Dock.

June—16,000 UAW members at Rockwell International, 20,000 Carpenters with the New York City Building Construction Contractors and 300,000 members of public employee unions in New York City.

August—65,000 UFCW members with the California Food Employers Council and 26,000 Teachers with the Chicago Board of Education.

September—56,000 Clothing & Textile Workers for a national contract with the Clothing Manufacturers Association USA, 16,000 UFCW insurance agents with Prudential Insurance Co. of America, 17,000 Service Employees with Los Angeles County and 9,000 Bakery, Confectionery & Tobacco Workers with Nabisco.

December—12,000 Machinists at Eastern Airlines and 22,000 Electrical Workers with the Northern States Power Co.

Rail unions assail grievance fund cut

Railroad unions sharply denounced Reagan Administration proposals to slash 25 percent of the National Mediation Board budget by scrapping a half-century-old practice of financing grievance arbitration.

Richard I. Kilroy, president of the Railway & Airline Clerks and chairman of the Railway Labor Executives Association, pledged a vigorous fight on Capitol Hill to prevent dismantling of the machinery for resolving railroad industry disputes.

"Rail labor has had to fight continually in Congress to keep National Mediation Board and National Railroad Adjustment Board funding at adequate levels," Kilroy said. "We intend to press Congress to provide the necessary funds in order to carry on the board's responsibilities."

NMB Chairman Charles L. Woods told the House Appropriations Subcommittee on Labor the Administration had concluded that full funding of the grievance process "is not fiscally justifiable in an environment of limited budgetary resources."

Although railroad unions and management are exploring ways to restructure the way disputes are resolved in the industry—including expedited arbitration boards, boards that hand down bench decisions and ones that reach findings without hearings—BRAC stressed that these discussions were not designed to replace the NMB grievance procedure.

Paying for Liberty

The Reagan Administration, which portrays itself as the taxpayer's best friend, has been pushing for higher "user fees" as an alternative to tax increases. But when the White House tried to sock it to visitors to the Statue of Liberty, an outraged Congress rebelled.

The Senate unanimously voted to revoke the $1 fee the National Park System imposed last February for visitors to the statue and its associated immigration museum. Previously the only charge was a 25-cent fee for persons who used the elevator rather than the stairway to get to the top.

Sen. Bill Bradley (D-N.J.) said it was "inappropriate and ill-conceived" to impose a fee just after the public had contributed $300 million towards the statue's 100th anniversary renovation.

The poem at the statue's base, he noted, reads: "Give me your tired, your poor, your huddled masses yearning to breathe free." It doesn't end with "and give me a dollar," Bradley said.

An earlier House-passed bill dealing with fees at national parks would rescind the Statue of Liberty admission charge and also bar imposition of fees for visitors to the Washington Monument.

In the face of widespread protest, the Administration has dropped a plan to charge admission to Independence Hall in Philadelphia—at least until after the current celebration of the bicentennial of the U.S. Constitution, which was signed there.

Shakeout process continues in presidential sweepstakes

The Democratic presidential field is getting more crowded and the Republican contenders are starting to thin out. But the shakeout process isn't complete, and some potential candidates in both major parties are still testing the political waters.

Eight prominent Democrats have either announced their candidacy for the presidential nomination or given strong indications that they will do so. Two others are considered in the "maybe" category.

The lone dropout from earlier lists of candidates was Sen. Dale Bumpers (Ark.), who told reporters he had decided the strain of a campaign on his family life wasn't worth it.

Two other senators—Paul Simon of Illinois and Albert Gore Jr. of Tennessee—quickly filled the gap in the ranks.

Change of heart

Simon, who had earlier declared his support for Bumpers, announced that he will seek the nomination himself. Gore, who previously had said he would not run, changed his mind and declared that he will be a candidate.

They join former Arizona Gov. Bruce Babbitt, Sen. Joseph Biden Jr. of Delaware, Massachusetts Gov. Michael S. Dukakis, Rep. Richard A. Gephardt of Missouri, former Colorado Sen. Gary Hart and former civil rights activist Jesse Jackson.

In addition, both Arkansas Gov. Bill Clinton and Sen. Sam Nunn of Georgia have kept the door open to a possible presidential announcement later this year.

The Republican probables, at latest tally, were Vice President George Bush, Senate GOP Leader Robert Dole of Kansas, former Delaware Gov. Pierre S. du Pont IV, former Sec. of State Alexander M. Haig Jr., Rep. Jack Kemp of New York and television evangelist Pat Robertson.

Former Nevada Sen. Paul Laxalt has kept the door open on a possible candidacy. But Donald Rumsfeld, a former Secretary of Defense, announced that he had decided against seeking the presidential nomination.

Despite the importance of the new southern regional primary day, on Mar. 8, early campaigning is focused as in the past on the first presidential tests—the Iowa caucus and the New Hampshire primary.

Cucumber growers recognize union

Toledo, Ohio—The unaffiliated Farm Labor Organizing Committee scored a breakthrough by winning representation rights among workers employed by 14 cucumber growers in Northwest Ohio and Southeast Michigan.

Although FLOC gathered 72 percent of all the votes cast at 27 farms in the area, it failed to win the required number of votes for representation on seven farms and an insufficient number of votes were cast at six other sites to validate the results.

As a result of the election, owners represented by the Fremont Pickle & Tomato Growers Association agreed to a three-year contract. An incentive pay system would be established that could provide workers as much as 6 percent more in annual earnings.

The contract, which runs through Feb. 28, 1990, was endorsed by Heinz USA, with whom the growers have contracts for the sale of cucumbers. It provides that FLOC will represent all workers on the farms where it won representation, with nonmembers paying a service fee equal to the dues paid by union members.

Heinz agreed to participate with workers and growers in establishing committees to study housing conditions, health care and day care centers.

The negotiation process was mediated by former Labor Sec. John Dunlop, a professor at Harvard University.

Conferees map strategy in trade and job areas to wipe out discrimination

Problem-solving and politics were on the agenda of the annual AFL-CIO civil rights conference, as participants surveyed the nation's civil rights landscape and exchanged ideas on how it can be improved.

More than 60 trade unionists from 35 affiliates gathered for the five-day session which addressed the theme: "Civil Rights in Crisis—a Call for Justice."

In an address to the conference, AFL-CIO Sec.-Treas. Thomas R. Donahue said the "chief issue in the fight for equal rights is jobs." He noted that the labor movement has "spent 20 years breaking down the job barriers and rooting out discrimination in the workplace and in the community."

Donahue applauded the recent Supreme Court decision on affirmative action but added, "if you're standing in the unemployment line, it takes you no place at all."

"One of the most vital civil rights issues on labor's agenda" is trade reform that focuses on affirmative action in international trade as well as in the workplace, Donahue said.

He also outlined other elements of labor's legislative agenda, including restoration of protections under the Civil Rights Act, parental leave, fair housing and an increased minimum wage.

Administration failure

AFL-CIO Civil Rights Director Richard Womack charged that the Reagan Administration has resisted and undermined civil rights programs by failing to enforce the law and politicizing civil rights agencies and appointments.

Despite some progress following the 1964 Civil Rights Act, "women and minorities continue to experience discrimination in employment," Womack charged. He called for a "national climate of compliance" including more vigorous enforcement of equal employment opportunities and more effective affirmative action programs.

President Lynn Williams of the Steelworkers recalled labor's early efforts in the fight for equal opportunity.

Williams scored the Reagan Administration for having "reopened the door to racist sentiments" by seeking to overturn the advances in civil rights and employment opportunities that the nation has made over the past two decades.

Sending the message

President William H. Bywater, of the Electronic Workers, stressed the need for education and communication "to get the message out to rank-and-file members that they are hurting themselves" when they support candidates who are not committed to labor and civil rights.

In presentations and discussions, participants examined the problems of working women, recent court decisions on affirmative action, concerns of Hispanic workers and political action programs. They met with representatives of the Equal Employment Opportunity Commission and also heard from officials of the AFL-CIO's support groups—the A. Philip Randolph Institute, Labor Council for Latin American Advancement, Frontlash and the Coalition of Labor Union Women.

Other speakers included Democratic presidential candidate Jesse Jackson; AFL-CIO Vice Presidents Frederick O'Neal and Barbara Hutchinson; Sec.-Treas. William Lucy of the State, County & Municipal Employees and Vice President Jack Otero of the Railway & Airline Clerks.

NLRB rules Otis flouted law in 10-year-old relocation case

Otis Elevator Co. violated the Taft-Hartley Act ten years ago when it circumvented the Auto Workers to deal directly with employees transferred from Mahwah, N.J., to East Hartford, Conn., the National Labor Relations Board ruled.

The decision was a watered-down version of one originally issued in March 1981, when the board ruled that Otis, a wholly owned subsidiary of United Technologies Inc., illegally refused to bargain with the UAW and unlawfully denied the union relevant information about the relocation decision.

The company appealed that earlier ruling, and in August 1981 the U.S. Circuit Court of Appeals for the District of Columbia granted the board's request for remand of the case for reconsideration in light of a Supreme Court ruling in a similar job-transfer case.

An administrative law judge again held that Otis unlawfully ignored its obligation to bargain with the union concerning the effect of its decision on the employees. But the NLRB, on a 2-to-1 vote, set that finding aside, contending that management was merely engaged in "hard bargaining" when it offered a transfer package to the UAW on a "take-it-or-leave-it" basis.

The board concluded, however, that Otis flouted the law by dealing directly with employees on the relocation package that included six-day home-finding trips to Connecticut, meals and lodging for 90 days for employees who relocated, and up to one month's salary for miscellaneous expenses.

The NLRB ordered Otis to give back pay to workers at the Mahwah facility who lost their jobs as a result of the production shift to Connecticut.

In a dissenting opinion, Chairman Donald L. Dotson argued that the case should have been dismissed in its entirety. Dotson insisted that Otis was "clearly privileged to transfer unit work without bargaining with the union."

Factory output and housing starts slump

Continued from Page 1

During the first quarter, wholesale prices increased at an annual rate of 5.5 percent—the fastest pace since 1985 when producer prices shot up 4 percent.

Sharply higher prices for food, women's apparel and home electronic equipment offset a two-tenths of 1 percent decline in energy costs. The latter had risen almost 10 percent in January and 4 percent in February.

The Commerce Dept. reported a puny two-tenths of 1 percent rise in retail sales in March, reflecting growing consumer unease about the state of the economy.

Sales in the first quarter of this year were 1 percent below the total for the last three months of 1986, the government said. It was the second successive quarter of declining retail activity.

On the home buying front, the Veterans Administration boosted its interest rate a full percentage point—from 8.5 percent to 9.5 percent. It marked its first upward movement in two years. The rate had declined steadily from its 13-percent peak in March 1985.

The banking industry has pushed up the cost of borrowing money a percentage point or more since March, sending would-be buyers scurrying for home mortgages before interest rates go any higher.

Building permits drop

There was grim news from the home building industry. Housing starts dropped 3.2 percent in March—the steepest fall since September—and the number of building permits issued for single-family homes plummeted by the largest amount in three years.

The Census Bureau said the seasonally adjusted annual rate was 1.7 million housing starts in March, compared with a 1.8-million pace in January and February.

Permits to build single-family homes plunged 7.7. It was the biggest drop since the 15-percent nosedive in March 1984.

The report showed that construction began on 350,000 homes during the first three months of 1987—6 percent below the pace for the same period last year.

Meanwhile, jobs continued their shift from manufacturing to the service sector in the past 12 months, the BLS reported.

Although virtually every state posted gains in retail and wholesale trade, finance, insurance and real estate, 23 states lost manufacturing jobs during the past year. The largest declines were registered in Massachusetts, Michigan, New York, Pennsylvania and Texas. And 27 states posted job losses in mining and oil extraction, with California, Louisiana, Oklahoma and Texas the biggest losers.

Unemployment was in the double-digit range in seven states during February, the government said, with Louisiana at the top of the list with a 14.3-percent jobless rate.

Minimum wage boost approved in Arkansas

Little Rock, Ark.—A labor-backed measure to raise the state minimum wage 15 cents an hour by January 1989 was overwhelmingly approved by the General Assembly and signed by Democratic Gov. Bill Clinton.

The state minimum wage, which was last increased to $3.15 an hour in 1985, would go up to $3.25 an hour next January and increase 5 cents more the following January. The law would cover employers with five or more workers and gross dollar volume of business under $365,000 annually.

The Arkansas minimum wage does not apply to companies covered by the federal Fair Labor Standards Act which currently sets a minimum wage of $3.35 an hour. The new minimum will restore the lowest-paid workers to about 40 percent of the state's average weekly wage and cover about 75,000 persons, according to State Federation President J. Bill Becker.

The AFL-CIO American
Federationist
VOL. 94 NO. 4 APRIL 18, 1987

Roots of the TRADE CRISIS

The AFL-CIO has long been concerned with the effects of unregulated and discriminatory trade. Millions of workers have lost their jobs due to the absence of effective trade policies, the capriciousness of individual companies or the vagaries of U.S. economic policy. The fact that international trade can and has damaged U.S. domestic production is widely acknowledged—an understanding no doubt triggered by the fourfold increase in America's trade deficit in just six years. Those who in the past denied the existence of a problem or counseled patience to the victims of trade have been largely silenced by the enormity of the shift in U.S. trade patterns.

The question now is what to do about it.

Last spring, the House of Representatives addressed this national crisis by passing, by a vote of 295 to 115, comprehensive legislation entitled the Trade and International Economic Policy Reform Act of 1986. While not perfect, the House bill, among other things, required the gradual reduction of U.S. trade deficits with certain countries, introduced the concept of worker rights and trade, modernized and streamlined U.S. trade remedy law, and expanded the coverage of unfair trade practice statutes. Unfortunately, the Senate didn't act. This bill has been reintroduced in the new Congress (H.R. 3) and the Senate has also begun consideration of various trade reform proposals.

In all probability, trade legislation will be enacted in 1987. Whether it will be sufficient to this country's needs remains the key question.

TRADE AND THE U.S. ECONOMY

The U.S. trade deficit reached $170 billion last year, more than four times the 1980 total. Exports dropped slightly from 1980 to 1986, while imports mushroomed 51 percent.

Fuel imports put this country in the red during the late 1970s and early 1980s. But recently, manufacturing goods have accounted for the biggest chunk of the trade shortfall. Manufactured imports outpaced exports by about $145 billion last year, from an export surplus of $13 billion as recently as 1980.

The enormous U.S. trade deficit wiped out millions of jobs, devastated local communities, and pushed the U.S. economy into a risky, fragile condition. The trade gap has already made the U.S. the largest debtor in the world, placing a heavy burden on future generations, which are likely to have fewer good job opportunities and slower income growth.

The trade imbalance cost the United States 2.5 million jobs in 1986 alone. Saving those jobs would have meant a reduction in the unemployment rate from 7.0 percent to 5.0 percent.

Numerous well-paying and high-quality job opportunities in the middle tier of the nation's income structure are being forfeited, and with that, the living standard that made the U.S. the envy of the world is being undermined.

The impact on employment has been severe. The year 1986 was only one of ten post-World War II years with an unemployment rate above 7 percent, and six of those years were 1981 through 1986, the period when America's international trade position nosedived.

While total employment has grown in the last six years, that growth has taken place solely in service sectors. Employment in manufacturing has declined by some two million jobs. Further, even with the sharp growth in service industry employment, the rate of job growth in the last six years is 29 percent below average growth rates of the 1970s.

The upheaval within the manufacturing sector has been harsh and tempestuous, and imports are the source of most of the employment losses. Since peaking in 1979, the jobs in numerous manufacturing industries have plummeted. Among durable goods manufacturers, lumber, furniture, stone, primary and fabricated metals, machinery, motor vehicles and other transportation equipment have all suffered considerable job losses. In nondurables, employment is down from 1979 levels in food, tobacco, textile, apparel, paper, chemicals petroleum and leather.

In a study of displaced workers released in October 1986, the Bureau of Labor Statistics reported that between 1981 and 1986, years when the nation's trade deficit was growing dramatically, 13.1 million lost their jobs to plant closure, slack work or layoffs. More than five million of these displaced workers had been at their jobs for at least three years. Of these, the survey found that 18 percent remained unemployed and an additional 15 percent had left the workforce entirely. For those fortunate enough to find other jobs, 10 percent were working part-time, and of those securing full-time work, 40 percent were forced to accept lower pay. Not surprising, under that impact, average weekly earnings for U.S. non-supervisory production employees have declined about 9 percent from 1979 to 1986 after adjusting for inflation, and 60 percent of the new jobs created since 1979 paid less than $7,000 a year.

Many Lost Jobs Aren't Reflected In Employment Data

The officially reported net job changes in various industries do not capture all of the jobs lost or show the job opportunities that would have been available if the nation's trade balance were better. For example, given the growth in the nation's economy and the demand for various goods and services, if trade had been balanced and demands were satisfied to a greater extent by domestic production, many domestic industries that lost jobs would have had job increases, and industries that posted net employment additions would have enjoyed even greater increases. And there are indirect effects on sales, jobs, and incomes that reverberate throughout the economy.

Several organizations have studied these relationships and tried to trace the interconnections among industries involving trade, output, and employment. Such investigations uniformly demonstrate that the nation's trade deficit has had significant adverse effects on employment and production and that manufacturing industries and the regions dependent on manufacturing have suffered the most.

One detailed evaluation of employment impacts, based on the experience in 1984, was published by the U.S. Dept. of Commerce in January 1986. The United States suffered a $123 billion deficit in its merchandise trade in 1984. Using two different assumptions concerning the composition and size of the trade deficit, the Commerce Dept. estimated that employment was between 1.3 percent and 2.7 percent lower than it would have been if trade were balanced. This represents between 1.1 and 2.4 million jobs.

A third approach assessed trade within the context of the overall economic environment and yielded an estimated loss of 1.8 million jobs in 1984. This analysis assumed that the United States would undertake policies to bring about a trade balance. These policies included negotiations with other nations to reduce trade barriers and unfair trade practices along with agreements that key trading partners would implement government spending, tax, and monetary measures to boost their economies. The additional element in this phase of the Commerce Dept.'s analysis was the allowance for the feedback from such factors as interest rates and inflation when the pace of the economy quickened because of the trade deficit's decline. Simultaneously, employment and output were traced through the nation's industrial structure, as in the department's two other analyses.

Updating these estimates to 1986 to account for the 40 percent deterioration in the nation's trade balance over the last two years indicates that the United States had 2.5 million fewer jobs because of the trade deficit in 1986. The jobs shortfall in manufacturing was heaviest in the following industries: textiles, 631,000; electrical and electronic equipment, 475,000; the three metal industries combined (primary iron and steel, primary nonferrous, and fabricated metal products), 342,000; leather and leather products, 208,000; and motor vehicles, 171,000.

As is to be expected, the regions where trade-sensitive manufacturing industries are located have experienced the largest numbers of lost jobs. However, the damage has by no means been limited to the northeastern and midwestern industrial belt. Data Resources, Inc. (DRI), a private economic consulting organization, evaluated trade's influence on the nation's regional employment patterns in 1984. DRI found that many large industrial states, including Pennsylvania, Michigan, Ohio, and New York have had huge numbers of jobs evaporate because of

This article was prepared by staff members of the AFL-CIO Dept. of Economic Research, including Assistant Director Arnold Cantor and Economist Mark Anderson.

Needed: 'Strong, Effective' Legislation

The following statement on trade was adopted by the AFL-CIO Executive Council, Feb. 16, 1987, at Bal Harbour, Fla.:

For the good of the country, and for the good of the international trading community, the 100th Congress must pass trade legislation that is based on a strong and effective trade deficit reduction provision. Such a provision must require any major trading partner that maintains excessive surpluses with the United States, and is found to engage in unfair trading practices, to reduce those surpluses.

The U.S. merchandise trade deficit amounted to $170 billion in 1986, a four-fold increase from the 1980 level. Millions of jobs have been lost. No sector of the economy is untouched. Mines and factories are closing, communities are devastated, and more and more farm families are being driven off their land. The dramatic increase in imports has been accompanied by massive inflows of foreign capital. America's future is mortgaged to the hilt.

More than 70 percent of the trade deficit is accounted for by imbalances with just five countries—Japan, $59 billion; Canada, $23 billion; Germany, $16 billion; Taiwan, $16 billion; and South Korea, $7 billion.

Some of these countries have refused to open their markets and abolish their unfair trading practices as a step toward reducing their huge surpluses. Where their focus has been on mercantilistic policies that depend upon export-led growth, that focus must be changed to policies that increase the purchasing power of their own people.

A strong trade deficit reduction provision is essential to give these countries the incentive to do what needs to be done to improve the lives of their own citizens and the citizens of their trading partners.

The prescriptions of the Administration—falling dollar exchange rates, multilateral negotiations, and selective action against unfair trading practices—have not, and will not, significantly reduce the trade deficit.

The Congress must send to the President a trade bill that will reduce the trade deficit and help American workers and industry regain lost production, jobs and income.

The AFL-CIO supports H.R. 3 in the House of Representatives as a constructive beginning to overcome the trade crisis. We are disturbed, however, that proposals advanced by the Chairman of the Senate Finance Committee fail to meet this test.

In addition to deficit reduction, the AFL-CIO supports legislation that will:

- Make the denial of internationally recognized worker rights an actionable practice under U.S. trade law. The U.S. should not permit free entry of goods produced in countries which refuse to respect basic worker rights.
- Expand trade adjustment assistance both in coverage and scope, financed by an import surcharge, to help those workers harmed by trade.
- Tighten and streamline the U.S. trade law to make relief from injury timely, effective, and predictable and to counteract unfair trading practices.
- Remove from both the tax and tariff codes incentives for the movement of U.S. production overseas, one of the major sources of the trade deficit.
- Deal with the problems of specific industries such as textile and apparel, shoes, telecommunications, printing, maritime and steel.
- Begin addressing the problem of less-developed country debt by requiring partial forgiveness by the lending banks of the principal owed, as well as reductions in interest rates.

The AFL-CIO will work with the Congress to achieve effective trade legislation.

The AFL-CIO will not support, and will oppose, purely cosmetic trade legislation that does not address these vital points.

the adverse effects of imports. But, when states are ranked by their job loss percentage, several Sunbelt states, including South Carolina, North Carolina, Georgia, Alabama, New Mexico, and Mississippi also show severe job losses.

TRADE BY COUNTRY AND SECTOR

The United States is running its biggest merchandise and manufacturing trade deficits with Japan. Imports from that country alone account for about $59 billion of the 1986 trade deficit of $170 billion. Japanese goods imported by the United States—almost all of them manufactured goods—increased by more than two-and-one-half times from 1980 to 1986 when measured in U.S. dollars.

But the United States is running large trade deficits with several other countries. In fact, more than 70 percent of the trade deficit is accounted for by imbalances with just five countries—Japan, $59 billion; Canada, $23 billion; Germany, $16 billion; Taiwan, $16 billion; and South Korea, $7 billion.

Unlike the United States, most other countries have taken strong action to aid their domestic industries through import restrictions, export promotion, and a variety of "industrial policies."

Some countries apply trade barriers, such as import charges and quantitative restrictions, on goods from the United States and elsewhere. Some subsidize their exports and "dump" their products here and elsewhere to capture markets. And a number of countries ignore patents and copyrights designed to protect imported goods from unfair imitation.

Japan employs a number of trade practices to discourage imports and spur exports. That nation imposes tariffs and other import charges on agricultural products, wood and paper products, cigarettes, and aluminum. For wood and paper products alone, the United States could increase exports to Japan by more than $500 million if Japan's tariffs were reduced to U.S. levels.

Japan also imposes non-tariff barriers such as discriminatory standards and elaborate testing, labeling, and certification of imported goods. These practices affect imports of telecommunications equipment, pharmaceuticals, medical equipment, and autos, to name a few. For example, each automobile imported into Japan must be individually inspected in contrast to the U.S. practice of examining a few sample cars. Last year, Japan exported more than 2.3 million cars to the United States. Meanwhile, only about 2,500 U.S. autos made it into Japan.

Other barriers include patent and trademark registration delays in Japan that deter U.S. firms from introducing their products into that country for fear of imitation. Until recently, the containers that U.S. shippers commonly use were banned from Japanese freeways, forcing the packing, unpacking, and repacking of many U.S. imports. And Japan ardently protects its agricultural industry, virtually forbidding rice imports, for example, even though Japanese rice costs around six times more than high quality California rice.

Nations of the European Economic Community (EEC) also run substantial trade surpluses with the United States and follow practices that encourage exports and limit imports for a wide range of products from different countries.

France uses massive export subsidies. In many cases, the subsidies are granted when countries place large orders for French goods, thus encouraging the sale of French goods abroad and hampering U.S. exporters that compete with France in those countries. In Germany, the Deutsches Bundespost agency responsible for the purchase of about 80 percent of that country's telecommunications equipment discriminates against non-German companies through testing and certification practices and requirements that manufacturers maintain facilities in Germany. And the European Community as a whole severely restricts agricultural imports from the U.S. and elsewhere.

Newly industrialized countries also have adopted trade practices favoring their own businesses. Brazil, for example, uses an extensive system of import controls. Total imports of Brazil in 1985 amounted to less than 6 percent of that country's gross domestic product—or 3 percent if oil imports are excluded. In contrast, U.S. imports amounted to 31 percent of this country's gross domestic product.

Brazilian law restricts the importation of goods that can be made in Brazil, and the country's licensing requirements and quantitative restrictions effectively exclude imports of U.S.-made goods. Without these restrictions, U.S. exports of textile and apparel to Brazil would average about $100 million a year, according to a report from the U.S. Trade Representative. With them, such exports amounted to less than $12 million in 1985.

Korea, which exports clothing, telecommunications and audio equipment, footwear, electrical equipment, and automobiles to the United States, imposes quotas on many U.S. agricultural and food products as well as a range of manufactured goods.

Imports have hurt a whole range of U.S. manufacturing industries. Auto imports are expected to total 4.7 million units in 1986, or 40 percent of the U.S. market. Steel imports have climbed 35 percent in volume from 1980 to 20.9 billion tons in 1986.

Imports of clothing and textiles rose more than 250 percent in dollar terms from 1980 to 1986. Shoe imports, too, have skyrocketed during that period. And the U.S. trade balance for telephone and telegraph equipment fell from a $136 million surplus in 1980 to a $1.3 billion deficit last year.

In 1980, the value of manufactured imports equaled 23 percent of the value of all such goods made in the USA. By 1985 their value was almost one-third that of U.S. manufactured goods. Meanwhile, the share of U.S. manufactured goods exported fell from 25 percent in 1980 to 18 percent in 1985. Given last year's trade deficit, 1986 levels undoubtedly will be worse.

Agriculture and High-Tech

For a time, some economists and policymakers counted on U.S. exports of agricultural products, high technology and business services to keep the trade flows in balance. They were wrong.

The United States, long considered the bread basket of the world, exported one-third fewer agicultural products last year than it did in 1980. The U.S. agricultural trade surplus has plummeted from about $23 billion to about $3 billion over that period. Many factors were involved, including the overvalued dollar, better agricultural yields abroad, and aggressive export policies of other countries selling to nations which previously bought from the United States.

A similar shift has occurred in U.S. trade of high-tech goods. The 1985 U.S. trade surplus of $3.6 billion for these goods is expected to became a deficit of $3.6 billion for 1986, a startling switch from a U.S. high-tech surplus of $26.7 billion in 1980. The United States is in the red to the tune of $18 billion for high-tech trade in communications equipment and electronic components, $2.8 billion for professional and scientific instruments and more than $800 million for engines, turbines and parts.

Comparisons of 1980 and 1986 high-tech sales show a two-thirds drop in the U.S. trade surplus for accounting, computing and office machinery—including computers—a one-third drop in the surplus for plastics, and another drop of almost one-third for drugs and medicines.

U.S. INTERNATIONAL FINANCIAL RELATIONS AND TRADE

Related to the sharp drop in America's international trade position is the fact that America doesn't just buy imports, we also borrow a lot of money to pay for those imports.

In the 1980s, the United States has gone from being the largest creditor nation in the world to the largest debtor. The United States and its citizens owe approximately $300 billion to foreign governments, corporations, banks, and individuals. Someday that money must be paid back; in the meantime, we are saddled with huge interest payments.

Current Account

Since 1976, the United States has had a merchandise trade deficit each year. But it didn't go into debt until 1982 because the investment income flow, plus income from services abroad by U.S. companies and citizens, outweighed the negative balances in trade, travel and transportation, and remittances abroad on pensions and other transfers.

However, starting in 1982, and in every year since, the trade imbalance overwhelmed the investment flow, and the U.S. balance on current account was negative, with the gap growing rapidly from year to year.

The current account deficits had to be made up by borrowing from other nations, and at the same time, the United States had to finance a huge and growing federal budget deficit. Foreigners rapidly increased their holdings of U.S. Treasury securities, helping to finance the budget deficit, and increased their direct investments in the United States by establishing and purchasing U.S. firms; by purchasing real estate, bonds, and corporate stocks; and by loans to U.S. companies. As the net investment position of the United States declined and that of foreign investors increased, the outflow of payments in the form of interest, dividends, and profits to foreigners advanced as loans and equity investments grew. This culminated in the United States becoming a net debtor nation in the amount of $107 billion in 1985 and $256 billion in the third quarter of 1986. Expectations are that the growth of the payments from the United States to foreigners in the form of interest, dividends, and profits will accelerate, enlarging the U.S. net debtor position to $800 billion by 1990.

This process will not go on indefinitely. Foreign lenders and investors will sooner or later lose confidence in U.S. investments or in the value of the dollar, which will decline as the U.S. economy slows and large trade deficits continue. Foreign creditors will then begin to draw back from U.S. loans and investments. If they sell off large amounts of U.S. securities, interest rates in the United States will rise, triggering a recession.

EXCHANGE RATES AND TRADE

In the 1980s the United States experienced an extraordinary rise and fall in the foreign exchange value of the dollar. The dollar rose 87 percent against other major currencies in less than five years—July 1980 to February 1985—then dropped a sharp 40 percent over the two years since February 1985. Imports into the United States climbed drastically in the first period when a high-valued dollar could buy more foreign goods, but instead of declining as the dollar declined, our trade deficit deteriorated dramatically from $123 billion in 1984 to $170 billion in 1986, the worst level ever recorded.

Exchange rates do influence the nation's trade patterns, but these recent experiences demonstrate that many other factors are at play.

The Volatile and Complex Nature Of Exchange Rate Movements

One reason for the dollar's sharp ascent during the initial years of this decade was the high level of real interest rates in the United States beginning in 1981. It's no coincidence that the U.S. economy plunged into the worst recession of the post-war era at the same time that real rates (i.e., interest rates minus inflation) climbed sharply in 1981. The 1981 tax giveaway, along with tight money, raised real rates in the United States and attracted huge capital flows from abroad, pushing the dollar up. During the past two years, the sluggish pace of the nation's economy—in large part the result of the trade deficit's heavy burden—has tended to lower interest rates and, along with numerous other factors, contributed to the dollar's decline.

While exchange rates are one of many elements

'The United States has gone from being the largest creditor nation in the world to the largest debtor. . . . Someday that money must be paid back. . . .'

that can affect exports and imports, exports and imports themselves can also feed back to exchange rates with a reverse influence. A strong currency, for example, tends to make a nation's goods more expensive, which may worsen a country's trade balance. If the trade balance does deteriorate, the need for currency for trade purposes will decline, which, barring other factors, tends to make the currency cheaper.

Another feedback from the exchange rate—price changes—tends to reinforce that movement. A stronger dollar usually means cheaper imports, which contribute to inflation's slowdown. This slowdown may have added momentum to the dollar's upward climb. First, the dollar may have appreciated further to reflect inflation's moderation in the United States relative to other nations. Another way that inflation's moderation may have boosted the dollar was by keeping real interest rates in the United States higher than they would have been, offsetting some of the interest rate reduction stemming from the inflow of foreign capital.

Perceptions of political stability, risk, and other subjective considerations also affect rates of exchange, and speculation generates violent movements in currency values that frequently overwhelm the influence of more fundamental factors.

Both money and goods now move across national boundaries to a much greater degree than ever before. This increased interrelationship among the economies of different nations means that one nation's actions to influence exchange rates can be negated by developments in other countries. Thus, while an improved balance between the nation's monetary and fiscal policies (i.e., lower interest rates and lower federal budget deficits) might bring about a desired realignment of exchange rates, that is by no means guaranteed.

The elements that influence exchange rates are difficult to sort out, and the connection from exchange rates to trade is tenuous. Contributing to this complexity are delays in adjusting buying and selling patterns to movements in exchange rates; pricing and business location strategies designed to offset currency fluctuations; the wide variation of changes in the dollar's value against the currencies of different countries; the use of subsidies, dumping and other tactics to offset exchange rate movements; the extremely low wage levels in many countries; differences in countries' growth rates; and the global debt problem with related adjustment programs that limit imports from the United States.

While the dollar has declined against the mark, the yen, and the currencies of some other major trading partners, it has not declined against many of other major currencies such as those of Korea, Taiwan and many Latin American countries. Many of the countries in East Asia and Latin America link their currencies to the U.S. dollar, and with cheap labor and more competitive currencies, they are displacing Japan as a source of machine tools, cars, steel, and electronics.

Even against currencies of those countries most heavily involved in trade with the United States, the weakening of the U.S. dollar has not been universal. Canada, for example, has traditionally been the United States' most important trading partner in terms of total exports and imports. While Japan surpassed Canada as the largest exporter into the U.S. market in 1985, Canada is still the largest market for U.S. exports, has the largest combined volume of exports and imports with the United States, and retains its ranking as the country with which the U.S. has its second largest trade deficit—up from $20 billion in 1984 to $23 billion in 1986.

The U.S. dollar advanced 17 percent against the Canadian dollar from July 1980 to February 1985, when it reached its overall peak against other currencies. But over the past two years, in a departure from the general trend, the U.S. dollar didn't weaken against that of Canada.

The newly industrializing countries in Asia—South Korea, Taiwan, Hong Kong, Singapore, Malaysia—have been singularly successful in keeping their currencies cheap against the dollar, in contrast to the general trend of the past couple of years. Using Korea as an example, from 1980 through 1986 the dollar appreciated 46 percent against the won, and even advanced 4 percent between 1985 and 1986. Only during the dollar's sharp drop in recent months has the won advanced slightly. With its cheap labor and more competitive currencies, Korea is displacing Japan as a source of manufactured imports.

The dollar's decline against a foreign currency means that one dollar buys fewer units of that currency. This translates into a higher dollar price for foreign goods, unless the foreign price is reduced to offset the change in currency values.

Import and export patterns may adjust to these currency changes, however, only after a significant time. Moreover, some circumstances and counteractive strategies may prevent such adjustment from ever taking place. Many orders are already in the pipeline and cannot or will not be cancelled. Long-term buyer and seller relationships have been established that aren't readily terminated. Since the quantity of U.S. imports doesn't respond to the higher dollar price right away, when the dollar's foreign exchange value falls, the dollar value of imports initially increases and the U.S. trade balance worsens. Such deterioration can go on for a long time if import purchasers don't respond much to higher import prices.

Further, numerous foreign producers have cut their prices to offset some or all of the effect of the weaker dollar. Such a strategy can keep their goods competitive in U.S. markets even though the dollar has weakened and their currencies have become dearer. While this reduces profit margins, many still have substantial leeway to earn a satisfactory return. This is because when the dollar rose earlier, many foreign producers didn't reduce prices in the United States as much as warranted by the dollar's increase, which fattened their profit margins.

Businesses in a country experiencing an exchange rate appreciation can also switch production to locations with lower costs. Japanese companies, for example, have established or relocated facilities in Taiwan to maintain their ability to export goods to the United States. Taiwan's currency didn't strengthen in terms of U.S. dollars as did Japanese yen, and Taiwan's wages are also far below Japanese wages. Exploiting this opportunity allows Japanese firms to maintain or expand market shares in the U.S., even though the dollar has dropped against the yen.

In the period up to February 1985 when the dollar was strengthening against other currencies, many U.S.-based companies engaged in similar practices. That is, they moved or set up production facilities overseas in order to raise profits. Now that the dollar has weakened, however, no major reverse transfer of production facilities to the United States appears probable. Instead, the extreme volatility of exchange rates encourages businesses to keep plants overseas, or establish new facilities abroad, as insurance against future currency movements.

The conventional expectation is that after enough time elapses for buyers to respond to higher priced imports, the quantity of imports will drop and the trade balance will improve.

But the ever-increasing trade deficit during the dollar's two-year decline repudiates the idea that the nation can just wait for exchange rates to work their magic and solve the trade crisis. The mounting import excess demonstrates that the nation's trade crisis is a multidimensional problem and not just a function of exchange rates. Even when the trade

deficit does diminish, the structural problems underlying much of the import surge will still need to be solved, and this will require a broad range of policy initiatives.

THIRD WORLD DEBT

The high debt levels of many Latin American and other countries combined with high interest rates have reduced their ability to buy American goods and increased their need to acquire dollars through exports to the United States. In fact, the combination of huge debt service requirements together with capital flight and policies that restrict growth has forced these countries deeper and deeper into debt. The World Bank reports that the total debt of developing countries has risen from $632 billion in 1980 to an estimated $1,010 billion in 1986.

One result has been a deteriorating U.S. trade balance with these nations. The U.S. trade balance with the largest Latin American countries has gone from a surplus of $5 billion in 1980 to a deficit of $16 billion in 1985.

The combined long-term debt of these same Latin American countries has increased from $292 billion at the end of 1982 to $333 billion at the end of 1985. For 1985 the average debt service-to-exports ratio for the seven major countries was 37 percent. Since their debt is mostly in adjustable rate loans, a sharp rise in U.S. interest rates, which would be transmitted to international financial markets, could lead to a virtual embargo on imports by the less developed countries and a further shrinkage of the market for U.S. goods.

The financial rescue packages put together by the International Monetary Fund (IMF) and other lending consortia have generally contained conditions that have further restricted trade, hurting workers in both the Third World and the United States. These loan packages have included requirements that debtor countries reduce government expenditures and restrict imports from the United States and other countries. Secondly, the developing countries have been forced by the IMF to expand their exports in order to obtain enough foreign currency to meet their debt service payments. This has been accomplished in part through a program of export-industry subsidization and other incentives that amount to "buying" a larger world share for their products.

These short-run solutions following the dictates of the banks and the IMF distort economic development. They generally come at the expense of production of basic domestically needed goods and domestic living standards and are the root cause of much political instability.

AMERICAN PRODUCTIVITY

Despite a lot of popular misconceptions, the U.S. produces more goods and services per worker and per hour than any other major industrialized country in the world.

In 1985, U.S. workers and industries were one-third more productive than their counterparts in Japan and the United Kingdom, and one-quarter more than the Italians, according to the U.S. Bureau of Labor Statistics. Productivity levels in West Germany and France came closest to those in the United States but still trailed by 7 percent.

The U.S. advantage over Japan is even greater when productivity is measured in terms of hours worked rather than number of employees. Measurements of production per hour show U.S. productivity levels two-thirds higher than those of Japan, according to estimates from the American Productivity Center.

U.S. Lead in Manufacturing Productivity

International productivity comparisons just for the manufacturing sector are difficult and no official government agency produces such data. Trade patterns, currency flows and interest rates all complicate attempts to make credible comparisons between countries. Despite this difficulty, rough estimates of manufacturing productivity per hour show the U.S. leading Great Britain by 100 percent, Canada by one-third, Germany by one-quarter and Japan by 9 percent.

Often the nation's productivity performance is confused by growth rates rather than with actual levels of production per worker. Japan currently enjoys the fastest growth in the rate of productivity increase of any major industrialized country, at 2.9 percent per year from 1980-85. Productivity in West Germany grew at a rate of 1.9 percent per year and in France at 1.5 percent. U.S. productivity growth trailed behind at 1 percent per year, but U.S. productivity levels still are superior.

Because U.S. workers produce more per hour than workers elsewhere, they can be paid more to reflect this without threatening U.S. competitiveness. The dramatic overvaluation of the U.S. dollar exaggerated wage and production cost differences between industries in the United States and in other countries. Also, to credibly compare wage rates among nations, the percent of labor costs compared to other production costs must be known.

The dollar's climb to its high mark in 1985 put U.S. wages at twice those of Japanese workers paid in yen. French wages were just 60 percent and West German wages 75 percent of those in the United States. The recent drop in the value of the dollar has narrowed the gap considerably. The International Monetary Fund reports a 30 percent drop from first quarter 1985 to second quarter 1986 in the ratio of unit labor costs in the United States to a trade-weighted average of unit labor costs in other industrial countries measured in U.S. dollars. The strong yen has moved Japan's wage level to a par with the U.S. level, and France's wage level is at 90 percent of the United States. West Germany's wage level is now 23 percent higher than our own.

"In sum, the deterioration of international cost competitiveness in U.S. manufacturing during the first half of this decade was the result of the real appreciation of the dollar, not sagging productivity growth or excessive wage increases," says the 1987 Economic Report of the President. The report also notes, "As the result of restrained wage increases and strong productivity growth, unit labor costs in manufacturing . . . have actually declined at an average annual rate of 0.8 percent since the recession trough in the fourth quarter of 1982." Meanwhile, the U.S. manufacturing trade deficit grew worse by a factor of more than four.

WORKER RIGHTS

The fundamental purpose of trade is to raise living standards and expand purchasing power. Practices such as subsidies or dumping, which give countries an unfair advantage at the expense of their trading partners are contrary to the goals of trade as are the even more predatory practices of low wages, oppressive working conditions, and the denial of worker rights. These practices depress the growth of domestic markets, making economies more dependent on exports which in turn undercut the living standards of American and other workers, and destroy the purchasing power that's essential to progress among the trading nations.

Unfortunately, many of the countries that have access to American markets and enjoy large trade surpluses regularly and actively deny their workers the right to join together for collective action to secure decent pay and working conditions.

Dollar Value Index With All 131 Trading Partners Shows Only a Slight Decline After an Enormous Rise

U.S. Merchandise Trade Deficit by Country in 1986

Source: Department of Commerce.

Worker rights are formally recognized in the conventions adopted by the International Labor Organization (ILO). These ILO conventions offer labor unions worldwide at least some standard against which to measure their own advances. ILO standards say for example that workers have the right to create and join unions, draw up their own union rules, elect their own leaders, develop their own programs, or make their own affiliations with national or international organizations if they wish. Current ILO standards also call for a 40-hour week, generally set the age limits of child labor at 15 and provide for extensive recommendations on mechanisms for preventing work place accidents and work-related illnesses. Respect for the dignity of work and workers is the only way to produce a level playing field in international trade relations.

The AFL-CIO has sought to require that our trading partners respect worker rights as a condition of aid and access to American markets. The trade bill passed by the House of Representatives in 1986 designated the denial of worker rights as an unfair trade practice and authorized the President to take countermeasures against governments failing to provide such rights.

Already in law, both the Generalized System of Preferences (GSP) and the Overseas Private Investment Corporation (OPIC), explicitly link labor standards to eligibility for trade and investment benefits. Specifically, internationally recognized worker rights as defined by GSP and OPIC are:

- The right of association;
- The right to organize and bargain collectively;
- A prohibition on the use of any form of forced or compulsory labor;
- A minimum age for the employment of children; and
- Acceptable conditions of work with respect to minimum wages, hours of work, and acceptable safety and health.

When Congress renewed the GSP in 1984, providing continued duty-free treatment for many products from developing countries, a mandatory labor rights criterion was added. This required the President to withdraw GSP benefits from any country not taking steps to afford internationally recognized worker rights, such as the right to organize and bargain collectively, to workers in that country. Early this year, the Administration announced its decision that Romania and Nicaragua would be removed from GSP and that Paraguay's eligibility would be suspended for worker rights violations. Other countries, including Chile, Suriname, Taiwan, and South Korea, targeted by the AFL-CIO for removal from GSP on worker rights grounds, will continue to receive preferential access to the U.S. market because of the failure of the Administration to take action.

MULTINATIONALS

The unconstrained, self-directed actions of U.S.-based multinational corporations have been key factors in undermining America's position in world trade.

Corporations shift the production of goods out of the United States to take advantage of low wages, working conditions, labor standards, taxes, and currency values. These companies actively seek to shape the national policies that affect them and shift U.S. technology and production know-how (much of it paid for by U.S. taxpayers) to wherever the profits are greatest.

Multinational corporations in 1983 received 46 percent of all U.S. imports, with one-third of their imports shipped in by their own affiliates in foreign countries. In 1983, almost half of the global exports of American multinational corporations came from their production facilities outside of the United States.

American multinational companies' employees in other nations now account for 6.6 million or 26 percent of the total; and in manufacturing, foreign employment accounts for 4.8 million or 31 percent of the total employment of U.S. multinational manufacturing corporations.

Examples of multinational firms moving abroad are many. American Telephone & Telegraph stopped producing ordinary telephones at an equipment plant in Shreveport, La., throwing more than 1,000 people out of their jobs. At the same time, AT&T has opened a similar production facility in Singapore and the output from that plant will be admitted to the United States without restrictions.

Automakers are planning to buy massive numbers of foreign-made cars. Ford has opened a $500 million plant in Mexico that will produce vehicles for the American market. General Motors has a joint venture with Daewoo in Korea to produce cars for the United States. And Chrysler plans to join with a Taiwanese car company to build a subcompact car that would be exported to the United States.

The Commerce Dept. estimates that by 1988, the practice of American companies selling foreign-made cars will raise imports and cost 90,000 more jobs.

In many cases, American multinationals have cut back or ceased production of product lines, preferring to buy foreign-made goods and sell the products under the American company's name. Several American companies are buying video cameras, recorders, and other consumer electronic equipment from Japanese companies and putting the American brand name on them. A large computer firm sells two mainframes which it buys from Japan and gets the central processing circuitry—the "brain"—for its biggest mainframe from a Japanese manufacturer.

The lucrative tax breaks enjoyed by multinational corporations include the foreign tax credit and the ability to defer taxes on income from foreign subsidiaries.

The foreign tax credit is a major factor in encouraging foreign operations of U.S. multinational firms. When an American firm pays state and local corporate income taxes, those tax payments are "deducted" from the otherwise taxable income of the corporation when its U.S. corporate income tax is computed. The multinational's overseas income gets a much better deal from the U.S. government than income from within the United States since income taxes paid to governments abroad are credited dollar-for-dollar against the company's U.S. corporate income tax liability.

If the foreign tax rate exceeds the U.S. domestic rate for any foreign affiliate in any country, the surplus tax credits can, with some restrictions, be washed out against the income of another affiliate taxed in a host country with tax rates below the United States. Surplus credits can also be "carried over" to cover tax periods two years backward or five years forward.

U.S. taxes are also deferred on income earned overseas until the profits are returned to the United States. This is often defended as "only" an interest free loan from the U.S. Treasury. However, a large amount of foreign profits are not returned to the United States, but are instead reinvested in the overseas affiliates. Under tax deferral, these profits reinvested are not subject to U.S. taxation and the interest free loan is in effect never repaid.

Foreign governments also offer an array of tax incentives, including total tax free status to attract

companies, and the U.S. government also helps the multinationals by underwriting insurance against the loss of foreign plants through expropriation and other risks.

Maquiladora Program

Renewed attention has recently been directed at the harmful effects of the maquiladora program—an arrangement whereby U.S. companies establish low-wage production facilities across the Mexican border. Late last year the Congress directed the Dept. of Commerce to end its sponsorship of a conference in Acapulco designed to promote increased investment by American firms in Mexico.

The Commerce Dept.'s promotional brochure for "Expo-Maquila" described the attraction of the maquiladora program rather succinctly, emphasizing: ". . . An even higher potential for profit . . . a highly trainable workforce . . . low cost foreign labor . . . duty free importation of equipment . . . U.S. customs laws (which) allow American parts and components to be exported, repaired, processed or assembled abroad and then imported back into the U.S. with duties paid only on the value added. . . ."

Mexican labor and tariff policies dovetail rather nicely, from the point of view of U.S.-based multinational corporations, with U.S. tax and tariff laws. The AFL-CIO has long opposed Sections 806 and 807 of the U.S. Tariff Code which permit the export and re-import arrangements described above. Although these tariff sections apply worldwide, they are used in a particularly effective way in the case of Mexico and the border program. These provisions give American-based multinationals cut-rate tariff treatment for products assembled "overseas," without the costs and difficulties normally associated with locating an assembly plant truly overseas.

According to the U.S. Commerce Dept., the number of maquiladora plants in Mexico has grown steadily from 300 in 1978 to about 760 in 1985, with employment of Mexican workers increasing from 80,000 to almost 300,000 during this period.

U.S.-based firms have invested almost $2 billion in these cross-border operations during the last decade. And, the American Chamber of Commerce of Mexico predicts that if the growth rate of the program continues at the existing pace, nearly one million Mexican workers will be employed at 1,000 plants by the mid-1990s.

American-based multinationals and even the U.S. and Mexican governments frequently argue that the maquiladora program helps to create and preserve U.S. jobs in so-called twin or companion plants on the U.S. side of the border. Experience, however, as well as common sense, shows this to be false. These foreign operations have had a devastating effect on U.S. jobs, American workers and their communities. The jobs of tens of thousands of U.S. workers have been moved to Mexico.

Although the governments of Mexico and the United States call the maquiladora program a "great success," the program has in fact done little to bring Mexico's industrial base into the 1980s, or to help its people escape from poverty. Wages are too low to significantly stimulate demand in Mexico's domestic marketplace, or to encourage the purchase of imports from other countries.

The multinationals, by buying labor cheap overseas and reselling products in the United States, are destroying the economic balance that helped to create and sustain the U.S. market. That balance was facilitated by a U.S. system that allowed workers to gain higher wages through collective bargaining as advanced technology was developed and yielded higher productivity. As workers received part of that productivity in higher wages, markets expanded and encouraged further investment and employment. Increased economies of scale then contributed to further productivity gains and permitted wage gains.

Many of the countries in which U.S. multinational corporations are locating new plants have hourly compensation costs for production workers in manufacturing—including wages and salaries, supplements, and employer payments for social security, and other employee benefit plans—which are significantly below those in the United States. Generally, the new plants include the latest production technology and equal or exceed in efficiency the older plants in the United States that have been shut down.

Hourly Labor Costs For Production Workers in Manufacturing As a Percentage of U.S. Labor Costs

	1975	1980	1985
Brazil	15	16	10
Hong Kong	12	15	14
Korea	6	11	11
Taiwan	7	12	11
Mexico	32	30	16

Source: U.S. Dept. of Labor

The economic balance that sustained a growing market in the United States does not prevail in the global economy the way it is reshaped by the multinationals. The U.S. economy and its workers are being affected adversely.

Eventually, because of the lower levels of wages and economic imbalances, the multinationals will have to sell in a world market less affluent than when workers producing the products received a better share of the sales value of the product. Their sales volume, benefits of economies of scale, and profits will be reduced.

GOVERNMENT RESPONSES

Existing U.S. trade law, while providing some measures to deal with foreign trade practices, has failed to curb the injury to domestic industries and workers. Generally, the statute is divided into "unfair trade" and "fair trade" provisions. Insofar as unfair trade is concerned, the principal elements are the antidumping law, countervailing duty law, and Section 301 of the Trade Act of 1974 entitled "Enforcement of U.S. Rights under Trade Agreements and Response to Certain Foreign Practices." The major fair trade provision is Section 201 of the 1974 Trade Act, also known as the "escape clause."

Antidumping Law

Congress first passed the antidumping law in 1916 and has amended it a number of times, most recently in the Trade and Tariff Act of 1984. This statute provides for the imposition of duties when foreign merchandise is being "dumped" in the U.S. market and is injuring U.S. industry. Dumping refers to the practice of selling goods in export markets at prices lower than those charged for the same goods in the home market.

Antidumping investigations may be initiated by the Dept. of Commerce or through petition filed by an interested party. The investigation must show not only the unfair pricing practice but that the domestic industry has been materially injured. The remedy available is the imposition of duties equal to the margin of dumping. An antidumping code under the General Agreement on Tariff & Trade (GATT) was negotiated in the 1970s and came into force in 1980.

Summary of Investigations Under Antidumping Law since January 1980

Petitions Received	365
Petitions Dismissed	14
Initiations	336
Suspensions of Investigations	6
Withdrawals of Petition	103
Final Antidumping Orders	74

Countervailing Duty Law

The countervailing duty law was first passed by Congress in 1897 and since then has been amended many times. Its purpose is to offset unfair competitive advantages that foreign producers might enjoy over U.S. producers as a result of government subsidies. Countervailing duty investigations may be initiated by the Dept. of Commerce or through petition filed by an interested party. The investigation must demonstrate that a subsidy exists and that U.S. domestic industry has been materially injured. The material injury standard is necessary only for those countries that are party to the GATT Subsidies Code which was negotiated in the 1970s and put into force in 1980. The remedy available is the imposition of duties equal to the net amount of the foreign subsidy.

Summary of Investigations Under the Countervailing Duty Law Since January 1980

Section 301

Section 301 of the 1974 Trade Act gives the President authority to take retaliatory action to (1) enforce U.S. rights under any trade agreement, and (2) respond to any action, policy or practice of a foreign country that is inconsistent with the provi-

Summary of Gephardt Amendment

The trade reform bill the House of Representatives is scheduled to take up Apr. 28-29 has some desirable features, but one very big weakness. It doesn't provide an effective means of reducing the nation's enormous trade deficit.

The approach the bill takes, of dealing with unfair trade practices on a case-by-case basis, isn't greatly different than present law. Experience has shown that it is not good enough. That's why unions are supporting the strengthening amendment that Rep. Richard A. Gephardt (D-Mo.) will offer.

These are its main provisions:

- The Gephardt Amendment would add a new part to Section 301 of the Trade Act to deal with countries that employ unfair trade practices to maintain excessive trade surpluses with the United States.
- The International Trade Commission, in any year that the U.S. trade deficit exceeded 1.5 percent of gross national product, would be required to determine whether any "major U.S. trading partner"—a country with more than $7 billion in trade with the U.S.—maintains an "excessive trade surplus" (ratio of U.S. imports to U.S. exports of 175 percent and a surplus of over $3 billion and a current account surplus).
- Within 30 days of this finding, the U.S. Trade Representative must determine whether any "excessive surplus" country maintains a pattern of unjustifiable, unreasonable or discriminatory trade policies or practices that contribute to that surplus.
- If this is determined, the country in question would be required to reduce its surplus 10 percent from the 1986 level by 1988, followed by a 10 percent reduction from the 1988 level by 1989, and so on. If a country ended its unfair trade practices or fell below any of the numerical standards noted above, the process would stop.
- Following the identification of a country, a negotiating period would be provided to seek an agreement that would eliminate the unfair trade practices or achieve the surplus reduction goals. If negotiations proved unsuccessful, the President would be required to take action (initially in May 1989) to achieve the surplus reduction goal.
- For example, if Japan were identified, it would be required to reduce its 1986 surplus of $58.8 billion to $52.9 billion in 1988, $47.6 billion in 1989, and $42.8 billion in 1990.
- The President could waive application of this provision if he determined that a country had balance of payments problems or debt problems or if enforcement would cause substantial harm to the U.S. economy. These waivers, however, could be overturned by Congress on a "fast track" basis.

sions of, or otherwise denies, U.S. benefits under any trade agreement, or is unjustifiable, unreasonable, or discriminatory or burdens or restricts U.S. commerce. The word "unjustifiable" refers to practices that violate U.S. international legal rights. The word "unreasonable" refers to practices that are not necessarily illegal but are otherwise unfair or inequitable. Investigations under Section 301 may be begun by the U.S. Trade Representative or any interested party through petition. Remedies under Section 301 are open-ended and left to the President's discretion. Since January 1975 only seven cases have resulted in retaliatory action.

Section 201—The Escape Clause

The principal U.S. fair trade law is Section 201 of the 1974 Trade Act which provides temporary relief for U.S. firms and workers from injurious import competition. This provision is based on the recognition that economic harm could come to particular sectors of the economy through fairly traded imports and that it is appropriate public policy to minimize such injury. An investigation may be initiated by the President or the U.S. Trade Representative or through petition from an interested private sector group.

The International Trade Commission (ITC) conducts an investigation to determine whether the imports are a "substantial" cause or threat of serious injury to the domestic industry producing a like or similar product. Substantial is defined as a cause that is important and not less than any other cause. This is a more stringent standard than international agreements require. If the ITC determines that injury has occurred, it recommends to the President the type of relief necessary to remedy the injury including the imposition of tariffs or quotas.

The President can either accept, reject, or modify the ITC recommendation. All too frequently, the President has decided against providing relief to the injured industry.

Summary of Investigations Under Section 201 since January 1975

Investigations Completed	60
Negative ITC Determinations	27
Affirmative or Tied ITC Determinations	33
Investigations in Which President Provided Import Relief Other than Trade Adjustment Assistance	12

Exchange Rate Policies

The steep rise in the value of the dollar from 1980 to February 1985 contributed to America's trade problem, but the impact has been overstated. Even though the dollar has been in decline for almost two years, the trade deficit has worsened. While the dollar has dropped almost 40 percent against the yen and the mark, when it is measured against the currencies of the 25 countries from which the United States imports the most merchandise, it has declined less than 10 percent.

The clear and demonstrable need for comprehensive general economic policies, trade specific actions and congressional prodding for legislative action has caught the Administration's attention. Unfortunately, for the most part this has resulted in merely heightening the rhetoric and some token steps. Fundamentally, the Administration remains committed to rather benign policies of watching the dollar fall and hoping for a growing demand for U.S. exports from the nation's major trading partners. Increasing this nation's "competitiveness" is also prominent among the Administration's catchphrases.

Expansionary Economic Policies

The Administration's call for expansionary policies by the country's major trading partners, particularly Germany and Japan, is conceptually similar to relying on a depreciating dollar, but even weaker in its effect since it assumes that increased demand in these nations will mean increased demand for U.S. products. This assumption is not supported by the evidence. Between 1980 and 1985, real U.S. demand for goods and services increased by some 12 percent, with inflation-adjusted imports increasing 45 percent. During this same time period, the Japanese economy grew 21 percent, but total imports increased only 9 percent. Germany's economy grew 6 percent, and total imports rose 10 percent, while imports from the United States dropped 18 percent.

Both Germany and Japan maintain a huge worldwide trade surplus—$29 billion and $77 billion, respectively—and therefore have the capacity to substantially increase imports from the United States. Simple economic expansion, however, in the absence of other policy changes, will not automatically bring this about. Their policies concerning imports must change. This should be a goal of any U.S. trade bill.

Selective Actions

As to tougher Executive Branch action against harmful foreign trade practices, the Administration's rhetoric has risen noticeably. Some complaints raised by domestic industry apparently have been settled. The Administration has even initiated some unfair trade cases itself in an effort to prove that the United States was serious. The number and selection, however, leave something to be desired. For example, selling more insurance to Korea will not solve our trade problems, and the actual results of Japan's agreement on tobacco or pushing Brazil to open its markets for computers and related equipment have not yet been realized.

Trade Negotiations

The final piece of the Administration's policy has been the initiation of a new round of trade negotiations. But negotiations have not in the past provided the relief that is essential to the survival of trade-impacted industries and their workers in the United States.

Even if negotiations are successful, agreements take years and the damage is being done right now. Negotiations will not create or implement an effective national trade policy or reduce America's huge trade deficits.

The overwhelming priority given by the Administration to negotiations on services, agri-

culture and investment in the new round also diverts attention from the principal trade problem, which is the massive shift that has occurred in trade in the manufacturing sector and the resultant loss of employment. Emphasis on "liberalizing" trade in services, agriculture and investment flows will have little impact on this central issue. In fact, it could accelerate the deterioration of the domestic manufacturing sector if essential U.S. protections in the goods area are sacrificed as the price for reductions in barriers to services, agriculture and investment. Further, what may appear to some as "barriers" to service or agriculture trade or international investment are in fact proper and even essential social and economic policies in both the United States and foreign economies. Banking and insurance regulations, protections of personal privacy, immigration rules and restrictions, and standards for lawyers, doctors and accountants are but a few examples.

The unrestricted flows of services and investment may be important to certain corporate interests, this does not make it significant for the economy as a whole. Since to a large degree services must be produced where they are consumed, any U.S. employment gains from increases in service trade would be marginal. The growth of service sector employment domestically has been in areas unrelated to international trade. Similarly, negotiations aimed at easing restrictions on international investment will do little to promote domestic economic growth and employment.

Competitiveness

The Administration is also pushing the "competitiveness" notion—a catchphrase that unfortunately obscures more than it reveals. To many, improving the nation's international competitiveness implies wage cutting and similar schemes to heap the burden of trade injury on workers and their families, as well as a general lowering of their sights and living standards. The measures proposed by the President fall far short of the actions needed to trim the $170 billion trade deficit, while other parts of the Reagan program—budget cuts in elementary, secondary and higher education programs for example, and the promise of continued attempts to deregulate and decontrol—would impede progress.

Much of the economic decline in U.S. goods-producing industries and the huge trade deficit is caused by misguided economic policies and the failure to deal appropriately with the realities of international trade and investment—not by a sudden or chronic loss of U.S. competitive ability. This Administration refuses to face the fact that free trade exists only as an empty slogan and a theoretical abstraction. Other nations manipulate product prices and exchange rates and erect trade barriers in order to promote and protect their workers, industries, and communities.

What Must Be Done

A strong, effective trade deficit reduction measure that requires our major trading partners to reduce excess surpluses if they are engaging in unfair trade practices must be enacted, and the United States should not permit unlimited entry of goods produced in countries that do not respect basic worker rights. That legislation should also include adjustment assistance and injury relief, removal of existing tax and tariff incentives to U.S. industries to move abroad, and measures to deal with specific problems of particularly hard hit industries. We must also deal with debt problems of less-developed countries in a way that strengthens their economies and enhances the living standards of their citizens.

New Books

Social Security After Fifty: Successes and Failures

Edited by Edward D. Berkowitz. Greenwood Press Inc., 88 Port Rd. West, Westport, Conn. 06881. 168 pages, $29.95.

The year was 1935. The nation was clawing its way up from the depths of the Great Depression. An alphabet soup of federal programs—NRA, WPA, PWA and the like—was slowly beginning to put America back to work. But the plight of the elderly—the ones, as labor used to put it, who were "too old to work but too young to die"—remained a problem in search of a solution.

Beating back the determined opposition of the business community, which charged that he would turn America into a socialist state, Franklin Roosevelt successfully steered through Congress the Social Security Act—legislation he regarded as the "cornerstone" of his program of sweeping social and economic reform.

What began as simply a basic pension program for those over 65 was steadily expanded—adding coverage for spouses and dependents of retirees, insurance for survivors if the family breadwinner died during his or her productive years, economic safeguards for disabled workers and their families and, ultimately, health care benefits for social security beneficiaries.

Over the course of a half-century, it became the most comprehensive social safety net ever devised and far and away the most universally popular social program on the statute books.

Yet when social security marked its golden anniversary in 1985, it remained at the center of controversy, challenged as to its long-term economic viability in the face of the graying of America and with the business community and some highly placed Administration officials still tilting toward replacing it with a voluntary program handled, not by government, but by private, profit-making insurance carriers.

Berkowitz, an associate professor of history at George Washington University, begins the volume with a description of the activities that marked social security's 50th anniversary and an overview of the program, while Prof. Mark H. Leff of the University of Illinois provides a historical perspective.

Two distinguished economists—Henry J. Aaron of the Brookings Institution and Lawrence H. Thompson of the General Accounting Office—discuss the program's performance and its effects on the American economy, while Martha Derthick of the University of Virginia describes the administrative policies within the agency and Prof. W. Andrew Achenbaum of Carnegie-Mellon University takes a look at the public uncertainty that has developed as a result of the barrage of unsubstantiated claims that, despite reforms enacted in 1983, the system still faced the prospect of going broke somewhere down the line.

Finally, former Health, Education & Welfare Sec. Wilbur J. Cohen and SSA's long-time chief actuary, Robert J. Myers, both of whom were present at the program's birth, look to the future—Cohen bursting with optimism about enlarging social security's scope to provide long-term health care (in the home environment, in community-based facilities or nursing homes) and Myers taking a more cautious approach that envisions the program retaining essentially its present mode when its 100th birthday rolls around.

Controversy to the contrary, the conclusion is that social security is, and will remain, deeply woven into the fabric of American society—a forecast that should be good news to today's generation of working men and women who are building up their entitlements to the law's protection through their work and contributions to this broad umbrella of social insurance.

Blue Collar-Roman Collar-White Collar: U.S. Catholic Involvement in Labor-Management Controversies, 1960-1980

Rev. Patrick J. Sullivan, University Press of America Inc., 4270 Boston Way, Lanham, Md. 20706. 346 pages. $26.75. ($16.75 paperback).

For nearly a century, the Catholic church has stressed the dignity of workers, their right to a fair share of the wealth they help to produce and the responsibility of management to treat them with the dignity to which they are entitled as human beings.

These mandates of social conscience had their origins in the Rerum Novarum encyclical issued by Pope Leo XIII in 1891. They were repeated and enlarged upon in 1961 by Pope John XXIII in Mater et Magistra, and were further underscored two decades later in the Laborem Exercens encyclical of Pope John-Paul II in 1981.

The way in which the Catholic church in America has responded to these exhortations is explored by Father Sullivan, a professor in the Dept. of Sociology at the University of Notre Dame and himself an activist in the long and many-faceted struggle of the Clothing & Textile Workers against the J.P. Stevens Textile Co.

The church's role, in Sullivan's view, is to defend the rights of workingmen and women, to mobilize the community on their behalf, and to serve as a bridge between the disparate worlds of workers and their employers. Hence the title—"blue collar" signifying unionists, "white collar" signifying management and, linking the two, the "Roman collar" of the churchman.

Sullivan's case histories begin with the long struggle to end the "bracero program," under which farm workers were imported from Mexico to work in miserable surroundings and under almost slave-like conditions as stoop labor in the huge corporate farms in America—the factories in the field of the 1960s. Following on the heels of this action was the church's support of Cesar Chavez and the Farm Workers who battled greedy management and hostile public officials throughout the agricultural Southwest.

The book also documents the 17-year-long struggle with J.P. Stevens before ACTWU won recognition for 3,500 workers at 10 plants in North Carolina, South Carolina and Alabama; the two-year ACTWU battle that led to a contract for 2,000 members at Farah Manufacturing Co. in San Antonio, Tex.; and a number of bitter contract disputes involving the unaffiliated Mine Workers throughout Appalachia.

Some familiar figures stride through the pages of this study—among them Msgr. George Higgins of the National Catholic Welfare Conference, Archbishop Robert Lucey of San Antonio, Tex., Bishop Sidney Metzger of El Paso, Tex., Msgr. Francis Lally of the U.S. Catholic Conference and Rev. James L. Vizzard of the National Catholic Rural Life Conference, to name just a few.

The study ends with some guidelines for parishes and dioceses about ways to get more deeply involved in preventing the escalation of labor-management disputes and to see that they are resolved within the framework of Catholic social doctrine that stresses the rights of working people and their families.

No review would be complete without an expression of regret as to the typography employed in the study's compilation. Conceding that we live in the computer age, it is unfortunate that the material is presented in a difficult-to-read format, apparently the output of a word processor, rather than professionally typeset pages.

—By Gene Zack

States enact meager gains in worker benefits

State legislatures made spotty improvements in workers' compensation and unemployment insurance during 1986 legislative sessions.

Injured workers in most states realized a slight increase in payments or family benefits. But jobless workers in some areas were hit with budget cuts and new restrictions on eligibility for regular or extended unemployment compensation. Today, fewer than four of every 10 unemployed workers qualify for benefits.

Overall, injured workers in 43 states and the District of Columbia who are suffering permanent job-related total disabilities got modest increases in their compensation payments. Two states reduced benefits and five maintained the same benefit level.

Disabled workers gained ground in Vermont, where maximum benefits are now based on 150 percent of the state average weekly wage, up from 100 percent. In Arkansas, the maximum weekly benefit for totally disabled workers will increase from $175 to $189 in July, to two-thirds of the average weekly wage in January 1989, and to 70 percent of the average a year later.

South Carolina raised its minimum weekly benefit for workers suffering from temporary and permanent total disability to $75, but added that benefits may not exceed the state's average weekly wage.

New Mexico, however, froze the average weekly wage on which benefits are based —now $308.28—through June, and Oklahoma legislators decided that the average weekly wage will be determined every three years rather than annually.

Benefit adjustments

Maryland legislators voted this year to reduce maximum weekly benefits for persons suffering permanent partial disabilities from $122 to $80 but added labor-backed provisions that will raise the rate to $82.50 by 1989. The state added a 5-percent annual cost-of-living adjustment for workers with permanent total disabilities.

In a few states, workers suffered setbacks in maintaining coverage for occupational disease. In Iowa, the legislature repealed a requirement that a worker's last employer pay compensation costs where exposure to particle-related and dust-related lung diseases occurred for at least 60 days.

The state also eliminated its occupational disease medical board and called for further investigation of occupational diseases by a panel of physicians designated by the industrial commissioner.

Kentucky legislators modified coverage for occupational illness by requiring that workers file their claims of asbestos-related disease within 20 years of exposure.

Burial allowances were increased in five states—Arkansas, Colorado, Rhode Island, Tennessee and West Virginia. Coverage for ambulance workers, rescue squads, police, fire fighters, prison guards and workers at religious institutions was added in some jurisdictions.

Under state unemployment compensation plans, maximum benefit rates increased in 33 states and remained the same in 17 states and the District of Columbia.

But many states acted to reduce or limit unemployment insurance benefits so as to accommodate budget-cutting requirements of the Gramm-Rudman-Hollings Act.

Federal impact

Kentucky tied its weekly maximum benefit, now $140, to the state's trust fund balance, while North Carolina voted to reduce both regular and extended benefits by similar amounts.

Louisiana also voted to reduce benefits by the federal share of any budget reduction resulting from the Gramm-Rudman plan.

In South Dakota, unemployed workers involved in a labor dispute will be found ineligible for benefits. But Tennessee workers who were furloughed prior to a labor dispute will remain eligible.

U.S. trade deficit over $15 billion as imports surge

Continued from Page 1

however, that "it's hard to say when" any turnabout will take place.

Oswald dismissed the statement as "wishful thinking" and said it was time for Congress to forge ahead with tough trade legislation. Among the measures under consideration on Capitol Hill, he said, "the only viable approach is the bilateral trade deficit reduction plan" proposed by Rep. Richard Gephardt (D-Mo.).

Senate Majority Leader Robert C. Byrd (D-W.Va.) weighed into the fight, declaring that the February figures "shatter the illusions held by many in the Administration that the trade problem will disappear on its own." The report, Byrd said, "proves once again that Congress needs to take constructive action on the trade problem."

February's new wave of imports totaling $33.7 billion—a $5-billion leap from January and 5.6 percent higher than the average monthly level throughout 1986—overwhelmed exports valued at $18.7 billion, leaving a gap that was exceeded only twice before in history. The deficit hit $16.1 billion in July 1986 and $15.4 billion last November.

Government economists estimate that for every $1 billion in domestic sales lost to imports, 22,500 American jobs are wiped out.

Import flood

The damage was greatest in the manufacturing sector, the Commerce Dept. figures showed. Imports of new cars, trucks, buses and automotive parts soared to $6.2 billion. Clothing and footwear imports accounted for $2.4 billion, telecommunications equipment hit $1.7 billion and computers and office equipment topped $1.4 billion. In every category, the import levels were sharply higher than in January.

Footwear imports reached a new peak in February, rising 37 percent over the previous month and 17.5 percent above the mark for the same month last year. Imported shoes have now captured more than 84 percent of the domestic market. Last year, Congress failed by a slim margin to overturn Reagan's veto of a bill providing import relief for the declining textile, apparel and shoe industries.

The $5.1-billion deficit with Japan in February accounted for more than one-third of the month's trade drain. There was a $1.9-billion shortfall with Western Europe, $1.9 billion with Canada, $1.5 billion with Taiwan, $1.2 billion with the OPEC nations, $800 million with Mexico and $700 million with South Korea.

Boss unionizes his own shop

Boston—When a company is losing money, how does it get itself back on its feet?

According to Jim Ansara, president of Shawmut Design & Construction Co., the answer is simple: go union.

In an interview with Inc. magazine, a publication aimed at small business, Ansara explained that he was impressed by the "astounding work" done by the crews of a unionized subcontractor.

When Shawmut's employees indicated they wanted to be represented by Carpenters Local 33, Ansara decided he wanted to have the same image of professionalism shown by the subcontractor. Recognizing the union, he told the business publication, helped "clean up the company's bottom line and straighten out its management mess."

The company's costs went up from $17 an hour to $25 in wages and benefits. But, said Dave Coolidge—the most reluctant of Shawmut's managers to embrace the idea of going union—"hiring union gets a better carpenter—more mature, more experienced, more skilled."

Although the hourly pay scale went up, Ansara explained, labor costs on most jobs have gone down because the skilled, unionized workers do the jobs faster and better. And having the employees represented by Local 33 guarantees the company a stable workforce, he added.

Charlie Mann, the company's general superintendent, was also impressed. "I see that a lot of my preconceived notions about unions were just wrong," he conceded.

Labor presses Gephardt amendment

The AFL-CIO has launched a postcard and call-in campaign in key congressional districts to win votes for the Gephardt amendment and put teeth into the trade bill the House will take up late this month.

Campaign tools include a videotape produced by the Labor Institute of Public Affairs that answers myths with facts—about the link between trade deficits and unemployment and about the legislation that is needed to bring imports and exports into closer balance.

The video, which was previewed at the AFL-CIO regional conference in New York, will be shown in union halls and at Capitol Hill briefings being arranged for members of Congress and their staffs.

Leaflets and radio commercials sponsored by a coalition of labor's allies, including consumer and farm organizations, are also being used in congressional districts that legislative strategists consider crucial.

The focus is on a "small list" of 25 key congressional districts where the lobbying equivalent of a full-court press is being mounted and a larger list of districts where AFL-CIO grass-roots legislative committees are active.

Parallel campaigns

Various affiliates, especially the Auto Workers, are conducting parallel and cost-sharing campaigns. The home district lobbying will include meetings with House members during Congress's Easter recess.

In target areas, plans are being made for an Apr. 23 telephone "call-in" to district offices of members of Congress. Callers will express their support for the trade bill amendment that will be offered by Rep. Richard A. Gephardt (D-Mo.).

Radio spot commercials have been prepared, stressing the millions of jobs lost because of "a few countries that repeatedly sell more goods to America than they buy from us."

The video presentation is designed to clear up distortions being peddled by foes of the Gephardt amendment.

It stresses the flexibility of the Gephardt approach, refutes the red herring of "protectionism" and makes the point that the amendment will open up new markets for America's exports.

The postcards to be sent to key House members carry the theme of labor's campaign that "a trade bill without deficit reduction is a hollow shell."

Heads of Chrysler and Ford join UAW in trade bill drive

Detroit—The heads of two of the Big Three automakers threw their support behind the Auto Workers' drive for legislation mandating reductions in the hemorrhaging U.S. trade deficit.

Chrysler Corp. Chairman Lee Iacocca and Ford Motor Co. Chairman Donald Petersen joined UAW President Owen Bieber in separate letters to their workers, urging them to contact members of Congress and insist on a trade bill that goes beyond rhetoric and "actually solves the problem."

In a message appearing in the Chrysler Times, Bieber and Iacocca blamed the loss of nearly 3 million industrial jobs since 1980 on the Reagan Administration's "stupid" trade policy.

The trade loss, which has had a devastating impact on the auto industry, came despite "record productivity and quality improvements and . . . sacrifices by American workers to make the . . . industry become more competitive," the UAW and Chrysler presidents said.

"Some people say the problem is that American workers don't care enough about their work any more and that American managers aren't effective," the message from Bieber and Iacocca said. "America's people aren't lazy and stupid," they stressed. It's the nation's trade policies that are "lazy and stupid."

Bieber and Petersen, writing in Ford World, agreed that enactment of a new trade bill is almost certain. But they warned it "may not be worth the paper it is written on if its purpose is simply to answer public criticism, rather than to actually solve the problem."

To be effective, they said, the new measure must set "goals and timetables" and have "enough backbone" to achieve a balance in the trade accounts with high-surplus countries like Japan "by the early 1990s."

South African police attack rail strikers

Johannesburg—Whip-wielding police attacked 300 black unionists who gathered outside a labor center here to get information on a strike against the government-run railroad.

Twenty officers with six-foot plastic whips and police dogs charged into the strikers near the headquarters of the Congress of South African Trade Unions to break up the gathering.

Dirk Hartford of COSATU said the unionists were merely trying to keep abreast of strike developments. "Not everyone could fit into the building," he explained. "The people outside were not doing anything," but any COSATU activities invite "special treatment from the police."

Some 20,000 members of the South African Railways & Harbor Workers Union have been on strike since Mar. 13. The walkout was triggered by disciplinary action against one member accused of theft.

Right to know

Screen Actor member Hector Elizondo explains in Spanish about "right-to-know" laws on hazardous chemicals. The television public service announcements produced by LIPA will be previewed at the Apr. 23-24 teleconference broadcast from AFL-CIO headquarters. An English language version features SAG member Joe Spano of Hill Street Blues.

Fired up by Colt

A thousand trade unionists rally outside Colt Industries headquarters in New York in support of 1,100 locked-out Auto Workers. Members of UAW Local 376 in Hartford, Conn., were without a contract for 10 months prior to walking out in January 1986. The state declared the impasse a lockout last August when the company refused to bargain. The National Labor Relations Board has issued a complaint against Colt.

Import ceiling called vital to save steel jobs

The Steelworkers called for an extension of import restraints on certain specialty steels, warning that termination of the program would have "disastrous consequences for American companies and workers."

Testifying before the International Trade Commission, the USWA and the Specialty Steel Industry of the United States urged the ITC to recommend that President Reagan extend the current restraints program beyond its July 19 expiration date.

USWA President Lynn R. Williams said the decision on extending import restraints "will affect the lives of thousands of workers." He pointed out that since 1979, "total employment in specialty steel operations has dropped by 12,000 to 34,000."

"We have seen far too much hardship imposed on the U.S. specialty steel workers by imports," he emphasized. "Many of our workers have been on layoff so long that their unemployment compensation benefits and health plan benefits have expired."

In addition, Williams pointed out, "many producers are in dire straits—some firms already have declared bankruptcy; other mills are closed." Unemployment in some plants has soared to more than 50 percent. "It is clear that imports have continued to be the root cause," he said.

New onslaught

The USWA and the industry group stressed that ending the restrictions on specialty steel while other areas of steel production remain under voluntary restraints will give foreign steel producers an outlet through which they can channel excess production—to the detriment of American specialty steel workers.

Reagan approved the current limitations on specialty steel in 1983, providing protection for producers of stainless steel bar, rod, plate, sheet and strip and alloy tool steel.

Paul R. Roedel, president and chief executive officer of Carpenter Technology Corp., testified that "foreign producers have every incentive to—and no doubt will—flood the U.S. market with dumped and subsidized imports unless the President's program is extended." Economist Stanley Nehmer told the ITC that the current restraint program has had "limited effectiveness in that imports have surged, particularly in flat-rolled products."

For stainless steel strip and sheet, import penetration rose from 10 percent in 1983 to 16.5 percent in 1986. The increase for stainless steel plate was from 5 percent in 1983 to 12.8 percent last year. Import penetration of the alloy tool steel market remained the same over the four years, while there was a slight decline in the stainless steel bar and wire markets.

Unions criticize variable rate for pension guaranty

Continued from Page 1

additional source of funding for benefits related to plant closings, Sheehan suggested advancing steel industry tax credits to reduce the financial pressure to terminate pension plans.

Hoffman said the UAW supports an immediate across-the-board increase in the pension insurance premium and provisions for additional increases in the future, possibly through an indexing feature.

He suggested establishing faster rates of funding for newly established pension plans. But he cautioned that "changing the rules in the middle of a game" for existing plans "would impose severe financial hardship on some employers" and could endanger existing programs.

Smedley and the other labor witnesses questioned whether allowing employers to reclaim a portion of so-called excess assets from a retirement plan would result in fewer terminations, since an employer could take out all the excess funds by terminating a plan.

Labor's position, Smedley stressed, is that "employer contributions paid into a pension fund have been earned by workers and represent current wages withheld to pay a benefit on retirement."

On another Administration proposal, involving transfer of funds from sound pension plans to underfunded pension or retiree health benefit plans, Smedley said the AFL-CIO would object if funds negotiated in the give-and-take of collective bargaining were tapped to provide additional money to funds covering workers outside the bargaining unit.

Stepped-up funding endorsed for AIDS research, treatment

AIDS victims should not be discriminated against in the workplace or denied health care because they can't pay for it, the AFL-CIO said in urging steps to increase research funding and provide adequate medical aid.

Bert Seidman, director of the federation's Dept. of Occupational Safety, Health & Social Security, told a conference sponsored by Project HOPE Center for Health Affairs that the Reagan Administration must face up to the government's responsibility in dealing with the disease.

The conference addressed the impact of AIDS on health care systems. The two principal considerations for workers with AIDS, Seidman said, are high medical costs and job discrimination. "As long as AIDS victims can work, there should be no discrimination against them," he said, stressing that the disease can be transmitted in only very limited ways.

Seidman noted that the average per patient medical cost is about $150,000. If the serum AZT becomes available, that would push the cost at least $12,000 a year higher—a level most workers would be unable to afford, even on a shared basis.

Former Republican Sen. Richard Schweiker, representing the American Council of Life Insurance, held that insurance companies should not have to provide coverage to AIDS victims. Seidman said, however, that if no insurance is available to the victims, then government-backed programs should be.

Insurance companies should be prohibited from discriminating against those who test positive for AIDS, he said, emphasizing that test results can be misleading, and that even a positive result only means the person has been exposed to the AIDS virus and is at risk. "There is a risk," he said, but "insurance companies are paid for protection against risk."

Support system

Seidman explained that the last AFL-CIO convention called for increased research funding, education about AIDS prevention, and programs to assure proper medical and social support to lessen the tragedy and suffering of the victims and their families.

He warned that failure to "face up now to the problem in a rational manner will greatly increase the suffering of AIDS victims and ultimately result in much greater financial expenditures."

IBEW extends apprentice training

The Electrical Workers and the National Electrical Contractors Association will add another year to the classroom training for apprentices to meet the increasing skill demands resulting from technological change.

Under the proposal—which will be submitted to the Labor Dept. for approval once it has been ratified by the 347 local apprenticeship committees across the country—apprentices will spend five years in class, instead of four. And they will have to rack up 800 hours of study rather than the present 576 hours.

The decision was announced jointly by IBEW President John J. Barry and NECA Vice President John M. Grau.

They emphasized that the union-management decision to extend apprenticeship training "demonstrates a continuing commitment to provide highly qualified people to meet the needs of our customers."

The expanded curriculum, they said, "will serve to increase the employee's sphere of knowledge, the employer's market share and the user's confidence in our product."

The approximately 20,000 apprentices already enrolled in the program will not be affected. The change will apply only to new entrants. The current requirement of 8,000 hours of on-the-job training in addition to the classroom time will continue in effect, Barry and Grau said.

The action points up an emerging trend in the construction industry. Last year, the Plumbers & Pipe Fitters extended its apprenticeship program from four to five years, and a number of Sheet Metal Workers locals have taken similar steps.

Labor humor columnist Les Finnegan dies at 72

Les Finnegan, whose labor-oriented humor column appeared in union newspapers for more than 40 years, died Apr. 12 in Washington. He was 72.

Finnegan joined the Newspaper Guild in 1936, when he was a reporter on the Washington Daily News. In World War II, he served as a labor press correspondent in the Pacific. Finnegan came on the staff of what is now the Electronic Workers in 1949 and was executive assistant to IUE President James B. Carey for 16 years. His award-winning weekly columns were syndicated by Press Associates.

Coalition presses for worker rights

Former Labor Sec. Ray Marshall is heading a Coalition for Worker Rights to promote international standards and support enforcement through U.S. trade legislation.

"There is no reason why the United States should open its market to nations that do not permit workers to form unions and bargain collectively," Marshall said in announcing the formation of the coalition. He also called for sanctions against countries that take no action against child labor abuses or deny protection against occupational hazards.

He said the coalition intends to work in cooperation with other organizations to monitor human rights violations around the world to assure compliance.

Its founding members include AFL-CIO President Lane Kirkland, NAACP Executive Director Benjamin Hooks, Urban League President John Jacob, Bishop John McCarthy of Austin, Tex., National Council of Churches Gen. Sec. Arie R. Brouwer, former ILO Director-Gen. David Morse, former Labor Sec. W. Willard Wirtz, and Eleanor Holmes Norton, former head of the Equal Employment Opportunity Commission.

IBP strikebreaker recruiting drive stumbles

Continued from Page 1

inghouse division. Manuso estimated that only about 500 workers—management personnel and strikebreakers—were on the job in Dakota City.

UFCW Local 222 business agent Bill Schmitz agreed, adding that IBP is recruiting people all over the country because local residents don't want to work during a strike or under the wages and working conditions that IBP is offering.

Texas AFL-CIO President Harry Hubbard blasted IBP's campaign "to entice workers living in areas of high unemployment" as one of "many methods that companies use to try and break unions."

IBP also has sought replacement workers in Milwaukee, Chicago, New Orleans, Denver, Jackson County, Minn., Sioux Falls and Yankton, S.D., and Peoria, Ill.

In Peoria, members of UFCW Local 536 set up informational picket lines outside IBP's temporary recruitment office. Union members passed out leaflets that detailed the company's high accident rate and poor working conditions.

Lower rates

The meat processor, a subsidiary of Occidental Petroleum, said it will pay hourly wages of $6, with future promises of 15-cent raises.

UFCW members at IBP were earning $8.20 an hour for slaughtering and $7.90 for processing jobs before they were locked out last December after refusing management demands for a wage freeze and a two-tier pay system.

Last month, IBP announced it was ending the lockout but was cutting hourly wages to $7.60 for processors. The local voted unanimously to reject the cuts and declare its members on strike.

The union filed new unfair practice charges with the National Labor Relations Board, citing the company's latest harsh proposal as fresh evidence of IBP's bad-faith bargaining tactics.

In 1982, the last time the parties negotiated, workers accepted a $1.07-an-hour wage cut.

EDITORIALS

Confronting Evil

IN CAPE TOWN, South Africa, prominent clergyman from all the major denominations joined in a worship service to condemn—and defy—a government ban on virtually any form of protest against detention without trial.

For nearly a year, South Africa has been under a "state of emergency" decree that gives government authorities virtually unlimited powers to "detain" people, in effect imprison them without charge or trial.

Journalists are forbidden to report these detentions, and newspapers cannot print accounts of protests or quote any "subversive statements" without prior censorship clearance. Last week's AFL-CIO News reported the banning of an issue of the newspaper of the black South African Council of Metal Unions. It was forbidden reading because it carried an account of a police assault on a union meeting that left one worker dead and 20 wounded.

An estimated 30,000 people—an astonishing 10,000 of them children—have been detained since the state of emergency was declared last June. The exact number isn't known because of the rigid censorship.

THE NEWEST government directive forbids just about every form of protest against the detentions, no matter how peaceful.

The police decree published in the official government newspaper makes it illegal to call for the release of the political detainees.

It specifically prohibits writing or sending a telegram protesting the government policy. It prohibits anyone from signing a petition for the release of a detainee, wearing a button or a T-shirt displaying a protest, or displaying a placard or bumper sticker showing dissent.

Now in South Africa, it is a criminal offense to attend meetings held to protest detentions or even to express "solidarity" with apartheid's victims.

As in our own civil rights movement, clergymen of different faiths have joined hands to bear witness to the principles of their religion and take a stand against injustice. Standing together in a Cape Town church were leaders of the Dutch Reformed, Anglican, Catholic and Jewish religious communities. To our nation's credit, the United States ambassador to South Africa was among those who attended this multiracial, interdenominational service of defiance.

The breadth of the protest represents a moral force that other rulers in history have found to be stronger than armies.

Dr. Allan Boesak, a leader of the Reformed Church to which most of South Africa's ruling class belongs, gave this stern and deserved verdict:

"This is the madness of a government which has long ago lost all legitimacy and can only live out its last days compounding the evil it has begun."

On the Home Front

IT WOULD be a mistake to assume that our own country's struggle for civil rights and equal opportunity came to an end with the great legislative victories of the 1960s. That would be like saying that the struggle of workers to organize and bargain collectively ended with the passage of the National Labor Relations Act more than a half-century ago.

The trade union movement isn't likely to make that mistake, in either category.

AFL-CIO Sec.-Treas. Thomas R. Donahue had this to say at the federation's recent civil rights conference:

"It would be nice if we could tackle one problem at a time and solve it, once and for all, and go on to the next one.

"That never happens. The laws we put on the books during the civil rights revolution haven't brought racial justice. The nondiscrimination clauses that were written into our union constitutions so long ago have not eliminated discrimination from our own ranks.

"We have to keep working at it, in all its dimensions and shapes and disguises, with no illusion that we'll ever see the day when there's nothing more to be done."

Washington Window

High nursing home costs drive elderly into poverty

By Press Associates

Every year, thousands of elderly people reach what they think is the end of the line. After caring for a sick spouse for a long time and becoming mentally and physically exhausted, the well person decides the sick spouse might be better off in a nursing home.

Now comes the real shock. Many people think that Medicare covers nursing home costs. Far from it. When a couple learns the cost of long-term care greatly exceeds their financial ability to pay, they are forced to exhaust their resources before becoming eligible for Medicaid.

A recent study estimated that nearly two-thirds of those people who enter nursing homes become impoverished in less than three months. A nursing home stay can cost from $20,000 to $30,000 a year—a price out of the reach of all but a few.

Most states force elderly couples to divest themselves of just about everything but their homes. Further, many states respond to budget crunches by slashing maintenance allowances altogether, leaving the spouse no protection against impoverishment.

The misguided public policies that systematically force elderly spouses outside the nursing home into poverty should be reversed in favor of a humane approach. A group of legislators and organizations has initiated a national debate to bring that about.

Congressional proposal

At a Capitol Hill press conference, Senators Barbara Mikulski (D-Md.) and George Mitchell (D-Maine) and Representatives Henry A. Waxman (D-Calif.) and Charles E. Schumer (D-N.Y.) explained how their bills would combine to help prevent spousal impoverishment.

Essentially, their approach would set federal minimum standards to protect the assets and decent living standards of those on Medicaid—the federal-state program that provides basic health services, including nursing home care, for low-income people.

Mikulski knows the problem first hand. Her father is institutionalized with Alzheimer's disease and her mother is being required to "spend down" to qualify for help.

Mikulski has introduced the Medicaid Community Spouse Safety Net Act of 1987, a bill to allow the spouse to keep up to $25,000 in assets. It sets a federal minimum standard allowing an income of $750 per month.

Because of state-determined Medicaid eligibility levels, Mikulski said, "middle-income elderly persons are forced into poverty in order to meet the costs of their spouse's nursing home care." Often, she said, they find themselves without enough money for special diets, medications or prescription eyeglasses.

Burden on women

The problem is particularly acute among older women, Mikulski pointed out.

Mitchell, who chairs the Finance Committee's health panel, sponsored a bill to allow spouses to keep a minimum of $510 a month in income. States would be allowed to set higher levels than the federal minimum.

Mitchell told how Douglas Lewis, a retired sea captain, went into a nursing home in 1984. The state of Maine claimed nearly all his pension and social security income for his care, leaving his wife, Florence, unable to pay for her own needs and upkeep on their modest Wiscasset home.

If the situation had been reversed, Mitchell said, Lewis would have been able to keep nearly all his $1,500 monthly income while Medicaid paid for his wife's care.

Waxman, chairman of a health subcommittee, introduced a bill to protect $12,000 in liquid assets and set the minimum allowable income at $925 per month.

Schumer, a cosponsor of the Waxman bill, is on the key House Budget Committee. He told of a Bronx, N.Y., couple who had been married 50 years and had to get divorced so the husband's bills could be paid after he came down with Alzheimer's disease.

MEMO FROM COPE

Odds 'n Ends

WELL, IT DOESN'T HURT to ask, does it? Democratic National Chair Paul Kirk for second time publicly urges all candidates for party's 1988 presidential nomination to refrain from roughing one another up. He asks stick to issues, no personal attacks. He rues political wounds inflicted on party during 1984 nominating process and various candidates' efforts to "tear down the opposing Democratic candidates" and to "bashing the party itself." Similar appeals to Republican hopefuls doubtless will come from GOP National Chair Frank Fahrenkopf. Kirk's plea was timely. Within recent weeks, one Democratic prospect accused another of being a "one-issue candidate." To which the other responded his accuser is "living in the past" and on issues might benefit from a "backbone transplant." War of words has continued despite Kirk's request, though no others have joined it yet.

QUICK TRIVIA QUIZ: What congressional district had highest voter turnout for 1986 U.S. House election? Give up? No. 1 in voter participation was South Dakota's at-large district with 286,000 going to polls. No. 2: North Dakota's at-large district with 282,000 voting. But if you think listing at-large (statewide) districts unfair, you are authorized to promote Nos. 3 and 4 to 1 and 2. They were Florida's 13th District with 240,000 turnout and the same state's 9th District where 230,000 voted. No other district was close.

FEELERS GO OUT from Sen. Jesse Helms' National Conservative Club testing support for a Helms run for GOP presidential nomination. NCC sends letter to selected Helms supporters asking if they favor a "go" and to show they're in earnest, please send money. If this prospecting produces encouragement, NCC will follow up with mailing to its full list of members, plus other right-wing organizations. More than others presently in GOP presidential field, Helms could unite hard-core right. He also could turn off practically everyone else.

CAN APPOINTMENTS undo results of 1986 Senate contests? Recent death of Nebraska Sen. Edward Zorinsky (D) resulted in appointment by state's Republican governor of little-known GOP businessman to fill out term. Brings Senate balance to 54-46 (from 55-45) Democratic margin. At same time, rumor floated that President Reagan might appoint Arizona Sen. Dennis DeConcini (D) as FBI director to succeed William Webster, who's taking over CIA. That would give GOP governor in Arizona opportunity to appoint another GOP senator, reducing Democratic Senate margin to 53-47. No further word on DeConcini, but lots of other possibilities can be, and are, speculated. One has been for Reagan to appoint Justice Byron White FBI chief and fill his Supreme Court spot with an ultra-conservative jurist.

YUP, THE 'DUKE' KNEW—The Duke—the late John Wayne—knew early on what a lot of Americans have discovered to their chagrin in recent months about their President. The Duke knew his friend and fellow ultra-conservative, Ronald Reagan, was not always clear in his perceptions or reliable in his presentation. Turns out the Duke wrote to Reagan on Nov. 11, 1977, trying to straighten out Reagan on the Panama Canal Treaty. Reagan had been sending out mass mailings decrying the pact. Wayne supported it, felt Reagan was wrong in his opposition to the treaty and untruthful in his criticisms. Wayne wrote to Reagan: "Now I have taken your letter, and I'll show you point by goddam point in the treaty where you are misinforming people. If you continue these erroneous remarks, someone will publicize your letter to prove that you are not as thorough in your reviewing of this treaty as you say or are damned obtuse when it comes to reading the English language." You don't fool with the Duke.

GROWING AND GROWING is list of announced or soon-to-announce candidates for presidential nominations. Democrats' potential field swells to eight as following take plunge or move to water's edge: Massachusetts Gov. Michael Dukakis, Illinois Sen. Paul Simon, Tennessee Sen. Albert Gore. They join former Sen. Gary Hart, Sen. Joseph Biden (Del.), Rev. Jesse Jackson, Rep. Richard Gephardt (Mo.), former Arizona Gov. Bruce Babbitt. Yet another has moved into a "maybe-he-will" posture, Arkansas Gov. Bill Clinton. For GOP, name of former Sen. Paul Laxalt (Nev.) pushes to fore as possible entry after he rethinks a run. Also some speculate former White House communications director Pat Buchanan might reconsider earlier decision and instead enter fray. They'd join Vice President George Bush, Sen. Robert Dole (Kan.), Rep. Jack Kemp (N.Y.), former Gov. Pete du Pont (Del.), Rev. Pat Robertson and former Nixon aide Gen. Alexander Haig. It's only April 1987, so leave plenty of room on your list for more names.

Reagan Takes on Dreaded TATSAS

figures best defense is a good offense

Beware the dreaded TATSAS.

They are back. What a pestilence!

They threaten us all. They will pull down the Republic. Drat them!

We must confront, and defeat, the TATSAS, before we are done in by them.

Well, that's Ronald Reagan's line, anyway.

It is the President who is sounding the alarm against the TATSAS. At war against them all his political life, Reagan invokes his ancient enemy again in the twilight of his presidency.

Who are the dreaded TATSAS? Who else but:

The "*T*ax *A*nd *T*ax, *S*pend *A*nd *S*pend" crowd, as Reagan describes them—congressional Democrats.

Why is the President once more so worked up about them? Simple. There's comfort in the familiar. Reagan returns to the staple of his political career.

Silenced and embarrassed for months by Who's-in-Charge-Gate, he tries to shake off the slump by returning to an old script he knows by heart. It served him well for years. It now has the extra benefit of deflecting attention from the Iran caper.

He lashes at the "budget-busters," the TATSAS, and vetoes what they pass—clean water legislation, the highway bill. He wants to depict a President on top of events, back in the saddle and riding out against the foe. In short, leading.

It is an attempt to rescue himself from irrelevance in the waning months of his administration.

Recent polls not only track the sharp drop in his personal popularity as a result of Who's-in-Charge-Gate, and the continuing evaporation of support for his policies. They reveal a public that sees Reagan as decreasingly irrelevant to what is happening in government. Huge percentages of respondents to polls believe that Reagan staff, not the President, shapes the major policy decisions that emanate from the White House. Most Americans, polls show, now look to Congress, rather than the President, to deal with issues and problems.

How best to regain the initiative? Clearly, the President's answer is to go on the attack—against the TATSAS. It's worked before. The best defense is a good offense.

But this time around it sounds so hollow. Here's a President who has more than doubled the national debt, but who holds everyone but himself responsible for "budget-busting."

It's simple arithmetic: The President cuts spending on vital people-helping programs. He more than offsets the cuts with increases in defense spending. Then his tax cuts—so heavily loaded to favor business and wealthy individuals—make it impossible to generate federal revenues that come even close to paying for federal programs. Result: record deficits. The "budget-buster" is Ronald Reagan, not his favorite whipping boy, the TATSAS.

Throwing down the gauntlet, as he has done with Congress, might or might not restore his image as a leader in the public eye. It *will* reduce Congress's spirit of cooperation with the Administration, and that includes many senators and representatives of his own party.

He is picking fights, not really on the merit of issues, but as a ploy to regain lost relevance. In those terms, he is unlikely to succeed more than briefly, if at all.

Who's in Charge? Public View

From NBC/Wall Street Journal Poll, March 15-17. Question: During the next two years, who do you think will have the most influence on the policies and decisions made in the White House?

Howard Baker	**31%**
Cabinet members	**29%**
Ronald Reagan	**27%**
Nancy Reagan	**6%**
Not sure	**7%**

Then, There's 'Jimmy Syndrome'

Aggravation comes in large doses.

Not only has his teflon shield cracked because of the Iran business, but the President also has been struck by the "Jimmy Syndrome," the same lousy luck, or timing, that plagued and embarrassed his predecessor, Jimmy Carter.

Remember when Carter was attacked by a rabbit? Or when he went into a swoon while jogging, and the news photographers naturally were on the scene, and front pages were filled with pictures of an exhausted-looking President about to take a tumble?

Things like that are happening to Reagan now, despite the carefully controlled access the media have to him. At his recent news conference, the President tried to demonstrate what he did after learning he'd erred badly on a matter of fact at an earlier press conference. He rolled his eyes, grimaced and rapped his forehead with his knuckles in a self-mocking way.

Of course, the photographers caught him at the time of maximum klutziness in his demonstration, and front pages bloomed with one of the few unflattering poses he was ever caught in.

Then there's the TV footage—run over and over again on news shows as Who's-in-Charge-Gate developed. There's the President at a complete loss for words and staring blankly at the cameras when asked what he's doing now to get hostages released. Beside him, Mrs. Reagan looks down at the ground like there's an interesting ant or something, concealing the fact that she's prompting him. But her whispered cue is audible: "We're doing all we can," she tells him to say. He says: "We're doing all we can."

Tack these to stories during the last weeks of Donald Regan's stint as White House chief of staff—the when-will-he-resign game—that led many to question who's making decisions about top presidential aides, the President or the First Lady.

It all adds fuel to the fire of speculation about the President's so-called "managerial style" and his distance from, and ignorance of, events occuring under his own nose—like with Oliver North, John Poindexter and the National Security Council.

It's true: When you're hot, you're hot.

But: When you're not, you're not.

AFL-CIO LEGISLATIVE ALERT! PAGE 8

AFL-CIO President Lane Kirkland views presidential candidate video with Executive Assistant Kenneth Young, left, Sec.-Treas. Thomas Donahue and LIPA Director Larry Kirkman on the production set at federation headquarters.

Amendment vote key to strong trade bill

Kirkland asks congressional mandate

Workers whose jobs are at stake and the unions that represent them called on House members to strengthen a committee-approved trade reform bill and signal to the world that a pattern of ever-mounting trade deficits must be broken.

From labor's standpoint, the key vote will come on an amendment to the trade bill that will be offered by Rep. Richard A. Gephardt (D-Mo.).

It targets countries that have used unfair tactics to run up a big trade surplus with the United States. They would have to reduce the imbalance, either by buying more American products or by curtailing their exports to the United States.

"The Gephardt amendment is essential," AFL-CIO President Lane Kirkland wrote House members. "It is a congressionally mandated response to the excessive trade deficits and requires action by the President to reduce those deficits."

It's "a responsible approach," Kirkland stressed, that would make trade reform legislation worthy of the name.

The bill the Ways & Means Committee is bringing to the House floor has a number of labor-supported provisions, including a declaration that countries that defy internationally recognized labor standards may be guilty of unfair trade practices.

What is missing from the bill, as the AFL-CIO sees it, is a mechanism to reduce the trade deficit and halt the wipeout of American jobs.

Labor's efforts to strengthen the trade bill were joined by a growing list of employers from import-battered industries, and there were indications that House members were listening.

The word from Capitol Hill was that a consensus was forming in support of the Gephardt amendment.

It was reflected in a closed-door caucus of House Democrats that amounted to a dress rehearsal for the two-day debate that will precede the Apr. 30 vote on the trade bill.

House Speaker James Wright (D-Tex.), told reporters that public opinion "is very strongly in favor of something in the nature of the Gephardt amendment."

Unfair tactics

At issue is whether countries that have used unfair trade tactics to capture large chunks of the U.S. market should be simply jawboned to reduce their trade imbalance.

The Gephardt amendment would put a time limit on negotiations with countries that have run up large trading surpluses (defined as exporting 75 percent more to the United States than they import from it).

Then, if no agreement were reached, it would require that the offending country reduce its trade advantage by 10 percent a year—either by buying more American-made goods or reducing its exports to the United States.

Even as the debate heated up, a study by the congressional Office of Technology Assessment warned that the 2 million jobs still remaining in the U.S. textile and apparel industries are "greatly threatened" by an unchecked flood of imports.

The job threat comes despite a productivity rise in the domestic textile industry of more than twice the level for all manufac-

Presidential candidates air views in videotapes for union members

In daily videotaping sessions at the AFL-CIO headquarters, Democratic and Republican presidential candidates, both declared and likely, are telling how they would address labor's concerns on vital national issues and how they would lead the country if elected.

Their responses, limited to four minutes each, will be grouped by party on a one-hour video tape for viewing by AFL-CIO members.

Federation President Lane Kirkland and Sec.-Treas. Thomas R. Donahue visited the production set where the presidential hopefuls are being taped through May 4 and paused to view the first candidate response.

The AFL-CIO Executive Council, meeting in Washington May 5-7, will preview the candidate videos produced by the federation's Labor Institute of Public Affairs. The final tape will be distributed to all affiliates, state and local central bodies, COPE and constitutional departments.

Written candidate responses to questions on four vital issues—foreign trade, the budget deficit, human needs and labor's role in the political process—will be printed in a special issue of the American Federationist.

To assure the widest possible distribution, the responses will be provided to other labor publications for reprinting.

Court upholds rule on sympathy strikes

The Supreme Court declined to upset the long-established principle of sympathy strikes, rejecting a move by John Morrell & Co. against Food & Commercial Workers in South Dakota who walked out in support of fellow members at the Morrell plant in Arkansas.

UFCW Vice President Lewie G. Anderson, director of the union's packinghouse division, welcomed the high court's action in denying review of an appellate court decision. He said it demonstrated to employers "that there are limits to how far the government will go to assist them in frustrating workers seeking a fair shake from their employer."

The case dates back to July 1985 when UFCW Local 340 struck the giant meat processing firm in Arkansas City, Ark., after their existing contract expired.

The Arkansas City local set up picket lines at the Sioux Falls, S.D., plant on Aug. 4, 1985. Almost all of the workers at the Sioux Falls facility, members of Local 340A, stayed off the job.

In the aftermath, the company took disciplinary action against the Sioux Falls workers, noting in their personnel files that the job absences were "unexcused." The union filed a grievance over the company's action, but management has stymied that procedure.

Injunction issued

When Sioux Falls employees again honored an Arkansas City picket line on Aug. 15, Morrell obtained a restraining order halting the sympathy strike while it was still in progress. It subsequently won a permanent injunction against the union.

That action was subsequently overturned by the 8th Circuit U.S. Court of Appeals, which ruled that federal labor law bars interference with sympathy strikes. When Morrell appealed the case to the nation's highest court, the AFL-CIO filed a friend-of-the-court brief taking the same position, citing the protections guaranteed by the 1932 Norris-LaGuardia Act.

In the wake of the Supreme Court's decision not to curb the right of union members to engage in sympathy strikes, Anderson said that instead of pursuing legal action, Morrell "should begin facing the real issues" raised by the workers.

The concerns of all Morrell employees, he said, are "about their declining standard of living and unsafe working conditions."

Those are the same issues being raised by members of UFCW Local 1142 at Morrell's Sioux City, Iowa, plant who have been on strike for nearly two months, Anderson emphasized.

No cute names

"I don't want to work for someone who tells me I have to be called 'Buttercup,' " insists Loree Eliason, a hair stylist at Fantastic Sam's beauty salon in Kennewick, Wash. That's one reason why Eliason and six other Food & Commerical Workers have struck one of the chain's 1,200 outlets. (Story on Page 5.)

Senate shunts FCC attempt to dismantle fairness doctrine

The Senate sent a strong 59-31 message to the Federal Communications Commission that it doesn't want the longstanding "fairness" doctrine for broadcasters to be scrapped under the guise of deregulation.

It passed—over the Reagan Administration's objections—a labor-backed measure that spells out in permanent law an FCC requirement that television and radio broadcasters provide "a reasonable opportunity" for discussion of conflicting views on important public issues.

Legislative Director Robert M. McGlotten expressed the AFL-CIO's strong support of the legislation in a letter to senators on the eve of the vote. He credited the fairness doctrine with encouraging more complete coverage of controversial issues.

A companion bill is scheduled for early action in the House Energy & Commerce Committee, where Chairman John D. Dingell (D-Mich.) is a sponsor. The Senate-passed bill was cosponsored by Commerce Committee Chairman Ernest F. Hollings (D-S.C.) and the ranking Republican member, Sen. John C. Danforth (Mo.).

It was opposed by the Reagan Administration, which has sought to do away with both the fairness doctrine and the equal

4/25/87

Electronic monitoring saps workers' privacy rights

Big Brother is cutting a wide swath of intimidation in the workplace, eavesdropping on millions of employees under the guise of "monitoring" their on-the-job performance.

Long-distance telephone operators, health insurance company personnel, airline and hotel reservation clerks and Internal Revenue Service employees are just a few examples of the victims of management's mushrooming electronic snooping.

Legislation introduced by Rep. Don Edwards (D-Calif.) would bring an end to this abuse and restore the privacy rights not only of the workers involved but members of the general public who also are unknowingly subjected to this wholesale invasion of privacy.

As Communications Workers President Morton Bahr, a strong advocate of the Edwards bill, put it:

"When employers are listening in on their workers, they are listening in on customers and clients too. Just think about your most 'private' conversations with the IRS, Blue Cross or Blue Shield, the Veterans Administration, and you begin to understand just how alarming secret monitoring is."

The modern high-tech workplace has become "liberty's new battleground," Bahr stressed, pointing out that in the telephone system alone, more than 200,000 workers are under surveillance. He assailed the practice as "a blatant attack on privacy" and charged that secret telephone and computer spying has turned the modern office into a "prison" for employees.

'Don't bug me'

The union has kicked off a major Capitol Hill lobbying effort in support of Edwards's bill, using the slogan "Don't Bug Me" to attract congressional attention.

There's more than just the privacy issue at stake, the CWA president emphasized, because secret monitoring leads to reduced creativity, declining productivity and increased physical, mental and emotional stress.

"Secret monitoring doesn't improve service to the customer," Bahr insisted. "The assumption by many employers that supervision must be conducted secretly or else the worker will quit trying is both unfair" and contrary to all available evidence.

How widespread is the practice? A report issued by 9to5, National Association of Working Women, cited a survey of 110 data processing, word processing and customer service worksites by Prof. Alan Westin of Columbia University. It showed that 98 percent used computers to track their workers. And the National Institute of Occupational Safety & Health estimated that two-thirds of VDT users are monitored.

In a recent issue of Technology Review, Prof. Gary T. Marx of the Massachusetts Institute of Technology and computer security expert Sanford Sherizen provided these examples of the escalating practice of spying on workers:

- A major manufacturer hid microphones in plant toilets, claiming it was merely trying to ferret out drug sales at work.
- A bank searched through an employee's microcomputer and read the worker's file of personal letters and income tax data.
- Two workers who engaged in an after-work fist fight in a parking lot outside the plant gates were videotaped on hidden cameras and subsequently fired.

And CWA, 9to5 and other unions have voluminous files on management eavesdropping, particularly on computer and telephone operators, and the resulting emotional and psychological problems their members have experienced.

Privacy safeguards

The Edwards bill won't outlaw monitoring. But it will provide some measure of protection for consumer and worker privacy rights. The legislation would require installation of a "beep" tone, audible to both the customer and the employee, to let them know that management is listening in on the conversation.

The requirement would apply to government agencies and all companies with significant electronic communications, but would not restrict legitimate law enforcement activities in those instances where wiretapping has been authorized by court order.

CWA Local 2300 President Blondell Stewart-Ware of Washington gives Capitol Hill press conference examples of employer bugging. Standing to her right are Rep. Don Edwards (D-Calif.) and CWA President Morton Bahr.

VDT on-the-job surveillance cuts output, increases stress

Albany, N.Y.—Electronic surveillance of workers using video display terminals may actually lower productivity, the National Association of Working Women suggested at a workshop on the job and health hazards of the computer age.

Research Director Sharon Danann of 9to5 criticized companies that put VDT workers under constant watch, noting that the normal job stresses encountered by operators—including productivity demands, computer down time and routine tasks—are worsened by the pressure of constant surveillance and the simplification of work that often accompanies monitoring.

She stressed that monitoring, if used at all, should not be constant and should not cover time spent away from the machine. Programs that measure bathroom visits and other work breaks are inappropriate to any measure of productivity, she said.

Workers should have a "right to know" if they are being monitored, Danann insisted. "It's not only the machine that is getting more control over your job, but management is getting a heck of a lot more control."

The one-day workshop was sponsored by the New York State AFL-CIO and Cornell University's School of Industrial & Labor Relations. Zena Sternbach, occupational safety and health director for the state federation, led the session, as 75 participants reviewed health and stress problems associated with video display terminals and exchanged strategies to solve them.

Gayle Gabler of Service Employees District 925 reported on protections for VDT workers won in collective bargaining agreements. SEIU contracts, she noted, include required rest breaks, testing for hazards, eye examinations and corrective lenses, comfortable work areas, training and advance notice of new technologies.

Bargaining gains

Similar protections included in more than 120 Newspaper Guild agreements were outlined by William South, chairman of the Guild's VDT committee.

Suzanne Waltz, president of State, County & Municipal Employees Local 1000, recounted efforts to win protections from the Dept. of Motor Vehicles. Only after she appeared on a popular talk show did management agree to consider the workers' concerns.

Participants discussed two measures introduced in the state legislature to implement many of the needed VDT protections and enact strict purchasing guidelines.

Senate rebukes FCC, votes fairness doctrine

Continued from Page 1

time requirement for political broadcasts in the guise of deregulation.

Until recently, many people had assumed that the fairness doctrine was based so closely on the intent of the Communications Act that legislation would be necessary to revoke it. But a federal court of appeals decision last September held that congressional approval would not be required, touching off a campaign to write the policy into law.

McGlotten cited the court ruling as raising the possibility of the FCC repealing through regulation a provision that many in Congress had considered already codified in law.

Conventions

The Allied Novelty & Production Workers will hold a special convention May 4-5 in Atlantic City, N.J.

The Utah AFL-CIO convention will be held Aug. 27-28 in Salt Lake City.

Coalition seeks key changes in immigration reform rules

Unions and the Immigration & Naturalization Service remain at odds over the issues of employer sanctions and the role of hiring halls as the nation moves toward implementing the 1986 Immigration Reform & Control Act.

The AFL-CIO and a coalition of 28 labor, civil rights and religious organizations told the INS that its proposed rules on employer sanctions, while "significantly improved" from an earlier draft, continue to have "serious weaknesses" that could jeopardize the job rights of aliens seeking legalization under the new law.

And the federation and its Building & Construction Trades Dept. asked the federal agency to make clear that employers, not hiring halls, are required to verify the citizenship of workers referred to job sites. The INS has blown hot and cold on whether or not to hold union hiring halls to the verification standards the law mandated for employers and employment agencies that refer job applicants for a fee.

Unions urged that regulations spell out the exemption for hiring halls, while leaving the way open for employers and unions to enter into voluntary agreements on verification requirements if they so desire. This should be true, the AFL-CIO and the BCTD said, even in those cases where hiring halls charge a modest fee to cover the cost of services they render applicants.

On the employer sanction issue, the labor-civil rights-religious coalition urged that employers be given an extension of the time period in which they can continue hiring job applicants who may be eligible for amnesty. The group also urged changes in the employment verification form, the use of a wider range of documents for job applicants to establish their work eligibility, and subpoena power for INS officers to inspect business records without an employer's consent.

The INS has set a Sept. 1 cutoff date for hiring undocumented aliens who came to the United States prior to Jan. 1, 1982, and who intend to apply for amnesty under the law. The coalition called this an unrealistic date and asked for an extension to make it possible for intended beneficiaries to "continue working without interruption."

Unions joining with the federation in calling for changes in the amnesty procedure were the Clothing & Textile Workers, Laborers, Ladies' Garment Workers, Service Employees, Auto Workers, and the unaffiliated Longshoremen & Warehousemen and United Electrical, Radio & Machine Workers.

Among other organizations in the coalition are the Jewish Labor Committee, La Raza, American Civil Liberties Union, American Jewish Committee, Episcopal Bishops Fund for World Relief, U.S. Catholic Conference, Public Advocates Inc., National Lawyers Guild and the Center for Immigrants Rights.

Cincinnati Fed elects Radford to top post

Cincinnati—V. Daniel Radford was elected Executive Sec.-Treas. of the Cincinnati AFL-CIO, succeeding William P. Sheehan who resigned.

Radford, 45, has served as acting secretary-treasurer since 1984 when Sheehan was appointed by Gov. Richard F. Celeste to the state Public Employees Board. Before taking office in the central body, Radford was an international representative with the Firemen & Oilers. He is a member of Local 73 of that union.

Radford will serve until the next central body election in May 1988. Sheehan was reappointed to a six-year term on the state board.

Seminars set on undocumented workers

The AFL-CIO and affiliated groups will hold a series of seminars for union representatives to help unions set up operations that will aid undocumented workers with the regulations and requirements of the new immigration reform law.

The workshops will be sponsored by state and local central bodies and affiliates of the Labor Council for Latin American Advancement, with support from the AFL-CIO. Speakers will include representatives of religious, civil rights and community organizations and government officials.

The first session is set for Apr. 25 at Texas AFL-CIO headquarters in Austin. It is sponsored by the State AFL-CIO, the Texas Triangle organizing project and the state LCLAA chapter.

The schedule for future sessions includes:

- San Francisco, Apr. 28, at the Cathedral Hill Hotel. Sponsored by the California AFL-CIO.
- Albuquerque, N.M., Apr. 30 at the University of New Mexico, Continuing Education Center. Sponsored by the State AFL-CIO and state LCLAA chapter.
- New York, May 6, at the Clothing & Textile Workers Joint Board auditorium. Sponsored by the New York City AFL-CIO.

Arrangements also are being made for a Miami-area workshop to be held May 4 at the Carpenters Hall in Hileah, Fla.

The Los Angeles AFL-CIO will begin assistance programs for undocumented workers on May 1.

Latin labor council plan

LCLAA is kicking off a major campaign to help undocumented workers find their way through the maze of red tape involved in achieving legal status and eventual citizenship under the new immigration reform law.

The council, which speaks for more than 1 million Hispanic members of organized labor, has produced a 15-minute videotape that explains how aliens can negotiate their way through the "dangerous minefield" of legalization. Titled "Talk to Those You Can Trust," the Spanish-language tape is part of the council's amnesty assistance program.

Sheet Metal union snubs double-breasted contractor

Insists on company-wide representation

Minneapolis—A Minnesota-based air conditioning contractor wants the National Labor Relations Board to compel the Sheet Metal Workers to sign a new representation agreement.

In a man-bites-dog twist of labor-management relations, the union points out that it is under no obligation to continue a bargaining relationship with a double-breasted employer whose associated firms operate nonunion wherever they can get away with it. Local 10 of the Sheet Metal Workers served notice it didn't want to renew the contract that expires in May.

The dispute involves Egan & Co., the Minnesota firm that the union considers the parent of an interstate brood of companies with substantial common ownership.

One of its offspring, the SMW noted, is the Egan-Ryan firm in Phoenix that has battled a union organizing campaign. A dispute over a representation election last year is still pending before the NLRB.

Another is the Schebler Co. in Davenport, Iowa, where Local 91 is trying to break off contract relations.

The NLRB went to federal court and obtained an injunction requiring the two locals to continue as the bargaining agent and negotiate over new contract terms pending a hearing on the merits before an administrative law judge.

The international union's counsel, Judith Rivlin, said the local unions are complying with the court order by "bargaining in good faith but under protest" while considering an appeal. The union rejects the NLRB and company charge of a secondary boycott, citing the common thread of ownership among the various companies. It also affirms the absolute right of a union to end a bargaining relationship with an employer.

Still pending in federal court is a similar but unrelated case stemming from the union's decision last year not to continue a bargaining relationship with the Limbach Co., a heating and air-conditioning contractor based in Pittsburgh. Limbach is suing the union for losses it claims to have suffered because it couldn't get skilled union members to work for it.

The SMW stressed that a bargaining relationship requires good faith by both parties. A policy adopted by the union's executive board in 1985 called for maintaining relationships only with companies that agree to operate "100 percent union."

El Salvador's survival linked to U.S. monetary aid package

El Salvador needs and deserves America's economic support in its struggle "to strengthen its democratic foundations against great odds," the AFL-CIO told a House Appropriations subcommittee.

William C. Doherty Jr., executive director of the American Institute for Free Labor Development, warned that strains on the Salvadoran economy could jeopardize the substantial progress the Duarte government has made towards social justice and political stability.

Land reform is progressing despite opposition from both the political right and extreme left, Doherty testified. He said the program is moving too slowly, government resources are inadequate, new farm cooperatives have been burdened by debt—but farm production and family income is moving up and persistent problems are being slowly overcome.

The campesino organizations, an important part of the democratic trade union movement of El Salvador, are committed to land reform, Doherty testified.

Damaged infrastructure

Urging increased U.S. assistance, Doherty cited the heavy damage to the nation's infrastructure resulting from continued guerilla raids. And last October's earthquake "proved more punishing to the economy than all the years of guerilla warfare combined," Doherty noted, causing an estimated $822 million in damage.

The probable return of some 200,000 Salvadorans unable to qualify for legal status in the United States under the new immigration law will add another burden on an unemployment-plagued economy, Doherty said.

He warned that the austerity measures demanded of El Salvador by the International Monetary Fund would fall hardest on the poorest families and could "undermine the political stability of the democratically elected government."

Doherty welcomed the actions taken by the government of President Jose Napoleon Duarte to reduce violations of human rights, bring the military under stronger political control and improve treatment of prisoners.

Both the AFL-CIO and the Salvadoran trade union movement believe that all human rights violations must be "vigorously protested," he stressed.

Doherty reiterated the federation's deep concern at the entrenched power of a judiciary "dominated by supporters of the most reactionary right-wing forces in El Salvador." He cited the inability to bring to justice the military officers who ordered the killing of two AIFLD staff members and a Salvadoran union leader in 1981.

But progress towards a more just society has been substantial and is continuing, Doherty said. "The once horrendous violations of human rights have been essentially controlled by strong executive direction. The most serious land tenure problems have been ameliorated by land reform."

The Salvadoran people "need and deserve" economic support, Doherty testified.

Calling judicial reform essential, Doherty noted that the Assembly to be elected next year will be able to replace judges who have obstructed justice, he said.

Letter Carriers President Vincent Sombrotto and Postal Workers President Moe Biller hand contract proposals to USPS management negotiators.

Postmaster Gen. Preston Tisch, left, shares ritual handshake with Louis D. Elesie at start of negotiations with Mail Handlers Division of Laborers.

Postal talks open

Contract talks covering nearly 700,000 postal workers—the largest negotiations scheduled for 1987—got under way in Washington as Preston Tisch became the first Postmaster General in history to sit across the bargaining table from union leaders. In negotiations to replace contracts that expire July 20, the unions made clear they would seek needed wage improvements in light of the Postal Service's $305-million profit in 1986.

Garment workers poisoned, employer gets slap on wrist

New Haven, Conn.—Uretek Inc., the first company convicted of criminal violation of Connecticut's hazardous waste laws, was fined $250,000 in state court here, but its striking workers consider the penalty a slap on the wrist in terms of the seriousness of the offense.

Ladies' Garment Workers Organizer Daniel Perez said Uretek got off lightly. Most of the 53 workers who struck Feb. 20 have been diagnosed as suffering from liver disorders caused by the toxic chemicals in their workplace, including 10 with acute hepatitis.

The company and its vice president were convicted of illegally storing and disposing of 300 barrels of hazardous waste in the first criminal prosecution under the state law. Superior Court Judge Thomas P. Miano fined Uretek Vice President John Andrews $5,000 in addition to the penalty against the company.

Uretek workers, mostly Hispanic, have petitioned for union representation and an election is scheduled for May. 5. The fabric-coating plant has been largely shut down, with only supervisor's working.

The solvent dimethylformamide, which is absorbed through the skin and lungs, is considered the probable cause of the liver ailments.

Employees frequently worked 12-hour shifts, ate lunches at their machines, were paid an average of $4.50 an hour and weren't eligible for the firm's medical insurance plan for the first five years of their employment. They reported company threats if they joined a union, but it took only two days for every eligible worker to sign an ILGWU card.

Median income data disguise family economic crisis

A Labor Dept. report showing a first-quarter increase in median family income over the year-ago period requires careful reading, the AFL-CIO said.

The Bureau of Labor Statistics reported that for the first three months of 1987, weekly median family income rose 4.9 percent from the same period last year—to $557 from $531.

All salary and wage earners, from multi-millionaires to assembly line workers, are included in this BLS series. The median weekly wage is the figure which cuts the population exactly in half, with 50 percent earning above that level and 50 percent earning below.

AFL-CIO Economist Anne Draper pointed out that the individual components of the total family measure do not add up to the 4.9-percent gain. Weekly median income for families with one wage earner rose just 2.4 percent while two-earner families saw their weekly median earnings increase 3.8 percent. The percentage gains are not adjusted for inflation, she noted, adding that the median income series could give an overly optimistic view of the earnings picture for working families.

Last month, BLS said in a separate report that real weekly earnings of the average nonsupervisory worker were only pennies higher over the year but the buying power of paychecks was still 10 percent below the 1978 rate.

Ups and downs

In single-earner families where the husband was unemployed, median weekly income fell, from $230 to $228 for the 12-month period ending March 1987. Median weekly earnings for all families with one wage earner rose 2.4 percent, to $343 during the same period.

Families headed by women saw a slight increase in earnings—1.9 percent—from $303 to $309 in the past year. But the number of families headed by women also grew by 2.3 percent, Draper pointed out.

Families in which only the husband worked realized median weekly earnings of $469 as opposed to those families in which only the wife worked which posted median earnings of $219.

BLS reported that the number of families experiencing unemployment declined by 250,000 to 6.2 million. But one-quarter of all white families had at least one unemployed member and 2.5 percent experienced total unemployment. And less than half of all families headed by women had one working family member.

Draper also pointed out that the median earnings report does not distinguish between full-time and part-time employment. A person earning as little as $20-30 a week is counted in the survey as fully employed, she said, further disguising a stagnant unemployment picture.

The percentage of black families experiencing total unemployment jumped to 7.3 percent, with nearly 39 percent having at least one family member unemployed. Nearly 29 percent of all Hispanic families had an unemployed member, with 13.8 families experiencing total unemployment, the report showed.

In other findings:

- Median weekly earnings for white families were $578 during the quarterly period, while black families earned $399 and Hispanic familes earned $412.
- Nearly 47 percent of all married couples reported both husband and wife working, up from 45 percent a year ago.
- More than half of all mothers with children under six years of age were working during the first quarter period, up from 48.9 percent.

The BLS report is based on the Census Bureau's monthly Current Population Survey with a sample size of 59,500 households.

Whether coating bridges or creating billboards, painters have left their marks across the United States and Canada for more than a century. Local 130 members put a new face on Houston's Astrodome while paintmakers from Local 950 mix and match. Right, a turn-of-the century union painting, glazing and paperhanging company in Vancouver, B.C.

Painters leave signature in 100 years of service

The Painters are ringing in the 100th anniversary of their union.

From the earliest days of the 19th century, painters had banded together in associations and fraternal organizations. A short-lived Painters Society was formed in Philadelphia in 1813, while New York painters joined the Practical Painters Union —founded in 1842—or the German Fresco Painters formed in 1862.

And over the next ten years, dry dock painters, custom varnishers and house painters all formed separate organizations in Chicago, New York, St. Louis and other cities. But local associations could not protect their members from employers who sought the cheapest wages and lowest costs and underbid local contractors.

In March 1887, 15 local unions representing about 600 painters met in Baltimore to form the Painters & Decorators of America. Led by John T. Elliott, an organizer and officer in the Knights of Labor, the new union adopted a constitution that provided death and disability benefits of $50, based on a six-month membership.

The per capita tax was set at 8 cents a month and the new organization also sought jurisdiction over all brush trades, including paper hangers, coach car, carriage, ship and sign painters, and grainers and glaziers.

The fledgling union received help from AFL President Samuel Gompers, who headed the Cigar Makers, and Carpenters President Peter J. McGuire. A year later, at its first convention in Pittsburgh, the Brotherhood of Painters, Decorators & Paperhangers of America recorded 111 locals and 7,000 members.

In the 1892 Painters Journal, Elliott reported on the union's fight for the eight-hour day and other activities. "In Louisville, painters enforced the nine-hour day. In Zanesville, a strike of one week increased wages 25 cents per day. In Sacramento—car and coach painters won the nine-hour day with wages of 27-1/2 and 32-1/2 cents per hour," he wrote.

Breach healed

But in 1894, regional differences split the union and separate headquarters were established in Baltimore and Lafayette, Ind. The dispute was finally resolved after six years with the help of Gompers and members of the AFL harmony committee.

In a 1902 report, Sec.-Treas. M.P. Carrick wrote that, "we have 735 locals in good standing and nearly 40,000 members, 210 local unions being organized in the first six months of this year.

"We have increased wages and decreased hours of labor in over 150 cities and towns in the U.S. and Canada. We hope that in a year from now it will be a curiousity to meet a painter, decorator or paperhanger who works longer than eight hours. We have established the Saturday half-holiday in several cities.

"We believe there is hope for us only through unity and organization. Thus we can sustain wages and make them more uniform.

"We can pay higher benefits and accomplish more. For that purpose the brotherhood was founded. We are not a secret organization. We have no oath, only a simple pledge of honor."

By 1914, more than 81,000 painters had joined the union and by 1921, many locals had won the five-day workweek.

Health and safety were also early concerns. The 1921 convention stressed the industry's hazards, charging that "the mortality rate of painters is unnecessarily high. The injurious nature of the materials we use, the lack of adequate provisions for personal cleanliness and the unhealthful conditions under which we live and work are contributing to our high death rate."

The union continued to grow through the uneasy 1920s, with membership reaching the 120,000-mark and the eight-hour day, five-day workweek almost universally enjoyed by union members.

But work disappeared during the dark years of the Great Depression. From 1929 to 1933, membership fell to about 60,000 members then rose as the nation moved toward World War II.

The Painters' role in the war effort included signing the first union "no-strike" pledge—with a majority of its 145,000 members at work on war-related projects—and purchasing more than $1 million in war bonds.

During the 1950s, a wave of anti-union sentiment swept the nation, but the Painters, led by Presidents L.P. Lindelof and Lawrence M. Raftery, continued to grow, meeting head-on a variety of new technologies and automation that threatened their jobs.

New headquarters

In 1968, under President S. Frank Raftery, the Painters moved their headquarters to Washington and changed the union's name to the International Brotherhood of Painters & Allied Trades.

Now led by President William Duval, the Painters are continuing their pioneering work in health and safety, producing publications, videotapes and other materials on job hazards, toxic substances, scaffolding and other concerns. The union also has provided training for more than 15,000 members and established health screenings to detect disabling lung, heart and blood disorders.

The painter's trade includes bridge painting, sign painting, architectural coating and finishing, glazing, floor covering, paint mixing, decorating, paperhanging, drywalling and glasswork.

Molders certified after 7-year struggle

Frustrated by seven years of National Labor Relations Board foot-dragging, the Molders and a Lumberton, N.C., valve manufacturer turned to a neutral third party—an action that resulted in a union victory on a key certification issue.

Under the precedent-setting procedure, the union and Mueller Steam Specialties signed an agreement to let an outside arbitrator resolve certification questions tied up in NLRB procedures since 1980.

The arbitrator's decision cleared the way for collective bargaining—the Molders' goal since Feb. 14, 1980, when hourly and production employees at Mueller voted for union representation by an 89-46 margin, with 10 challenged ballots.

President Howard D. Samuel of the AFL-CIO Industrial Union Dept., which participated with the Molders in a coordinated organizing effort that led to the election victory, hailed the arbitrator's decision.

Poor process

"This case illustrates the inadequacy of our labor laws and, even more, of the procedures which the NLRB follows today," Samuel said. "We are pleased to have been a part of a creative and constructive effort by labor and management alike to resolve our legal differences and move forward despite obstacles set up by the board."

Following the 1980 election, Mueller filed a series of objections to the NLRB's certification of the Molders, charging the union and the IUD with unfair election campaign techniques. On three successive occasions, the NLRB regional director, the board itself and an administrative law judge held that the union organizers hadn't engaged in any objectionable conduct.

Instead, the ALJ found 22 employer unfair labor practices and recommended that the company be ordered to bargain. Mueller then filed a new round of appeals that kept the case tied up in labor board proceedings.

As the case continued to drag through NLRB channels, Samuel met with Harold Marko, chief executive officer of Core Industries, owner of the North Carolina firm, and reached agreement to empower a neutral third party to hand down a final and expedited resolution of the certification issue.

In his binding decision, the arbitrator ruled that "the union was properly certified by the board as bargaining representative" for production and maintenance employees. He directed Mueller to bargain in good faith with the Molders on a contract.

New catalog issued on labor films, videos

The AFL-CIO's catalog of audio-visual programs—"Films and Videotapes for Labor"—has been updated, featuring an expanded list of materials on labor history, collective bargaining, arbitration and grievance procedures, political action, safety and health, and legislative issues.

A single copy is free. Additional copies are 75 cents each, 100 for $60, and 1,000 for $550.

The catalog, Publication No. 22, can be ordered from the AFL-CIO Pamphlet Division, Room 208, 815 16th St., N.W., Washington, D.C. 20006.

Sheet Metal skill awards set as centennial event

The Sheet Metal Workers launched a two-year program to recognize and honor the skills of union crafts workers and builders, as part of the union's 100th anniversary. The SMW will mark its centennial year in 1988.

The program, jointly developed with the Sheet Metal & Air Conditioning Contractors National Association, is "a way to recognize the work of generations of fine craftsmanship at the community level," SMW President Edward J. Carlough said.

The project also acknowledges how building trades skills and workers "contribute to a better quality of life in the places where we live, work, worship and play," he added.

Association President James E. Roth noted that "skilled craftsmanship abounds in all communities in a variety of shapes, sizes, places, but needs to be given greater visibility."

Under the "craftsmanship-is-the-heart-of-the-community" program, SMW locals and contractors will work with community, labor and business organizations and public officials to nominate outstanding examples of construction and craftsmanship.

Reagan's feeble tariffs unlikely to slow down flow of Japanese imports

Reagan Administration sanctions against Japan for wholesale dumping of computer chips in open violation of an agreement reached last summer are merely "a drop in the bucket" in dealing with the flood of imports from that country, the AFL-CIO charged.

The tariffs imposed on certain electronic consumer goods affect only $300 million in Japanese imports at a time when that country's trade surplus with the United States is running at an annual rate of nearly $60 billion, Federation economist Mark Anderson pointed out.

The restrictions, he noted, could be lifted within the next 60 days, or even sooner if the President decides to ease up, making the action "little more than a symbolic gesture."

What is needed, Anderson stressed, is "decisive action to address the staggering level of Japanese goods that are flooding the U.S. market, driving companies out of business, driving workers onto the unemployment lines and destroying the economic base of hundreds of communities."

Meaningless step

He expressed concern that the Administration may have taken this "relatively meaningless" step in the semiconductor field "in an effort to blunt the effort underway in Congress to enact tough trade legislation that would drive down the huge trade imbalances" with Japan, West Germany and other countries.

Anderson emphasized that last year, the White House renegotiated the multifiber agreement on textiles to thwart congressional action on a bill to stem the tide of textile, apparel and shoe imports. Reagan then vetoed a bill to provide relief for domestic producers, and an override attempt failed by a slim margin.

The imposition of 100 percent tariffs on some Japanese microcomputers, television sets and power hand tools—in effect doubling their price as they enter the U.S. market—marks the first time that the United States has taken unilateral steps to protest that country's wholesale dumping practices. "We welcome any kind of Executive Branch action to enforce trade agreements," Anderson said. "But this hardly addresses the deep-seated problems we have with Japan."

Basic problem remains

The move "in no way comes to grips with the fundamental problems that underlie the U.S. trade deficit with Japan," he emphasized. "The only effective solution is for Japan to open its markets to American-made goods and end its export-dependent economic status that's causing so much harm in this country," Anderson maintained.

Japan has virtually closed its markets to the American computer industry, has set intentionally high barriers to U.S.-made cars, and has taken other actions to protect its domestic industry at the expense of America's ability to export its products.

The "sensible way" to deal with the long-term problem, the AFL-CIO said, is through enactment of a tough trade bill that includes an amendment being offered by Rep. Richard A. Gephardt (D-Mo.) mandating action to bring exports and imports into closer balance instead of leaving it to the Administration to go the negotiation route with other countries on a case-by-case basis—as the White House did with Japan on the semiconductor issue.

U.S.-made passport press passe

U.S. passports aren't exactly "made in Japan," but they come mighty close to bearing that inscription.

Americans traveling abroad will find that these ultimate symbols of citizenship have been reproduced on a $1-million Japanese-made machine.

The Government Printing Office said the machine was manufactured by Uno Seisakusho Co. Ltd., described as the "low bidder" for the contract. The only other firm that was in the running was a West German manufacturer.

The machine was assembled in this country by a team of Japanese technicians who took six weeks to install it in a building almost in the shadow of the U.S. Capitol. It was given a test run in Washington by a Japanese engineer.

When it's in full operation, the machine will print, fold, cut, number, sew and trim up to 7 million American passports a year.

The GPO is so proud of the new machine that it produced a brief promotional videotape to praise its efficiency. The government agency played the tape for reporters on a Japanese-made videocassette recorder, hooked up to a Japanese television receiver.

Gephardt amendment key trade vote

Continued from Page 1

turing, and textile workers' wage rates that have dropped still further behind the national average.

The report found that paychecks for American apparel workers have slipped from 62 percent of the national manufacturing average to 52 percent since imports became a major factor. They now account for half of all U.S. apparel purchases. From 1980 to 1985, the domestic textile and apparel industries lost 282,000 jobs.

Few House districts are without their horror stories—of disappearing electronic and electrical industries, decimated steel employment, a shrunken U.S. auto industry, depressed suppliers, and abandoned shoe factories.

Meanwhile, the Senate Finance Committee started its markup of a trade bill that eventually will be meshed with the House measure.

Committee voting on the bill may begin next week and Senate floor action could come by early June, Senate leaders said.

In the last Congress, a House-passed trade bill that included an earlier version of the Gephardt amendment died without action being taken by the Republican-controlled Senate.

What it's all about

Seattle—Belonging to a union meant all the difference to television reporter Julie Blacklow, a member of the Television & Radio Artists, who has returned to her job with more than $30,000 in back pay —thanks to AFTRA.

But for her colleague, assignment editor Bill Baker who wasn't part of the bargaining unit, it was a different story. He was fired as a result of the same incident—and had no one to fight for him.

Backlow and Baker both lost their jobs for their alleged "poor judgment" in covering a fast-breaking, controversial kidnapping story.

But AFTRA—with financial backing from the Washington State AFL-CIO and other unions in the federation—fought the case on the ground that the union contract contained a "just cause" protection for its members.

Blacklow is now back at her job, doing on-the-air reporting. But her colleague had to settle for employment elsewhere—because he didn't have the benefit of a union.

Kirkland assails South Africa for slaughter of rail strikers

AFL-CIO President Lane Kirkland condemned the "brutality of the South African government," following the murder of six union members and the wounding of an undetermined number of others when police opened fire on striking black railway workers in Johannesburg.

Police killed several members of the South African Railway & Harbor Workers Union at a train station and then mounted a siege at the offices of the Council of South African Trade Unions, where other union members were slain.

Kirkland said the American labor movement was "outraged at the renewed attack on the black trade union movement in South Africa" and emphasized that the unprovoked assault "strips away the facade of order and unmasks the brazen repression which is at the root of the apartheid system" that keeps the white-minority government in power.

The action also brought a vigorous protest from the International Confederation of Free Trade Unions in Brussels, where its Coordinating Committee on South Africa was in session at the time of the assault.

Provocative action

The ICFTU expressed "horror" over the carnage and branded the police violence "wholly unjustified and avoidable." It charged that the dispute arose "from the unjust, provocative and shortsighted approach of the South African Transport Services to its black employees."

The confrontation erupted after union members gathered at the Doornfontein station to protest the government-run railroad's firing of 16,000 strikers after they rejected an ultimatum to return to work and end a six-week walkout.

Later, at the COSATU headquarters 12 miles away from the scene of the first clash, security forces armed with automatic rifles surrounded the union building, trapping some 500 transport workers and supporters. At least two union members died in the ensuing hail of gunfire.

Kirkland said that the "provocative approach of the South African government" was aimed at crushing the union. The action, he said, "reveals the true intentions of Pretoria—the suppression of independent trade unions and of those who dare to speak out in behalf of human dignity, workers' rights and racial equality."

The AFL-CIO demanded that Pretoria halt its "aggression" against workers, enter into negotiations with the black-led South African unions and immediately reinstate all dismissed workers.

The ICFTU charged that Pretoria's decision to dismiss the transport workers and its refusal to negotiate with the union were deliberately designed to "inflict grave suffering" on the black labor movement and to damage constructive labor relations in that strife-torn country.

The committee urged ICFTU member organizations to press their own governments to file formal protests with the white-minority regime in Pretoria and to take "active measures to dissuade the authorities from pursuing their ruthless campaign of repression."

Kirkland pledged the AFL-CIO's continued support to the independent black trade union movement in South Africa.

"We send our condolences to the families of those murdered in the struggle for justice and freedom," he declared. "And we pledge our steadfast solidarity in the struggle for democracy and human dignity in South Africa."

The ICFTU said it would extend assistance to families of the slain and wounded strikers, and vowed that it would continue to support COSATU and the rest of the independent trade union movement in the struggle for social and economic justice.

Dan Conway dies, retired president of Bakery Workers

Carlsbad, Calif.—Daniel E. Conway, president emeritus of the Bakery, Confectionery & Tobacco Workers, died of cancer Apr. 13. He was 75.

Conway, president of the American Bakery & Confectionery Workers from 1969 until his retirement in 1978, helped build the union after its predecessor was expelled from the AFL-CIO in December 1957 for corruption. The Tobacco Workers merged with the B&C in 1978 to form the BCT.

The news of his death "brings us all great sorrow," said BCT President John DeConcini, who succeeded Conway. "He was a man of great integrity and compassion who believed fervently in the goals of the labor movement and worked diligently to make them into reality for our members and food workers around the world."

Conway became active in the union while working in Los Angeles pie shops during the Depression. In 1937, he was elected business agent for Los Angeles Local 37 and later that year was appointed an international representative. He became an international vice president in 1948, director of organization in 1953 and administrative director of the union in 1955.

Following the B&C's ouster from the federation, Conway and DeConcini with two other officers were given a charter by the AFL-CIO for the American Bakery & Confectionery Workers Union. In 1969, the unions were reunited after the old B&C leadership was ousted and Conway was elected president of the merged unions. He also served as a vice president of the federation's Union Label & Service Trades Dept. and president of the Food & Beverage Trades Dept.

A memorial service will be held Apr. 28 at 1 p.m. at Bradley Hills Presbyterian Church in Bethesda, Md. He is survived by a son, daughter and four grandchildren.

Hair stylists put a curl in boss's name game

Kennewick, Wash.—Striking for personal dignity, seven local hair stylists want union recognition and an end to the practice of having to use demeaning nicknames on the job.

The operators, members of the Food & Commercial Workers, walked off the job because the owner of the Fantastic Sam's beauty salon insisted they be called "Bubbles" or "Freckles" or "Buttercup" instead of their given names.

There are other issues at stake in the walkout against the franchise operation which has more than 1,200 outlets and more than 10,000 employees in the United States, Canada, Australia, Japan and Taiwan.

Besides union recognition, the hair stylists want:

- Information about whether the chemicals they work with every day are going to harm them or their children.
- The freedom to change jobs but remain in the same industry they've chosen for a career—a direct challenge to management's demand that they sign away their rights to work for a competitor if they leave the chain.

Most of all, said Beth Shulman, director of the UFCW's Professional Hair Care & Beauty Trades Division, "they want to make a decent living and have decent benefits like health insurance to protect themselves and their families."

UFCW Local 1439 in Spokane filed unfair labor practice charges with the National Labor Relations Board after the stylists were threatened and fired for joining the union.

The local pointed out that Sam M. Ross, founder of the chain based in Memphis, Tenn., was quoted on local television as threatening to blacklist the strikers. Operators from a Spokane outlet of the same chain were required to work as scabs here and received more favorable terms and conditions of employment than striking employees received before the walkout.

The UFCW also plans to file sex and age discrimination charges against the chain with both the state and federal governments, Shulman said.

"Operations like Fantastic Sam's are the McDonald's of the hair care industry," the UFCW official said. "they are structured to exploit young women just graduating from beauty school. Most are paid minimum wage and discouraged from establishing the loyal customer base that makes hair care an attractive career."

Trouble spots

Unemployment rates in 20 states were above the national average of 6.6 percent in February and hovered close to that mark in 13 other states and the District of Columbia. Jobless rates were in double digits in seven states—Alaska, Idaho, Kentucky, Louisiana, Mississippi, West Virginia and Wyoming.

Employers liable for unsafe workplace

Court says complying with specific standard no defense

Employers can be cited under the general duty clause of the federal job safety law for failing to maintain a safe workplace even if they comply with a specific standard covering the hazard at issue, the U.S. Court of Appeals for the District of Columbia Circuit ruled.

The court remanded the case back to the Occupational Safety & Health Review Commission which had dismissed a 1983 general duty citation against General Dynamics Corp., after an on-the-job fatality at its military tank plant in Centerline, Mich. The Auto Workers and the Secretary of Labor appealed OSHRC's dismissal.

The Occupational Safety & Health Administration cited General Dynamics Land Systems Division with two willful violations in 1983 following a series of incidents in which workers at the company's Warren, Mich., plant were injured from exposure to freon, a solvent used clean up oil spills in the hulls of the tanks.

Federal OSHA cited the firm for violations of the general duty clause and of the standard governing worker exposure to the solvent. OSHA sought penalties totalling $18,000.

During the OSHA investigation at the Warren plant, UAW member Harvey Lee died at the Centerline plant from exposure to freon. Michigan OSHA investigated that incident and the state charged General Dynamics with involuntary criminal manslaughter. The case, dismissed by lower courts, is now before the Michigan Supreme Court.

Safe workplace

The general duty clause of the 1970 law requires employers to provide "a place of employment which (is) free from recognized hazards that are causing or are likely to cause death or serious physical harm" to their workers.

General Dynamics contested the citations. An administrative law judge ruled that OSHA did not prove a violation of the freon standard. Further, the ALJ dismissed the general duty citation, reasoning that the charge is "inappropriate and must be vacated because the alleged hazard is addressed by a specific standard" which General Dynamics had not violated.

The ALJ's ruling became a final order of the commission "by virtue of the failure of any commissioner to direct internal review within 30 days," the appellate court noted.

Dr. Franklin Mirer, the UAW's safety director, said the court's decision was vital to restoring the general duty clause that the Reagan-appointed commission attempted to erase. "The appeals court put it back in the way Congress had intended," Mirer stressed.

The ruling "means that an employer who knows there's a serious hazard in the plant can't hide behind an absent or inadequate OSHA standard," Mirer commented.

The unanimous opinion, written by Judge James L. Buckley, found that the general duty clause "clearly and unambiguously" imposes a general requirement for employers to provide a safe workplace that is "distinct and separate" from the duty to comply with specific health and safety standards. Further, the general duty clause is not preempted by the specific standards, the court held.

Recognized hazards

The judges ruled that an employer is required to protect workers from "recognized hazards," including those of "which he has specific knowledge. Therefore, if (as alleged in this case) an employer knows a particular safety standard is inadequate to protect his workers against the specific hazard . . . his duty under (the general duty clause) will not be discharged no matter how faithfully he observes that standard."

But if the employer lacks specific knowledge of a hazard, he "may rely on his compliance with a safety standard to absolve him from liability for any injury actually suffered by employees as a consequence of a hazard the standard was intended to address and he will be deemed to have met his obligation under the general duty clause," the court said. From this, it held that the ALJ should have "determined whether the description of the hazard was accurate and if so, whether General Dynamics had knowledge of the hazard."

The court also found a disparity between the hazard covered in the freon standard and the hazards described in the OSHA citation, pointing out that the citation refers to a "danger, in the confined spaces requiring special entry procedures, of short-term exposure to toxic vapors in concentrations that may displace oxygen."

OSHRC's order to dismiss the citation was "arbitrary and capricious," the court said, because it departs from the commission's decision in ConAgra Inc.—a case in which workers were required to enter grain-laden railroad cars containing pesticide fumes.

In ConAgra, the ALJ also had dismissed the general duty citation. The commission, while holding a specific standard preempts the general duty clause, decided that the "failure to test in a confined atmosphere before possible exposure of employees to a toxic substance is a violation distinct from a continued exposure" to a toxic substance. OSHRC remanded the ConAgra case holding that the administrative law judge "erred in granting ConAgra's motion to dismiss" the citation.

AFGE open house

Government Employees President Kenneth T. Blaylock, right, shares the ribbon-cutting honors as the AFGE opened its new headquarters. The union's 1986 convention voted to dedicate the building to Royal L. Sims, a national vice president who died last year. AFGE members in Washington to lobby on Capitol Hill toured the new headquarters. From left, Washington Mayor Marion Barry, Sim's sister Notie Sims and Blaylock.

Unions press for new rule on carcinogen

Four unions and a citizens' group returned to court seeking an order that the Occupational Safety & Health Administration issue a short-term exposure limit for cancer-causing chemical ethylene oxide. OSHA, meanwhile, called for public comments to aid it in revising exposure standards for four ethylene glycol ethers.

The action to wrest a short-term limit on EtO from the agency was filed by the Service Employees, State, County & Municipal Employees, Hospital & Health Care Employees and Clothing & Textile Workers and the Public Citizen Health Research Group.

The suit asks the U.S. Circuit Court of Appeals for the District of Columbia to enforce the order it issued against OSHA last July. That ruling requires the agency to set a short-term exposure limit for the chemical or explain why it cannot. EtO is used as a sterilizer in hospitals, and workers are routinely exposed to blasts of the gas when unloading sterilizing machines.

OSHA proposed a limit of 10 parts EtO per million parts air in 1984, but dropped in the last day before publishing the final rule, apparently under pressure from the White House Office of Management & Budget. Since then, the agency has fought against issuing any short-term exposure limit.

Meanwhile, OSHA initiated rulemaking action to reduce exposures to four glycol ethers. The agency issued an "advanced notice of proposed rulemaking" in early April, seeking public comment on engineering controls, health effects, appropriate exposure limits, available substitutes, exposure monitoring methods, training and cost-benefit ratios for various control measures.

Unnecessary step

A recent report by the Administrative Conference of the United States, an independent federal agency, criticized OSHA's use of the "advance notice of proposed rulemaking" step in standard setting, declaring that it results in little new information while adding to already lengthy rulemaking process.

The Environmental Protection Agency estimates that between 200,000 and 350,000 workers are exposed to potentially unsafe levels of glycol ethers found in solvents, inks, paints, adhesives, plastics, rubber, electronics and photographic chemicals.

Comments on the four chemicals—2-methoxyethanol, 2-methoxyethanol acetate, 2-ethoxyethanol, and 2-ethoxyethanol acetate—are due by July 31, OSHA said. Adverse health effects include reduced sperm counts, gynecological disorders, neurotoxicity and depression of immune system and bone marrow production.

The Chamber's Agenda

YOU WOULD think that the U.S. Chamber of Commerce would be concerned about a trade imbalance that has shrunk markets for American goods and made basket cases of entire industries. But it turns out that it has more urgent concerns.

The Chamber has embarked on a "stop labor mission," according to an account in Congressional Quarterly magazine. The article describes a whimsical "impeccably catered lunch" that the Chamber put on recently for 25 invited reporters. Each guest was given a cutesy "menu" of labor's legislative goals in the 100th Congress and the purported price.

By the Chamber's arithmetic, a parental leave bill that allows workers to take unpaid leave to care for a new baby or an ailing family member is priced at $2.6 billion.

A bill to curb polygraph use in private employment is "a carryout special for those who like to feast on employer property." Plant closing legislation, by the Chamber's menu description, is guaranteed to "stall economic growth."

The only guarantee, we suspect, is that anyone who swallows the Chamber's menu descriptions is in for a bad case of indigestion.

Right Diagnosis, Wrong Cure

ONE OF THE BEST arguments for strengthening the trade reform bill the House Ways & Means Committee has drawn up is the committee's own report on the need for legislation.

It accurately identifies an important cause of our nation's huge and fast-growing trade deficit. Other nations have fostered the development of industries to produce for export markets and have made trade into a one-way flow by subsidizing exports and restricting imports.

Rather than develop their own domestic markets, the report points out, such countries prefer "to plow their export earnings back into further manufacturing capacity."

The United States lacks a "cohesive national strategy" to deal with the real world of international trade, which doesn't follow the old textbook definitions. The consequences have been devastating, the committee points out. It cites:

- The loss of 2 million manufacturing jobs since 1981.
- A farm depression that has led to half a million farm foreclosures in the same period.
- Unacceptably high unemployment in key industrial areas.

THE REPORT points out also that "our workers and communities are being asked to pay the costs of changes brought upon them by world competition, while the federal government does little to promote the necessary adjustment process."

Does it read familiar? It should. This is what unions have been saying—for some years now.

The problem is the remedy, not the diagnosis. In general, the changes the Ways & Means Committee recommend are desirable and should be adopted. They just don't go far enough.

Nothing in the committee bill would require countries that have used unfair trade practices to build huge trade surpluses to reduce the imbalance. The amendment that will be offered by Congressman Gephardt would do so.

Its formula of a 10 percent narrowing of the trade imbalance each year is reasonable and achievable. It would not disrupt world markets, but it would provide light at the end of the tunnel. It should be adopted.

Dehumanizing Workers

PEOPLE ARE not machines, and they should not be treated as such. They should not be wired up to polygraphs, subjected to Big Brother electronic surveillance, forced to urinate into paper cups, or otherwise dehumanized on the job.

All this is so obvious, it should not be necessary to state it. Fortunately, most employers agree. Unfortunately, some do not. They're usually the ones who complain the most about lack of company loyalty on the part of workers.

Washington Window

Aid voted for homeless long ignored by Reagan

By Press Associates

During the 1980s, growing numbers of homeless Americans have dotted the urban landscape with scenes that long have been typical of Third World cities—men and women living and sleeping in streets and parks, eating from garbage cans, begging for loose change.

During the past six years of recession and "recovery," the ranks of homeless have swelled while government programs like food stamps, low-income housing and job training were cut back. Soup kitchens and shelters run by churches and charities have been stretched beyond their means by the suddenly jobless "new poor" who never imagined they would be asking for a handout.

National leadership on the program has been sorely lacking. President Reagan was asked in early 1984 about the homeless on ABC's "Good Morning, America." He replied, "What we have found in this country, and we're more aware of it now, is one problem that we've had, even in the best of times, and that is the people who are sleeping on the (heat) grates, the homeless who are homeless, you might say, by choice."

Around that time, Edwin Meese III, the President's friend and counselor, commented, "We've had considerable information that people go to soup kitchens because the food is free and that's easier than paying for it."

Sleep out rally

Since then, the political climate has changed. On Mar. 3, about a dozen members of Congress joined a gathering of movie stars and activists in sleeping out on the streets of Washington. This "Grate American Sleep-Out" was organized by homeless advocate Mitch Snyder and actor Martin Sheen, who portrayed Snyder in a television program about the homeless.

Two days later, the House on a 264-121 vote passed a bill to triple current federal spending on homeless assistance programs.

The House bill would provide an additional $500 million in fiscal 1987 for shelter and health care for the homeless, and $255 million in fiscal 1988-90 for food and nutrition programs.

The Senate approved a smaller homeless aid package that would provide less than the House bill in such areas as health care, long-term housing and food and nutrition, but more for job training, education and drug and alcohol treatment.

Worsening problem

No one knows how many homeless there are in America. The two most widely quoted estimates range from a low of 250,000 by Reagan's Housing & Urban Development Dept. to a high of 3 million by private groups which aid the homeless.

Whatever the figure, the problem is worsening. Officials of the United Way and the National Coalition for the Homeless estimate that homelessness is growing by 25 percent a year.

Who are the homeless? While the most visible are the disheveled, the chronically down-and-out and the mentally ill, these unfortunates are just the tip of the iceberg.

Last winter, the number of homeless families with children rose 25 percent, making families with children about 35 percent of the homeless population, according to the Partnership for the Homeless. This New York area inter-faith group, which runs the largest private shelter and permanent housing program for the homeless in the nation, surveyed 741 public and private social service agencies across the nation.

It found the leading cause of rising homelessness was lack of affordable housing, followed by a lack of job training and placement and a lack of proper care for mentally disabled persons discharged from institutions. It also found that Reagan's housing, jobs and other policies were "a distinct cause of homelessness." It is good news that Congress has begun to change those policies.

AFL-CIO LEGISLATIVE ALERT!

This week, as many of you read this issue of the *Alert*, the House will be voting on the Gephardt trade deficit reduction amendment. You and other union activists across the country have participated in one of labor's major grass-roots lobbying campaigns, meeting with, writing to, and calling your representatives, to tell them how vital this amendment is to the economic security of America's workers. But as important as this vote is, it is only a beginning.

AFL-CIO Supports Riegle Amendment

Fair Trade Fight Moves To Senate Finance Committee

This week, the fight for fair trade reform also starts up in the Senate. The Senate Finance Committee is scheduled to begin mark-up on their version of the omnibus trade bill, and Sen. Donald Riegle (D-MI) will offer S. 499, the companion to the Gephardt amendment, for inclusion in the committee bill.

AFL-CIO President Lane Kirkland has said that the present version of S. 490, the Senate bill, is "totally inadequate to the task of addressing the nation's trade crisis."

This version, which is supported by Senate Finance Committee Chairman Lloyd Bentsen (D-TX), contains neither of the provisions which are the most vital to labor: the Riegle trade deficit reduction mechanism and a provision which would recognize the abuse of the rights of foreign workers as an unfair labor practice.

What You Can Do: First, to ensure the passage of an effective and fair trade bill this year, members of the Finance Committee and both of your senators need to be contacted now. Tell them that "hollow shell" trade legislation is not enough. Urge them to vote for an effective trade bill which contains Senator Riegle's trade deficit reduction provision and his provision to protect workers rights abroad.

Second, check the next issue of the *AFL-CIO News* or the *Alert* for the House roll call vote on the Gephardt amendment to see how your representative voted. Thank them if they supported us. If they did not, let them know of your strong disappointment over their lack of support, and let them know that you will not forget how they voted.

Risky Business: Industries Endorse High Risk Bill

Perhaps it's true that with perseverance, anything is possible...

Thousands of toxic substances are in wide industrial and commercial use in the United States. Approximately 11 million workers are being exposed to known carcinogens. While a number of identifiable worker populations are at high risk of developing diseases because of job related hazardous substance exposure, these workers are seldom told of the risks they face.

Last year, neither the House nor the Senate completed work on AFL-CIO supported legislation which would provide notification, information and medical monitoring to workers who are at high risk of disease because of on-the-job hazardous exposure. The Reagan Administration claimed that the measure was unnecessary, and many business groups characterized it as a burden on industry that would be "disastrous to the U.S. economy."

This year, the legislation was reintroduced as H.R. 162 and S. 79. The Senate's February hearings saw a break in the Administration's ranks, with a top Health and Human Services official testifying against the bill while officials of the National Institute of Occupational Safety and Health were saying that the bill was needed, medically sound and scientifically workable. In the latest, most surprising development, several major trade groups and corporations have begun to line up with labor, health and environmental groups in support of the legislation. American Electronics Association, General Electric Co., Digital Equipment Corporation, IBM, Chemical Manufacturers Association, Occidental Petroleum Corporation, and Crum & Forster Insurance Co. have now offered their endorsements. We are pleased to report that the bills are now off and running. In the Senate, the Labor Subcommittee on Health has scheduled mark-up for April 28th, and House action is expected to follow quickly.

Super-Surplus Trading Partners: Free Trade or Free Ride?

At long last, Congress has begun to consider legislation that recognizes the severe economic impact of America's enormous trade deficit. Yet, while legislators agonize over as modest a proposal as the Gephardt/Riegle amendment for trade deficit reduction (see above), business as usual continues in other countries.

The Republic of South Korea is illustrative of the kinds of practices which America's work force is being forced to compete against. Korea, which exports a good deal of clothing, telecommunications equipment, footwear, electrical equipment and automobiles, had a trade surplus of $7.1 billion last year.

In return, Korea imposes quotas or enormous tariffs on a wide variety of U.S. agricultural and food products, as well as an array of manufactured goods, including carpets, automobile parts, machine tools and computers. There is even a law prohibiting the possession of foreign cigarettes, over which the government has a monopoly.

As for workers' rights, Korea's record is equally dismal. Despite its claims to the contrary, the "economic miracle" of South Korea has been built on the backs of men and women who work some of the longest hours in the world, and suffer increasingly from work related diseases.

The AFL-CIO has repeatedly presented the Reagan Administration with hard evidence that the labor practices of the Korean government warrants its removal from the General Systems of Preferences (GSP) list, which gives tariff-free status to qualifying countries. No action has been taken.

The following is an excerpt from an article in the January issue of the AFL-CIO's Department of International Affairs' *Bulletin* which reports on some of Korea's labor practices:

A New York Times Magazine *cover story of December 14 was another of a rash of media salutes to South Korea's "meteoric rise" and "international success." The article began with a "human interest" story -- the good fortune of Kim Jung Soo, 39, an assembly line worker who is now a foreman at the Hyundai Motor Company plant in the small Korean city of Ulsan. The author quoted Mr. Kim as saying that Hyundai "gives him everything: 'clothes, shoes, and even underwear'."*

But there are things Hyundai does not give. Among them is the freedom to be interviewed alone. All Hyundai workers' interviews with the Times *correspondent had to be monitored by a company official -- a point unmentioned in the article.*

The article does note, however, that Hyundai does not provide its workers sufficient wages, nor the right to organize a union.

Most workers at Ulsan do not earn enough to be able to afford the cars they manufacture. The plant turns out up to 1,500 cars a day. But the workers travel by bicycle and on foot. Hyundai does issue them jackets with a white stripe on the back "so that the workers will not be hit by cars at night as they walk along the dark Ulsan streets."

As for union organization: "Hyundai is definitely one of the most anti-labor of large companies here."

Job-saving trade bill approved

Search goes on

Hundreds of union volunteers search for 28 workers entombed by the Apr. 23 collapse of a building under construction in Bridgeport, Conn. Area Building Trades leaders called for more OSHA compliance officers to conduct thorough on-site inspections. There are only two federal construction site inspectors for the entire state. All but one of the dead, missing and injured workers were members of BCTD unions. (Story on Page 5.)

House adopts Gephardt plan to reduce import imbalance

By David L. Perlman

The House passed a job-saving trade bill and now it's up to the Senate to do likewise.

A key 218-214 vote inserted a labor-supported amendment that requires nations that have used unfair tactics to run up a huge trade surplus with the United States to reduce the imbalance by 10 percent a year. **(Rollcall on Page 2.)**

That amendment, by Rep. Richard A. Gephardt (D-Mo.), was the focus of the trade bill debate. Its adoption by the House, AFL-CIO President Lane Kirkland said, "serves notice that our country is determined to reduce its current job-destroying trade deficit."

It's the "first step toward passage of an effective trade bill sought by millions of working Americans," Kirkland said, and "the AFL-CIO will seek similar action by the Senate."

Last year's record-shattering $170-billion trade deficit claimed more than 2 million American jobs.

With the Gephardt amendment included, the House approved the trade bill on a 290-137 vote. On final passage, it was supported by 247 Democrats and 43 Republicans. Only six Democrats joined 131 Republicans in opposition.

The Senate Finance Committee is putting its version of trade legislation into final shape, and preliminary votes indicated that it will resemble the bipartisan measure that the House Ways & Means Committee sought to pass intact.

Sen. Donald W. Riegle Jr. (D-Mich.) is expected to propose a strengthening amendment based on the Gephardt language when the bill comes before the Senate. In the last Congress, a House-passed trade bill was bottled up in committee by the Republican-controlled Senate.

Reagan opposition

Without any assurance of being able to stop legislation in the Senate, the White House lobbied intensively to defeat the Gephardt amendment. President Reagan used his weekly radio address to charge that its adoption could touch off "a fierce trade war."

In a comparable test last year, 44 Republicans voted for the Gephardt provisions. Only 17 Republicans resisted White House pressure this year, including Rep. Hank Brown (R-Colo.), who cosponsored the amendment.

Before addition of the Gephardt amendment, the committee-approved bill would have required the U.S. trade representative to begin negotiations with all nations deter-

Field sanitation rules issued after 14-year OSHA delay

Ending 14 years of what a federal court branded "a disgraceful chapter of legal neglect," the Labor Dept. ordered the nation's growers to provide nearby drinking water, toilets and handwashing facilities for nearly 500,000 agricultural workers by this summer.

Farm Workers Sec.-Treas. Peter G. Velasco called the action "long overdue." The UFW "fought like hell" to require growers to provide basic field sanitation standards, he stressed.

The test of the new regulations, Velasco said, will be how vigorously the federal government enforces them. He pointed out that several California counties have field sanitation laws on the books, but that "they have never been enforced."

Sheldon Samuels, safety director for the AFL-CIO Industrial Union Dept., said the standards will mark the first time that health and safety protections have been extended to agricultural workers.

"These people have been victimized by a society that thought it could ignore them, even though their exposures to pesticides, fertilizers and other on-the-job dangers is incredible," Samuels emphasized.

And Roger C. Rosenthal, executive di-

Real weekly earnings drop as retail prices resume climb

Real average weekly earnings tumbled seven-tenths of 1 percent in March, as American workers and their families continued to be the primary casualties on the nation's economic battleground.

A rise of five-tenths of 1 percent in consumer prices over the previous month and a decline of six-tenths of 1 percent in weekly hours were at the root of the downward slide in purchasing power. They more than wiped out a meager three-tenths of 1 percent increase in average hourly earnings between February and March.

As a result, the earnings of nonsupervisory workers were worth 1.1 percent less than a year earlier. What's more, the purchasing power of their weekly paychecks was a staggering 9.3 percent lower than it was in March 1979, indicating that they are still losing the fight for equity in the economic rat race.

The surge in consumer prices for urban wage earners and clerical workers (CPI-W) —the Bureau of Labor Statistics index used in calculating cost-of-living increases in collective bargaining—means that the March figure was 2.8 percent above the same level a year ago.

The increase would have been 3 percent if the BLS hadn't changed the mix of items on which it bases its figures. Earlier this year, the government adopted new guidelines that downgraded the food, medical and transportation components and gave more weight to such upscale items as home computers and cable television services, video cassette recorders and video games.

Inflation heats up

Even with the change in the statistical measurement, consumer prices raced ahead at an annual pace of 6.3 percent during the first quarter of this year—far eclipsing the 1.1-percent inflation rate for all of 1986.

The BLS reported that costs rose for every item in its market basket of goods and services except food and beverages, which edged down a mere one-tenth of 1 percent. Apparel prices shot ahead 1.9 per-

Secondary picketing of railroads upheld

Unanimous Supreme Court refuses to derail union rights

By Gene Zack

A unanimous Supreme Court cleared the tracks for railroad unions to engage in secondary picketing against the entire industry, even when their dispute is with a single carrier.

Climaxing the three-year struggle of the Maintenance of Way Employees against two subsidiaries of Guilford Transportation Industries Inc.—Maine Central Railroad and Portland Terminal Co.—the high court said secondary picketing was a legal economic weapon that couldn't be taken away from rail workers.

The case was brought by Burlington Northern Railroad and six other carriers.

The decision marked the second time in as many weeks that the court affirmed labor's picketing rights. Earlier, it refused to curb the right of Food & Commercial Workers in South Dakota to walk out in support of fellow members at an Arkansas plant of John Morrell & Co., one of the nation's largest packinghouses.

In the Burlington Northern case, the court ruled that once rail unions have exhausted the dispute-settling machinery established by the Railway Labor Act, federal judges have no power to block picket lines set up near other carriers not directly involved in the labor contract dispute.

Writing for the full court, Justice William J. Brennan Jr. emphasized that the RLA—which governs labor-management relations in the railroad industry—allows the parties to "resort to whatever self-help is legally available" after all other attempts at settlement have failed.

Federal judges may not "second-guess which activities are truly in the union's interest," Brennan declared, pointing to the 1932 Norris-LaGuardia Act which was designed to "immunize such picketing from federal court injunctions."

House rollcall on Gephardt amendment

This is the 218-214 vote by which the House strengthened the trade reform bill and adopted the labor-supported amendment proposed by Rep. Richard A. Gephardt (D-Mo.) to reduce the nation's huge trade deficit.

Right votes (R) for the amendment were cast by 201 Democrats and 17 Republicans. Voting wrong (W) were 55 Democrats and 159 Republicans. Absentees are marked A. Numerals show congressional districts.

Soft landing

CBS news staffers, summarily fired in the network's big economy cutback, found out that executive suite dismissals bring big bucks, not hardships.

A company proxy statement revealed the "golden parachute" that former CBS Chairman Thomas H. Wyman got when he was ousted after three years in the job.

Wyman received a settlement that could total more than $4.3 million and an annual payment of $400,000 for life. That's in addition to the $1.1 million in salary and bonuses for the year in which he was fired.

The CBS settlement was even more generous than the payments General Electric made when it cut the executive staff of RCA Corp. after acquiring the company.

RCA's former chairman, Thorton Bradshaw, will receive only $500,000 a year for three years. But two former RCA executives who are staying on as GE senior vice presidents can count on paychecks of $1.75 million this year plus bonuses of at least $340,000.

Auto workers get trade adjustment pay

Benefits due 70,000 who lost jobs to foreign imports

More than 70,000 Auto Workers who lost their jobs because of America's open-door trade policy are in line for trade adjustment assistance payments expected to average in the $2,000 to $3,000 range as a result of a court case the UAW pursued for nearly six years.

A byproduct of the UAW case was an important 5-4 Supreme Court decision that rebuffed a Justice Dept. attempt to limit the ability of unions and other associations to represent their members in federal courts.

The workers who will receive what the UAW termed "long overdue" benefits were victims of a restrictive Labor Dept. interpretation of eligibility requirements.

The 1974 Trade Act said that adjustment benefits—then substantially more generous than they are now—would go to workers displaced by imports provided they had been employed in an import-affected job for at least 26 of the previous 52 weeks. But the Labor Dept. instructed state employment offices not to count weeks in which workers received vacation or sick pay towards the 26 weeks.

It was that policy that the UAW challenged in a 1981 suit. A federal district judge upheld the union's position and ordered the Labor Dept. to change its regulations and make good the loss to the workers adversely affected.

The government appealed, and won a 2-1 decision from a panel of the U.S. Court of Appeals for the District of Columbia.

The decision was written by Judge Clement F. Haynsworth Jr., on temporary assignment to the District of Columbia circuit, and supported by Judge Antonin Scalia, since named by President Reagan to the Supreme Court.

No right to sue

Its controversial conclusion was that the UAW lacked standing to bring the suit because most of its members were not affected and some of the workers whose interests the suit defended were not UAW members.

The AFL-CIO, concerned at the implication of the decision, filed a brief with the Supreme Court challenging the appellate panel's ruling, joined by an unusual coalition of diverse organizations. Participating groups included the U.S. Chamber of Commerce and the National Association of Manufacturers, the NAACP and the Sierra Club, among others.

Justice Dept. attorneys filed the Reagan Administration's brief in support of restricting access to the courts.

In a 5-4 decision, the Supreme Court ruled that the UAW did have standing and sent the case back to the appellate court for a ruling on its legal merits.

Under those ground rules, the Court of Appeals agreed with the district court that the Labor Dept. had denied adjustment assistance to persons eligible.

In compliance with the order, the department would be required to direct state employment offices to seek out persons who may have been unjustly deprived of payments.

UAW attorneys said they expect the Labor Dept. will comply with the ruling. But a Labor Dept. spokesman said the department's attorneys are still reviewing the legal situation.

House puts teeth in trade bill to reduce import imbalance

Continued from Page 1

mined to have both an "excessive" trade surplus with the United States and a pattern of unfair trade practices. But only the products directly involved in unfair trade practices would have been subject to retaliation if negotiations proved unsuccessful.

Under Gephardt, if negotiations fail, the offending country must reduce its trade surplus with the United States by 10 percent a year. It could do this either by buying more American goods or reducing its exports to the United States.

Other countries won't change their restrictive trade practices unless we apply "direct pressure for change," Gephardt told the House. Our government's trade policy is "long on words," he said, and the response of America's trading partners is still more words, not action.

Fallout from deficit

He spoke of the fallout from the mounting trade deficit—the loss of well-paid jobs, a shrinking middle class and declining wages. The status quo isn't good enough, Gephardt insisted as his House colleagues gave him an ovation.

There was strong and substantially bipartisan support for several other labor-supported provisions in the trade bill. The House-passed measure also:

- Strengthens the powers of the U.S. Trade Representative and directs, rather than merely authorizes, retaliation by the United States against specific practices that violate international trade agreements.
- Defines as an unfair trade practice denial of basic worker rights, including the right to union representation. Use of child labor and failure to comply with other internationally accepted labor conditions would also be unfair trade practices. Governments that allow such exploitation could be subject to trade retaliation.

Other new unfair practices would include "export targeting," which some countries have used to build up industries to take over U.S. domestic markets.

- Strengthens Trade Adjustment Assistance for workers whose jobs have been wiped out by imports. All workers certified for TAA assistance would be entitled to up to $4,000 in training and remedial education benefits. There would be a new option of supplemental TAA payments for workers who take new jobs that pay less than their previous jobs.
- Sets up a new worker readjustment program to provide comprehensive services to dislocated workers, along the lines of a bill introduced by House Education & Labor Committee Chairman Augustus F. Hawkins (D-Calif.).
- Requires the Federal Maritime Commission to investigate unfair trade practices which discriminate in favor of foreign vessels. If negotiations fail, the FMC could impose penalties or sanctions.
- Prohibits federal agencies from purchasing goods produced in a nation whose government discriminates against U.S. firms and products in awarding contracts.
- Puts priority on negotiating an end to barriers to U.S. telecommunications products and mandates presidential action if no agreement is reached.

The American people "want action" to bring down the trade deficit, House Speaker Jim Wright (D-Tex.) stressed in closing debate on the bill. The biggest U.S. exports from America's largest port, he reminded his colleagues, are scrap metal and waste paper that come back to this country as finished goods manufactured abroad.

Helping hand

President emeritus J.C. Turner of the Operating Engineers, right, accepts the 1987 Joseph A. Beirne Award from AFL-CIO Community Services Director Frank Emig. The honor, named for the late Communications Workers president, recognizes outstanding service to the United Way of America. As president of United Way International, Turner worked to establish United Way networks in Central and South America. At left is William Aramony, president of the United Way.

Real weekly earnings drop as retail prices resume climb

Continued from Page 1

cent in March, while transportation was up seven-tenths of 1 percent.

The March price rise continued to be influenced by the steady upward movement in the world petroleum market. Gasoline prices rose 2.1 percent over the previous month while heating oil prices were 1.6 percent higher. However, both remained substantially below their year-ago level.

The upward surge in consumer prices contributed to widespread losses of workers' purchasing power during the past year in virtually every sector of the workforce, the Labor Dept. report showed.

Biggest losers were workers in retail trade, who saw the value of their earnings tumble 2.8 percent since March 1986. In the mining, oil and natural gas industry, real earnings declined 2.7 percent.

The only gains in real earnings in the one-year period were recorded in the construction industry, where worker purchasing power rose 3.1 percent and in finance, insurance and real estate where the increase was nine-tenth of 1 percent.

Farm workers win sanitation battle

Continued from Page 1

rector of the Migrant Legal Action Program, long involved in the farm workers' struggle for equal rights, said he was "delighted" that standards have finally been mandated. "It's about time," Rosenthal declared.

Under the new federal regulations, the 54,000 growers will have until May 30 to set up "suitably cool" and "readily accessible" drinking water for field workers. By July 30, the growers must provide a toilet and handwashing facility for every 20 workers within a quarter-mile walking distance from where they are working.

"Basic human decency demands that suitable drinking water, toilets and handwashing facilities—fundamental needs taken for granted at other American worksites—be provided these workers," Labor Sec. William E. Brock declared.

The battle over standards has been waged in Congress and the courts since 1973. The U.S. District Court for the District of Columbia twice ordered the Occupational Safety & Health Administration to produce sanitation rules, only to be overridden by the appellate court.

A 1982 court agreement required that OSHA complete the standards-setting procedure by February 1985, but OSHA got the court to push the deadline back. After OSHA announced it would not issue a rule, Brock responded to the public outcry by saying he would review the decision. He then moved the federal deadline back two years to give the states an opportunity to enact their own legislation.

Foot-dragging

Under intense political pressure from agribusiness, state legislatures dragged their feet for the next 18 months. The appellate court ordered OSHA to issue standards by Mar. 8. But delays plagued the process to the bitter end, with issuance of a rule stalled both by Brock and the Office of Management & Budget.

OSHA officials estimated the new field sanitation standard will cost growers about $24.1 million a year. But the costs will be far outweighed by savings estimated at $79 million annually from the wiping out of more than 140,000 cases of parasitic diseases among farm workers resulting from the current lack of such sanitary facilities.

According to the government, the drinking water, toilets and handwashing facilities will reduce job-related illnesses among farm workers by two-thirds because workers finally will be getting protections against communicable intestinal diseases, urinary tract infections, heat stroke and exposure to farm chemicals.

Of the nearly half-million workers who will be covered by the new standards, one-fourth are migrants and some 30 percent are women.

OSHA said the new regulations will apply only to farms employing 10 or more farm workers—a position long opposed by organized labor, which favored a program under which all agricultural workers would be guaranteed these basic field sanitation protections.

Rex Hardesty named information director

AFL-CIO President Lane Kirkland has named Rex Hardesty as director of the federation's Dept. of Information.

Hardesty, 49, has been an assistant director of the department since 1982. He succeeds Murray Seeger, who left the federation in March to join Radio Free Europe/Radio Liberty.

Hardesty came to the AFL-CIO staff in 1969 as editor of the Federationist magazine. Earlier, he had been editor of the CWA News, the Communications Workers publication, a copy editor on the Washington Evening Star and a sports writer for the Tulsa World. He was born in Oklahoma and graduated from Benedictine Heights College in Tulsa.

Government holds key to solving child care crisis

By Candice Johnson

A nationwide survey of 600 working Americans demonstrated strong support for government programs and policies to ensure quality and affordable child care.

The opinion poll, conducted for the State, County & Municipal Employees by a Boston polling firm, showed overwhelming support for government efforts to help middle-income and working families manage their child care dilemma.

Nearly three-fourths of the respondents —71 percent—advocated government policies "to help make child care services more available and more affordable" for working families. AFSCME also pointed out that the greatest degree of support for better care was among workers and families earning between $20,000 and $30,000 a year, with respondents in that income bracket recommending government action by an 80-16 percent margin.

Nearly three-fourths of the workers surveyed called for strict licensing standards for child care facilities, even though regulation would raise the cost of care. Leave for new parents also was favored, with 62 percent suggesting that employers provide up to 18 weeks of unpaid leave to care for a new baby.

AFSCME President Gerald McEntee said the poll showed overwhelming support for increased child care programs and government policies that will "support and expand child care for working parents."

Inadequate response

Neither the government nor employers are "responding adequately to child care needs," he charged, calling for a "national strategy" that will provide quality care for children and meet the needs of working parents.

Among the survey's findings:

- More than one-half of those surveyed —53 percent—believe there are not sufficient facilities to meet care needs and 79 percent believe the development of child care services should be encouraged.
- Working Americans favored expansion of public school services to include optional child care before and after elementary school hours by a 68-24 percent margin.
- More than half of working parents —58 percent—with children under age six in a child care facility pay all costs.
- At least 28 percent of working parents have given up a job or promotion because of a lack of child care.

A bill that would respond to some of the concerns of working parents was the subject of hearings by a Senate Labor subcommittee. The measure, the Family & Medical Leave Act, would provide new parents with up to 18 weeks of unpaid leave without jeopardizing their jobs. Workers who suffer serious illness themselves could take up to 26 weeks of unpaid leave without fear of losing their jobs.

Critics have painted the parental leave measure as a "yuppie bill" that would only benefit well-to-do young couples.

But in a poignant statement, David and Nettie Boggs of South Carolina recounted the hardships faced by working parents who must earn a living and care for a seriously ill child. Their 12-year-old son Jonathan suffers from a serious respiratory disease that has required more than 140 surgical procedures.

Job loss cited

Nettie Boggs testified that she lost one job because of the long hours spent with Jonathan at hospitals. She now works as a cook, waitress and cashier at a restaurant near her home.

Her husband, a traveling salesman who sells religious and inspirational books, recalled his frequent trips to the hospital when Jonathan was younger and said a former supervisor accused him of using his son as an excuse for a day off work.

"You don't have to pay me, but don't tell a man he's go to choose between his job and his work and his child," Boggs insisted. A companion measure in the House also provides for unpaid leave to care for a sick parent.

Sharing the dream

"We want to share the dream," Electronic Workers President William H. Bywater, second from left, said in presenting 150 Martin Luther King Jr. board games to the District of Columbia recreation department. "Today's children need to learn about positive role models and the Martin Luther King game is an excellent vehicle to learn about one of America's greatest heroes." Seated right is the game's creator, Richard Levy, with recreation department deputy director Samuel LaBeach.

Federal workers ask curbs on random drug-testing plan

Government Employees President Kenneth T. Blaylock asked Congress to limit random drug testing of federal workers and provide added funds for employee assistance programs that help workers overcome alcohol and drug abuse.

Blaylock told the House Subcommittee on Human Resources that AFGE officers and shop stewards are deeply involved in rehabilitation programs, many of which were negotiated at the bargaining table. But he challenged the assumption that there is a drug problem in the federal service significant enough to justify a large-scale urine-testing program.

Subcommittee Chairman Gerry Sikorski (D-Minn.) expressed similar concern at the start of the hearings. He cited high error rates in testing of urine samples and said he was "troubled" by the Administration's decision to single out federal workers as the "starting point" for a national crusade against drugs.

Objections detailed

Blaylock said random testing would be wrong, even if urine tests were 100 percent accurate and cost free. He testified that the AFGE objects to the program because:

- It is unconstitutional.
- It degrades innocent employees.
- It sets the precedent of employers intruding on the private lives of their employees, raising the specter of government as Big Brother.
- It is irrelevant to solving the nation's real drug problem.
- It hinders the actual rehabilitation programs in the government.

Blaylock endorsed a bill by Rep. Gary L. Ackerman (D-N.Y.) that would limit drug testing of federal employees to cases where supervisors have "reasonable suspicion" that an employee's performance is impaired because of the use of illegal drugs.

The Administration has defended its focus on the federal workforce, Blaylock noted, by contending that the government should "show the way" since it is the nation's largest employer.

Blaylock responded that the AFGE has argued for years that the government should be an "ideal employer and show the way in labor-management relations, pay and benefits."

He termed it "disingenuous" for the Administration to reject that reasoning on everything but drug detection.

Congress pressed to move on parental, medical leave

Parental leave and medical leave are increasingly important to today's workforce and have not been a significant cost burden to either public-sector or private-sector employers, union witnesses testified at Senate hearings.

The bill they supported would require firms with 15 or more employees to allow workers of both sexes to take up to 18 weeks of unpaid leave over a two-year period to care for newborn, newly adopted or seriously ill children.

It would allow up to 26 weeks in the event of an employee's own serious illness, and a House version would also allow unpaid time off to care for a seriously ill parent. During the period of leave, employees would continue to be covered by any health insurance plan their firm provided for its workers.

President Gerald W. McEntee of the State, County & Municipal Employees told a Senate Labor & Human Resources subcommittee that "parental leave is clearly a fact of life in the public sector," and is a high priority among AFSCME's members at all income levels. Subcommittee Chairman Christopher J. Dodd (D-Conn.) is a principal sponsor of the labor-endorsed bill.

Experience has shown that parental leave programs even more extensive than the one proposed in the legislation have worked satisfactorily and that employer fears have been groundless, McEntee testified.

Most other countries are far ahead of the United States in helping working parents "cope with the demands of family responsibility and the demands of a full time job," he noted.

Changing patterns

Food & Commercial Workers Vice President Pat Scarcelli and Service Employees Vice President Rosemary Trump stressed the changed family pattern that has made the traditional two-parent, one-earner household the exception.

"Pressures on working Americans have intensified," Trump noted. "It is now necessary for the family to send more than one wage-earner out into the workforce just to try to keep pace with yesterday's standard of living. And single-parent households, who now comprise 16 percent of all families, are in deeper trouble."

The tragedy of "the crisis of the American family," she suggested, is "our nation's failure to respond to it."

The SEIU represents both public and private-sector workers, and Trump noted that nearly all of the union's public-sector contracts allow at least six months of parental leave and in other areas come close to the minimum standards proposed in the legislation. But the private sector lags behind, and unorganized workers are "doubly vulnerable."

Family challenge

Scarcelli, who is also the UFCW's director of women's affairs, noted that 40 percent of married working mothers have husbands who earn less than $15,000 a year and the task of combining work and child-rearing is even more acute for single parents.

In today's workworld, she urged, "more flexible leave policies are needed. Fathers as well as mothers should have the opportunity to care for their children. No parent should be required to choose between staying home with a sick child and losing a job."

Scarcelli noted that retail stores and other service employers traditionally use large numbers of part-time workers, allowing considerable flexibility in scheduling leave.

In assembly operatioins such as meat processing, Scarcelli pointed out extended leaves are frequently granted and fulltime "floaters" move where needed to cover absences.

A cost study conducted by the government's General Accounting Office contradicted a U.S. Chamber of Commerce claim that the legislation would saddle the nation's employers with huge additional costs.

The GAO found that the Chamber had greatly exaggerated the cost of the legislation and ignored entirely the benefits that would derive from providing the unpaid leave the legislation would require.

"The Chamber looks only at one side of the balance sheet," the GAO concluded.

Airline job rights vital as mergers mount

The AFL-CIO and its airline industry affiliates pressed Congress to require the Transportation Dept. to safeguard the rights of workers affected by mergers and takeovers.

Labor protection provisions in merger agreements were standard in the years before airline deregulation, federation Legislative Director Robert M. McGlotten noted. He said the Transportation Dept.'s abandonment of worker protections disregards the clear intention of Congress when it passed the 1978 Airline Deregulation Act.

McGlotten spoke for the multi-union Airline Labor Coordinating Committee as well as the AFL-CIO at hearings before the Senate Subcommittee on Aviation. The coordinating group includes the Machinists, Air Line Pilots, Flight Attendants, Transport Workers, Flight Engineers and Railway & Airline Clerks.

The bill labor supports has been introduced in the Senate by Brock Adams (D-Wash.), a former Secretary of Transportation. It is identical to the bill sponsored by Rep. Norman Y. Mineta (D-Calif.) that passed the House by a bipartisan 329-72 vote in the last Congress but died in the Senate.

Fairness test

It directs the Secretary of Transportation to investigate airline merger applications to determine if the merger would reduce jobs or adversely affect wages and working conditions, including seniority, of employees. The Transportation Dept. would be required to ensure that a merger plan is fair to employees.

The former Civil Aeronautics Board used to routinely require labor protection provisions in all mergers but the Transportation Dept., McGlotten noted, has "jettisoned" the policy.

McGlotten scoffed at the department's reasoning that the only justification for safeguarding worker rights would be to avoid disrupting transportation through a strike. According to the Administration, strikes that do not affect the entire industry are no longer a problem because deregulation allows other carriers to move in an fill the gap.

The need for fair treatment of workers "remains unchanged by deregulation," McGlotten stressed.

Death on the job

Building collapse tied to inspector shortage

Bridgeport, Conn.—The toll of dead construction workers may reach 28 here when rubble is cleared from the site where they were entombed by a building collapse.

While the cause of the collapse is not yet known, area Building Trades leaders say it might have been prevented if the Occupational Safety & Health Administration had more than just two construction site inspectors for the entire state.

In the aftermath of the tragedy, the Bridgeport Building Trades Council set up a disaster relief fund to aid the families of the victims. Carpenters President Patrick J. Campbell helped kick off the nationwide fund, noting "a lot of paychecks are going to have to be replaced."

The union craftsmen killed or missing inlcude eight Carpenters, seven Laborers, seven Iron Workers, three Plumbers & Pipefitters, one Electrical Worker and one Operating Engineer. An Iron Worker's son visiting the site was also killed. Eleven other tradesmen were injured.

'Lift-slab' method

When the tragedy occurred, workers were using a method in which concrete slabs are cast on the ground and then hoisted into place. Several floors had been framed and workers were lifting six slabs when the top one slipped, triggering an inward collapse that took down the entire L'Ambiance Plaza building, according to witnesses.

It will be months before OSHA issues a final report on this tragedy and decides what would have prevented it. But the real prevention, union leaders say, would have been to have more inspectors. Further, on the day prior to the accident, city building inspector Frank Mercaldi had asked that his staff of six be increased by four more to cope with Bridgeport's building boom.

Robert A. Georgine, president of the AFL-CIO Building & Construction Trades Dept., said this tragedy "again demonstrates the peril of the construction worker and our hearts go out to the families and friends of those killed and injured as they pursued their dangerous trade. We have not yet learned the cause of the horrible accident. Our efforts have centered on trying to rescue any possible survivors."

No random inspections

State AFL-CIO President Betty Tianti said, "There's no question that OSHA is terribly understaffed. My understanding is that they don't make inspections unless there is a complaint. There are no random inspections, as far as I know."

OSHA's Hartford office runs 40 to 50 days behind normally, Tianti said, and up until recently responded to worker complaints with a 20-to-30-page questionnaire rather than an on-site inspection. The use of questionnaires was dropped after Sen. Lowell Weicker Jr. (R) protested their use to the Labor Dept., Tianti said.

John W. Olsen, executive secretary-treasurer of the Connecticut Building & Construction Trades Council, said the building trades have had a long-standing problem with OSHA, even to the point of passing a resolution at its last convention citing the difficulties.

"There are a lot of problems," Olsen said. "We're very unhappy about the ability to get inspectors out to the jobsite. We are in a building boom here. If they can't get to the union jobs, I wonder about the safety on nonunion jobs."

Olsen noted that the day after the building cave-in, a scaffold collapsed at the Greenwich Towers that left one worker dangling in the air.

Discussing the building collapse, Olsen said, "This one made the news, but there are plenty of construction deaths in this state. The problems are out there, but the individual deaths hardly get noticed."

Action needed

Ron Nobili, business manager of Laborers Local 665, voiced his hope that the incident will result in getting more OSHA inspectors. "Perhaps an inspection could have helped," Nobili said.

It took the collapse of a bridge on Interstate 95 in Connecticut, Nobili noted, to get action on rebuilding the nation's infrastructure, and just perhaps out of this tragedy will come some good. "We can't keep on going the way it is now," he said.

Nobili related that a union member was killed a few years ago and it "took several months" to get an OSHA investigation. He said he was told it was because of a heavy backlog of cases.

Donations to aid victims can be sent to the Bridgeport Building Trades National Disaster Relief Fund, 1211 Howard Ave., Bridgeport, Conn. 06605.

Union volunteers carry a victim from the rubble.

Trades criticize OSHA proposals for excavations

Revised safety standards for trenching and excavations proposed by the Occupational Safety & Health Administration fall short of providing workers needed safeguards, the AFL-CIO Building & Construction Trades Dept. charged.

"The standard as proposed is inadequate," BCTD Safety Director Jim Lapping said. "By making half a standard, OSHA is not accomplishing a realistic goal of providing protection that is available." He called instead for a BCTD-backed legislative package requiring contractors to get an OSHA permit prior to trenching or excavating deeper than five feet.

He said the BCTD safety and health committee will review the proposal and send its comments to OSHA's construction advisory committee.

OSHA said more than 100 cave-in fatalities occur each year and estimated the fatality rate for trenching to be 112 percent higher than in construction as a whole.

The agency said contractors were often confused by the two standards for excavations—one being for trenching operations only. The only proposed rule has only one set of requirements for excavations, and may affect an estimated 643,000.

Economic indicators skewed by seesawing stock market

With stock prices leading the way, the government's index of leading economic indicators rose four-tenths of 1 percent in March.

At the same time, soaring inventories of unsold consumer goods, particularly automobiles, helped propel the gross national product's growth to an annual rate of 4.3 percent during the first quarter of 1987.

But economists took little comfort from the statistics. The leading indicators are supposed to forecast future economic activity and they were spurred by a 4.1-percent rise in stock prices.

But in the period following compilation of the statistics, stock prices nosedived as a jittery Wall Street reacted to rising interest rates and the continued slippage of the U.S. dollar against foreign currencies.

The surge in the GNP, it was accompanied by a steep 2.2-percent slowdown in consumer and business purchases—an indication that layoffs might lie just over the horizon until retailers whittle down huge inventories of unsold goods.

Personal consumption expenditures fell $2.7 billion in the first three months of this year after dropping $2.2 billion in the fourth quarter of 1986. Business expenditures plummeted $15.4 billion, offsetting the $3.4-billion rise in the October-December period when buying was influenced by a last-ditch effort to lessen the impact of the new tax reform law.

In other economic developments:

- Machine tool sales, which are a more reliable index of industry's future plans, were down 23 percent in March from the same month last year. Orders amounted to $165.2 million as compared to the $214.6-million level in March 1986. Industry spokesmen said the decline indicated manufacturers' uncertainty about the direction in which the economy is headed.
- A surge in the demand for military hardware resulted in a 3.4-percent rise in durable goods orders in March. But with the Pentagon's spending factored out of the figures, orders for big-ticket items advanced a mere eight-tenths of 1 percent. Defense orders spurted 38.2 percent in March after a 48.9-percent rise the previous month.
- Sales of new homes plunged 3.6 percent in March while sales of existing homes edged up five-tenths of 1 percent. The outlook for home buyers is clouded by rising interest rates on home mortgages, which pushed up past the 10-percent level for the first time in more than six months.
- The government's employment cost index—which measures changes in wages, salaries and benefits—increased nine-tenths of 1 percent in the first-quarter. During the same period a year ago, the increase was 1.1 percent. Over the year that ended in March 1987, the index was up 3.4 percent compared with a 4.1-percent jump for the March 1985-86 period.
- The federal budget deficit narrowed to $28 billion in March from $30.1 billion a year earlier, the Treasury Dept. said. The Administration is forecasting a budget shortfall of $173 billion for the fiscal year that ends Sept. 30. The Congressional Budget Office is predicting a $174-billion deficit. Private analysts see a gap in the neighborhood of $190 billion.

McCreary Tire, U.S. Playing Card put on boycott list

The AFL-CIO has added the McCreary Tire & Rubber Co. and U.S. Playing Card Co. to its boycott list.

More than 200 Rubber Workers at a McCreary plant in Indiana, Pa., were locked out in March 1986 when they overwhelmingly rejected a company demand for a two-year wage freeze and deep cuts in other benefits.

The company wanted to eliminate two holidays, cut pension and medical benefits and institute a new, lower pay scale for new workers.

Although the members of URW Local 947 offered to stay on the job while contract negotiations continued, the company refused and has tried to resume operations using strikebreakers.

Members of Retail, Wholesale & Dept. Store Union Locals 256 and 257 in Norwood, Ohio, have been locked out by the United States Playing Card Co. since last November, when they rejected deep slashes in wages and benefits sought by the company.

Unacceptable terms

Although the contract covering 275 workers expired last July, negotiations continued until November when management sought to impose its demands. The workers had agreed to accept a wage cut but refused the company's bid to end seniority, increase its contracting out and to hire school children at lower wages during vacations.

In February, U.S. Playing Card slashed wages 40 percent and threated to transfer all jobs to nonunion plants. Members of Graphic Communications Locals 501 and 11 who worked at the playing card manufacturer are honoring the RWDSU picket line. Their agreements with the company are now expiring.

The company produces playing cards under the brand names Aviator, Bee, Bicycle, Congress and Tallyho.

Total destruction marks the site of building collapse that killed or injured 39 workers.

Raise the what?

The Reagan Administration—which more than doubled the national debt in its first six years in office—wants to prevent a scheduled 10-percent debt-ceiling cut from taking effect in mid-May.

The present ceiling is $2.3 trillion. But under existing law it's supposed to drop back to $2.1 trillion on May 15. Panicky Administration officials warned that this could trigger an unprecedented government default on May 28.

Since borrowing already is well over the $2.1-trillion level, Treasury Under Sec. George D. Gould said, the government would be unable to meet major obligations that will fall due at month's end. The consequences of a default, he insisted, "could run into the hundreds of billions of dollars."

All this comes from an Administration which racked up the biggest budget deficits in history after Candidate Reagan's pledge—long repudiated—to balance the federal budget by 1984, or sooner.

Court backs railroad unions on secondary picketing issue

Continued from Page 1

BMWE President Geoffrey N. Zeh called the decision "a resounding victory for rail labor" and a blow to President Reagan, who has been pushing to bring railroad unions under the Taft-Hartley Act, that bans secondary activity by unions in other industries.

"Since 1914, Congress has told the courts they should not interfere with railroad picketing," Zeh said, adding that the decision sends "a strong message to the Reagan Administration that secondary picketing is a proper course of action under the law for rail labor."

Richard I. Kilroy, chairman of the Railway Labor Executives Association, called the decision a "welcome and resounding reaffirmation of rail workers' rights to stand up and fight when an anti-union carrier takes aim" at their wages and benefits.

But Kilroy, who is president of the Railway & Airline Clerks, warned that anti-labor forces "have not given up their attack" on rail unions. For that reason, he said, rail labor will continue to give top priority to fending off any congressional assault on this basic right. "As we learned in the Guilford fight," Kilroy declared, "secondary picketing can be critical to the defense of employees when a railroad is intent on destroying unions."

Government remedy

Brennan's decision pointed out that even if a union sets up industry-wide picketing to enlist sympathy in its basic dispute with a single carrier, the government still has a remedy at its disposal. The President has authority to interrupt such picketing for a 60-day "cooling-off" period by appointing a board to look into the dispute.

That happened twice in the Burlington case, but both times the railroad rejected the settlements proposed by the emergency boards. Congress then stepped into the picture, imposing a third "cooling-off" period and mandating that the congressionally appointed board's recommendations be made final and binding on both parties.

Although the congressional action resolved the dispute before the case reached the high court, the justices decided to rule on the legality of secondary picketing in any event because, it said, the issue was certain to come up again.

The case reaches back to 1984, when the union's contract with Maine Central was up. Management had already abolished the jobs of more than 200 BMWE members and proposed sharp cutbacks in wages, hours and working conditions for the remaining 110 workers.

When the RLA's mandatory settlement procedures failed to produce agreement, the BMWE struck both operations on Mar. 3, 1986. Two days later the strike was extended to two other Guilford subsidiaries—the Delaware Hudson Railway Co. and the Boston & Maine Corp.

Spreading strike

A month later, the union extended its strike to other railroads in the Northeast with which Guilford had traffic-swapping arrangements and then announced plans for nationwide picketing of all carriers until Guilford came back to the table.

Responding to the BMWE action, 62 rail companies asked the U.S. District Court for the District of Columbia for a temporary restraining order, but the request was denied.

Burlington Northern and six other lines then obtained a preliminary injunction against the picketing from the U.S. District Court for the Northern District of Illinois. But the 7th Circuit U.S. Court of Appeals reversed that order.

In a move designed to resolve the conflict between the two circuit courts, the Supreme Court took the case and held that the "plain language" and history of the 1932 law made it clear that Congress didn't intend to allow federal courts to enjoin secondary picketing in the railroad industry.

"Congress passed the Norris-LaGuardia Act to forestall judicial attempts to narrow labor's statutory protection," Brennan wrote for the full court. "Accordingly, we refuse to narrow (the language of the 1932 law) to exclude those battles involving secondary activity."

National defense hinges on merchant fleet revival

Revitalizing the lagging U.S.-flag maritime industry during peacetime is the only guarantee of having a merchant fleet adequate to perform its defense-support role in time of crisis, AFL-CIO Maritime Trades Dept. President Frank Drozak told the President's Commission on the Merchant Marine & Defense.

"Access to cargo is the only answer that I know to the problem of how to build a merchant marine that is adequate to develop commerce in peacetime and serve as a naval auxiliary in time of war," Drozak, president of the Seafarers, emphasized.

Since 1935, laws on the statute books have targeted the merchant marine for special cargo support to assure its readiness to serve as the nation's "fourth arm of defense." But the federal government has systematically neglected this responsibility in recent years, and American-owned and manned vessels now carry only 5 percent of the nation's foreign trade, the MTD president pointed out.

Doubling the amount of cargo moving aboard vessels in the American merchant marine would carry a small price tag, Drozak insisted. Yet even that modest increase would produce enough ships to generate jobs sufficient to meet the Navy's emergency needs.

Shipping reforms

At the same time, he called for protection of domestic shipping—the movement of cargo between ports in the United States. He called for enforcement of the Jones Act's requirements that only U.S.-built, U.S.-owned ships be allowed to participate in that trade. He said the rule should also apply to the much-publicized "cruises to nowhere" now sailing from American ports using foreign-flag vessels.

The same message about the need for increased cargo for American ships came from Vice President C.V. Schamann of the Marine Engineers. He recommended that the presidential commission consider such cargo-generating agreements as bilateral arrangements with this country's major trading partners and full enforcement of cargo preference laws dealing with government freight.

Tough stand

Raymond T. McKay, president of MEBA District 2, urged support of pending House legislation to require such bilateral cargo-sharing agreements, a tough stand against foreign restrictions on U.S.-flag carriers, and reservation of automobile imports for American vessels.

These proposals, McKay said, would encourage private investment and would be "at least a starting point for constructive discussion of our present maritime dilemma."

Testifying for the National Maritime Union, Talmage E. Simkins urged adoption of a national cargo policy as the "most effective and direct way of restoring an American-flag merchant marine." He criticized the way the government oversees the industry and called for creation of a Cabinet-level presidential assistant for maritime affairs.

Simkins also urged an end to foreign registration of U.S.-owned ships to avoid this country's taxes, labor laws and safety requirements, and said the Defense Dept. should halt its reliance on such vessels to meet its emergency needs.

President Robert J. Lowen of the Masters, Mates & Pilots called for a federal commitment to the declining merchant marine. The ability to go to sea is being "destroyed" by government withdrawal of support for the industry, he said, adding that "you can lay that directly at the door of the Navy and the Defense Dept."

NMU and MEBA District 1 launch plan for merged union

New York—The National Maritime Union and Marine Engineers District 1 announced merger plans to create a 37,000-member union covering seagoing, inland waterway and shoreside workers.

NMU President Shannon Wall and MEBA-1 President Eugene DeFries said a referendum on the move—which also contemplates combining the benefit plans and political action funds of the two unions—would be submitted to their respective members over the next few weeks.

The first test of the proposed merger came at a meeting at the NMU's New York hiring hall, where members voted 214-1 in favor of the unity plan.

The proposed merger would not affect two other MEBA affiliates. District 2, which represents licensed engineers and deck officers, joined with the Seafarers earlier this year to create the Seafarers Maritime Union. District 3, which represents radio officers aboard ship, will operate outside the newly merged union.

If approved by the members, the merger will consolidate hiring halls, computer and telephone systems in what Wall and DeFries described as a "more cost-effective" way to service members in an industry plagued by foreign competition.

Positive development

The two union presidents expressed the hope that the employers with whom they deal and the federal government, which is supposed to play a key role in safeguarding the merchant marine, will view the merger as "a positive development for the maritime industry generally."

They added:

"We recognize that the merging of our two organizations will involve many complex problems which may take time to solve fully. Nevertheless, we are convinced that the benefits of such a merger are so overwhelming that it must be accomplished no matter what efforts are required to resolve the problems which may arise."

The NMU has a membership of 25,000. Of that number, 10,000 are unlicensed seamen serving aboard ocean-going vessels. The remainder work on riverboats, ships on the Great Lakes or shoreside activities.

The 12,000 members of MEBA District 1 work as licensed engineers aboard ship. The union has been active in recent years in the drive to unionize the nation's air traffic controllers, without representation since President Reagan crushed the Air Traffic Controllers's strike six years ago.

Labor Studies schedule for May and June

The George Meany Center for Labor Studies will offer 15 workshops during May and June. The schedule:

Organizing II, May 10-15—An institute cosponsored by the AFL-CIO Dept. of Organization & Field Services for experienced union staff. Topics include internal private sector organizing, issue-oriented campaigns and recruiting and training union members.

Advanced Editing Skills, May 10-15—A workshop for union editors who have completed the newswriting course and are ready for more work on layout, photo editing and headline writing.

Individual Rights in the Workplace, May 10-15—An examination of the union representative's role in protecting workers' rights on polygraph tests, pre-hiring tests and discipline and discharge cases.

Computers for Local Unions, May 17-21—An institute for union staff on the use of mini- and micro-computers.

Negotiating Contracts with State & Local Agencies, May 17-22—A five-day course on preparing initial proposals, developing committee work, recordkeeping procedures, opening statements, appropriate contract language and ratification.

Researching Private Employers, May 17-22—An institute for international and local staff on corporate finance in order to develop "employer profiles" for negotiating and organizing activities.

Opinion Polling for Organizers, May 26-29—A workshop on the use of opinion polls in campaigns, conducting polls, using case studies and practice sessions, and developing questionnaires, samples and an analyses of poll results.

Pension Trustee Training for Public Sector Unions, May 25-29—Institute at University of California at Berkeley on the basics of pension plan structures, operations and financial reports.

Alcohol & Drugs: Discipline & Discharge, June 7-12—A workshop examining discipline and discharge standards using arbitrators and case studies.

Certified Employee Benefits Specialists, June 7-12—The first in a series of 10 courses on employee benefits.

Labor Law for Organizers, June 14-19—An institute on organizing and federal labor law in the private sector.

Arbitration in the Federal Sector, June 14-19—An institute for negotiators focusing on pensions and health insurance.

Negotiating for Employee Benefits, June 14-19—An institute for negotiators focusing on pensions and health insurance.

Arbitration Techniques: Preparation & Presentation, June 21-26—An opportunity to prepare and present cases before professional arbitrators.

Contract Negotiation: Private Sector, June 28-July 2—A workshop on bargaining tactics, role of the chief negotiators, and preparation and design of initial and counterproposals.

AFL-CIO affiliates using the campus in May for their own staff training programs are: American Institute for Free Labor Development, Apr. 26-May 29; African-American Labor Center, May 2-15; Amalgamated Transit Union, May 3-8; Newspaper Guild, May 4-6; Communications Workers of America, May 10-22; Electronic Workers, May 26-29; AIFLD/Bermudians, May 30-June 6; Railroad Signalmen and Bakery, Confectionery & Tobacco Workers, May 31-June 5.

More information about labor studies programs is available from the Registrar, George Meany Center, 10000 New Hampshire Ave., Silver Spring, Md. 20903. Telephone: 301/431-6400.

New contracts negotiated for program narrators

New York—Members of the Television & Radio Artists and the Screen Actors Guild will vote in a mail referendum on a one-year contract providing a 4-percent pay increase for narrators of slide films, and industrial and educational programs.

The proposed agreement raises the rate for a 10-minute narration from $500 to $520. Narrators and voice-over players will earn $234 for the first hour of studio time and $68 for each additional hour.

EDITORIALS

Negotiating from Strength

THE INTENSITY of the House debate on strengthening the trade bill by adoption of the Gephardt amendment is good news.

It signals congressional acceptance of the imperative of trade law reform to narrow the horrendous trade deficits that have been the hallmark of this Administration.

The House was not just going through the motions. The debate was over the specifics of the legislation, and there was a great deal at stake.

In congressional districts across the country, plants have been closed and workers have been displaced both by imports and the cutoff of traditional U.S. export markets.

Even an Administration that clings to an antiquated textbook myth of free trade has acknowledged that trade legislation is at least a political necessity. But if the Administration has its way, the bill that reaches the President's desk will be more rhetoric than substance.

That isn't good enough. The House cast an important vote for a meaningful, effective trade bill. This year, the Senate cannot afford to duck the issue. The trade deficit must be brought down.

Certainly, the United States must be prepared to negotiate with its trading partners. But as anyone who has ever served on a union bargaining committee can testify, it's mighty hard to negotiate improvements if the boss is aware that nothing will happen if he keeps saying "no" to every proposal.

That's what the Gephardt amendment debate was all about.

In the Trenches

COMPETITIVENESS, as the trade bill debate makes clear, means different things to different people.

In Thurmont, Md., a community of 3,300 in the vicinity of the Camp David presidential retreat, this currently fashionable buzzword has taken on an ugly meaning.

Thurmont's biggest employer is the Claire Frock Co., until recently locally owned, where nearly 500 women workers are represented by the Ladies' Garment Workers. They went on strike last month and, as a Washington Post reporter discovered, the community is solidly behind them.

A new corporate owner slashed wages from a marginal $5.40 an hour to $4.75, eliminated two paid holidays, and sought to abolish seniority by making employees submit new job applications.

Management claimed in a newspaper ad that pay cuts are needed to stay "competitive." It noted pointedly that "many apparel plants throughout the United States have closed."

At that rate, we'll soon catch up with the third world.

Rigged Parachutes

USING DEREGULATION as an excuse, the Dept. of Transportation no longer requires assurances of "just and reasonable" treatment of employees as a condition for approval of airline mergers or takeovers.

Airlines of course are happy to join with the Administration in opposing legislation that would re-establish congressionally authorized labor protection provisions as a matter of law.

As the AFL-CIO and its airline industry unions noted at Senate hearings, the issue is of more than academic interest. There is hardly an airline that has not been involved in merger negotiations or takeover speculation.

Even as the hearings were going on, airline executives were fastening their own golden parachutes.

At United Airlines, a company spokesman explained, the board of directors had voted special employment contracts to seven top executives because of "potentially disturbing circumstances arising from the possibility of change in control" of the airline.

If they lost out in a change of corporate control, they would continue to receive their full salaries for five years. An additional 37 lower-level executives would be eligible for severance pay of three times their annual salaries.

Guess who is left without a parachute?

'New appointment or two'

Was Meese aide kidding about plan to pack court?

By Gus Tyler

When the Supreme Court decided by a 6-3 vote to uphold affirmative action by an employer who gave preference to a woman over a man, the Reagan Administration was upset.

Atty. Gen. Edwin Meese has repeatedly and strenously opposed affirmative action. Reagan's recent appointees to the high court were, in the eyes of the White House, supposed to back the Administration's view. Yet, in this most recent decision, affirmative action was upheld by the court for the fourth consecutive time. The opinions in each case were written by Justice William Brennan, who has been denounced as an exponent of "radical egalitarianism" by William Bradford Reynolds, head of the Justice Dept.'s civil rights division.

When the media asked the Justice Dept. how it felt about all this, its public affairs director, Terry Eastland, said that all that was required was "a new appointment or two" to the court.

Whereupon, Solicitor Gen. Charles Fried, who represents another arm of the Justice Dept., commented: "Statements like that I find deeply troubling."

Fried has good reason to be troubled. He has to live with this court; he has to come back with other cases. The last thing he wants is to appear before the court as spokesman for an Administration that tells the justices out in the open that the White House intends to overrule them by making "a new appointment or two."

Dangerous scheme

But beyond Fried's perfectly rational strategic reasons for finding Eastland's statement objectionable, there is a more profound reason why the notion of "packing the court" is dangerous. If the President can tailor a court totally to his suiting, then the court becomes nothing more than an instrument of the Executive Branch wiping out the "separation of powers" and the system of "checks and balances" are wiped out.

The attempt to turn the court into an echo of the White House did not begin with Reagan. President Roosevelt openly tried to "pack the court" in 1938, but failed.

Eastland was also assuming that "a new appointment or two" would be ratified by the Senate. But that is dubious given Reagan's weakened prestige and a Democratically controlled Senate.

Finally, there is no telling how a "new appointment or two" will turn out. Eisenhower appointed Earl Warren under the impression he was naming a conservative Republican; Warren was the most liberal Chief Justice ever. The progressive Wilson named James McReynolds who turned out to be the most consistent conservative on the bench. Eisenhower though he was getting a conservative when he named William Brennan. And Justice Antonin Scalia, Reagan's most recent appointee, has been in agreement with Brennan in 62 percent of the cases decided this term.

In a post-mortem interview, Eastland claimed he was just kidding.

Finnegan's wake

Les Finnegan, whose light-hearted labor-oriented column appeared in union publications for four decades, died Apr. 12. Friends and fellow workers got together for a wake on Apr. 28 to reminisce on Finnegan's long service to the labor movement, his many humorous escapades as well as his sardonic writing. Here's an item from one of his columns:

In Chicago, it wasn't very long ago that employers and employer associations were fighting tooth-and-nail against the "pernicious new idea" of severance pay for workers. But then employers discovered the idea—for themselves, that is—and everything changed. These days it's not uncommon for bosses to negotiate $1-million and $2-million severance pay windfalls for themselves.

On-the-job toxic hazards explored

Teleconference links 18 centers nationwide to press for safeguards

By Arlee C. Green

A two-day teleconference focused on helping workers use information gained from state and federal right-to-know laws to demand control of chemicals in the workplace and the community.

AFL-CIO Sec.-Treas. Thomas R. Donahue opened the conference, titled "The Right to Know—Making it Work," noting that it was the first such event to originate from the federation headquarters "with our own facilities."

The Labor Institute of Public Affairs, the federation's television arm, produced the conference which was broadcast via satellite to sites in California, Arkansas, Michigan, Maryland, Missouri, Pennsylvania, Illinois, Ohio, Wisconsin, West Virginia, New York, Connecticut and Nebraska.

Participants included union leaders, shop stewards, safety committee members and labor educators at 18 university locations nationwide.

Donahue called the right to know an "issue of direct and immediate concern to working men and women." Noting that in 1981 only two states had adopted RTK laws, he credited organized labor with help ing put the issue on the public's agenda. Now 29 states and many localities have such laws—"despite an uncaring and hostile" Reagan Administration, he said.

Public interest

Labor's success on this issue, Donahue added, "serves to remind us—and perhaps more important, reminds our opponents—that labor is still an effective and forceful advocate of change," and that by successfully representing workers, "we are also serving the public interest."

Unions are still in court trying to get the Occupational Safety & Health Administration to extend the hazard communication rule to cover all workers, Donahue said.

Margaret Seminario, associate director of the AFL-CIO Dept. of Occupational Safety, Health & Social Security, coordinated the development of the program, which was moderated by Karen Ignani, an assistant director of the same department. Time was provided daily for participants are each site to discuss RTK issues, followed by a panel discussion that responded to questions from the various locations.

In detailing the history of right-to-know regulations, Seminario said such laws are a first step that came about "because of a cooperative effort by trade unionists, environmental groups, community organizations and others."

Now is the "time for all of us to put that information to work and to take an active role in demanding that chemical hazards in the workplace and community be controlled," she said.

Contract language

Steelworkers President Lynn R. Williams, chairman of the Executive Council's Safety & Occupational Health Committee, opened the conference's second day explaining how "union negotiated contract language can readily expand what is required by federal or state right-to-know laws and regulations."

Williams noted that the "right of unions to review chemicals coming into the workplace, to improve training and to require better labeling of chemicals are all issues for collective bargaining." He cited the example of how a USWA local got a chemical manufacturer to revise inadequate material safety data sheets. The local later negotiated a better ventilation system and safer work practices for workers using those chemicals.

Deborah Berkowitz, safety director for the federation's Food & Allied Service Trades Dept., told conference viewers that "training in many ways is the most important" aspect of the federal hazard communication rule, because employers must provide workers with the specific hazards of chemicals used, how to protect themselves and the safety data sheets.

She warned, however, that some employers will take short cuts to training. "Be sure the training is adequate," Berkowitz said. Employers must have a written training program, and all workers should have received training in the use of toxic chemicals by May 25, 1986. New workers since then should have also been trained before being assigned to a work area.

Painters safety director Rod Wolford explained the strengths and weaknesses of the federal requirements on chemical labeling and material safety data sheets. After detailing the information OSHA requires on an MSDS, Wolford explained how to evaluate data provided by chemical suppliers.

He stressed that often this information, while "legally sufficient," may not always be "adequate." Therefore, unions must determine if there is any missing information. Wolford explained the labeling requirements for containers and piping systems, noting that protective measures are not required on those labels. Further, labels can identify products by brand names, code names or numbers, rather than providing the chemical ingredients.

Jamie Cohen, a safety specialist with the Electronic Workers, reported on workers' rights regarding access to medical and exposure records, using examples of how two local unions were able to improve jobsite safety by evaluating such information.

Records that workers have access to include monitoring results, such as air sampling, biological monitoring, MSDSs or other records that identify toxic substances, exposure data to physical agents, and the employer's written hazard communication program.

Reducing exposures

Sec.-Treas. Eric Scherzer of Oil, Chemical & Atomic Workers Local 8-149, emphasized that the "right to know must be part of a campaign to reduce exposures or it's a meaningless right." He told how a local union can best make use of its right to know.

Use the MSDS to find out the possible health problems in the workplace, he said, then make sure the worker training program is adequate. If it isn't, Scherzer continued, push for changes by getting these union rights bargained into the contract. He told of one plant where the union's industrial hygienist now runs the training program and has complete access to chemical information, exposure data and other records, thereby greatly improving safety on the job.

Auto Workers industrial hygienist Peter Dooley discussed collective bargaining strategies, keying on the grievance procedure and how to negotiate right-to-know language into the contract.

Dooley stressed that the federal RTK regulations are minimum requirements that can be incorporated into the contract and later improved. Often grievances about workplace hazards lead to contract language, he noted.

Lump-sum pay adds to gains of new pacts

Collective bargaining in the first quarter of 1987 yielded average wage increases of nine-tenths of 1 percent during the first year—up slightly from the eight-tenths of 1 percent average during the same period in 1986.

As in the past, the figures compiled by the Bureau of Labor Statistics seriously understate gains made at the bargaining table because they exclude lump-sum payments which have become an increasing factor in labor-management negotiations.

If up-front lump-sum payments were included, there would be a significant difference. For the more than one-third of the union members whose contracts were negotiated in the first quarter, these one-time payments pushed first-year gains up to 1.6 percent.

Not including the lump-sum payments, wage increases for the 230,000 workers involved will average 1.7 percent a year over the life of the contracts, most of which will run for three-year periods, the Labor Dept. said.

Changing wages

Under the contracts negotiated in the first quarter, 143,500 workers will receive wage increases averaging 3.3 percent annually, 52,000 will have their wages frozen at present levels, and 33,700 will take pay cuts averaging 2.4 percent a year.

The data presented an uneven economic picture that in large measure was a reflection of the devastating impact the nation's runaway trade deficit has had on workers in industries ravaged by imports.

In the manufacturing sector, which has borne the brunt of one-way foreign trade, contracts negotiated in the January-March period provided an average first-year decrease of 1.8 percent and an average annual decrease of three-tenths of 1 percent. About one-fourth of these settlements were in the import-beleaguered steel industry.

By contrast, nonmanufacturing agreements—primarily in the construction, retail food, real estate and service industries—produced an average initial gain of 2.6 percent and an average annual increase of 2.9 percent over the life of the agreements.

COLAs declining

Cost-of-living adjustment clauses are on the decline, the BLS said. At one time, contracts covering 60 percent of all union workers contained COLA provisions, but that number has dropped to only 38 percent.

Non-COLA agreements negotiated in the first quarter provided an average increase of two-tenths of 1 percent initially and 1.3 percent a year over the life of the contract. Those which adjust wages to help ease the impact of inflation, however, will produce increases of 2.5 percent both in the first year and annually over the life of the agreement, the BLS said.

Another 105 contracts, covering more than 350,000 workers, expired by the end of the first quarter but new pacts either had not been negotiated or were awaiting membership ratification. These agreements were concentrated in the steel, airline and railroad industries.

Job training program spurred in California

Sacramento, Calif.—The AFL-CIO's Labor Institute of Public Affairs and the federation's Human Resources Development Institute are collaborating on an effort to get local unions actively involved in California's state-funded job training program.

The goal is to help encourage employed union members to acquire the advanced skills needed to stay on top of a technologically changing job market and to provide retraining for workers facing layoffs or displaced by plant closings.

California's Employment Training Panel, which administers the program, has awarded a $110,000 contract to LIPA for a 10-month promotion and technical assistance program. It will include video tape production, mailings, specialized conferences, telemarketing and other communications tools to reach local unions and central bodies.

GOP loses bid to undermine prevailing pay

The Senate Armed Services Committee voted down a Republican attempt to gut the Davis-Bacon and Service Contract prevailing wage laws, but a new attack on worker protections is expected in the House.

Sen. Phil Gramm (R-Tex.) proposed to exclude defense contracts of less than $1 million from the two prevailing wage and benefit laws. He was beaten on an 11-9 vote, with all committee Democrats opposed.

The outcome reflected the political change in the new Congress. Last year, under Republican control, the committee voted to raise the threshold for prevailing wage coverage on defense contracts. Despite the committee rejection this year, the issue could come up again when the Senate takes up the Defense Dept. bill.

In the previous Congress, the Senate rejected the attempt to gut the Service Contract Act, which applies mainly to low-wage occupations. But it voted to keep in the defense bill a provision excluding construction contracts of less than $250,000 from Davis-Bacon coverage. The House balked, however, and the anti-worker provision was dropped in a House-Senate conference.

An anticipated attack on Davis-Bacon coverage in the House is considered less of a threat.

Weakening amendment

Reps. William L. Dickinson (R-Ala.) and Charles W. Stenholm (D-Tex.) are expected to offer an amendment when the defense bill comes to the House floor that would raise the threshold on Davis-Bacon coverage from $2,000 to $1 million.

That would exclude 95 percent of military construction contracts, AFL-CIO Legislative Director Robert M. McGlotten said. He urged the House to adopt instead a labor-supported substitute by Reps. Austin J. Murphy (D-Pa.) and Augustus F. Hawkins (D-Calif.) to exclude only military construction under $25,000 from Davis-Bacon coverage.

Murphy and Hawkins have also introduced permanent legislation that would raise the Davis-Bacon threshold on all federally funded construction to $50,000 for new construction and $15,000 for repair and renovation. Their bill is supported by the AFL-CIO and its building trades.

Kirkland opens Executive Council discussion of labor's agenda.

Council presses Senate to enact strong trade bill

By David L. Perlman

Trade deficit reduction and international workers' rights will be principal AFL-CIO goals as the Senate shapes its version of trade reform legislation.

Both are part of the trade bill the House passed on Apr. 30 by a 290-137 vote. The Executive Council praised the House bill as a responsible approach to a serious and worsening trade crisis.

The council called on the Senate to follow suit "by enacting a broad trade bill that provides hope to American workers suffering from the impact of unfair and one-sided trade."

It endorsed two bills introduced by Sen. Donald W. Riegle Jr. (D-Mich.) and urged that they be incorporated in the Senate's trade bill.

One Riegle proposal is the counterpart of the House-adopted Gephardt amendment. It would target nations that have used unfair tactics to roll up a big trade surplus with the United States. If direct negotiations did not bring about a solution, the offending country would be required to reduce the imbalance by 10 percent a year, either by buying more American goods or cutting back its shipments to the United States.

It's enactment "will put a deadline on talk and require a real reduction in the trade deficit," the council stressed.

At a news conference during the Executive Council meeting, AFL-CIO President Lane Kirkland noted that trade negotiations with other countries continue endlessly "and have proved quite unproductive."

Key to turnaround

Without an approach comparable to the Gephardt amendment, Kirkland said he saw no prospect of any turnaround.

The House-passed bill defines denial of basic worker rights, such as suppression of free unions or use of child labor, as an unfair trade practice that could subject the offending nation to retaliation under U.S. trade law. Rep. Don J. Pease (D-Ohio) originally sponsored the concept.

Riegle's counterpart bill has been largely incorporated into the trade measure being drafted by the Senate Finance Committee, but an attempt to dilute or eliminate it is likely when the bill is before the Senate.

The Administration has opposed a

Council puts endorsement drive in gear

By John M. Barry

A massive effort to involve union members and their families in the process of choosing the next President of the United States was kicked off by the AFL-CIO at the Executive Council's spring meeting.

"Our goal in this political education effort," Federation President Lane Kirkland said at a news conference, "is to increase participation within our ranks, and by doing so, to strengthen solidarity and to build a more effective American labor movement."

The first step, Kirkland said, is the widest possible distribution among affiliates and their members of information on the presidential candidates' positions. These are set forth by the candidates themselves in responses to five questions—four written and one videotaped—which the federation submitted to 14 declared and potential candidates.

Voluntary guidelines

Materials being used in the first stage of labor's political effort were reviewed by council members during the two-day meeting in Washington. The council also issued voluntary guidelines urging affiliated unions and their officers to refrain from public endorsements of presidential candidates before a meeting of the AFL-CIO General Board tentatively set for next October. Affiliates will decide at that meeting whether the federation should make an early endorsement.

Kirkland said the candidates' answers "will give union members their first chance anywhere to see and compare the large field of candidates for President." The written answers appear in the Federationist center section of this issue of the News and will be carried by many labor publications across the country. Cassettes of the videotaped question and responses are being sent to state and local central bodies, field staff and affiliated unions for internal distribution.

In addition, unions have been urged where possible to meet directly with the

Corporate raiders victimize workers

Workers and their communities are the chief casualties of corporate takeover raids and congressional remedies are long overdue, the Executive Council declared.

Greed is the fuel for the wave of hostile takeover attempts that threaten the nation's economic health, the council charged. It warned that "no business, no matter how large or how soundly managed, is safe from attack by a raider."

The council statement pointed to the elimination of jobs in the aftermath of such successful raids as the takeover of Crown Zellerbach.

But it stressed that jobs have also been lost in costly defenses against raids. It cited the stock buyout by the Goodyear Tire & Rubber Co. and leveraged buyouts, such as Safeway Stores and Owens-Corning Fiberglas.

No economic or social benefit has come from "this frenzied takeover activity," the council stressed. "To the contrary, millions of hours and billions of dollars have been wasted on the unproductive task of restructuring corporations" as a result of the huge debts that have been incurred.

Widespread fallout

For workers—the fortunate ones who keep their jobs—the fallout of corporate raids has often been cuts in pay or benefits, or the raiding of pensions funds.

Legislation pending in Congress to curb some abuses of corporate raids and to make stock tender offers fairer to stockholders have labor's support as one part of the solution, the council said.

But further measures are needed to protect workers and their communities, the AFL-CIO stressed. The council's recommendations included:

- Speculators and raiders should not be allowed to profiteer by unloading their stock after having pushed its price up to inflated levels by their takeover ploy.
- Raiders seeking to take over a company should be required to declare their plans for the future of the firm and disclose the source of their financing to investors, workers and affected communities.
- Stock purchases financed by the sale of junk bonds should be subject to the

Slaying of South African unionists draws outrage

Expressing "outrage" at the "recent upsurge in repression" against the black trade union movement in South Africa, the AFL-CIO condemned the murder of six black railway workers by police and massive government raids on the Johannesburg headquarters of the Congress of South African Trade Unions.

These actions by the Botha white minority government, the Executive Council declared, "unmask the violence which is at the root of the apartheid system."

The federation assailed the Botha regime for resorting to brutality in its effort to "crush an eight-week-long strike for better conditions by the South African Railway & Harbor Workers Union and to frighten a trade union movement that is at the forefront of the struggle" to dismantle South Africa's racist structure.

"The killing of trade unionists, the dismissal of 16,000 striking workers, the refusal to negotiate with their trade union and the attacks on trade union headquarters reveal the true intentions of Pretoria—the suppression of independent trade unions and of those who dare to speak out in behalf of human dignity, workers' rights and racial equality," the council declared in its statement.

Aggression must end

The federation demanded that the white-minority government halt its "aggression" against the black-led South African trade union movement, enter into negotiations with the striking union and reinstate all laid-off workers.

"Police interference in trade union activities must cease and unions must be allowed to exercise their rights in accordance with internationally recognized labor standards," the statement insisted.

The council rejected the justification advanced by the regime of President P.W. Botha—that the murder of the strikers was in response to "acts of violence"—calling the South African government claims "preposterous and transparent in their mendacity."

The AFL-CIO pledged its continued support for South Africa's independent black trade union movement, "that country's principal force for peaceful change," and extended condolences to the families of those "murdered in the struggle for justice, democracy and trade union freedom."

Meanwhile, police surrounded COSATU headquarters in Johannesburg for seven hours and arrested 11 strikers for alleged involvement in the stabbing deaths of four scabs at the government-run railroad system.

Violence deplored

COSATU General Sec. Jay Naidoo made it clear that the labor movement has never condoned violence in the resolution of union disputes. But he called it "disgraceful for the government to exploit the deaths to stir up its propaganda war against us as a legal trade union federation."

Naidoo accused the white-minority government of ransacking COSATU's offices, detaining key leaders, restricting legitimate trade union activities, and creating a climate of public distrust of the labor movement.

Council members hear from NAACP Executive Director Benjamin Hooks on the decline of federal civil rights initiatives under President Reagan. Presidential selection process opens

Council issues guidelines for affiliates on endorsements

Continued from Page 1

candidates during the next several months.

The overall theme of the effort is "Democracy at Work," reflecting the federation's intent, as Kirkland put it, "to conduct the most open and thorough process of consultation and communication with our members that is within our power." During the summer and fall, he said, "our members will be telling us what they think about the candidates."

Other candidates who may emerge between now and the October General Board meeting will be encouraged to make their views known to union members in various ways available to them, Kirkland said, but they will not be added to the videotaped or written responses of the initial group of eight Democrats and six Republicans. To do so would be unfair to the candidates whose responses did meet the schedule, he said, and a cutoff point had to be set to assure enough time to elicit the views of union members.

The council's guidelines for the political process, besides the appeal to refrain from endorsements, urge that prior to the General Board meeting:

- National and international union officers and staff should not participate on candidates' committees, solicit funds for candidates or provide them with funds or other resources.
- Unions should extend equal courtesy and cooperation to all candidates for the presidential nomination.
- Affiliates should use "their own methods of determining the views and preferences of their members in a manner that leads to a bottom-up, rather than a top-down decision."
- Early 1987 political events should be considered on a case-by-case basis, with labor delegates to conventions or conferences being urged to vote their individual preferences so that such votes are not viewed as the position of any national or international union.

Consideration of the political process, including a viewing of the videotape prepared by the Labor Institute of Public Affairs of the candidates' responses to the single broad question, consumed most of the second day of the meeting.

A visitor on the opening day was Benjamin Hooks, executive director of the NAACP, who reviewed the decline of federal civil rights initiatives under the Reagan Administration. Also at its opening session, the council adopted a statement calling on the Senate to match the House in passing strong trade deficit reduction provisions. And it urged legislation to curb the "epidemic" of mergers and corporate takeovers that it said threatens the nation's economic health.

Other statements hailed the 40th anniversary of Israel and restated the federation's solidarity with Histadrut, that country's labor federation; denounced the upsurge of repression against the black trade union movement in South Africa, and called for the opening of the United Nations files on Nazi war criminals.

On trade union matters, the council endorsed consumer boycotts of two companies that have locked out their union workers—McCreary Tire & Rubber Co. of Indiana, Pa., and the U.S. Playing Card Co. of Norwood, Ohio. The union-busting tactics of IBP Inc. at its Dakota City, Neb., packinghouse also were condemned.

The council urged support of the special fund set up to aid the victims of the Bridgeport, Conn., construction tragedy and approved a $5,000 contribution from the federation.

Details of these actions are covered elsewhere in this issue.

Contributions also were approved to the Citizen/Labor Energy Coalition, National Consumers League, No Greater Love, and the Citizens Network on International Affairs.

Committee reports

Progress reports of council committees were presented by Sec.-Treas. Thomas R. Donahue on the evolution of work and by Vice Presidents Gerald McEntee on Montana's rejection of a constitutional convention to mandate a balanced federal budget, William Wynn on recent defeats of "right-to-work" bids in Oklahoma and New Mexico, John T. Joyce on defense and Frederick O'Neal on civil rights.

The council also heard staff reports from Legislative Director Robert McGlotten, Research Director Rudy Oswald, Organizing Director Charles McDonald, COPE Director John Perkins, LIPA Director Larry Kirkman, and Ray Denison, president of the Union Privilege Benefit Programs.

At his opening day news conference, Kirkland responded to a question about the state of his health following his recent kidney surgery that he is now about "90 percent" recovered and expects to be 100 percent "before too long." He said he is on no medication and requires no further treatment.

The council's next meeting will begin Aug. 17 at the Meany Studies Center in Silver Spring, Md., when the new archives building on the campus will be dedicated.

Central American economy explored

Tegucigalpa, Honduras—Labor, government and business leaders held an exploratory session here on the prospects for forming a Central American Development Organization to help resolve the social, political and economic problems of the region.

The concept of a tripartite organization was first proposed by the AFL-CIO and the region's trade union federations in 1983. The initial proposal was presented to the National Bipartisan Commission on Central America on which Federation President Lane Kirkland served.

CADO's goal would be to further human rights and democratic development and to make recommendations concerning the funneling of economic assistance into Central America.

Representing the AFL-CIO at the session here were President John T. Joyce of the Bricklayers, a federation vice president, and Executive Director William C. Doherty Jr. of the American Institute for Free Labor Development.

Although sharp differences emerged among the delegations, there was general acceptance of the basic premise that CADO could serve a vital role in reducing the tensions between the economic sectors of each country and in helping assure a democratic solution to the area's problems.

The proposal will continue to be explored at another session to be held within the next two months.

Besides the United States, delegations attended from Panama, Costa Rica, Honduras, El Salvador, Guatemala and Belize.

Sealed UN files help Nazis evade war crime trials

To serve the ends of justice, the United Nations should open long-sealed files on war criminals so participants in the "gruesome Nazi atrocities" of nearly half a century ago can be brought to trial, the Executive Council insisted.

Noting the rising tide of public debate over the possibility that Soviet bloc nations have forged evidence in a move aimed at "dividing American ethnic groups," the council emphasized that "a clear, unimpeachable and reliable body of evidence continues to be shielded from public scrutiny."

The evidence covers approximately 40,000 suspected war criminals, some 25,000 of whom "warranted prosecution," the federation said. It is contained in the War Crimes Files of the United Nations—evidence gathered in the aftermath of World War II by the Allied War Crimes Commission.

After the commission completed its work, it turned the records over to the UN "for safekeeping" with the intention that the documents would "contribute to bringing other war criminals to justice," the statement emphasized.

Access restricted

"Inexplicably, UN officials have since restricted access to the files, maintaining that permission must be secured from the 17 nations that comprised the commission," the council said.

"The AFL-CIO believes the enormity of Nazi crimes outweighs such narrow procedural arguments," the federation said, calling on UN Sec.-Gen. Javier Perez de Cuellar to open the files so that the documentary evidence can be used to track down the guilty.

The council emphasized that "continued opposition to access to this important source of information acts as an impediment to the punishment of those guilty of crimes against humanity."

Council salutes Israel on 40th anniversary

The Executive Council sent 40th birthday greetings to the state of Israel, praising it as "the only free and democratic state in the Middle East."

The council said Israel's "strong commitment" to democracy and social justice has been maintained and strengthened despite "the relentless war waged against it by Palestinian terrorists and neighboring Arab dictatorships."

"We greet Israel's democratic achievement with particular satisfaction," the labor federation declared, "recognizing it as a state built on the pioneering vision of the trade union movement and trade union values."

The council statement hailed the role that Histadrut played "in shaping the social, economic and cultural life of Israel" and lauded the labor federation for its "defense of the rights of all Israeli workers, irrespective of their race or national origin."

The council called on affiliated unions to continue their strong support of Israel and to give Histadrut the moral support it needs in its social, economic, educational, cultural and health initiatives that have "contributed significantly to the strength of Israel's democracy."

High-rise tragedy

Reagan safety policy draws council's fire

The deaths of 28 union construction workers when a high-rise building collapsed in Bridgeport, Conn., underscore the need for Reagan policy changes and legislative reform to ensure that federal safety standards are adopted in a timely manner and effectively enforced, the Executive Council said.

"The Bridgeport accident grimly portrays the hazards in the construction industry where more than 2,500 workers are killed each year," the council stressed. It accused the Occupational Safety & Health Administration of failing to recognize "the high risk and potential catastrophic consequences that exist in the most hazardous occupations" and branded OSHA's existing construction safety standards "woefully outdated."

The council charged that Reagan Administration delays have added years to the adoption of revised standards, while the quality of construction industry inspections has deteriorated.

Enactment of construction safety and health legislation being sought by the federation's Building & Construction Trades Dept. is essential to address the many shortcomings of OSHA, the AFL-CIO statement said.

Worst tragedy in decade

The council noted that the Bridgeport tragedy was the worst construction accident in the United States since 1978 when 51 building tradesmen were killed in the collapse of a cooling tower under construction in Willow Island, W.Va.

The causes of the Bridgeport accident are still under investigation by OSHA and the National Institute for Occupational Safety & Health and it may be several months before reports are issued on the exact causes. Besides testing the concrete used in the floors and checking the placement of the footings, OSHA and NIOSH are examining the building design and the earth beneath the building.

The council cited earlier safety problems at the Bridgeport site and stressed that the local area OSHA office had refused to honor union complaints requesting immediate hazard inspections. With only two on-site construction inspectors for the entire state, there have been considerable delays in the inspecting of construction sites, the council added.

It stressed that OSHA is still citing employers for fewer hazards and imposing reduced penalties even though the agency has targeted the construction industry for more inspections since 1982. Still the number of workers suffering serious injuries on the job has not decreased.

Death toll

The Apr. 23 Bridgeport collapse killed eight Carpenters, seven Laborers, seven Iron Workers, three Plumbers & Pipefitters, one Electrical Worker and one Operating Engineer, along with the son of an Iron Worker who was on the site. Eleven other tradesmen were injured.

In expressing its "heartfelt condolences to the families and friends of those killed" in the accident, the council urged unions and their members to contribute to a special fund set up to assist the families of the victims.

Contributions can be sent to the Bridgeport Building Trades National Disaster Relief Fund, 1211 Howard Ave., Bridgeport, Conn. 06605. The council contributed $5,000.

The nearly block-long pile of rubble resulting from the collapse was carefully dismantled piece by piece by a small army of union volunteers and area firemen who often worked around the clock to get the job done—a job that took a physical and emotional toll on the city's union building tradesmen.

Ron Nobili, business manager of Laborers Local 665, credited the union volunteers with being able to clean up the site in a week's time. "Only organized labor could have made such a massive rescue effort without any additional injuries," he said.

Local building trades leaders expressed hope that the tragedy will at least have a positive effect in getting more OSHA inspectors hired. They noted that until recently, the agency often responded to worker complaints with long questionnaires, instead of an inspection.

Union volunteers remove one of the last of 28 victims in Bridgeport, Conn.

Council presses get-tough trade bill

Continued from Page 1

strong provision to protect workers rights.

Kirkland rejected a suggestion that the close 218-214 House vote for the Gephardt deficit-reduction amendment reflected a softening of public support for labor's position.

"I think the trade issue is a burning issue with the American people," he responded, "and I don't think that issue is going away, nor is it lessening."

While the Senate Finance Committee has nearly completed its markup of the trade bill, the measure is not expected to be ready for the Senate floor until June. The House took up the legislation under a rule limiting amendments that could be proposed, but the Senate will be under no such constraint.

A House-Senate conference will seek to resolve differences between the two bills.

Meanwhile, the Reagan Administration let it be known that it has serious objections to several provisions in the House bill and in the measure being marked up by the Senate Finance Committee—apart from the Gephardt amendment.

The White House doesn't like improvements in the trade adjustment assistance program to help workers whose jobs are wiped out by imports.

It wants more "flexibility" to allow the President to ignore congressional directives. And it opposes the labor standards protections the AFL-CIO has pressed.

But the Administration stopped short of the tough veto threats that in past years have caused Congress to back away from a confrontation. Veto warnings have proved less intimidating in the twilight of Reagan's presidency than in past years.

Even the watered-down bill the House Republican leadership proposed as a substitute for the trade bill that was enacted contained provisions the Administration had branded "unacceptable."

Key congressional panels act on health hazard warning bill

House and Senate subcommittees approved similar versions of a high-risk notification bill and the AFL-CIO urged fast-track action to move the legislation through Congress.

The bills endorsed by both the Senate Subcommittee on Labor and the House Subcommittee on Health & Safety would commit the government to seek out, notify and offer counseling to persons whose health may have been impaired by on-the-job exposure to hazardous substances.

A Risk Assessment Board, to be set up in the Dept. of Health & Human Services, would identify workplace health hazards and seek to locate persons in the high-risk category.

AFL-CIO Legislative Director Robert M. McGlotten stressed in a letter urging approval by the full Senate Labor Committee that early diagnosis and treatment "can save lives and help reduce the staggering costs of medical care."

Occupational diseases generally have long latency periods, McGlotten stressed. He pointed to former asbestos workers, cotton textile workers, vinyl chloride workers and coke-oven workers who are disabled or dying of as a result of ailments stemming from their work.

Passage of a high-risk notification bill has been a major legislative goal of the AFL-CIO Industrial Union Dept., and the measure has substantial bipartisan support despite the Reagan Administration's opposition. The chairmen of the House and Senate subcommittees that approved the measure are its principal sponsors—Rep. Joseph M. Gaydos (D-Pa.) and Sen. Howard M. Metzenbaum (D-Ohio).

An adjournment logjam kept similar legislation from reaching a vote in the last Congress, and supporters began their efforts early in this session.

Metzenbaum and Gaydos agreed to some modifications in last year's bill to pick up important support from major chemical companies. But the Administration remained adamant. Three Cabinet members—Health & Human Services Sec. Otis R. Bowen, Attorney Gen. Edwin Meese and Labor Sec. William E. Brock—wrote Gaydos that they will recommend that President Reagan veto the bill "if it is presented to him in its current form."

The Administration has suggested a study commission to consider the issue of notification as a facet of the Occupational Safety & Health Administration's hazard communications standard.

Gaydos countered that OSHA already has the power to move along the lines the Administration advocates, but it hasn't done so.

Seniors pay price for Medicare cuts

A General Accounting Office report tracing cutbacks in Medicare and Medicaid under the Reagan Administration points up the need for improving health care protection for the elderly, AFL-CIO Social Security Director Bert Seidman said.

The GAO study showed that the elderly and poor are paying more for health care as a result of legislation enacted during the Reagan years. It found also that elderly Americans are actually paying a higher percentage of their income for health care than they did before Medicare was enacted more than 20 years ago.

The GAO report was prepared at the request of Rep. Edward R. Roybal (D-Calif.), chairman of the House Committee on Aging. Roybal noted that the shift of costs to the aged and poor would have been even greater if Congress had enacted all of the Reagan Administration's legislative proposals.

He termed the GAO report "a convincing argument" for action by Congress and the Administration to prevent further out-of-pocket cost burdens on Medicare and Medicaid recipients.

Seidman agreed, and pointed out that the AFL-CIO has urged Congress to add broad catastrophic health protection to Medicare and begin to address the heavy financial costs of long-term care.

Executive Council in session at federation headquarters explores issues vital to workers.

Lane Kirkland unveils AFL-CIO's program for involving union members in the decision on an early presidential endorsement for the 1988 campaign.

Council raps poverty wages, job safety violations at IBP

The Executive Council called on billionaire Armand Hammer, chief executive officer of Occidental Petroleum, to end the "poverty wages and horrendous work conditions" that forced 2,800 Food & Commercial Workers to strike the Dakota City, Neb., plant of Occidental's subsidiary, IBP Inc.

At the same time, the council assailed the "deplorable safety record" at IBP, formerly Iowa Beef Processors and the world's largest meatpacker.

Although IBP workers must cope with injury and illness rates that run 23 percent above the national average, the company has been exempt from workplace inspections because its self-maintained safety records submitted to the Occupational Safety & Health Administration claim injury rates that are only a fraction of those that have actually occurred.

Under threat of subpoena, the council noted, IBP was forced to appear before a congressional subcommittee investigating fradulent OSHA recordkeeping by employers trying to avoid safety inspections.

The federation renewed its plea to OSHA to end its reliance on employer-maintained safety logs and to mete out to IBP "the maximum penalty for any illegalities discovered, so that other companies are deterred from similar practices."

The statement condemned the "intransigence" of IBP and Occidental Petroleum for locking out UFCW members last December because they rejected a four-year wage freeze. Three months later, Local 222 turned the lockout into a strike, voting overwhelmingly to reject company demands for pay cuts that would have reduced hourly wages below 1981 levels.

"Substandard wages and working conditions at IBP have helped it amass substantial profits," the council declared, noting that in 1986 the parent company reported IBP had operating profits of $177 million. Citing the financial record, the council said the actions of IBP and Occidental "show their contempt for human dignity."

Lockouts assailed

The council also threw its support behind the members of Retail, Wholesale & Dept. Store Locals 256 and 257 who have been locked out by the U.S. Playing Card Co. of Norwood, Ohio, since Nov. 30, 1986, when management's unilateral imposition of drastic wage and benefit cuts destroyed more than 30 years of "a harmonious bargaining relationship."

And it called on all union members and their families to support the 200 members of Rubber Workers Local 947, who have been locked out by McCreary Tire & Rubber Co. of Indiana, Pa., since they refused the company's "unreasonable demands for wage cuts, benefits reductions and other concessions."

The council has put both U.S. Playing Card and McCreary on its "don't patronize" list and has called on union members to join in boycotting the products of these two companies.

Workers lose out in corporate raids

Continued from Page 1

Federal Reserve Board's margin requirements.

- Collective bargaining agreements should be binding on the corporate successors or new owners of a company for the term of the agreements.
- New owners shouldn't be allowed to pay off costs of acquiring a company by tapping a pension fund and pocketing so-called surplus funding.
- Top managers of an acquired company shouldn't be allowed to escape from the consequences of a reorganization on "golden parachutes" at the expense of rank-and-file workers whose jobs are also eliminated. Just as employers aren't allowed to discriminate in retirement plans affecting workers and executives, they shouldn't be permitted to discriminate in severance benefits by giving special privileges to executives.

Anaheim public workers join Service Employees

Garden Grove, Calif.—Members of the Anaheim Municipal Employees Association, representing 900 city workers, voted overwhelmingly to join the Service Employees' Orange County Public Employee Council.

This was the fourth consecutive organizing win over the past year in a drive that has added more than 2,500 to the membership rolls of the SEIU council. The other victories were: Santa Ana, 761 city workers; Costa Mesa, 283 city workers and Orange County, 565 blue-collar workers.

Pickets outside National Press Club urge billionaire Armand Hammer—in Washington to autograph copies of his autobiography—to get IBP Inc. to accept a new UFCW contract restoring wages that were unilaterally cut.

Benzene exposure on job means high leukemia risk

Push on for lower limits to save lives

By Arlee C. Green

A new government study found that workers occupationally exposed to benzene at the current federal limit for 40 years would have a 154 times greater risk of contracting leukemia than the population at large.

The findings strengthen earlier studies to point up the critical need for reducing the exposure limit, the AFL-CIO said.

Federation Safety Director Margaret Seminario noted that the study by the National Insitute for Occupational Safety & Health shows that a decrease in the exposure limit would save many workers' lives. Even OSHA's proposed reduction, which is one-tenth the current limit, would still put workers at a 70 percent greater risk of leukemia than the general population.

Seminario cited organized labor's long push for a limit to one-half part benzene per million parts of air, a 20-fold reduction from the current limit of 10 ppm. OSHA proposed to lower the level to 1 ppm last year. The researchers found that reducing the exposure limit to one-tenth of 1 ppm would reduce the risk to virtually the equivalent risk of the general population.

Greater risk

The risk-assessment study was a follow-up on earlier research involving 1,165 rubber workers at three plants. They included all workers employed in the rubber hydrochloride departments between Jan. 1, 1940, and Dec. 31, 1965. The follow-up study which covered through the end of 1981 showed 819 were still alive, 330 had died and 16 were not located, but presumed to still be alive.

The researchers reported nine leukemia deaths, nearly four times the number expected for that size population. Exposures for those workers who died from leukemia ranged from one month to 23 years. The latency periods ranged from two years to 37 years and the workers' ages at the time of death ranged from 28 to 69. Two of the workers died before age 30, after less than 18 months exposure at what would have been equivalent to 1 ppm every workday for 40 years.

Cancer fatalities

The study, published in the New England Journal of Medicine, also found four times the expected rate of multiple myelomas—tumors of the bone marrow. It is of "interest that three of the four deaths from multiple myeloma . . . occurred in the group with the lowest cumulative exposure to benzene and that all four persons who died had exceptionally long latency periods," the study said.

OSHA said it will shortly finish work on a final rule which will then be sent to the Office of Management & Budget for review. OSHA said it hopes to publish the final rule in June.

OSHA first proposed to reduce the worker exposure level in 1978, based partly on the results of studies showing the link between benzene and leukemia. That rule was struck down by the Supreme Court in 1980 on the ground that OSHA had not proven the need for a new standard. In the seven years since that ruling, OSHA rejected setting an emergency standard and had to explain its inaction in court, but no specific timetables were set for producing a new rule.

The final rule will likely have a short-term exposure limit. The short-term limit was dropped from the proposed rule after OMB objected to it. But last July's court decision on ethylene oxide served notice on OSHA that it must include such limits or explain why it cannot.

CLUW 'Hit' and 'Ms' lists mark women's foes, friends

The Coalition of Labor Union Women issued its first "Hit" and "Ms." list, an assessment of individuals and organizations that have hurt and helped working women over the past year.

The list was released as part of CLUW's observance of Working Women's Awareness Week, May 10-16.

Nominations were received from state and local chapters, with the final selections made at CLUW's executive council meeting last month.

Those making the "Ms." list have "advanced the image of working women over the past 12 months and deserve our applause," CLUW said.

They include the Supreme Court for its recent rulings on affirmative action, sexual harassment and maternity and disability rights; actress Jean Stapleton for her work on behalf of older women; President Dorothy Height of the National Council of Negro Women, and the state of Massachusetts for child care programs described as "the Rolls Royce of day care" for working parents.

Other winners on the "Ms." list were film maker Jean Kilbourne; Dr. Mathilde Krim; Merck, Inc., for its extensive family and leave policies; the film "Extremities," which explored violent crime against women from a women's perspective and two television programs, "L.A. Law" and "Cagney & Lacey."

By contrast, those who made CLUW's "Hit" list were selected for actions over the last 12 months that "hindered and degraded the image of working women," CLUW said.

Badge of dishonor

The Beastie Boys—a rock group whose lyrics suggest violence against women—was bounced from the final hit list by Fantastic Sam's, a nationwide beauty salon franchise that forces its employees to adopt nicknames like "Foxy" and "Bubbles." But there was no shortage of contenders for the badge of dishonor.

Comedian Joan Rivers made the list for her slaps at nurses, flight attendants and telephone operators; Carl Icahn of Trans World Air Lines for his "comments and attitudes" about flight attendants, and fashion designer Norma Kamali for refusing to recognize a union in her garment shops. Maryland's Linda Chavez, the unsuccessful Republican candidate for the Senate, won a special vote as the "dirtiest politician of the year."

Others on the dishonor roll were the U.S. Chamber of Commerce, the Wendy's hamburger chain, Singapore and British Calendonia Airlines, Phyllis Schlafly and the sports divisions of the three major television networks.

CONVENTION

The Vermont AFL-CIO will hold its 1987 convention Nov. 6-8 in Stratton Mountain.

The Candidates on the Issues

Bruce Babbitt

Governor of Arizona, 1978-1987; Attorney General, 1975-1978; Attorney, Brown, Vlassis & Bain, 1967-1975; Attorney, Office of Economic Opportunity, 1965-1967.

Joseph R. Biden Jr.

U.S. Senator (Delaware) 1973—; Chairman, Judiciary Committee; ranking Democrat, Foreign Relations Committee

Michael S. Dukakis

Governor of Massachusetts, 1974-1978 and 1982—.

Richard Gephardt

Chairman, House Democratic Caucus, 1985—; U.S. Representative (Missouri), 1977—; Board of Aldermen, 1971-1976.

Albert Gore Jr.

U.S. Senator (Tennessee), 1985—; U.S. Representative, 1977-1985; Reporter, Nashville Tennessean, 1970-1976.

Gary Hart

U.S. Senator (Colorado) 1975-1987; co-founder, Congressional Military Reform Caucus, 1981; manager, McGovern Campaign, 1971-72; Attorney, Departments of Justice and Interior, 1964-67.

Jesse Jackson

President, National Rainbow Coalition, 1984—; President, Operation PUSH, 1971-1983; Executive Director, Operation Breadbasket, 1966-1971.

Paul Simon

U.S. Senator (Illinois) 1985—; U.S. Representative, 1975-1985; Lieutenant Governor, 1968-1972; Newspaper Publisher, 1948-1966.

George Bush

Vice President of the United States, 1981—; U.S. Representative, 1967-71; Ambassador to China, 1974-75; Director of Central Intelligence, 1975-77.

Bob Dole

Senate Republican Leader, 1987—; Senate Majority Leader, 1985-86; U.S. Senator (Kansas), 1969—; decorated World War II combat veteran.

Pete du Pont

Governor of Delaware, 1977-1985; U.S. Representative, 1971-1977; State Legislator, 1969-1971.

Alexander M. Haig Jr.

Secretary of State, 1981-1982; Supreme Allied Commander of NATO, 1974-1979; Chief of Staff to President Nixon, 1973-1974; founder/President, Worldwide Associates, 1982—.

Jack Kemp

U.S. Representative (New York), 1971—; Pro Football Quarterback, American & National Football Leagues, 1957-1970.

Pat Robertson

Founder/Chairman, Christian Broadcasting Network, 1959—; founder, Operation Blessing, 1978—; Broadcast News Analyst, 1975—; Chancellor, CBN University, 1978—.

The Candidates on the Issues

The AFL-CIO asked 14 declared and potential candidates for the Democratic and Republican Party presidential nominations in the 1988 election to respond in writing to four questions on key issues. The goal is to help our members and their families exercise their civic rights and responsibilities, to become more involved in deciding which candidate or candidates offer the standard of leadership this nation seeks.

The American standard of living is under attack. Persistent unemployment and lower pay scales have strained family budgets. Consumer purchasing power is eroding. The good jobs that formed the basis for a stable middle class are disappearing in the face of intense and often unfair foreign competition. At the same time, as the federal role has been reduced, an increased burden is being placed on state and local governments to provide community services and to rebuild deteriorating public facilities.

As the proper role for government continues to be the subject of national debate, American workers and their unions are deeply concerned about the need to provide better jobs, improved education, equal opportunity for all, affordable housing, access to health care, and all the elements necessary to give the next generation a chance at a better life than its parents.

These concerns are the basis for the AFL-CIO's questions, which appear below and on the following pages with the candidates' responses.

QUESTION 1

FOREIGN TRADE

How would you propose to reduce America's trade deficit and encourage the fair exchange of goods with other nations, while maintaining and improving our standard of living?

DEMOCRATS

Bruce Babbitt

Free traders tell us, in the face of all the evidence, that there is nothing basically wrong with the system of international trade. Protectionists want to pick fight after fight about unfair trading practices and start an unending cycle of retaliation.

My approach is a third alternative entirely. I call it balanced trade. Balanced trade concentrates on objective results ("balance") rather than subjective rules (such as "fairness") which different nations interpret differently.

Balanced trade means simply that every industrial country must keep its *multilateral* trading accounts, the sum total of all its foreign trade, in approximate balance. If you export, you import, and you do it in equal measure. The overall value of what you sell to the world must match the overall value of what you buy. If that is not the case, and you won't balance your accounts, then your victims will balance them for you—with across-the-board tariffs that increase every year.

That is balanced trade. It is a new idea in recognition of an old value: overall parity between exports and imports. All it needs is a President who is bold enough to make it happen.

Joseph R. Biden Jr.

Today's world is more complicated than the simplistic choice between free trade and protectionism. Free trade is a myth—something that never existed. And protectionism would be self-destruction—a trade war now would be like a nuclear war: there would be no winners.

Both options are defeatist. Free traders say we are powerless to change our future. Protectionists say we cannot compete against our rivals and win.

Our next President must respond to unfair foreign trade practices, not with talk, but action. He should sit down with trading partners and put "all the cards on the table": negotiating with them over trade practices, military and foreign aid support, and the value of our currencies. If needed, the President should impose tariffs on those who are unwilling to be fair traders.

Our goal must be not withdrawing from world competition but entering it to *win*. Management is going to have to worry more about building industry for the next decade, and less about next quarter's profits. Management must give workers more say in how industries are run and a share of the profits: workers must accept this responsibility and help America increase productivity and product quality.

Finally, we should not ignore the human costs of trade problems. As President, I would use tariff proceeds to fund worker retraining and relocation. And I would support ideas like wage insurance, plant closing laws, and community tax base insurance.

I don't want America to withdraw from world trade—nor do I want us to concede defeat to our rivals. Instead, I want us to prevail in the world economy, and I know that we can.

Michael S. Dukakis

The trade deficit has cost two million jobs, betraying the hopes and dreams of families and communities across our nation. Debating "protectionism" versus "free trade" misses the point. Our goal must be competitive American industries and balanced trade internationally.

Some say America must de-industrialize. I disagree. We need our basic industries. Our national security cannot become hostage to raw materials purchased, processed and manufactured abroad.

To win in world competition, we must invest in education and job training, in first-rate transportation, in clean air and water, and in new technologies that will help both new and older industries. And we must work to keep plants open, help dislocated workers, and provide older workers with new skills.

We must address unfair trade practices that subsidize foreign goods and close markets to our products. Where appropriate, we can provide limited relief from foreign competition, *but we must insist that the industries that benefit from that relief invest and modernize and become competitive.*

Finally, we must get our fiscal house in order by reducing the record deficits which devour savings, inflate the value of the dollar, attract foreign capital, make America a debtor nation and cost millions of American jobs.

Richard Gephardt

I intend to continue pushing this year, as I did in 1985, for Congress to enact a tough trade policy. The Gephardt Amendment would give this country the teeth we need at the bargaining table, in trade negotiations, to open up closed markets abroad.

Other countries found to be engaging in unfair trade practices would have a chance to negotiate a fair trade agreement with the United States. But if they won't come to the table, or if efforts to negotiate fail, or if an agreement is reneged upon by a trading partner, then U.S. sanctions would be systematically imposed under my policy. And we would keep them in place until that country acts fairly and agrees to reduce its surplus by 10 percent per year.

No other country in the world can match the productivity of American workers, but other countries are preventing us from competing head to head. They've erected trade barriers and they take us for patsies and chumps because our government won't get tough on trade. We need to get the handcuffs off American workers that have been put on us by unfair trade practices abroad. Just let us compete, that's all, and I know we'll win. And our standard of living will rise when we get America back to work.

Albert Gore Jr.

America is in a trade crisis. Over the past six years this Administration has spent and borrowed us into a very deep hole. We're tired of leaders whose idea of free trade is to tell the world, "Here—we've got lots of jobs. Go ahead and take as many as you like!" We need a strong leader who won't tolerate a declining standard of living or an economy that leaks $170 billion a year.

What has been lacking is presidential leadership and presidential willingness to back up words with actions in our dealings with trading partners. Our government must also stop making America's problems worse by borrowing more than we can afford.

We should target our resources toward long-term prosperity, productivity, and people for a change. America should prepare to compete by making better products than the Germans—not by paying wages that are lower than Brazil's. Our next generation of leaders should know that to win back American jobs, Americans need the best training programs and schools.

This country practically invented world trade, and we used it to build a better life for everybody. The next President must inspire this nation to lead the way again—and join with working men and women to bring out America's best.

Gary Hart

Trade policy must be based on America's national interest in growth and jobs. Good jobs can only be generated by an economy that invests and sells more than it borrows and buys. Since 1981, high deficits, low productivity, complacent management and blind faith in the "free market" have devastated American workers, communities and leadership in world trade.

Our recovery must begin with the courage that was missing in 1981; we must reverse Reagan priorities. But our future depends on selling more American-made goods to foreign customers within strictly enforced international agreements. We should not adopt quick-fix import controls. Percentage protectionism, like Gramm-Rudman's percentage deficit cutting, does not create one new job.

The Hart trade policy would make America tough and smart. It would increase support for education, research and training. It would strengthen sanctions against countries that ignore trade agreements and cancel the cutbacks in U.S. Customs budgets that invite the dumping of foreign goods. We should eliminate trade benefits for countries that violate worker rights. We should provide temporary protection only to industries that agree to modernize.

These policies will help produce full employment, expand the middle class, fulfill our historic commitment to end poverty and raise the standard of living for every American.

Jesse Jackson

Fair trade is essential to protect our national interests, our vital industries, and our jobs. An effective national trade policy includes aggressive federal initiatives and coordinated programs to improve competitiveness and increase American exports. We must negotiate trade agreements, through GATT and bilaterally, that are fair and mutually beneficial.

Second, the major cause of our trade deficit is

President Reagan's record budget deficits. They have driven up the value of the dollar and made our products uncompetitive in the world.

Third, we have lost our industrial and commercial competitiveness in the world because our research and development monies, over half of our scientists and engineers, and six percent of our GNP, goes toward military projects; while the Japanese have 75 percent of their scientists and engineers, and their research and development monies, working on industrial, commercial, and economic development. A nation does best what it does most. We are first in military development and they are becoming first in economic development.

Lastly, I support international labor rights. American workers can never compete with slave labor markets abroad—nor should we try. I support efforts to oppose foreign governments' actions which blatantly suppress workers' rights, imprison and kill labor leaders, and have virtually no health and safety standards.

Paul Simon

The devastation of America's industrial base caused by the massive influx of subsidized imports from low wage countries represents the most serious threat to American industry since the Great Depression—as every steelworker, autoworker, machinist, communications and textile worker and every other American worker knows so well. We are in a trade war right now and we are losing it.

That erosion of America's industrial base by foreign imports must be stopped soon.

Franklin Roosevelt wouldn't have stood for it. Harry Truman wouldn't have stood for it. And neither will I.

I didn't care what my Republican (and neo-liberal) opponents said when I cosponsored the textile and domestic content bills.

And today, I am a cosponsor of the toughest trade legislation currently before the U.S. Senate, including the worker rights and bilateral trade reduction measures.

We must be careful that the rhetoric of "competitiveness" doesn't become a new code word for wage freezes, concessionary contracts, and other anti-worker policies.

Frankly, we must see how the currently proposed trade legislation works to save American jobs.

If the enacted legislation and its actual execution doesn't work, then newer, tougher legislation may be called for.

REPUBLICANS

George Bush

The President should always look out for the national interest. First, I support strong and strict enforcement of our trade laws. We must remember, however, that protectionism helps a selected group at the expense of all Americans and overall economic growth. Limiting imports to reduce the trade deficit would: (a) raise prices to consumers; and (b) invite other countries to retaliate against our exports. The result? Loss of American jobs—lots of them.

Yes, trade must be fair. We're working hard to make sure that other countries do not subsidize or dump their products here. But the best way to reduce the trade deficit is to expand exports, not restrict imports. We're pressuring other countries to open up their markets by self-initiating unfair trade cases for the first time ever and pushing for a new trade round to bring down barriers to our exports.

However, getting our trading partners to compete fairly is not enough. Even if all markets were open, U.S. industry must still work on improving its fundamental productivity. That means resisting efforts to balance the budget by raising taxes. Increasing taxes on business at home can only raise the prices of our products and make them less competitive abroad.

Improving our fundamental productivity means making our education system second to none. It means arming our workers with the best technology. It means creating a new partnership between labor and management to strive for excellence and quality in every product we make. If we improve our fundamental productivity and ensure that everyone competes by the same rules, I'm confident that we can keep America number one.

Bob Dole

I recommend a four-point program. First we should make our determination clear to foreign nations that they must open their markets if they expect access to ours. A current example is Japan's refusal to provide a larger market share for American produced auto parts as well as the reluctance of Japanese auto producers in the U.S. to purchase more local components. This requires a strong President who will not hesitate to take vigorous action to promote sales of American products.

Second, we need tougher trade statutes to assure injured industries of swift and effective relief from unfair foreign trade practices. The emphasis on adjustment should be increased, so that industry can get back on its own feet and the jobs of American workers don't become dependent on perpetual government assistance.

Third, we must address the broader economic issues that contribute to the trade imbalance: budget deficits, global debt, exchange rates, and economic growth. The trade problem does not exist in a vacuum.

Finally, we must improve underlying American competitiveness. This means improving our research capabilities, such as federally supported laboratories; increasing our stress on education, particularly in the sciences; increasing labor-management cooperation; raising our savings rate to increase investment; eliminating unnecessary regulation which hampers business productivity. In sum, the American worker deserves better than to be cast to the winds of fate. If workers are allowed to compete fairly, they will compete well.

Pete du Pont

We should never forget that American workers are today the most productive workers in the world. Our high productivity gives us the highest standard of living in the world, and we must build on our success by continuing to improve productivity for all Americans. When bad government tax and spending policies don't get in the way, Americans can outcompete, outproduce, and outperform anybody in the world. Too often politicians have blamed American workers when their liberal high tax, big spending policies have been the real guilty party.

We must reduce taxes which make American products too expensive in world trade. We must reduce unnecessary regulations that hurt our ability to compete.

From a long-range point of view, we must improve our education system. We simply cannot prepare our young people for the future with a system designed a century ago. If America is to be competitive, education and training must continue throughout our lives. We need to help those who must prepare for second and third careers—for new work in new industries.

Our goal as Americans is to compete—and win. We should never hide behind false walls of protectionism. That is what Herbert Hoover tried to do, and it brought on the Depression. We don't need to hide behind tariff walls. If we insist on open markets, we can win. Some of these markets are closed to us today. This must end.

As President, I would negotiate from strength with those nations that use tariffs and other barriers that keep out American exports now. For example, as President, I would refuse to sign any major trade agreement that did not include significant reductions in barriers to our agricultural exports.

The Japanese want access to our American markets. They can have it if the Japanese market is opened to Iowa beef and Kansas corn. It's a very simple message to our foreign trading partners: no increase in efforts, no increase in exports.

Alexander M. Haig Jr.

I believe that America can compete with the best on a level playing field. To level that field, however, means much more than the elimination of unfair trading practices. Only a small part of our trade deficit is due to such practices. We need a broad-ranging program that recognizes the mutual interest of both America and our partners in a more balanced exchange of goods, not punitive or protectionist measures.

First, we should get our fiscal act together. High real interest rates and an unstable dollar due to massive budget deficit have taken a heavy toll of our ability to compete abroad—and at home.

Second, we should get our industrial act together. Management and labor must forge an alliance to bring America into the new industrial age of greater efficiency and higher quality. Government can help, for example, through worker retraining, tax incentives and regulatory reform.

Third, we must at the presidential level take the international lead in expanding free and fair trade rules to cover investment, services, intellectual property and agriculture. The annual economic summits offer an opportunity to accelerate this process. The President should also retain the flexibility he needs to enforce fair trade under current rules.

Fourth, we should make clear to our partners that just as we are making the hard economic choices, we expect them to do so as well.

Fifth, we should work together to reignite the growth of the less-developed countries, primary customers for our industrial exports, not just prolong their economic stagnation by increasing their debt.

Jack Kemp

I believe the American labor force can compete and prosper in the global economy. America is the most productive nation in the world. We need to increase our commitment to improving skills, through education and training and further investment in modern plant and equipment. As a national leader for lower tax rates on both wages and investment, I believe we must take further steps to remove artificial barriers to U.S. competitiveness in order to reduce our trade deficit.

First, we must take steps to reform the world's monetary system to provide a stable dollar and help bring about lower long term interest rates. Our manufacturing productivity has begun to rise again, but this has been swamped by the wildly fluctuating dollar, high interest rates, and the global recession among our trading customers who are buying less of U.S. products.

Second, our goal must not be to raise tariffs which would add a tremendous burden on working Americans, but to open markets for our goods and raise the U.S. standard of living. To end unfair foreign trading practices, we must force competition by lowering, not raising, barriers. I have introduced legislation authorizing reciprocal lowering of trade barriers—particularly with the export competitors of countries that refuse to open their markets to U.S. goods—and requiring consumer and taxpayer impact estimates for all trade legislation.

Pat Robertson

America is now engaged in a global economic battle. Our steel, our automobiles, our heavy machinery, our airplanes, and our farm products must fight to maintain in domestic markets and to gain a share of world markets. No industry can produce its products, purchase its supplies and components, or pay its labor without regard to world competition. To win in this battle, America must:

1. Reduce the federal budget deficit so that the economy can be free of inflationary pressures, and to achieve lower interest rates. We must avoid irresponsible lending to foreign borrowers. The dollar must be rescued from the up-and-down roller coaster of the past several years.

2. American industry must learn to compete in the international arena. Our products must be known as the best in the world. To accomplish this, I propose a partnership between government, management, and labor. Management must encourage laboring men and women to teach them ways to improve quality and production techniques. Labor in turn must recognize that wage increases depend on productivity and sales, not on outmoded techniques and regulations. Government must provide the tax incentives for job retraining to encourage modernization and research and development for America to move ahead.

3. The Smoot-Hawley tariffs sent America and the world into a terrible depression. I favor free trade as the best program for the farmers, the workers, and business. However, I also favor fair trade. If other nations are consistently cheating on us, I say, "Either open your doors to American products or we will close our doors to you."

QUESTION 2

BUDGET DEFICIT

How would you reduce the federal budget deficit without hurting working Americans and the poor? Would you rule out raising federal revenues, including tax increases, as a component of deficit reduction?

DEMOCRATS

Joseph R. Biden Jr.

The Reagan Administration has amassed the largest public debt in the history of the nation. This debt will force our children, and perhaps many future generations, to pay for our excesses.

We cannot reduce the deficit unless we achieve economic growth greater than the sluggish rate we have now. We can increase growth by addressing third world debt problems and reducing our trade deficits.

We must takes steps to reduce deficits steadily over the next few years. Specifically, I propose cutting several billion dollars from the defense budget. I would also convert trade quotas to tariffs, raising more than $10 billion a year. I would also seek to eliminate all waste in government spending through better management and collection practices.

New taxes to reduce deficits should be a last resort. If we need to find additional revenues, there are several principles we must apply. First, any new taxes must be based on "ability to pay" and must not make the tax system less progressive. Specifically, I would oppose a value added tax, which would unfairly burden working people. Second, new taxes must not significantly impair our efforts to compete in the world economy.

Finally, as a way to ensure future budget control, any proposed new spending programs should be specific as to how they would be paid for. We should be honest about the cost of new priorities. And we must ensure that their burden falls least on the poor and middle-class Americans, who have lost most of the ground during the Reagan years.

Michael S. Dukakis

We cannot create economic opportunity for all Americans if we are burdened with $150-$200 billion budget deficits.

Record deficits mean record interest payments, an over-valued dollar that damages our competitiveness, and a reduced standard of living for Americans.

There are two ways to reduce the deficit. Control spending and increase revenues. We must do both. No serious presidential candidate can rule out new taxes. But instead of rushing to impose new taxes . . . on income, on imported oil, on gasoline . . . *we should first collect the taxes that are already due.*

This year, the Internal Revenue Service will fail to collect *$110 billion* in taxes owed to the Treasury, but not paid. America's working people pay their taxes; they must through payroll withholding. But too many others, including some corporations, do not.

We can raise $70 billion in new revenue by bringing tax compliance rates back to where they were in 1965. That's the quickest—and fairest—way to reduce the deficit.

We must also restore sensible priorities to federal spending. We need a strong defense, but we must also eliminate the waste and mismanagement that weakens our security and diverts resources from other urgent economic and human needs.

Richard Gephardt

My goal isn't to raise taxes, it's to get America back on a steady course and moving again. We absolutely must balance the books. The budget deficit is throwing our economy out of whack and mortgaging the future of our children.

Current budget priorities are simply misplaced. I am confident we can strengthen our national security by investing in people. We can't put blinders on when the questions of defense cuts or revenue increases comes up. Nothing should be eliminated from the budget debate as long as we make the necessary investments in people—education, health care, job training, nutrition, etc. Every program must be reevaluated, but we must not—we will not—swing the budget axe blindly.

I believe Americans are willing to invest in the future of their children. But we can't ask those least able to afford it to do it all. I would propose a budget that shares the sacrifice among those who *can* bear the burden. So I think it comes down to a combination of cuts and investments, less wasteful spending on things and better investments in people.

Albert Gore Jr.

America took 176 years to accumulate a trillion dollar debt. The current Administration needed only five years to double it. This Administration's borrow-and-spend policies have made our products more expensive overseas, cost millions of American jobs, stopped investment in economic growth, and squeezed important social programs.

I believe America is ready to reduce the deficit in a fair and responsible way. My first choice for reducing the deficit is economic growth, with more jobs for Americans who will then pay taxes on their income. But we must have a contingency plan as well. We would be willing to share the burden equally, with equal contributions from three areas: cuts in military spending, cuts in domestic spending, and increases in revenue.

A tax increase would be a last resort, but the President is wrong to rule it out as part of a comprehensive solution to reducing the deficit. We should not impose a regressive value-added tax which weighs most heavily on working Americans.

Instead of cooking the books with phony budget proposals, the next President should put all the facts on the table and lead in the development of a broader consensus on the necessity for a responsible fiscal policy.

Gary Hart

Reagan's deficits are poisoning today's economy and stealing our children's future. We are gambling with inflation and guaranteeing a return to high interest rates. Democrats must have guts: to confront the health establishment and control costs; to reform farm programs and protect family farms; to stop purchasing every gold-plated weapons system the Pentagon wants and to replace even the best-intentioned programs when they no longer work.

We also need the guts to avoid Gramm-Rudman gimmicks and take direct responsibility for the choices we make. To invest—and I will—in worker training, public education and R&D, infrastructure and aid to the needy, we have to have additional revenue, without income tax increases on the poor or the middle class.

I advocate an oil import fee, increased luxury taxes, converting quotas to revenue-producing tariffs and consideration of a surtax on the wealthiest.

Americans know that deficits tax our exports, subsidize foreign goods and prevent important needs from being addressed. They know Reaganomics is to blame. They want leaders who agree, with President Kennedy, that "to govern is to choose." Americans are prepared to make tough choices.

Jesse Jackson

President Reagan mortgaged America's future through irrational military spending, unfair tax cuts, the use of unemployment to fight inflation, and misplaced national priorities.

I'm not convinced we need new taxes—though I have not ruled them out. For example, several studies have shown that there may be annual uncollected taxes up to $100 billion.

We need a FAIRER TAX SYSTEM. If new taxes are needed, I will fight for a fairer tax system for the middle class, workers and the poor.

Second, we need NEW BUDGET PRIORITIES. We need a strong national defense, but we can shift spending from military to domestic without hurting our defense. We can have job creation, job training and retraining, worker safety, education, health care, housing and a clean environment with new priorities. A working America is a taxpaying America.

Third, I support an "INVEST AMERICA" plan where greater use of $2 trillion in private pension funds can be earmarked for the rebuilding of America's infrastructure; legislation that gives workers and communities six-month notice before closing plants; workers' option to purchase such plants with government-guaranteed loans; investment tax incentives to corporations conditioned on their willingness to reinvest in this market; and encouragement to corporations to joint venture with local and state governments.

Paul Simon

This Administration has mounted the most concerted and broad-scale attack on the role of government since the 1920s.

The stripping of government's needed revenues, combined with a mean-spirited attack on public employees is part of a right-wing Republican effort to roll back every progressive program enacted for the benefit of ordinary American families since the New Deal.

That cannot happen.

We must move immediately to restore sufficient revenues to meet our nation's pressing domestic needs. We must reduce the pressure of budget deficits on our trade deficit. And, we must reduce the deficit because, as Harry Truman said, deficits only help the rich. The most effective method of reducing the deficit is to put America back to work, and increase our tax base.

I alone among the announced presidential candidates opposed the 1986 tax bill because of the unjustified revenue-stripping reduction of tax rates for the super-rich.

We must move aggressively to close tax loopholes and reverse the Reagan-inspired erosion of the tax base.

Similarly, *I believe public service must regain its respected role in our country's life.* The Republican effort to destroy public service through privatization must be stopped!

Bruce Babbitt

As Governor of Arizona I balanced nine budgets in a row—simply by saying that some things are more important than others. My priorities were creating jobs and protecting the interests of those least able to protect themselves. Even through a national recession, my government:

- Repealed a regressive sales tax on food.
- Boosted spending on public education, public safety, health and human services.
- Kept state spending below seven percent of total personal income.

What you need to know from every presidential candidate is: What are his or her priorities? And how will he or she pay for them? My priorities are outlined in the following answer. I would pay for them both with budget cuts and revenue increases, all of them targeted on some genuine measure of need. I would not give a mortgage interest deduction for mansions and vacation homes. I would not pay subsidies to corporate mega-farms. I would not build three new generations of nuclear missiles all at once. I would not pay the Vanderbilts and the Mellons the same tax-free social security benefits as a widow in a cold-water flat. In short, I would balance the budget by setting humane priorities and standing by them.

REPUBLICANS

Bob Dole

Working Americans, even those we seek to

help, are especially hard hit by continued budget deficits. The inability of the Congress to consider realistic spending cuts seriously hampers our ability to increase our productivity and growth.

Getting the deficit under control is critical to our future. But, in putting together any package of deficit reduction proposals, it is inevitable that someone or some group will feel the pain of spending cuts. I would propose that we try to insure that no one group is singled out unfairly and that we spread the reductions across the broadest possible base. For this reason, I would exempt very few programs from review, including defense. But there are, of course, some programs which should be given special consideration as they provide crucial benefits to the neediest in our communities, for example Medicaid and the supplemental security income program for the blind, aged and disabled.

In deciding how best to reduce federal expenditures the federal government should cooperate more fully with states and localities to determine which services would be most appropriately delivered by those governments, utilizing their resources as a complement to ours.

Before proposing the actual reduction of benefits, I would also look at the way our programs are managed in the hopes of reducing administrative costs and increasing their efficiency.

Revenues may inevitably play a role in any serious reduction effort. But, I am opposed to any modification of the individual or business rate structure which would have us break the commitment we made to working Americans last year in the tax reform bill.

Pete du Pont

I have pledged to the American taxpayers, and I repeat this pledge here: I will not raise taxes. I will reduce wasteful and over spending. The federal government must stop thinking of our tax dollars as its piggy bank.

I served as the Governor of Delaware for eight years. Before I took office, the state had run a deficit in four of the previous five years. By cutting taxes—not raising them—and controlling unnecessary spending, we in Delaware balanced the budget eight years in a row. Through lower taxes and deregulation, we built a solid record: today, one job in five in Delaware was created during the eight years of my Administration.

As President, I will insist that able-bodied people—now on welfare—go to work and become productive, self-respecting workers. This will lower the deficit. And I will end subsidies to corporations and wealthy individuals that continue to cost the taxpayers billions—starting with the $26 billion in farm subsidies that have enriched large corporations and hurt consumers and small farmers.

I will not raise taxes. I will control spending. And we will balance the budget. We did it in Delaware, and with your help, we can stop the liberal high tax, big spending policies that have brought us the deficit.

Alexander M. Haig Jr.

The federal budget deficit is the product of long-term growth in programs and conflicting theories about how best to raise revenues. Experiments with supply side economics and monetarism have reduced federal revenues even though they have contributed to economic growth and the reduction of inflation. Today, I believe the deficit can be brought down gradually and safely through the application of these principles:

1. No one section of the budget should bear the main burden of reduction.
2. Every area of expenditure should be scrutinized before undertaking additional revenue increases.
3. The budget process itself should be reformed, so that no President should be faced constantly with the choice of shutting down the government or signing a "budget-buster."

Clearly, these principles will require a constructive partnership between Congress and the Executive. But that is why we elect them. The alternative, such as constitutional amendments to balance the budget or arbitrary "automatic" cuts across the board are abdications of responsibility and will never work if the will to carry them out is not there.

Jack Kemp

I would rule out a tax increase as a component of deficit reduction. I believe the most compassionate and progressive way to bring the budget into balance is to concentrate on a comprehensive economic policy aimed at reducing unemployment, lowering interest rates, bolstering trade and exports, and eliminating corporate welfare. Unlike many in both parties, I believe that the high interest rate policy of the Federal Reserve is a main cause of the deficit, not an undertaxed work force. The U.S. budget cannot be balanced by unbalancing the budgets of working men and women; therefore, I reject tax increases. Our government must be committed to full employment without inflation. Through strong pro-growth initiatives, the unemployment rate can be reduced —a precondition for a balanced federal budget.

Dramatic steps to move our economy to full employment without inflation and achieve a balanced budget must include:

First, stable money to bring down interest rates and arrest the commodity price deflation hurting our farmers and manufacturers; lower interest rates would reduce the cost of servicing the national debt and help our housing, automobile, manufacturing, farming, and other interest sensitive industries;

Second, stable exchange rates and a reciprocal initiative to eliminate unfair barriers to U.S. exports;

Third, labor and capital must be liberated from high tax rates so that American industry can reindustrialize and workers are given the incentives and tools to compete;

Fourth, a strong commitment to job training, trade adjustment assistance, and education—to bolster investment in both human and physical capital.

Finally, corporate welfare programs must be eliminated and strict limits should be placed on government spending; I favor a line item veto for the President.

Pat Robertson

The most cruel thing that a government can do to its workers, its retirees, and its young is to load on such an insupportable burden of debt that future opportunities in the American market place are destroyed either by ruinous inflation, or financial collapse and depression.

On the other hand government serves well its working people and the poor by doing its part to supply paying jobs through a vigorous and expansionist private sector.

The key to cutting the federal budget deficit is to eliminate waste and mismanagement. Our people want government services, but they want a lean and efficient government.

The Grace Commission pointed out that $433 billion of government savings are possible over a three-year period. This report has never been implemented.

The Packard Commission pointed out savings and efficiencies that would be possible in the Defense Department.

Economist Donald Lambro speaking of "Fat City," identified $100 billion of waste in the federal budget.

Cuts should be fair and across the board. The question is not whether they are possible with minimum pain, the question is whether we as a nation have politicians with enough guts to put the interests of America above their own.

George Bush

Congress is now considering reducing the budget deficit by raising taxes. This approach cuts against the grain of common sense. Will taxing Americans more make us work harder? Will taxing business more make it invest more?

Arguing that higher taxes will be used to reduce the deficit ignores the record of Congress. In 1982, the Democratic leadership promised to cut spending by $3 for every $1 increase in taxes. That promise remains unfulfilled. Pressures for spending in the Congress suggest that higher taxes will not reduce the deficit, but finance more wasteful spending.

The challenge of balancing the budget illustrates the need to have a president who can protect the national interest. Many government programs are well-intentioned. But these programs must be financed by taxes, which hurt all Americans, or by borrowing, which future generations of Americans will have to pay back. The need to protect the national interest—both now and in the future—requires a president who can represent all the people by controlling spending and keeping taxes down.

Yes, there are cases when government needs to help. One good example is our Administration's proposal for a new $1 billion program to retrain dislocated workers and help them get permanent jobs.

But let us not forget our ultimate goal. Let us balance the budget, but let us do it without hurting economic growth and weakening the security of our nation. Keeping this strategic goal in mind, the President and I have achieved the following. 13 million new jobs. Inflation falling from 12 percent in 1980 to just 1 percent in 1986. Interest rates dropping from 21.5 percent in 1980 to 7.75 percent now. Our defenses strengthened. In sum I believe we can ensure that our best days lie ahead by controlling spending and keeping taxes down.

QUESTION 3

HUMAN NEEDS

What role do you see for governments—federal, state and local—in such areas as: education, training, employment, health care, housing, equal opportunity, the environment, and programs for the elderly? At your first Cabinet meeting, what instructions would you give to the heads of departments with responsibilities in these areas?

DEMOCRATS

Michael S. Dukakis

Consider the record we built in Massachusetts.

We helped working families, and the elderly, by balancing our budgets and by cutting taxes five times in four years. But we also made concern for the most vulnerable members of our society a top priority.

Our employment and training (ET) program helped welfare families lift themselves out of poverty and become self-sufficient wage-earning citizens.

And we helped 30,000 low-income families find decent, affordable housing.

We were the first to use state funds to supplement the federal nutrition program for women and infant children.

We quadrupled college scholarship assistance; and increased funds for public higher education by a greater percentage than any other state.

We worked hard to provide quality health and home care for older citizens.

We committed ourselves to battling AIDS, homelessness, teen pregnancy, adult illiteracy, drug and alcohol abuse, and the failure to provide child support.

Now the time has come to provide that kind of leadership from Washington.

That is the message I would deliver during my first Cabinet meeting.

But I would add that *the most important human service program of all is full employment,* and that will be a fundamental goal of the Dukakis Administration.

Richard Gephardt

Government has one major function, essentially: to protect and defend its citizens. The federal government must act in the national interest, and I would reverse the policies of the past several years that pit region against region, and which divide

America. All governments, at every level, should be working together, pulling together, instead of shucking responsibility off onto the next guy down the ladder.

Under a Gephardt presidency this country would see an unprecedented federal commitment to education. That's the key to building the future of America. We must, and would, do more to combat adult illiteracy, prevent dropouts, help people train and retrain for better jobs, and elevate the aspirations and talent of all our people.

We will never be a secure nation as long as our citizens are uneducated, ill-housed, ill-clothed, ill-fed, and unemployed or underemployed. We will make America first again by making people—human resources—our first priority. I see an America where all leaders share that responsibility, but where the federal government sets the tone and takes the lead. In a Gephardt Administration, I would expect the heads of all departments to lead in that new direction.

Albert Gore Jr.

Americans want a better deal from government. As President, I will set out to find a job for every American who wants to work, and make sure the minimum wage is at a level that assures everyone gets fair pay. I believe we should invest in people for a change, by creating better schools and job training programs. We should launch a national job bank to match jobseekers with job openings, so that if a person is out of work, he or she will immediately have a list of all the opportunities available. We should widen the doors of equal opportunity we fought so hard to open in the first place.

America must insist on a cleaner environment, by cleaning up hazardous waste dumps and demanding clean water and clean air. America must guarantee all citizens the right to shelter and increase the supply of affordable housing. We should stand up for social security and give the elderly access to better, less expensive long-term care. And we must make good health care available to everyone at a price they can afford.

Finally, we should make it easier for Americans to build strong families, with good schools, quality child care, and meaningful programs against crime and drug abuse.

Gary Hart

My instructions will be straightforward:

"The 1988 election was America's answer to politics-as-usual; it defined our mandate, binding on you no less than on myself. America's national interest is our guide. It is why I am a Democrat and why our Administration earned the trust of the American people. Never forget that:

"1. People come first.

"2. Progress is never built by leaving those in need behind.

"3. Your work is human investment, equal rights and economic justice.

"4. All of us are going to focus on restoring a world-class American economy: rebuilding our factories, inventing new technologies and creating more family-supporting jobs. We must construct the best education system in the world and make training as available to workers as public schools are to their children.

"5. We will expand security for the changing family by enforcing support payments, eliminating discrimination in housing and jobs, and fostering parental leaves and licensed day care.

"6. Don't propose pie-in-the-sky political gimmicks; do what is right for America's future.

"7. We are no better than the people we serve, and the day your service falls below the highest ethical standards is the day you're out of the Cabinet."

Jesse Jackson

At my first Cabinet meeting I would instruct Cabinet and Department heads that our government will assume the appropriate leadership in these areas to ensure responsible, effective and efficient performance. We will meet our responsibilities to the nation. My priorities include:

President Reagan proposed cutting education to $14 billion. I proposed raising education to $25 billion.

Unemployment during the Reagan Administration has averaged 8.1 percent. I propose a FULL EMPLOYMENT AND BALANCED GROWTH ECONOMY as the number one priority of a Jackson Administration.

I support a national health care system that provides quality health care for all of our citizens based on need and not solely on money; and a new national housing effort that would both shelter our people and help put our people back to work.

I strongly support affirmative action and would use the full powers of the Executive Branch of government to firmly, but fairly, enforce the law.

A major role must be played by the federal government in cleaning up our environment. We can clean up our environment, create jobs, and generate new taxes at the same time.

The measure of the moral character of a nation is how it treats its young, poor and elderly.

Paul Simon

Some believe our nation has reached its full potential. I believe there are areas where government action is needed, and needed badly. I will not wait until my first Cabinet meeting to put together a program; I will move immediately after my election. At the first Cabinet meeting, we will have a detailed plan to begin implementing.

Quality education must be available to all. The federal government must provide guidance and direct assistance where appropriate. We must raise teacher pay and expand incentives for attracting and retaining excellent teachers.

We cannot tolerate 7 percent unemployment. As Franklin Delano Roosevelt did, we need to put America back to work. We need to expand private sector jobs, train and retrain young and old workers, and provide jobs for those who can't find work.

Housing programs for the poor, the elderly and those who are handicapped must be revitalized.

The social security system and the Older Americans Act must remain viable, providing vital services and support.

There must be access to quality health care for all. Medicare must be strong. *All* Americans must have insurance and be protected from overwhelming medical expenses that leave them helpless.

These are the things I stand for.

Bruce Babbitt

Three major priorities:

1. Children. One American child in four lives in poverty. That is unacceptable, and I see three urgent tasks. First, we must extend Medicaid benefits to every child in poverty—immediately. Second, we must help make it possible for working parents to find decent child care. Third, we must have massive improvements in education.

2. Jobs. You create quality jobs with economic growth, and that means giving ordinary workers a piece of the action. How many times have you heard executives push for wage cuts—and then reward themselves with bonuses for their frugality? No American company should be permitted to deduct an executive bonus as a business expense unless it offers productivity pay for all of its employees. I'd say to every American worker: If you make first-rate efforts—if you pay attention to detail, if you improve the quality of your product, if you find a better way to do the job—you'll have first-rate rewards.

3. Environment. We need legislation on acid rain, groundwater protection, and public lands. I would tell every polluter: if you poison our water you will go to jail, and your money will be spent to clean up the mess.

Joseph R. Biden Jr.

Our primary challenge is to end a decade of the "got mine, get yours" philosophy, and restore our sense of community and common concern.

For our young, we must insure that all have decent health care from birth through adolescence. We must give them the best education system in the world. We must expand drug education and treatment programs. And we must sponsor new plans to put higher education within the reach of teens from all backgrounds.

We must help adults in need by providing shelter for the homeless and training and opportunities for the jobless. Government must give these Americans the help they need so they can help themselves.

We must insure that our elderly have a retirement with dignity. They should have the health care they need without spending everything they have worked a lifetime to save.

Our next President must lead the government in addressing these pressing problems. The record of the past seven years—of neglect and irresponsibility—must be ended.

But the President will have to do more: he will have to challenge the American people to work for these same goals in their neighborhoods, schools, union halls, and communities. He must offer moral leadership and a vision of social justice. He must remind the people that our less fortunate citizens are not "them"—they are a part of "us."

This is not something we should do just out of compassion for those less fortunate. Helping fellow Americans helps all of us. We will need to tap the full potential and energies of all of our people if we are to remain a great country into the next century and beyond.

REPUBLICANS

Pete du Pont

The first task for the federal government is to provide for our national defense. Without a strong military—second to none—we would quickly lose all our freedoms. Poland, Afghanistan, Cuba, and Ethiopia are tragic reminders of what it means to be weaker than the Soviet Union.

America must research, build, and deploy the Strategic Defense Initiative as soon as possible. Today, we have no defense against Soviet missiles fired on purpose or by accident. That is a scandal. Some liberals say we should trust the Soviets. I say we should place our trust in the ingenuity, talent, and hard work of the American people to build a strong defense—the technology for which will catapult us ahead of the rest of the world in competitiveness.

Another important task is to get drugs out of our children's classrooms. The only way we'll ever guarantee drug-free classrooms is to link drug use with a driver's license. Now this will require random drug testing of teenagers in our schools. But, if we can require vaccinations before kids go to school, we can require drug testing while they're in school.

Of course, we must provide counseling and help for young people who need it. But we have to let them know there are penalties—and consequences—for drug use. We have to say, "If you use drugs, you won't drive . . . because you won't have a driver's license."

For a long time, we've gone after drug pushers. Now it's time to get tough with drug users too.

Government must provide opportunity—opportunity for welfare recipients to vault out of poverty, for parents to choose the schools their children will attend, and for young workers to save for their own retirement. My campaign offers specific proposals for changing the policies that keep us from these goals.

Alexander M. Haig Jr.

At my first Cabinet meeting, I would say this: the best government is the least government but that which government does, it must do well. The American people, after trial and error, have established a social compact. Our task is to do well, to respect that compact and to encourage social progress.

In addition, I would say to the Secretary of Labor that he must always hear the voice of labor. Other Cabinet officials, such as Commerce, Treasury and Defense must do so as well.

The American system of federal, state and local government is intended to give us the flexibility to deal with problems at the most effective level. Over the past decade, we have seen a strong revival of state and local capacity to handle such pressing issues as economic development, job training and welfare. Recent studies show that state "workfare" proposals offer more promising results than traditional federal style approaches in the effort to reduce welfare rolls.

This new federalism, however, does not relieve Washington of responsibility for matters that it can handle best. Environmental protection goes

beyond state or local capabilities. We urgently need changes in our health care system, not just to contain costs but to make sure that those costs do not lead to a catastrophe for the elderly and poor. Ultimately, the federal government must also take the lead in combatting the plagues of AIDS and drugs, both of which have an important international dimension.

While education remains a primary task for state and local jurisdiction, the federal government can and should help to restore to our schools a sense of discipline, a respect for humane values and a quest for excellence that are essential to our future as a democratic society. It should also assemble, monitor and evaluate standards of education at the national level. I welcome the new emphasis on mastering the fundamentals—reading, writing and arithmetic—and analytical skills necessary to succeed in our changing society. Our teachers, the custodians of the future, deserve our encouragement and reward as they strive to improve education especially at the grade and secondary school levels.

Jack Kemp

The most important thing government can do for people is to provide the ladder of opportunity upon which all can climb, and a floor of help to those who can't help themselves or are in temporary need of assistance. I will instruct my Cabinet to follow policies that will lead to a growing economy of at least 5 percent per year and that will provide a good job at a decent wage for everyone who wants to work. I will work to liberate labor, capital and working families from high taxes and interest rates, and uphold the traditional family values upon which our nation was founded.

I will commit my Administration to not only fighting but winning the war on poverty. I will mobilize the power of the private sector to create jobs and opportunity in distressed cities and rural areas through enterprise zones. My Administration will give public housing tenants the chance to become homeowners through urban homesteading legislation. My longstanding and active support for job training, trade adjustment assistance, magnet schools, and protections for workers in the workplace will remain unchanged. I will commit my Administration to ensuring human and civil rights with equal opportunity for all. I believe the social security system is the bedrock of retirement security, and I will uphold its integrity and continue to oppose any effort to reduce benefits to older Americans.

Pat Robertson

In my own organization we have been involved in feeding, clothing, and housing some 13 million needy Americans. We do it with one-half of one percent overhead. Ninety-nine and one-half percent reaches the ultimate recipient. Some government programs use 70 percent for administration with only 30 percent reaching the recipient.

Welfare must be used to bring people into dignity and productivity. It should never be used to create dependency.

The greatest problem area of poverty today centers around single women with dependent children. I may be old-fashioned, but it is my feeling that if a man fathers children, it is his job, not the government's to care for them. I also feel that, with the exception of women with children under the age of six, the concept should be payment for productive employment—"workfare" not welfare.

For efficiency, and for moral and spiritual support, government should work in partnership with the private medical agencies to care for those truly needy among us.

My instructions to my Cabinet would be:

"Under no circumstances can a great and powerful nation fail to provide adequate care to its elderly, infirm, and handicapped. We can no longer tolerate the heart-rending sight of people sleeping on grates at the heart of our cities.

"Current welfare legislation must be reformed and improved. We must be compassionate—but that compassion must be tough and efficient as stewards of the taxpayers of America."

George Bush

Americans have never been as well off as they are today. We've created 13 million new jobs, cut inflation, and brought interest rates down. At the same time, we've rebuilt our defenses, while strengthening social security and preserving the social safety net.

I have always believed that the best social program is a job. That's why the best way to meet our social needs is to protect the ability of our economy to produce new jobs.

We must keep moving forward with policies that will provide more opportunity, further the creation of new jobs, and keep inflation and interest rates down. We must not reverse course. We must not make a U-turn to policies of high taxes and overspending. Those policies failed before and they would fail again.

We need to build on our progress and keep moving forward. Two major challenges we face are education and AIDS. Our Administration has led the crusade to reform American education by bringing back basics and emphasizing achievement and high standards. SAT scores are now rising again after almost 20 years of steady decline. I am convinced that education holds the key to restoring our competitiveness in the world market. I would also seek new ways to improving the ability of middle-class families to meet the rising costs of college.

As for the AIDS crisis, I pledge my total commitment to a comprehensive national effort to combat this disease. As President, I would coordinate the efforts of health care professionals, educators, clergy, parents, and all concerned Americans to work together to end this threat to our future.

Bob Dole

In defining the role of government, I begin with the belief that people at the grass roots level—neighborhoods, church congregations, rank-and-file union members, and small business owners—can usually fashion better ways to meet the needs of their communities than can Washington's bureaucracy. At the same time, as a product of depression-era Kansas and a World War II vet, I understand that there are situations when the government needs to step in and lend a hand. Government at all levels has a responsibility toward society's less fortunate, though the degree of that responsibility and how it is divided among the federal, state, and local governments can vary widely depending upon the policy objective.

For example, in an area such as civil rights, I believe the federal government should play a strong, primary role. This is why I have supported every major civil rights law and was proud to play a leadership role in the 1982 extension of the landmark Voting Rights Act. On the other hand, in areas like employment, I feel the federal government should be a partner with state and local governments, as well as labor and business, to expand job opportunities for America's workforce. Similarly, I believe that the federal government shares an obligation with state and local governments to help the economically disadvantaged. This is why I have supported the Food Stamp program, Medicaid, Medicare, increasing access to legal services, and increasing the availability of health care for the unemployed.

The central theme in my instructions to all appointees would be to seek out ways to improve the effectiveness and professionalism in the administration of programs, and to the extent further belt-tightening is needed to reduce the deficit, fairness in proposing cuts.

QUESTION 4

THE POLITICAL PROCESS

Unions, like many other membership organizations, have historically played an active role in the political process by assisting their members in registering, by communicating with their members on the issues, and by endorsing candidates whose positions further the best interests of their membership. What are your views of organized labor's proper role in the political process?

DEMOCRATS

Richard Gephardt

Democratic victories are won with the help of labor, it's as simple as that, and we can't do without you. I make no bones about the fact that I would welcome the endorsement of the American labor movement. I plan on working with the labor movement to put their membership on delegate slates across the country. I look toward the labor movement to take an active role in organizing our campaign, in recruiting volunteers, and providing financial contributions.

I share the concerns of the working people of this country—always have, always will. Often as people reach for the stars they forget their beginnings, but not Dick Gephardt. I'm never going to forget the hard work my parents had to put in to provide me with the opportunities I've had in life. I want that same kind of country for my children and yours, a nation that is proud of its workers, and where hard work yields fair rewards and opportunity. We're setting out to make America first again by sticking to our strongest values: honesty, trust in people, regard for hard work, and caring about our neighbors. That's what my campaign is all about.

Albert Gore Jr.

In my experience, unions have always played an important role in shaping national policy. When important legislation is on the line, organized labor always comes through with tremendous grass-roots support. Time after time, that political involvement saves jobs and makes the system work.

Organized labor has helped me on every one of my campaigns with advice, support, and volunteers. I would not be in the Senate were it not for the hard work of working men and women in Tennessee.

I have long been a strong supporter of union participation in the democratic process. Unions help democracy work the way it was meant to—by harvesting ideas at the grass-roots level. Democracy is just as important in the workplace. Economic growth will come when working Americans have more pay and say.

Gary Hart

In a democratic society, politically active membership organizations and an independent trade union movement are a big protection against the tyrannies of totalitarianism and the economic law of the jungle. Unless Americans talk back to government and to management, unless they exercise their votes and voices, we'll never have full civil rights, pathways out of poverty, affordable homes, quality health care or clean constitutional government.

Organized labor not only has the right but the duty to involve its members, protect their political rights and publicize the issues, records and support of candidates. We have never differed in the struggle to strengthen political participation and the collective bargaining process and enhance the remedies afforded by federal law.

Political education is at its best when workers know which candidates have been friends and who cast the tough votes. There will be some differences with all candidates this time, but as we work for what's best for all Americans—our common purpose and our larger national interest—let us learn from the past and not let differences over which tough trade policy will most effectively create good jobs or my opposition to PAC money divide us.

Jesse Jackson

I support the right and ability of all citizens and labor to participate fully in the American political process. I have spent all of my adult life fighting and risking my life for that right. No one has

risked more, registered more, politically educated or involved more American citizens in the political process.

Organized labor is a legitimate interest whose concerns must be taken into account by any serious presidential candidate.

The role of presidential leadership is to put forth a vision of where the country needs to go, how he/she proposes to get there, allow people and groups to see their role in the plan, and inspire all citizens and groups to get involved.

I have fought alongside organized labor all of my life in our shared commitment to full employment, liveable wages, worker safety, collective bargaining, health care, housing, equal opportunity, voting rights and other programs of humane priorities at home and human rights abroad.

I support organized labor's right to speak and act on international labor and human rights issues, and I look forward to continuing our efforts in these important fields.

Paul Simon

American working people and the American labor movement have been the driving force behind every major piece of progressive legislation in the United States in this century.

That includes minimum wage, social security, Medicare, basic health and safety legislation, civil rights. And on and on.

And, any Democratic candidate for President who doesn't recognize this progressive and central role of the American labor movement does not, in my opinion, understand our history either as a party, or as a nation.

In 1984, for example, the members of the AFL-CIO provided the Democratic presidential candidate with a dramatic 61-39 percent margin.

The simple fact is that the *American labor movement is often way ahead of the Democratic Party in recognizing the issues which concern and move ordinary American working people and voters. The election of 1984 is a dramatic demonstration of that.*

I see my role in this campaign as the spokesperson of the Roosevelt, Truman, Kennedy Democratic tradition of fighting for American working men and women.

I would be proud to carry the banner of the American labor movement and the Democratic tradition into the next election.

And, as Harry Truman showed, when we do that, Democrats win!

Bruce Babbitt

The American labor movement has always stood for the protection of those who could not protect themselves. You have led the way to many of this century's most important social welfare advances. As a Democrat, I welcome the vital contribution that the labor movement has made to building my party. There is nothing narrow or selfish in representing the interests of working men and women and their families, and I will be proud to stand with the American labor movement in this presidential campaign. There will inevitably be issues on which we disagree, but I welcome your participation and I intend to work hard for your support.

Joseph R. Biden Jr.

Organized labor has always been the bedrock of progressivity in this nation. But I believe that 1988 will be a watershed election for labor. At the moment when the standard of living for our workers is no longer rising, we need strong leadership from labor.

We are seeing many transitions in the economy which will affect workers. We need more labor protection now, not less, so that the rights of American workers are not sacrificed in this transition. For example, many manufacturing jobs are being lost and are being replaced by service sector jobs which are not organized. I believe labor must organize in those new industries in order to protect worker rights.

Over the past six years, business groups have been waging a war on organized labor—trying to roll back most of the gains of the past four decades. The Reagan Administration has tried to undo the entire structure of labor-management relations in this country. The chairman of the NLRB has gone so far as to attack the very idea of collective bargaining, the most fundamental right of all.

It is time for unions and their members to fight back. You have a right and duty to play an active role in politics. You should demand that basic fairness be done for working people, and that we get the nation moving again.

I hope that every working man and woman will get involved in the political process in 1988. America's unions should do everything they can to make sure that this happens.

Michael S. Dukakis

I believe that organized labor can and must play a key role in the American political process.

The leaders and members of organized labor in Massachusetts have been an important part of the extraordinary economic success that we enjoy. With the full participation of organized labor, we have reduced unemployment to less than 4 percent in Massachusetts.

Labor leaders have been essential partners in a coalition that has won passage of strong plant-closing legislation; a comprehensive right-to-know bill; and sweeping reform of our workers' compensation system.

Without national leadership from organized labor, we would never have achieved the kind of social and economic progress that is reflected in federal laws governing the minimum wage, the eight-hour day, civil rights, Medicare and Head Start.

I have sought support from organized labor throughout my political career, and I do so now as a candidate for the presidency.

We need your involvement; we need your leadership; we need the active participation of working men and women and their families in the 1988 campaign.

And I will need your active participation and involvement as President of the United States.

REPUBLICANS

Alexander M. Haig Jr.

As Supreme Commander of NATO, I became aware of organized labor's essential international role. In a world often hostile to democracy, American labor leaders have always stood courageously for the principles of human dignity, individual rights and freedom. Through its international efforts, the AFL-CIO has written a unique chapter in the history of human rights, while making an essential contribution to the security of the free world.

It is not a question therefore of labor's proper role in the political process. There can be no democratic political process without a strong labor role. Every democratic community has a strong organized labor movement. In countries not yet free, such as Poland, labor unions are the leading advocates of a democratic system.

Americans believe that a free people, to be truly free, must also be educated in their political choices. Democracy is not a spectator sport. Every participant is a winner. Only those who fail to participate are the losers. Unions, by assisting their members to understand the issues and the candidates, help this process.

Jack Kemp

The proper role of organized labor in the political process is the same as that of all organizations—to work to promote the best interests of its individual members, of free enterprise, and of our nation. As co-founder and president of the American Football League's Players Association, I helped negotiate the first league-wide pension contract in history. I believe in the sanctity of the contract and the right to bargain—and I also respect and uphold individual rights to choose, free of coercion. I have been fortunate enough to receive the endorsement of many labor unions during my campaigns for Congress, and I have learned first-hand that union members vote the candidate, not the political party. The political diversity among American working men and women and their active involvement in the political process has been good for labor and good for our democracy. I welcome the active involvement of labor in the political process on a bipartisan basis.

Pat Robertson

Organized labor has at its disposal vast sums of money held in trust under a tax free status. This money comes from the dues of hard-working Americans.

These dues are not Democratic money or Republican money, but workers' money.

I feel that unions should have the same rights and privileges in the political process as any other non-profit membership organization. However, never should the leaders of unions use their power or the union dues for any candidate in a primary or general election. Political participation is a precious right that should never be abridged to any American.

George Bush

A democracy can only be as strong as its people. If Americans fail to exercise one of our most precious rights—the right to vote—the United States would be a democracy in name only.

Over the last two centuries, we've had to struggle, and sometimes even fight, to extend the right to vote to all Americans, regardless of race, color, creed, or sex. Now that we have universal suffrage, we must always protect this most treasured of rights.

Communist societies allow their subjects the "right" to vote in theory. Dictators of the left—and the right—ignore what we must never forget: the vital importance of free people voting freely according to the dictates of their conscience.

Like other organized groups, labor unions can play an important role in furthering and strengthening our democracy. By encouraging members and their families to register and vote, and by helping to inform them about the issues and candidates, unions can play a valuable role in strengthening freedom.

Bob Dole

As the representatives of nearly 20 million workers, it is entirely appropriate and desirable for labor unions to play an active role in the political process by registering voters and communicating with union members on issues critical to their interests.

I think, however, the AFL-CIO's decision to attempt to become a force only with the Democratic Party in presidential elections is a grave error that has worked to the detriment of its members. Union members are a politically diverse group, many of whom are proud to be members of the Republican Party. In the last election, 47 percent of union households supported the Republican presidential candidate. Therefore, it is time the AFL-CIO leadership abandoned its partisan Democratic role and adopted a more bipartisan approach that better reflects the views of its members. I would like to see the AFL-CIO work within the framework of both national political parties to advance the agenda that is critical to its membership.

Pete du Pont

I would like to thank Lane Kirkland for the opportunity to share my thoughts with you. The space here is short, and I hope that as I travel around this great nation of ours, I will have the chance to meet and speak with you.

Our Constitution is now 200 years old. It is the bedrock of our liberties, and it gives us all the opportunity to take part in our democracy. Labor unions and other associations have an important role to play in our elections, our economy, and the quality of our life.

I do get concerned sometimes when I see how labor union Political Action Committees tend to throw their support behind so many liberal politicians. Many liberal politicians who receive tens of thousands of dollars from labor unions—money paid by you—vote for a weak America. They criticized America when we liberated the brave people of Grenada. Those liberal politicians who vote against every defense bill are no friends of patriotic, hard-working Americans. I urge you as members of a labor union to take an active role as an individual in choosing just what kind of politicians get our dollars.

U.S. textile-apparel industry struggles to survive

By Gene Zack

The American textile and apparel industry could be extinct in a decade unless the government intervenes to halt the glut of low-wage foreign imports and increase investment in research and technology, the congressional Office of Technology Assessment warned.

Jobs have disappeared, plunging 142,000 between 1980 and 1985 alone, the OTA said. Plummeting wages have depressed the average textile worker's real earnings to 66 percent of those for the entire manufacturing industry while apparel workers earn only 52 percent of the national average. The problem is accentuated by the recent rise in the use of "subminimum" wages and growing employer violations of overtime laws.

At the same time, companies have gone under at an alarming rate, bringing economic hardship not only to local communities but to such supporting industries as transportation, finance, insurance and business services that depend on the health of this once-powerful domestic industry.

All this has taken place even though worker productivity grew at "double the average growth of manufacturing" during the past decade and even though the industry has introduced new technology "at an unprecedented rate," the OTA said.

But the same technological advances are being used abroad by American-owned companies that moved their operations offshore and by mushrooming foreign competition in nations that "pay workers a small fraction of the U.S. minimum wage," the 117-page report said.

The result is that imports grew from 25 to 50 percent of the U.S. market during the past decade—directly linked to what the congressional agency called the total lack of an effective national trade policy.

Federal indifference

"The United States is one of the few nations that has left its markets largely open to foreign sales of textile and apparel, and one of the few that has paid little attention to the research needs of its domestic industry," the OTA said.

"As a result, imports have flooded domestic markets. Unless policy action is taken in the next few years, there is reason to be concerned about the very existence of the many parts of the industry," the report stressed.

Nor does the OTA see any radical change in the import menace resulting from the two-year campaign by the Reagan Administration to devalue the American dollar.

"The recent fall in the dollar's value with respect to the currencies of industrial nations will tend to provide only modest relief," the congressional agency said. "Much of the growth in U.S. imports has come from nations like Korea, Hong Kong and Taiwan, whose currencies are either tied to the dollar or have not changed significantly with respect to the dollar."

Moreover, the report stressed, the global deck is stacked against American textile and apparel firms. At the same time that this country maintained its support for "open markets," the OTA said, "other countries began to close their borders to textile and apparel imports."

Since 1983, it pointed out, the European Economic Community has "strengthened import restrictions significantly," while Japan restricts imports by enormous pressures that include a variety of bilateral restraint agreements. The effect has been to channel the textile and apparel imports of the developing nations into the U.S. market.

A number of developing nations, including China, are using textile and apparel imports to stimulate domestic economic development. What's more, they're "willing to go to extreme lengths to protect domestic industries and promote exports," the OTA said. It noted as an example Pakistan, where "more than half of all industrial employment is associated with" the textile and apparel industry.

Bleak outlook

The outlook for the United States is bleak, the OTA said. Domestic jobs will continue to be lost "even if trade penetration levels return to those of the early 1970s," the report said, and midsize U.S. companies will continue to be squeezed out of existence.

The OTA cited a number of proposals that have been advanced in Congress which it said could save the textile and apparel industries from extinction. They include:

- Tougher enforcement of bilateral trade agreements and the Multi-Fiber Agreement and expansion of MFA to cover fibers not presently controlled.
- An import licensing system to prevent overshipments so that the growth of imports would be linked to the growth of the domestic market as a whole.
- Mandatory retaliation against nations engaged in "dumping" in the United States or engaging in such unfair trade practices as denial of basic labor rights and standards.
- A strong industry commitment to retrain workers displaced from traditional textile and apparel jobs.
- A broad-scale program for research and development to rebuild U.S. technical capabilities, accompanied by federal assistance to encourage investment in innovative technology.
- Establishing programs to facilitate industrywide cooperation and standard-setting to insure a "quick response" to shifting domestic markets.

But time is of the essence, the OTA said, or the industry will drown in the flood of imports. "Without serious action in the near future," the report warned, "long-term strategies for making the U.S. apparel and textile industries competitive may become largely academic."

That's been the cry of the industry and its workers for years. Yet in 1986, the House fell eight votes short of overriding President Reagan's veto of a bill that would have rolled back exports from the major textile exporting countries to the levels of the early 1980s.

Union halls gain exemption from immigration checking

Ending its on-again, off-again approach to the role of union hiring halls under the new immigration reform law, the Immigration & Naturalization Service exempted them from having to verify the citizenship status of workers referred to job sites.

The decision was a victory for the AFL-CIO, its Building & Construction Trades Dept. and other unions which contended the verification requirement extended only to employers and private, for-profit employment agencies.

The INS shifted its ground several times, at one point taking the position that the payment of membership dues to a union or the imposition of nominal fees to cover referral procedures brought hiring halls under the law's provision requiring verification by a "referrer for a fee."

In the end, the government backed off from that ruling. But, as organized labor had urged, the INS left unions and employers free, if they so desire, to negotiate collective bargaining agreements establishing hiring hall verification procedures.

In issuing its final regulations, the INS also heeded the petitions of organized labor, civil rights groups and religious organizations to expand the list of documents that aliens can use to get and keep jobs and to establish their eligibility for citizenship status.

Court settlement

To avoid job disruptions resulting from the government's refusal to continue issuing temporary work permits as it begins the legalization process, these groups won a settlement in the U.S. District Court for the Eastern District of California allowing undocumented aliens to certify to employers that they expect to be granted amnesty. The INS said it would continue this process of "self-issued work permits" until Sept. 1 and pledged that it would take a "flexible" approach to the verification process.

The INS refused labor's request to establish a procedure under which subpoenas or warrants would be issued to inspect business records without an employer's consent. Instead, the new regulations provide that the INS or the Labor Dept. must give an employer three days' advance notice of such inspections.

The new law is expected to grant amnesty to as many as 3 million undocumented aliens who entered this country prior to Jan. 1, 1982—provided they have remained in the United States since then and have put down roots in their communities.

The INS began the massive year-long task of legalization May 5, opening the doors of 107 centers across the country to begin processing applications.

Poland cracks down on Solidarity rallies

Warsaw—The Jaruzelski regime resumed its crackdown on Solidarnosc, disrupting May Day observances by Poland's free trade union movement.

Police rounded up leaders of the underground labor movement and held them incommunicado for 48 hours to prevent their participation in rallies being staged to provide a contrast to the government's massive demonstration supposedly devoted to saluting workers.

The government had denied Solidarnosc's petition for an independent May Day march.

In Wroclaw, 50 Solidarity members were taken into custody when they tried to march under the banner of the outlawed union and a dozen people were seized in Posnan.

Amnesty assistance

President Jack Otero of the Labor Council for Latin American Advancement details outreach campaign to aid Hispanic workers seeking amnesty and legalized status under new federal immigration law. LCLAA, the federation's Hispanic worker support group, has produced a 15-minute, Spanish-language videotape on the law's requirements and published other materials to help undocumented workers with the lengthy application process. The tape and publications will be available to local unions, churches and community organizations.

Los Angeles centers assist aliens

Los Angeles—Organized labor opened six immigrant assistance centers to help undocumented aliens qualify for legal residence status during the next year under the new immigration law.

Local unions contributed more than $100,000 to set up the full-time counseling centers here and in the City of Commerce, El Monte, Mission Hills and Pomona. Processing centers may also be opened in Santa Ana and Riverside if the need exists.

The centers are located at union halls of the Clothing & Textile Workers, Ladies' Garment Workers, Electrical Workers, Laborers, Carpenters and Food & Commercial Workers.

Los Angeles AFL-CIO Executive Sec.-Treas. William R. Robertson said the unions expect to counsel more than 25,000 aliens. He said assistance will also be offered periodically at two dozen other union offices in the area.

"The labor movement is deeply committed to helping immigrant workers and their families become free of the fear of deportation and eventually to become American citizens if they so desire," Robertson said.

The unions have prepared brochures in English, Spanish and five Asian languages to give applicants for legal status the information they need to qualify for amnesty under the 1986 law.

Rise in bank interest rates threaten higher mortgages

Leading banks raised their prime interest rates one-quarter of 1 percent for the second time in a month, pushing the rate they charge their preferred customers to 8 percent.

The increase will ripple throughout the lending industry, forcing up interest rates on home mortgages and other consumer loans.

Financial analysts predicted the prime rate would continue to climb even higher —to as much as 8.5 percent—within a matter of weeks as a result of Federal Reserve Board action to tighten credit in an effort to stem the steep decline in the U.S. dollar.

The White House sent out mixed signals on the action by the nation's giant banks. President Reagan told reporters that "I wish they hadn't done it." But press spokesman Marlin Fitzwater said it should be "helpful in preserving the dramatic gains that we have made against inflation."

In other economic news:

- The productivity of American business and industry rose at an annual rate of 1.8 percent in the first quarter, the Labor Dept. reported.

The increase, which followed two consecutive quarterly declines, was accompanied by a sizable reduction in labor costs as hourly compensation rose by the smallest amount in more than a quarter of a century. Hourly compensation edged up at an annual pace of only one-tenth of 1 percent during the three-month period.

Some economists expressed concern, pointing out that the bulk of the productivity gain resulted from a buildup of inventories. If sales don't pick up in the second quarter, industry could end up cutting both production and jobs.

- Commercial and business construction fell sharply in March, pulling down overall construction spending 1.3 percent to its lowest level since December.

Construction of single-family and multifamily homes rose four-tenths of 1 percent during the month, but nonresidental construction plunged 4.1 percent.

The best hope for the future of the construction industry lies in the expectation that money soon will be disbursed under the $88-billion highway and mass transit bill that Congress enacted into law over Reagan's veto.

Organizing moved to front burner

National conference explores new concepts and strategy

By Candice Johnson

Union organizers from Montana to Rhode Island recessed their campaigns to exchange ideas and sort out tactics at the AFL-CIO's national organizing conference.

The four-day session, sponsored by the Dept. of Organization & Field Services, brought together more than 150 participants from 24 unions.

The conference emphasized techniques and strategies to help organizing committees in their fight for a first contract and offered advice on establishing a volunteer organizer program for rank-and-file members. Other topics included running successful campaigns without using the National Labor Relations Board, organizing immigrant workers and using the media.

AFL-CIO Sec.-Treas. Thomas R. Donahue outlined several approaches to organizing that have been adopted by the federation through the efforts of the Committee on the Evolution of Work. These methods include utilizing union members as "volunteer organizers," organizing around key issues in the workplace and community and offering needed benefits and services through the Union Privilege Benefit Programs.

The committee's report also recommended better training for organizers and a broader search for people "who have different backgrounds and disciplines," he added. Donahue also stressed the need to maintain contact with workers "who have enjoyed and benefited by union representation . . . but have moved on to another job" at a nonunion workplace.

Associate memberships

"With the development of an associate membership programs that transcends collective bargaining, unions will be able to take advantage of the goodwill and efforts they have built," Donahue said, laying the groundwork for a later, successful organizing campaign.

The benefits and services available through an associate membership also may attract workers who otherwise might not be interested in joining, he added.

Organizing for the 1980s and 1990s requires "experimentation, new ideas and variations on old techniques" that have worked in the past, Donahue said.

Organizing Director Charles McDonald said that organizing efforts had been put on the "front burner" by the AFL-CIO and its affiliates, with unions looking at new techniques and models for winning members.

In a workshop session on non-NLRB organizing, Stephen Lerner of the Service Employees stressed the need to win community support early in the campaign. He urged participants to learn the financial operations of their industry and how workers are affected by several layers of employers. Citing the building service industry, he pointed out that the purse strings for building maintenance workers were actually held by building owners and not the employing service contractor.

Crucial elements

Dan Stewart of the Hospital & Health Care Employees emphasized the importance of timing when organizing to win a first contract. He suggested that unions plan activities and demonstrations to coincide with bargaining sessions so that most workers could participate.

Mel Stack outlined the Food & Commercial Workers' volunteer organizer program, explaining that after a training session, interested union members join ongoing campaigns, serving from one to two weeks, or longer.

In other sessions, participants examined the role of the clergy in union efforts, discussed organizing in the construction industry, looked at computer needs and studied techniques for corporate campaigns.

House panel approves curb on employer lie detector tests

A labor-supported bill to prohibit most employers from administering "lie detector" tests was approved and strengthened by the House Subcommittee on Employment Opportunities.

The 9-2 vote cleared the measure for action by the full Education & Labor Committee, probably later this month. Some of the issues that divided the subcommittee are likely to be refought there, before the legislation is sent to the House floor.

Rep. Pat Williams (D-Mont.), the bill's chief sponsor, was also the author of the strengthening amendment. It would extend the legislation's restrictions on use of polygraph devices to include written or oral "attitude tests" that some firms rely on to evaluate the honesty of employees and job applicants.

Both sorts of testing, unions contend and experts have testified, are unreliable and depend heavily on intimidation to extract admissions of misconduct.

Preparing a subject for a polygraph test has been likened to readying a condemned person for the electric chair.

Attitude tests, which many employers favor as both cheaper and less controversial than polygraph testing, purport to use psychology to measure employee honesty with a barrage of questions. As an example, one test asks whether "stealing from an employer is different than stealing from a friend."

The subcommittee split along party lines on that issue, with seven Democrats voting for the strengthening amendment and four Republicans opposed.

Williams agreed to a national security exemption in the bill, identical to one of the amendments the House adopted in the last Congress before passing the measure by a 236-176 vote.

A companion bill, carrying bipartisan sponsorship, cleared the Senate Labor & Human Resources last June but was not brought to the Senate floor before the 99th Congress adjourned.

The new bill, as approved by the subcommittee headed by Rep. Matthew G. Martinez (D-Calif.), would prevent employers from requiring employees or job applicants to submit to lie detector tests and from discriminating against those who do not.

Violations could subject employers to civil penalties of up to $10,000, and to damage suits brought by employees or job applicants.

Lie detector tests are defined in the bill to include any written or oral test that is used to detect deception or gauge the honesty of an employee or applicant.

Retirees gain reprieve on benefit rights

Congress staved off a threat to retired workers whose former employers file for bankruptcy law protection by continuing a temporary law preventing the cancellation of their health, disability or life insurance benefits.

The law is due to expire May 15th, but a four-month extension approved by both the Senate and House will give Congress more time to try to reach agreement on permanent legislation. The temporary measure was adopted last year, largely to prevent the LTV Corp. from reducing retirement benefits that had been negotiated by the Steelworkers.

House Judiciary Committee Chairman Peter W. Rodino Jr. (D-N.J.) said a 1984 amendment to the Bankruptcy Act barring firms from unilaterally tearing up union contracts should be clarified to reflect the intent of Congress to include protection for retired workers.

The four-month extension of the temporary law, Rodino said, "buys time" for Congress to adopt permanent legislation.

Bank bill advances

The House also cleared a labor-supported measure to limit the time a bank can take to clear checks deposited by its customers. Many banks now place holds on checks that exceed the time required to clear the deposit, to the disadvantage of customers needing access to their funds.

Senate Democrats united behind a compromise budget resolution that restores $2 billion that an earlier version would have cut from domestic programs. It conditions a $7-billion rise in military spending to presidential approval of separate tax legislation to pay for defense increases.

The trillion-dollar budget calls for $18.3 billion in additional revenues to stay under the Gramm-Rudman-Hollings deficit ceiling. President Reagan has threatened to veto any tax increase.

All but three Republicans voted against the Democratic budget resolution. But Reagan's budget proposal was rejected by a resounding, bipartisan 81-18 vote.

Labor-backed bills

House and Senate committees have a number of labor-supported bills high on their agendas.

The Senate Labor & Public Welfare Committee was scheduled to act on the Civil Rights Restoration Act, which would offset a Supreme Court decision that thwarts enforcement of several laws requiring withholding of federal funds from institutions that discriminate.

In a letter to committee members, AFL-CIO Legislative Director Robert M. McGlotten urged approval of the bill without substantive or irrelevant amendments. Progress in the last Congress was blocked by a controversy over attempts to include language dealing with abortions in the bill.

McGlotten also urged the House Energy & Commerce Committee to approve legislation that would write the fairness doctrine for broadcasting into permanent law.

The Senate has already passed a bill that would prevent the Federal Communications Commission from abolishing the fairness requirement through regulations.

UAW locals ratify Mack Truck pact

Four Auto Workers locals approved a new five-and-a-half year job security contract with Mack Trucks Inc. that guarantees to preserve work at Mack plants in Maryland and Pennsylvania in exchange for wage concessions of $1 an hour. The settlement provides benefits improvements while trimming pay rates to $13.50 an hour.

The agreement runs until Nov. 3, 1992, and covers some 5,500 active and 3,300 laid-off workers at plants in Hagerstown, Md., and Allentown and Macungie, Pa. Mack agreed not to close any plants for any reason other than reduced market demand, pledged capital improvements at the Hagerstown and Macungie plants, agreed not to transfer work to other locations and not to outsource work beyond what had already been announced.

The contract improves life insurance by $6,000 over the term, boosts sick and accident benefits by $50 a week, raises long-term disability payments by $200 a month and provides a $1,000-hike in retirees life insurance.

An early pension incentive of supplemented payments will be provided for those age 55 with a decade of service who retire. A severance formula that provides $1,000 a year for year of service for the first five years and double that after five years' service will pay up to $50,000 to those who choose to leave their jobs.

Pension benefits will be improved by 40 cents a month per year of service in each of the first three years of the contract, by 55 cents in 1991 and 40 cents in 1992. Annual lump-sum payments of $200 will be made in every year of the contract except the fourth year for those already retired.

Employees will retain their 15 annual holidays, but vacations will be cut by a week and three personal days will be dropped.

EDITORIALS

An Obligation to Listen

THE CANDIDATES for the presidential nominations of the Democratic and Republican parties understandably welcome the opportunity to present their views on issues important to American workers to an audience composed of millions of union families.

But it's a two-way benefit, and the AFL-CIO just as heartily welcomes their decision to take part in labor's "Democracy at Work" project.

By their participation, the candidates acknowledge that our concerns as workers, union members and Americans are important and deserving of thoughtful answers. Each has addressed the questions the labor movement asked, and it is our obligation in turn to consider their responses.

We take their candidacies seriously. They deserve from us an open-minded appraisal of their programs and their records.

They will get it.

Union members will listen to what they say, now and in the months ahead as the campaign progresses.

We will consider what they have stood for in the past and where they stand today. We will try to assess both what they have accomplished and what they propose to accomplish.

Whatever our individual or collective judgment on the merits of the various candidates, the interchange can only enhance the democratic process. That's its intent.

Stakeout in the Senate

IF ANY ENTERPRISING reporters had chosen to stake out the hearing room of the Senate Labor & Human Resources Committee between midnight on May 6 and the early hours of May 7, they would have well rewarded for their enterprise.

They would have been able to spot all nine Democratic members of the committee and four of the seven Republicans, entering the room singly and in small groups. The Senate had been in late night session, and they were gathering for an unprecedented post-midnight committee meeting.

The subject: the Civil Rights Restoration Act. That's a bill the AFL-CIO, women's groups and the civil rights movement support. It seeks to repair the damage that a controversial Supreme Court decision did to enforcement of laws prohibiting discrimination on the basis of race, sex, age or physical handicap by institutions receiving federal funds.

Controversies irrelevant to the legislation's intent had blocked action in the last Congress and Chairman Edward M. Kennedy (D-Mass.) was determined that the measure wouldn't be shunted aside this time around.

He was willing to accommodate a Republican opponent who had schedule conflicts that prevented a morning session, but not to the point of delaying action—not even when the Senate stayed in session unexpectedly late.

The bill's committed supporters—nine Democrats and Connecticut Republican Lowell P. Weicker Jr.—came to the post-midnight committee session prepared to stay as long as necessary to get the legislation on track.

The result was a firm agreement for a timetable to deal with pending amendments, to culminate in a May 21 vote on clearing the bill for the Senate floor.

A sleepy but elated AFL-CIO legislative representative passed on the news of the committee session. Reporters, even for the AFL-CIO News, don't generally stay on the job all night—at least not for congressional committee meetings.

But 13 senators did so, and for that we can all be grateful.

Fueled by Greed

THE ECONOMIC health of the United States is threatened by an epidemic of corporate takeovers. No business, no matter how large or how soundly managed, is safe.

No economic or social benefit has been produced by this frenzied takeover activity. Billions of dollars have been wasted.

The ultimate losers in these matters are workers and their communities.

—From AFL-CIO Executive Council statement on corporate takeovers, May 5, 1987.

Washington Window

Campaign fund needs put Congress in hock

By Press Associates

"Follow the money" was the advice "Deep Throat" gave to the reporters who unraveled the Watergate scandal. Out of that corruption of the political process came reforms in public financing of presidential elections.

"Follow the money" also was a guideline for investigators trying to put together the pieces of the puzzle in the Iran-Contra arms sale scandal. The money trail led to the Reagan White House, where the President met with wealthy supporters to thank them for their financial contributions. In addition to those tax-deductible funds being used in possible violation of foreign policy laws, some of the money may have financed political ads attacking critics of Reagan's Central America policies. And that would be a violation of federal election law.

Just as President Nixon through Watergate unwittingly brought about the public financing of presidential campaigns, it would be ironic if Reagan's current scandal helps spur legislation to publicly finance congressional campaigns.

Integrity restored

Reagan has said he philosophically opposes public financing of presidential elections, yet he dropped by the U.S. Treasury and legally picked up some $90 million for his campaigns in 1976, 1980 and 1984. The President should agree that public financing through the $1 check-off on tax returns has reduced the role of private wealth and restored confidence in the integrity of presidential campaigns.

When Congress set spending limits along with public financing for presidential candidates, it also limited congressional campaign spending, but without public financing. In 1976, the Supreme Court upheld the legislation on presidential campaigns and struck down the spending controls over congressional races. To be constitutional, the high court said, spending limits for congressional elections must be part of a voluntary system that includes public financing.

Absent such controls, congressional campaign spending in the past decade has soared out of sight. One citizens' group, Common Cause, reported that spending in Senate races rose from $38 million in 1976 to $179 million in 1986. In 1975-76, Senate winners spent an average of $610,000; in 1985-86, Senate winners averaged $3 million each in spending.

Spending in House races has more than tripled, rising from $61 million in 1975-76 to $194 millon in 1985-86. Winning congressmen spent an average of just over $87,000 in 1975-76; in the last election cycle, House winners averaged $329,000.

Pax vobiscum

About a third of that money came from political action committees of which there were 608 in 1974. Today there are more than 4,000. PAC contributions to congressional races have jumped from $22 million in 1976 to more than $130 million in 1986.

Observers believe effective reform of congressional campaign financing is needed now. Runaway congressional campaign spending gives big business and the wealthy a disproportionate influence on Capitol Hill. There are reportedly 40 millionaires in the 100-member Senate—no surprise considering what it takes to get elected.

Senate Majority Leader Robert C. Byrd (W.Va.), cosponsor of a reform bill, said senators have to start raising money years before facing re-election. "They all too often become fundraisers first, and legislators second," he said.

A consensus seems to be growing in Congress on the need for reforms. Labor supports a bill sponsored by Byrd, Sen. David Boren (D-Okla.) and 42 other senators, that would provide for partial public financing and limit candidate spending. Labor also favors a spending limit on PACs, wealthy individuals and "independent" groups and a crackdown on devices such as "bundling" and "conduiting" that conceal contributions.

AFL-CIO LEGISLATIVE

ALERT!

Chalk One Up For American Workers! House Passes Gephardt, Senate Fight To Follow

Victory In The House

Fighting against tremendous odds, workers across the country won a major victory when, on April 29th, the House of Representatives voted 218-214 to adopt the Gephardt amendment on trade deficit reduction. The vote followed an intensive lobbying campaign by grass-roots activists, who let their representatives know that workers considered this to be one of the most important votes that members would cast during this session of Congress.

In addition to renewing contacts with members who had voted in support of last year's trade bill, the campaign was aimed at new members and others who were thought to be persuadable. Legislative Action Committees (LACs), State and Local Central Bodies and AFL-CIO field staff helped to generate a deluge of letters, phone calls and telegrams. Almost two hundred representatives received personal visits in their districts.

In some districts, April 23 was named as "Call-in-Day", and union constituents were mobilized to make calls to their member's local offices. One district office reported that their telephone lines were tied up all day as over 100 pro-Gephardt calls were logged in. The office also received 39 mail-grams and several hundred postcards. By the end of the day, the representative had pledged his support for the amendment.

Simultaneously, a media campaign was organized, utilizing radio spots, newspaper ads and a six minute video. The video, entitled "The Bottom of the Ninth on Trade," was used in local union meetings and staff briefings on Capitol Hill.

Battle In The Senate

Trade unionists are being asked to continue the campaign -- this time lobbying their senators. The narrow margin of victory in the House means that the anti-fair-trade forces in the Senate might try to minimize the country's support for effective trade legislation. Pressure from the grass-roots will, therefore, be even more important in the coming weeks.

By the time you receive this *Alert*, the Senate version of the comprehensive trade bill (S. 490) should have been reported out by the Senate Finance Committee. On April 30, by a 15-2 vote, the Committee approved an amendment by Sen. Donald Riegle (D-MI) which defines the abuse of basic worker rights as an unfair labor practice. However, as in the House, S. 499, the Riegle amendment which contains a trade deficit reduction enforcement provision, will be decided in a floor fight.

What You Can Do

Write to both of your senators. Tell them that real trade reform is of the highest priority for working men and women who care about their country and their jobs. Tell them that if they are serious about dealing with America's trade crisis, they will support the Riegle amendment when it is introduced on the Senate floor.

Dislocated Worker Aid: Congress Begins Action On Plant Closing Bills

Between January of 1981 and January of 1986, just under 11 million American workers lost their jobs due to plant closings. Often, a company's decision to close its doors is unexpected, leaving workers completely unprepared. Their families' economic security is shattered; their communities gutted.

In many instances, the injuries suffered by workers and their communities could be eased, or avoided altogether, by timely government or union notification. Some contemplated plant closings and mass layoffs are preventable; indeed, less than 10 percent of plant closings are due to bankruptcy or financial insolvency. And where a closing cannot be prevented, its disruptive effects can be minimized by a variety of readjustment measures.

The AFL-CIO maintains that if a company must close its doors, management has a responsibility to notify and, thereby, ease the suffering of its workers and their community. Legislation requiring advance notification of closings, and providing aid to dislocated workers and their families has now begun to move in Congress.

The Senate Labor and Human Resources Committee is expected to finish marking-up S. 538, the Economic Dislocation and Worker Adjustment Assistance Act of 1987, this week. The House version, H.R. 1122, is scheduled to be considered by the Education and Labor Committee on May 20.

What You Can Do - Contact members of the House Education and Labor Committee and both of your senators. Tell them that you would like their support on S. 538 and H.R. 1122. Since a corporate decision to abandon an area is not made in a void, such decisions should take into account their social and economic effects on workers and their local communities.

For The Record . . .

During the April 29th floor debate, many members of the House of Representatives stood up to argue in favor of the Gephardt amendment. The following are excerpts from some of their statements in the Congressional Record:

The policy we have been following has been one that has been long on words, on our side and on the side of our trading competitors. We complain with lots of language and what we get back is language, words. We get press releases, we get good intentions, but we do not get action, we do not get change, we do not get the kind of open markets that I think we demand and need in order to make the world trading system work...

That is what the Gephardt amendment is about. It is a new policy. I think if we can put in place, and we can make it happen; if we can change the behavior, if we can open the markets, then we can turn to the American people with credibility and say that now it is time to make America good again and great again and strong again and do all of the things that we, together, have to do to make that happen.

Gephardt (D-MO)

This is an amendment to open up markets to give Americans jobs and opportunity.

Brown (R-CO)

I am really tired of telling my constituents that they have to become more competitive when I know that, in some instances, no matter how competitive they become, they won't be allowed to compete...

Wolpe (D-MI)

The rhetoric of free trade has been an impediment to the development of a comprehensive, responsible trade policy. It has been an encumbrance, and to those who have lost their jobs because of blind subservience to it, it has been a curse...

Then there is always the GATT. How many times have we heard, wait until the next GATT round? If we stay the course on the good ship GATT by the time the balance of the world manipulates our next group of negotiations, we'll have nothing left in this country we can be accused of trying to protect.

Ridge (R-PA)

I am not prepared to let this Nation roll over and play dead on the trade issue. I will not stand idly by while steelworkers, coal miners, and textile workers hit the unemployment lines.

Bevill (D-AL)

[This] is the key to letting the world know that America means business.

Bonior (D-MI)

American industry and American workers are being subjected to an assault from all sides, and our county's reaction has been anemic. We've adopted a "welcome mat" trade policy. Unfortunately we are the mat and the rest of the world is using us to clean their muddy shoes.

Davis (R-MI)

In the next ten years we will not have one blast furnace left in America. What will we defend ourselves with, styrofoam?

This [amendment] does not go far enough. If it were up to me, I would ship the EPA to Japan, I would send Malcolm Baldrige to Korea, and Clayton Yeutter to Taiwan.

Traficant (D-OH)

South Africa's rulers tighten grip

Black trade unions prepare for new era of oppression

By Gene Zack

South Africa's black trade union movement faces a bleak future in the wake of whites-only elections that strengthened the grip of apartheid forces on the government and sharply reduced the already thin ranks of white moderates.

That's the grim assessment given by Dale Tifflin, research director of the Council of Unions of South Africa/Azanian Confederation of Trade Unions.

The draconian measures taken by President P.W. Botha's regime against labor and civil rights coalitions in the past year "are going to get harsher," warned Tifflin, who was in Washington for a week-long institute at the George Meany Center for Labor Studies.

The modest "reforms" put in place last year to quiet world criticism of apartheid "will go down the drain," she predicted. The first change will probably be reinstitution of the onerous "pass laws," which treat black workers as "aliens" and require them to carry identity cards restricting their access to white industrial and commercial centers.

Tifflin expressed concern that labor will have to endure "another blood bath" at the hands of security forces which have systematically harassed unions for opposing the government's racist policies and pressing for workers' rights.

Tifflin, who herself was imprisoned without charges and held incommunicado for 14 days last year, expressed concern that there could be an increase in the number of unionists picked up in police dragnets and jailed for months at a time.

In addition, state security forces have banned union publications, opened and confiscated mail, tapped union phones in open violation of the law and disconnected labor teletype lines at central telephone switching centers to hamper communication

MEMO FROM COPE
PAGE 8

Food for the jobless

Jobless workers in Houston draw emergency food supplies at Pipefitters Local 211 union hall—one of 16 union locals participating in the Harris County AFL-CIO's community services network. Last year, the central body gave out more than 300,000 pounds of surplus cheese, butter, grains, dried milk and other food. The county labor federation's program serves more than 3,500 needy families every month. (Story on Page 6.)

New jobs cut unemployment but push down wage levels

Job gains centered primarily in the service sector pushed the nation's unemployment rate down to 6.3 percent in April—the lowest level since Ronald Reagan came to office more than six years ago.

But the jobless level was still substantially above the 5.6-percent unemployment mark of March 1979—the lowest point reached during the Carter Administration.

The AFL-CIO called April's three-tenths of 1 percent decrease in joblessness "welcome news for American workers." But it added a note of caution.

"Average weekly earnings declined last month and were down from last March in real terms," Federation Research Director Rudy Oswald pointed out. "So more jobs didn't mean more pay" for the nation's workforce.

The decline in real earnings between March 1986 and March 1987 was a sharp 1.1 percent, resulting from a combination of a drop in weekly hours and rising inflation that has robbed earnings of their purchasing power.

Trade deficit tops '86 as imports set record

The March trade deficit of $13.6 billion pushed the U.S. gap between imports and exports in the first quarter 8 percent above the same period a year ago when the nation was enroute to its largest trade shortfall in history.

In the fiirst three months of 1987, the nation suffered a $40.9-billion trade imbalance. That's $3 billion more than the deficit accumulated in the first quarter of 1986.

What's more, March imports climbed to an all-time high of $34.7 billion, eclipsing the previous one-month import record of $34.3 billion set last October.

Government economists estimate that for every $1 billion in domestic sales lost to imports, 22,500 American jobs are wiped out.

The only thing that helped take some of the sting out of that continued import surge was that exports rose $3.6 billion in March to $21.1 billion—the highest one-month level in six years.

The AFL-CIO said that any easing of the deficit was "welcome news." But with the first-quarter deficit running at a faster pace than a year ago, it took sharp issue with Administration claims that the figures mean the trade crisis is over.

Not so rosy

"When imports reach a new record in a single month and when the first-quarter deficit is $3 billion higher than the one we experienced a year ago, it's hard to justify the rosy forecasts coming from the White House," said Federation economist Mark Anderson.

So far this year, Anderson pointed out, the trade deficit is running at an annual rate of $163.8 billion. "That's only a slight improvement over 1986, when we rang up a record $166.3-billion shortfall," he said.

There's little in the figures to suggest that good times lie ahead for workers, industries and communities that have been inundated by the tide of imports that washed over them throughout the Reagan Administration, Anderson said.

The only permanent cure for the continued wide gap between imports and exports, he said, is Senate enactment of the House-passed trade bill that would force other nations to tear down barriers to U.S.-made goods and impose penalties on countries that subsidize exports, exploit workers and target Americans as their primary consumers.

Overly optimistic

"Congress shouldn't be misled by the overly optimistic pronouncements from an Administration that has promised over and over again that the problem would correct itself," Anderson continued. "This Administration has been wrong before, it's wrong now and we have confidence that legislators won't be taken in by these blue-sky predictions."

The March trade shortfall with Japan continued to be the nation's largest. At $4.9 billion, it was a scant $182 million below the February level and was running at an annual rate of $57.6 billion—roughly the same as the 1986 pace.

But the improvement in the trading picture with Japan was more than offset by a sharp rise in the deficit with West Germany. The March deficit of $1.6 billion was up 60 percent from the previous month. That puts the annual rate at $14.8 billion, slightly less than last year's level.

The deficit with Taiwan is running at an annual clip of $17.2 billion, while the annual pace of the shortfall with South Korea is $8 billion. Both rates are well above the levels reached in 1986.

House panel boosts Medicare benefits

By David L. Perlman

The House Ways & Means Committee responded to labor's concerns and approved a catastrophic health care plan for Medicare beneficiaries that will be financed by monthly premiums keyed to ability to pay.

Its benefits are greater than would be provided in an Administration proposal sent to Congress early this year. And the funding mechanism is more equitable than the formula that had been devised by a subcommittee.

It covers unlimited hospitalization and substantially more of the expenses incurred in serious and lengthy illness than Medicare now provides.

The manner of paying for the expanded Medicare coverage was of special concern to the AFL-CIO.

Labor strongly objected to a subcommittee proposal to tax Medicare recipients—including 1.6-million low-income persons who otherwise would owe no taxes—for the value of the Medicare benefit.

Wrong approach

Apart from burdening those least able to afford the cost, the approach appeared dangerously close to the taxation of employee benefits. That's a concept that unions strongly opposed and Congress firmly rejected when the tax reform bill was being considered last year.

The AFL-CIO has a better idea, Legislative Director Robert M. McGlotten wrote members of the Ways & Means Committee. He urged a small premium increase for everyone, with a supplemental premium based on ability to pay.

That's essentially what the full committee adopted.

It voted to raise the Medicare Part B medical insurance premium, which is now $17.90 a month, by $1 in 1990 and $1.50 the following year. Part B insurance covers most doctor bills and outpatient treatment. It's optional but 98 percent of those eligible subscribe to it. Part A of Medicare is the basic hospitalization coverage. It's

5/16/87

Illinois AFL-CIO President Robert G. Gibson introduces video of presidential candidates at Chicago showing.

Democracy at work

Members screen the candidates

Trade union members across the country are beginning to get the word on where declared and potential candidates for President stand on the issues of concern to workers and their families.

Within days after the AFL-CIO Executive Council previewed videotape presentations by seven Democrats and six Republicans, unions put on screenings in eight cities—Chicago, Detroit, San Francisco, Kansas City, Atlanta, Orlando, Fla., and New Brunswick, N.J.

And that's only the start, according to the Labor Institute of Public Affairs, which has already booked showings in 60 big cities and small towns during the next several weeks.

Single copies of the videotapes have been supplied to all state central bodies. Each AFL-CIO regional director has received six prints, and another 10 prints have gone to each COPE regional director.

Backing up the federation's own political education effort, national and international affiliates have already placed their orders for tapes in bulk—2,000 by the Communications Workers; 1,000 each by the Bricklayers, Operating Engineers and State, County & Municipal Employees; 185 by the Signalmen; 100 by the Maintenance of Way Employees, and 45 by the Flight Attendants, for example. And the orders keep rolling in, with LIPA estimating there will be more than 10,000 videos in circulation.

The Machinists will produce 500 copies of the videos on their own, featuring remarks by President William W. Winpisinger. And the Auto Workers will produce a similar number with a message by President Owen Bieber.

Supplement distributed

Labor's effort to reach out to members and their families in order to stimulate increased participation in the preprimary screening of candidates is being augmented by an eight-page Federationist supplement reprinted from the May 9 issue of the AFL-CIO News.

The widely distributed special section focuses on the candidates' views on foreign trade, the budget deficit, meeting human needs and labor's role in the political process.

In addition, affiliates and state and local bodies plan to reproduce the material in their own union publications to make sure that every trade unionist knows where the candidates stand.

All this is just the first step in a complex process whereby the views of union members and their families will be solicited as to their presidential preferences—a key element in preparing for the meeting of the AFL-CIO General Board, tentatively set for next October, when affiliates will decide what role the federation will take in the presidential selection process.

Another aspect of labor's drive to educate members on the candidates and issues involves inviting presidential aspirants to address union gatherings so that members can hear the candidates in person.

The AFL-CIO Industrial Union Dept. did just that at its annual legislative conference, hearing from three Democratic hopefuls—Sen. Paul Simon (Ill.), Sen. Joseph Biden (Del.) and Rep. Richard Gephardt (Mo.)

The federation's effort is the most comprehensive undertaking by any citizen group in getting out the message as to where the candidates stand on the issues and to get feedback from members on the candidate they want to support in the 1988 primaries and general election.

UAW contract provides full job security

Detroit—The Auto Workers negotiated a landmark job security program protecting all bargaining unit positions at Case IH plants in five states in a new 39-month contract that covers 5,100 workers, including 1,600 on layoff.

UAW President Owen Bieber and Vice President Bill Casstevens said the contract establishes guaranteed employment levels for all current jobs. This is the first time the union has won a "100 percent job security" clause in a major contract—a three-decade UAW goal, Bieber and Casstevens noted.

The contract with Case, a unit of Tenneco Inc., also provides increased pension benefits, Martin Luther King Jr.'s birthday as an added paid holiday, continued cost-of-living protection, annual lump-sum payments, a joint training program and improved health care and sick and accident benefits, Casstevens said.

UAW members ratified the agreement in voting conducted by the eight Case locals.

Company commitment

To gain the historic job security language, the workers agreed to more flexible work rules and changes in job assignments, overtime and bidding and transfer language. The cornerstone of the job security language is a commitment by the company that "active employment will not drop below certain predetermined levels . . . equal to 100 percent of the current active workforce minus future allowable attrition during the term of this agreement." This protections covers reductions for virtually any event, including economic downturns.

Casstevens, the union's farm implement director, explained that all jobs in each bargaining unit, based on the number of active employees as of May 1, 1987, are covered. The company will recall from layoff one worker for every two attritions, due to retirements, deaths or quits.

The new contract covers members of Local 152 in Hinsdale, Ill; Locals 1304, 1306 and 1356, all in East Moline, Ill.; Local 180 in Racine, Wis.; Local 763 in St. Paul; Local 807 in Burlington, Iowa, and Local 1004 in Southaven, Miss.

Case workers will receive a $250 special lump-sum payment within three weeks after ratification and annual payments based on the number of hours worked.

Cost-of-living adjustments totalling $1.24 an hour under the previous contract will be folded into the basic wage rate in 31-cent increments on Oct. 1, 1988, and Jan. 1, Apr. 1 and July 1, 1989. Wages at Case average $15 an hour, the union said.

Pension increase

A five-step increase in early retirees' pensions will lift the maximum monthly benefit to $1,350, Casstevens said. Basic pension rates will also rise in five increments to $23 a month per year of service by Jan. 1, 1990. Pensions for current retirees will go up $1.50 a month per year of service, with $200 lump-sum payments in October 1987 and September 1988.

The union won provisions for a substantial penalty against the use of excessive overtime. Case will pay a $5 an hour penalty on all premium hours in excess of 5 percent of straight-time hours worked. The penalty will be paid based on the total hours worked over the year.

Senate pressed to hold firm on immigration law

There is no reason to delay the timetable for requiring employers to verify the legal residence status of newly hired workers, the AFL-CIO insisted in a letter to senators.

At issue is whether the enforcement date of a key provision of the immigration reform law should be postponed beyond June 1. That's when employers will be subject to penalties if they fail to verify the legal residence status of new workers.

During the first year of enforcement, the penalties on employers are not very painful—a warning for a first offense and a fine for a repeat violation.

Nevertheless, an appropriations bill awaiting Senate Action would delay the start of employer enforcement for four months, until Oct. 1.

Delay unnecessary

There's no cause for delay, AFL-CIO Legislative Director Robert M. McGlotten wrote senators.

He pointed out that Congress spent six years debating employer sanctions before agreeing on immigration reform legislation. Employers know their obligations under the law and there is no reason they can't abide by the terms of the verification process, McGlotten stressed.

Any further delay, he suggested, "could send the wrong message" and encourage violation of the law.

The Senate Appropriations Committee added language delaying the June 1 enforcement date to a supplemental appropriations bill that will soon reach the Senate floor.

When the bill comes before the Senate, Sen. Alan K. Simpson (R-Wyo.), a leading sponsor of the immigration law, has said he will propose an amendment to retain the June 1 verification date. McGlotten urged senators to support Simpson's amendment.

New jobs cut unemployment but push down wage levels

Continued from Page 1

"American workers need both jobs and good pay to support themselves and their families," Oswald stressed.

Moreover, for those on the unemployment rolls, the economic outlook continued to be grim. Although the Bureau of Labor Statistics reported 7.5 million Americans without work, more than 5 million of them—two-thirds of the total unemployed—were without benefits in mid-April.

Since the Reagan Administration came to office, steep budget cuts and harsh eligibility requirements have steadily eroded the historic role of unemployment compensation to put a floor under the misery suffered by the jobless and their families.

The "official" total of 7.5 million unemployed continued to mask the full impact of the present economic situation. There were another 1.2 million "discouraged" workers no longer considered part of the workforce because they've abandoned their search for nonexistent jobs, and an additional 5.4 million "involuntary part-time" workers—people who would prefer full-time jobs but can't find them.

14.1 million victims

This means, Oswald emphasized, that there are 14.1 million Americans affected by the continued troublesome nature of conditions in the nation's labor market.

According to the National Committee for Full Employment, this puts the "real rate of joblessness and underemployment" at a depressing 11.7-percent level.

Manufacturing employment edged up by 14,000 in April to a total of 19.2 million. That's an increase of 1.2 million since the depths of the Reagan Recession in December 1982. But the total is still nearly 2 million below the record high of 21.2 million posted in January 1979.

As has been the pattern throughout the "recovery" period, the biggest job gains were concentrated in the non-manufacturing sector. Service employment was up 100,000, retail trade jobs rose 67,000, government employment increased 60,000, jobs in finance, insurance and real estate field grew by 40,000, there were 30,000 more jobs in health services and an addition of 20,000 in business services.

Construction employment rose 23,000 between March and April, while employment remained static in the mining, oil and gas extraction industry where the BLS said the "long downward slide" in joblessness resulting from fluctuating world energy prices "seems to have bottomed out."

The unemployment situation improved for nearly all segments of the workforce. In April, joblessness stood at 5.4 percent for whites, 13 percent for blacks and 9.2 percent for Hispanics. Although the unemployment situation for blacks showed the most dramatic improvement—declining from 13.9 percent to 13 percent—Oswald pointed out that this was largely the result of blacks dropping out of the labor force.

All for 25 openings

Baltimore—An estimated 2,500 people, many of whom waited overnight, lined up outside a temporary job interview center to compete for 25 jobs at the Lever Bros. soap manufacturing plant here.

The company expected only 400 applicants. Instead, eager job hunters began arriving at 11 o'clock the previous night, standing in line outside a suburban motel until the doors opened at 7 a.m.

The 25 jobs at stake will pay workers $10.73 an hour to operate packaging equipment. Explained one applicant, who learned of the openings from a friend who had been laid off and was watching the want ads, "I can't support myself on $4 an hour."

The latest government statistics showed Baltimore with a jobless rate of 5.9 percent—a level below the national average. But the rush of applicants gave new evidence that counting part-time or low-paid workers in the "employed" category disguises the economic crisis facing workers and their families.

Postal unions challenge motive for rate increase

The U.S. Postal Service Board of Governors recommended hefty across-the-board rate increases, and the timing of its action —at the outset of collective bargaining sessions—drew sharp criticism from postal unions and a bipartisan group of House members.

The proposed hikes—which must go through a protracted 10-month review process before the Postal Rate Commission makes any final determination—contain a mixed bag of increases that could sharply boost the cost of mailing trade union publications.

The recommended increases were announced only two weeks after the USPS opened contract negotiations covering 600,000 postal workers across the nation.

Postal Workers President Moe Biller and Letter Carriers President Vincent Sombrotto charged that the premature action "pollutes the bargaining environment and undercuts the integrity of the rate proceeding itself."

They accused the Postal Service of "thumbing its nose" at a 1984 recommendation by the Postal Rate Commission that such requests be deferred until after the completion of contract negotiations to allow the commission to make a more realistic assessment of its financial condition.

The USPS move triggered an angry protest from Rep. William L. Clay (D-Mo.) and Rep. Frank H. Horton (R-N.Y.), both members of the House Post Office & Civil Service Committee. They urged the commission to withdraw its recommendation until after contract negotiations are concluded.

"Let's retract that proposal until the figures are ready," Horton urged commission members.

The impact of the proposed rate increases on labor publications depends on whether unions use second- or third-class mailing permits, according to Edwin M. Schmidt, the AFL-CIO's postal expert.

Steep increase

The proposal contemplates a 50 percent cut in charges based on weight—a step, Schmidt said, that will benefit only commercial publications "of the telephone-book variety." At the same time, the second-class piece rate—the key cost factor to unions—would rise from 8.7 cents to 12.4 cents. This translates to a 42.5-percent hike.

Unions which send their publications via third-class mail face a 2-percent increase in costs if the new rate system is put into effect in its present form, Schmidt noted.

The postal committee of the AFL-CIO and the International Labor Communications Association is looking into the recommendations to determine what action labor should take in the face of this new economic threat to labor's ability to communicate with its members.

House panel approves plan to boost Medicare benefits

Continued from Page 1

funded through the social security payroll tax on workers and employers.

Most of the funds needed for the catastrophic insurance benefits would be derived from a "supplemental premium" that would be paid by persons covered by Medicare who have taxable incomes over $15,000. Their payments would rise with their income, to an estimated maximum of about $580 a year.

Under the bill, Medicare beneficiaries could also receive up to 150 days of care in a skilled nursing facility, with no requirement for prior hospitalization. Present law has a 100-day limit, with a requirement for hospitalization for at least three days before admission to the nursing home.

Coverage expanded

In both instances, however, the nursing home coverage is for treatment of illness and not for primarily caretaking services. The committee bill would also allow more days of home health services.

States would be required to cover the costs of all Medicare premiums, deductibles and co-payments for elderly and disabled persons with incomes below the poverty line.

While the committee approved the key features of the legislation, there were some blanks still to be filled in before the final vote on clearing the measure for the House floor.

The Energy & Commerce Committee, which shares jurisdiction over portions of Medicare, is also exploring both coverage of prescription drugs and the problem of long-term nursing home care.

The committee bill is similar to a measure introduced by Senate Finance Committee Chairman Lloyd Bentsen (D-Tex.). It, too, combines an across-the-board rise in the Part B premium with a supplement based on ability to pay.

The Administration bill, which the House committee rejected by a 24-11 vote, would raise Medicare Part B premiums by the same amount for all covered persons to pay for a somewhat smaller expansion of benefits.

Presidential support for even a limited catastrophic insurance add-on to Medicare was a victory for Health & Human Services Sec. Otis R. Bowen.

Some White House advisers had contended that protection against catastrophic health care costs would amount to government competition with private firms that sell "medigap policies" to the elderly.

Building Trades President Robert Georgine and Legislative Director Leo Zeferetti, left, at House hearings on changes in Davis-Bacon Act coverage.

Fine-tuned revisions backed on Davis-Bacon protections

Building trades unions are supporting a carefully crafted effort to amend the Davis-Bacon Act by trimming back its coverage but strengthening its enforcement.

Legislation introduced by Reps. Austin J. Murphy (D-Pa.) and Augustus F. Hawkins (D-Calif.) is on the right track, President Robert A. Georgine of the AFL-CIO Building & Construction Trades Dept. testified at House hearings, although it reduces coverage more than unions consider appropriate.

Davis-Bacon, dating back more than 50 years, requires contractors on federally funded construction to pay prevailing wages and benefits to their workers.

Under the Reagan Administration, the Labor Dept. has weakened the law's protections through changes in regulations. And in recent years, repeated attempts have been made in the House and Senate to reduce Davis-Bacon coverage through amendments to bills funding various government programs.

Reasonable changes

It is against this backdrop that Hawkins, as chairman of the Education & Labor Committee, and Murphy, who heads its Labor Standards subcommittee, are seeking to update the Davis-Bacon Act.

The bill they introduced would raise the dollar threshold for construction contracts covered by the law from the $2,000 level set in 1935 to $50,000 for new construction and $15,000 for contracts involving repair or alteration.

Georgine said the building trades could support a rise in the threshold figure to $25,000 for new construction and perhaps $10,000 for repairs and alterations. Exemptions beyond that level, he suggested, would encourage some agencies to split up contracts to stay under the threshold limit.

But Georgine welcomed other provisions of the Murphy-Hawkins bill that he said would "significantly improve" the administration of the law. The plus side, he testified, includes a clear affirmation of the right to sue firms that violate the law and the closing of various loopholes.

Regulations reversed

The building trades welcome the bill's reversal of two regulatory changes made by the Labor Dept., Georgine testified.

One would require the Labor Dept. to include all similar construction projects in area wage surveys, not just non-government projects. The other would tie the definition of "helper" more closely to area practices to assure that workers aren't reclassified and paid at a lower rate.

Labor Dept. Solicitor George R. Salem said the Administration wants the dollar threshold for Davis-Bacon coverage raised to $1 million for military construction contracts and to $100,000 for other federally funded contracts. He said the Administration opposes the concept of a lower threshold for renovation and repair.

Ground workers pick Machinists in Northwest vote

The Machinists won a National Mediation Board representation election covering more than 14,000 ground employees at Northwest Airlines, bringing the IAM's total membership at the carrier to 20,000.

The final tally showed the IAM gathered 55 percent of the ballots cast. The Railway & Airline Clerks drew 45 percent of the votes.

BRAC President Richard I. Kilroy, in a telegram to IAM President William W. Winpisinger, said that while BRAC was "disappointed" over the outcome, "our disappointment is lessened by the knowledge that another strong AFL-CIO union like yours will be representing the interests" of Northwest employees.

The election was a runoff of a three-way contest two months ago, following Northwest's acquisition of Republic Airlines. Also involved in that election were the Air Line Employees, an affiliate of the Air Line Pilots. Although the IAM received the most votes in the earlier balloting, it didn't win a majority.
